The Pierce County Comprehensive Plan is an adopted policy document that guides County decisions related to growth and development in unincorporated Pierce County. The plan outlines existing conditions and a future vision for the County’s unincorporated areas. It contains goals and policies that are meant to direct growth and development in a way that will help the County achieve this vision.

The goal of the Comprehensive Plan is to honor the past and look ahead.

The Big Idea

Pierce County adopts this Comprehensive Plan to guide all subsequent plans and decisions. The policies reflect the following key values chosen by the citizens of Pierce County:

- Protect the Character of Our Rural Lands
- Promote Open Space and Parks
- Preserve the Natural Environment
- Maintain Our Livable Neighborhoods
- Connect Motorized and Nonmotorized Transportation Routes
- Promote a Diverse, Healthy, and Sustainable Economy
- Require Infrastructure and Services Concurrent with the Actual Need
- Preserve Our History
- Public Safety

_The Big Idea_ is the foundation of the Comprehensive Plan. Remember these key values when reading and interpreting the policies.
**UPDATING THE PLAN**

The Comprehensive Plan update began in early 2013 with internal review of the existing Pierce County Comprehensive Plan document and associated plans, including the eleven associated community plans. Team members from all applicable departments, including Planning and Land Services, many divisions within Public Works and Utilities, Parks and Recreation, Community Connections, and the Tacoma Pierce County Health Department were involved in reviewing and editing the contents of the existing plan. This team was also responsible for identifying gaps between the existing plan and the requirements of the state’s Growth Management Act and the Puget Sound Regional Council’s policy document, Vision 2040. Once the document was updated and gaps were identified, the team outlined a public participation plan that began in early 2014.

**PUBLIC INVOLVEMENT**

In February 2014, Long Range Planning staff began a series of study sessions to inform the County’s representative bodies, including County Council, Planning Commission, and all Land Use Advisory Committees (LUACs) about the update. Throughout 2014, staff kept engaged with the LUACs in subsequent meetings to present and receive recommendations on proposed edits to their respective community plans.

Team members worked together in April 2014 to develop an open house format that included all topics in the Comprehensive Plan to provide information to the general public and receive input on issues found in the plan. Open houses began in late May and ran through July, covering various communities within the County.

**PIERCE COUNTY PROFILE**

Pierce County is the second most populous county in the state of Washington, behind King County. Formed out of Thurston County on December 22, 1852 by the legislature of Oregon Territory, it was named for U.S. President Franklin Pierce. As of the 2010 Census, the population was 795,225. The County seat is Tacoma, which is also the County’s largest city, on Commencement Bay.

Pierce County’s moderate climate, combined with a contrasting geography of water and mountains, encourages a wealth of year-round outdoor activities. Pierce County has miles of Puget Sound waterfront, Mount Rainier National Park, 361 fresh-water lakes, alpine and cross-
country skiing, and nationally ranked year-round golf courses, while also offering all the urban amenities.

Major industries include aerospace, healthcare, technology, agriculture, timber products, and military installations. In addition to the City of Tacoma, Pierce County is home to several suburban cities, small towns, and rural communities, as well as forests and farmlands.

The County is notable for being home to the Mount Rainier volcano, the tallest mountain in the Cascade Range. Its most recent recorded eruption was between 1820 and 1854. There is no imminent risk of eruption, but geologists expect that the volcano will erupt again. If this should happen, parts of Pierce County would be at risk from lahars, lava, or pyroclastic flows. The Mount Rainier Volcano Lahar Warning System was established in 1998 to assist in the evacuation of the Puyallup River valley in case of eruption.

**Geography**

According to the U.S. Census Bureau, the County has a total area of approximately 1,800 square miles, of which 1,670 square miles is land and 130 square miles (7.2%) is water. The highest natural point in Washington is Mount Rainier at 14,411 feet. Mount Rainier is the most visited attraction in Washington, and the tallest volcano in the lower 48 states. The Mount Rainier National Park celebrated 100 years in 1999. The park has a perpetual snowpack and 26 glaciers.

**Topography**

The topography of Pierce County is quite varied; elevations range from sea level to the 14,410 foot summit of Mount Rainier. The general slope from east to west is fairly gentle except for abrupt drops into the larger river valleys of the County.

The Puget Sound lowland may be characterized as a relatively flat plain ranging in elevation from 100 feet to 700 feet above mean sea level, rising to approximately 2,000 feet where the forested foothills begin. The plain is broken at irregular intervals by rolling terrain and by the steep-walled valleys of the major rivers. The valley walls are precipitous in many places such as those of the Puyallup River.

The Cascade foothills are an undulating to rolling belt of benches and low hills with fairly shallow stream channels except for the major rivers. The Cascade Mountains, with the exception of Mount Rainier, range in elevation from 2,500 to 7,000 feet.

**Soils**

The glacially-derived soils of Pierce County have been altered by climatic and vegetative processes. Upland deposits are mantled by glacial till and shallow soil, and the alluvial deposits of the major river valleys are deep and agriculturally productive.

Two or more individual soils make up a soil association. In the Pierce County area included in the *Soil Survey of Pierce County Area, Washington* (1979), 38 different series of soils have been identified.
Most of the County’s soils are of low-to-moderate erosion potential. According to Soil Conservation Service data, approximately 12% of the soils in the Pierce County Soil Survey have moderate to severe, severe, or very severe erosion potential. Most of these soils are associated with steep slopes. Steep sloped areas, especially those with pervious soils underlain by impervious hardpan layers, are also subject to landslide hazards.

Many of the County's soils have severe limitations for septic tank fields primarily due to wetness, slope, and an impervious cemented pan layer. Soils with slight limitations for septic, such as Spanaway soils, have greater permeability. However, the permeable nature of these soils can increase the potential for groundwater pollution.

**GOVERNMENT**

The County has adopted and is governed by a charter. This is allowed by section 4 of Article XI of the Washington constitution. The Pierce County Executive heads the County's executive branch. The Assessor-Treasurer, Auditor, Prosecuting Attorney, and Sheriff are also countywide elected executive positions.

The Pierce County Council is the elected legislative body and consists of seven members elected by district. The Council is vested with all law-making power granted by its charter and by the State of Washington. The Council sets County policy through the adoption of ordinances and resolutions, approves the annual budget, and directs the use of County funds. The seven members of the County Council are elected from each of seven contiguous and equally populated districts, with each Councilmember representing approximately 114,000 County residents. Each County Councilmember is elected to serve a four-year term.

**GROWTH MANAGEMENT PLANNING**

**PLANNING IN PIERCE COUNTY**

The first Pierce County Comprehensive Plan (post-GMA) was created by the Pierce County Citizens' Advisory Group through a grassroots public process. Review and revision of the draft involved the Pierce County Planning Commission, the County Council, and the County Executive, with much technical assistance from County department staff. The review included public outreach including television programs, open houses, community meetings, public testimony, and mailings.

The plan was adopted by the Pierce County Council on November 29, 1994, and became effective on January 1, 1995. It integrated residents' ideas, concerns, and preferences into statements of how the County should be developed, what development regulations should accomplish, what facilities and services levels are needed, and how publicly-funded improvements should support these objectives.
The policies of the Comprehensive Plan articulate a vision of Pierce County. Residents and stakeholders continue to use the plan to guide their design and location decisions as they plan for improvements. Although the plan looks only 20 years into the future, the values and objectives expressed in the plan extend beyond the 20-year planning horizon. The plan is reviewed and updated regularly to address changes in conditions or the vision of the County's residents.

Planning in Pierce County is also influenced by and must be consistent with other planning documents at the State, Regional, and Countywide levels. This top-down approach is shown in the hierarchy graphic above.

**WASHINGTON STATE GROWTH MANAGEMENT ACT**

In 1990, the State Legislature enacted the Growth Management Act (GMA) which initiated and required the development of policies to manage growth in Washington State. All urban counties and their cities and towns were required to develop comprehensive plans and regulations to implement those plans. Plans must address issues in land use, transportation, housing, capital facilities, utilities, and rural lands, and must guide development and accommodate the population growth forecast for the next 20 years.

The Growth Management Act (RCW 36.70A) and related State planning guidelines (WAC 365-196) guide the development and update of the Pierce County Comprehensive Plan. The Act outlines 14 goals for the development of a comprehensive plan. Each goal, viewed as equally important, must be furthered by the growth management strategies.

These goals, as set forth in RCW 36.70A.020, are adopted to guide development and adoption of Pierce County's Comprehensive Plan and Development Regulations. The goals are not listed in order of priority.
The 14 planning goals are:

<table>
<thead>
<tr>
<th>Goal</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Urban Growth</strong></td>
<td>Encourage development in urban areas where adequate public facilities and services exist or can be provided in an efficient manner.</td>
</tr>
<tr>
<td><strong>Reduce Sprawl</strong></td>
<td>Reduce the inappropriate conversion of undeveloped land into sprawling, low density development.</td>
</tr>
<tr>
<td><strong>Transportation</strong></td>
<td>Encourage efficient multimodal transportation systems that are based on regional priorities and coordinated with county and city comprehensive plans.</td>
</tr>
<tr>
<td><strong>Housing</strong></td>
<td>Encourage the availability of affordable housing to all economic segments of the population of this state, promote a variety of residential densities and housing types, and encourage preservation of existing housing stock.</td>
</tr>
<tr>
<td><strong>Economic Development</strong></td>
<td>Encourage economic development throughout the state that is consistent with adopted comprehensive plans, promote economic opportunity for all citizens of this state, especially for unemployed and for disadvantaged persons, promote the retention and expansion of existing businesses and recruitment of new businesses, recognize regional differences impacting economic development opportunities, and encourage growth in areas experiencing insufficient economic growth, all within the capacities of the state's natural resources, public services, and public facilities.</td>
</tr>
<tr>
<td><strong>Property Rights</strong></td>
<td>Private property shall not be taken for public use without just compensation having been made. The property rights of landowners shall be protected from arbitrary and discriminatory actions.</td>
</tr>
<tr>
<td><strong>Permits</strong></td>
<td>Applications for both state and local government permits should be processed in a timely and fair manner to ensure predictability.</td>
</tr>
<tr>
<td><strong>Natural Resources Industries</strong></td>
<td>Maintain and enhance natural resource-based industries, including productive timber, agricultural, and fisheries industries. Encourage the conservation of productive forest lands and productive agricultural lands, and discourage incompatible uses.</td>
</tr>
<tr>
<td><strong>Open Space and Recreation</strong></td>
<td>Retain open space, enhance recreational opportunities, conserve fish and wildlife habitat, increase access to natural resource lands and water, and develop parks and recreation facilities.</td>
</tr>
<tr>
<td><strong>Environment</strong></td>
<td>Protect the environment and enhance the state's high quality of life, including air and water quality, and the availability of water.</td>
</tr>
<tr>
<td><strong>Citizen Participation and Coordination</strong></td>
<td>Encourage the involvement of citizens in the planning process and ensure coordination between communities and jurisdictions to reconcile conflicts.</td>
</tr>
<tr>
<td><strong>Public Facilities and Services</strong></td>
<td>Ensure that those public facilities and services necessary to support development shall be adequate to serve the development at the time the development is available for occupancy and use without decreasing current service levels below locally established minimum standards.</td>
</tr>
<tr>
<td><strong>Historic Preservation</strong></td>
<td>Identify and encourage the preservation of lands, sites, and structures that have historical or archaeological significance.</td>
</tr>
<tr>
<td><strong>Shorelines</strong></td>
<td>Manage development within Shoreline jurisdiction consistent with the Washington State Shoreline Management Act and Pierce County's Shoreline Master Program.</td>
</tr>
</tbody>
</table>
MULTICOUNTY PLANNING

The Act also required the development of multicounty planning policies for the central Puget Sound region of King, Kitsap, Pierce, and Snohomish counties. The Multicounty Planning Policies, developed as part of Vision 2040, describe regional objectives for issues that cross county boundaries and need to be met to achieve inter-jurisdictional consistency. The Vision 2040 Planning Policies were adopted in March of 1993 by the General Assembly of the Puget Sound Regional Council (PSRC) as an amendment to Vision 2040. In 2012, the PSRC adopted Transportation 2040, a transportation action plan update for the central Puget Sound region.

Vision 2040 Planning Policies cover the same topics required of the Countywide Planning Policies (CPPs). Open space linkages, resource protection, and critical areas, identified as important issues in the GMA, were also included because of their regional importance and the impossibility of achieving them without the inter-county collaboration. In 2008, the PSRC adopted Vision 2040, an update to the Multicounty Planning Policies.

COUNTYWIDE PLANNING

The Pierce County Regional Council (PCRC) was created to ensure planning between Pierce County and its cities and towns was accomplished in a coordinated, consistent manner. The Council is comprised of elected officials from Pierce County, each of its 23 cities and towns, and the Port of Tacoma. The primary responsibility of the PCRC is to ensure that the Growth Management Act requirements are coordinated within the County and the region. The Countywide coordination is accomplished through the implementation of the Pierce County Countywide Planning Policies.

The regional coordination is accomplished by this group acting as a sub-regional council to the Puget Sound Regional Council (PSRC). The PSRC represents the four-county region of Pierce,
King, Snohomish, and Kitsap counties. Members from the PCRC are represented on the different boards and commissions of this regional body. These boards include the Growth Management Policy Board, the Transportation Policy Board, the Economic Development Policy Board, and the Executive Board. Joint jurisdictional planning will occur in those areas where the respective jurisdictions agree such planning would be beneficial. Designation of Urban Growth Areas (UGA) requires extensive coordination between the cities and towns and the County. Though UGAs remain under the County's jurisdiction, it is beneficial to both municipalities and the County to jointly plan for them.

Cities and towns are concerned about the type of land use activities and design standards which are permitted outside of their municipal limits, since they have a direct impact on the city or town. Many of the cities and towns have developed land use plans which address areas currently under the County's jurisdiction. For the cities and towns to effectively reach their goals after an annexation, they need to ensure the County does not permit activity which would be inconsistent with their future plans.

To address this concern, the Pierce County Council passed Resolution No. R93-96, which supports a Joint Planning Framework recommended by the Pierce County Regional Council. The strategy of the Joint Planning Framework is to encourage appropriate jurisdictions to enter into interlocal agreements to facilitate and accomplish joint planning in areas of mutual concern. Interlocal agreements enable the involved jurisdictions to work together to review and consider issues of mutual concern.
DIRECTION AND IMPLEMENTING POLICIES

The Comprehensive Plan is intended for use by all members of the community for unincorporated Pierce County. The plan is internally consistent even though some issues are addressed through multiple policies in multiple elements and some issues receive refined and more detailed direction in community plans.

The policies contained within this Comprehensive Plan are intended to be statements of policy, and allow flexibility when it comes to implementation. Policies cannot be applied independently; rather, implementation of the policies must be balanced with one another and will address details such as how and when the policy is applied and any relevant exceptions.

The Comprehensive Plan is a tool to assist County Councilmembers, planning commissioners, County staff, and others involved in making land use and public infrastructure decisions. It provides the framework for the County’s Development Regulations.

Supplemental resources are available on the Department of Planning and Land Services website.

DOCUMENT ORGANIZATION

While the Comprehensive Plan’s narrative text and maps frame the key proposals, the essence of the plan lies in its policies. These are declarative statements that set forth the County’s approach to various issues. While every effort has been made to provide clear policies, there may be a need for interpretation. The authority of interpretation lies with the County and will be enacted through decisions.

✔ Goals are the overarching policy direction on a particular topic that represents the main idea of subsequent policies. Goals tend to be very general and broad.

✔ Policies provide further guidance in support of the goals.
Within each element chapter, the policies are organized presented in the following format:

**SOLUTIONS TO HOUSING ISSUES**

The Housing and Land Use Elements provide direction to accommodate enough affordable housing for all economic segments of the community. Land use strategies may include: allowance for accessory dwelling units, infill development, rehabilitation of existing housing, mixed-use development, and smaller lot sizes. Regulatory strategies may include streamlined approval processing and priority permit processing.

The Land Use Designations Map in the Land Use Element identifies ten land use designations within an Urban Growth Area to accommodate projected housing needs: Moderate Density Single Family, High Density Single Family, Master Planned Communities, Major Urban Centers, Activity Centers, Community Centers, Neighborhood Centers, Mixed Use Districts, High Density Residential Districts, and Urban Villages. Of these designations, the Moderate Density Single Family, High Density Single Family, High Density Single Family, and the High Density Residential Districts are to accommodate only residential uses.

Low income and government subsidized households, and individuals or multi-family structures. Housing objectives, principles, and strategies in the Comprehensive Plan encourage income diversity within the population and guarantee an adequate supply of housing for all socioeconomic segments of the population.

It is the intent of the Housing Element to create solutions for affordability, to collectively address all economic segments of the population, very low income, extremely low income, 50 percent area median income, ≤ 50 percent area median income, and ≤ 50 percent area median income, respectively.

It is the intent of the Housing Element to create solutions for affordability, to collectively address all economic segments of the population, very low income, extremely low income, 50 percent area median income, ≤ 50 percent area median income, and ≤ 50 percent area median income, respectively.

**GOAL H-1**

Allow for a range of housing types in appropriate areas of the County.

- H-1.1 Encourage a variety of housing types that allow high densities and creative use of land within the urban area.
- H-1.2 Ensure that housing types within the rural and resource areas retain the rural character, and respect the features of the lands.

**GOAL H-2**

Encourage the development of new housing within the urban growth areas where facilities and services exist or are planned.

- H-2.1 Increase density in communities with existing infrastructure.
- H-2.2 Allow for accessory dwelling units, cottage housing, and Katrina cottages to reduce housing costs for residents.

**NARRATIVE INFORMATION**

An introduction to each section, supplemental information, and data may be found in the narrative preceding policies.

**ADDITIONAL INFORMATION AND SIDEBARS**

Text boxes and sidebars are used to provide more information, examples, and visuals that are associated with policies.

**POLICY ORGANIZATION**

Within each element chapter, the policies are organized presented in the following format:

**POLICIES**

A policy is a statement to guide decision making. Policies are intended be carried out by an implementation measure.

**GOALS**

A goal is a general statement to introduce the general idea of the following policies.

**LINKS TO OTHER ELEMENTS/SECTIONS**

Buttons identify where there is overlap in policy with another element and provide a link to where they can be found.

**NUMERATING**

Policy numbering corresponds with the chapter title. Policies subsequent to a larger policy issue are numbered in a hierarchical format.

**CHAPTER AND PAGE NUMBERS**

Page numbers are organized by chapter number and page; they also include the title of the chapter.
There are multiple sub-plans that implement the Comprehensive Plan, and other documents that are related to the plan. The following list is not comprehensive, but provides supportive and related documents organized by element.

INTRODUCTION

The Land Use Element describes how the policies in the other plan elements will be implemented through land use policies and regulations, and thus, it is a key element of the Comprehensive Plan.

The Land Use Element was developed in accordance with the Countywide Planning Policies, VISION 2040, and integrated with the other Plan elements to ensure consistency throughout the Comprehensive Plan. The Land Use Element considers the general distribution and location of land uses, the appropriate intensity and density of land uses given current development trends, the provision of public services, and environmental considerations.

GROWTH MANAGEMENT ACT AND THE LAND USE ELEMENT

The Land Use Element of the Pierce Comprehensive Plan meets the goals of the State Growth Management Act by providing policies and mapping which designates the general distribution, location and extent of land use within the County. The land use element provides for a wide range of land uses including agriculture, timber production, housing, commerce, industry, recreation, open spaces, general aviation airports, public utilities, public facilities, and other land uses.

The land use element includes policies and guidance based on the existing population densities, and estimates of future population growth. The Land Use Element supports the foundational goal of the Growth Management Act by identifying and designating urban and rural areas and directing higher intensity development and growth into the urban areas. The Land Use Element recognizes development in both the urban and rural areas of the County that focuses urban development in the urban areas and provides for lower density development in rural areas to preserve the rural character.

The Land Use Element also includes policies that support communities that provide walking and biking access to local services and transportation. This includes policies for the development of more compact communities focused on access to transit and complete streets that provide for multiple users including pedestrians, bicyclists and transit. This urban design approach promotes increased physical activity within communities as encouraged by the Growth Management Act.

GROWTH AND DEVELOPMENT STRATEGY

The growth and development strategy directs future development primarily to occur within Urban Growth Areas. The growth and development strategy further directs major concentrations of development to occur in centers, mixed use districts, and high density residential districts. Moderate density single-family residential areas will serve as the principal land use for the remaining areas within the Urban Growth Areas.
PROVISION OF FACILITIES AND SERVICES

Facilities and services are necessary for urban growth and economic development. They are essential for achieving high-quality, attractive communities. Since most growth will be encouraged in Urban Growth Areas and since the low densities to be maintained in Rural Areas require a lesser level of public improvements, Pierce County is committed to using its limited public resources to concentrate on providing public services in Urban Areas. The County also can set different spending priorities within UGAs to maximize the impact of public spending and to attract certain kinds of growth to specific locations.

PLANNING APPROACHES TO INCREASE PHYSICAL ACTIVITY

Recognizing the growing need for physical activity among residents, the Washington Legislature enhanced the GMA guidelines for multimodal transportation in 2005 when they passed Engrossed Substitute Senate Bill (ESSB) 5186. This law amends the GMA and requires that communities consider urban planning approaches that promote physical activity. (Planning to Encourage Physical Activity-WA CTED) Meeting this requirement includes providing policies and plans regarding land use and transportation that make walking and biking to daily services and needs easier and preferred.

The Pierce County Comprehensive Plan includes the following approaches to increase physical activity:

- Compact Communities and Transit-Oriented Corridors – The Comprehensive Plan provides policies for the development of compact communities or transit oriented corridors that provide for pedestrian and bicycle connections to local services and transit. (Land Use Element: Compact Urban Communities)
- Complete Streets – The Comprehensive Plan provides policies for the development of streets that accommodate multiple users and enhance access and connectivity for pedestrians and bicyclists. (Transportation Element: Active Transportation)
- Employment Centers – The Comprehensive Plan provides policies that the location and design of employment centers should facilitate access and circulation by transit, pedestrians, bicyclists, and other alternative transportation modes. (Land Use Element: Employment Center)

INVENTORIES, FORECASTS, AND ANALYSIS

The inventory presented in this element provides information useful to the planning process. It does not include all of the data or information that was gathered, but presents the relevant information in an organized and useful format. The inventory summarizes general implications for development of the physical descriptions or types of land use, and summarizes the County's specific information. The analysis of this information is detailed below. This section includes population, demographics, population targets, land capacity, target allocations, and the land
use inventory. The following information shows Pierce County is compliant with the Vision 2040 Regional Growth Strategy.

**Population**

The 2010 Census reports that 795,225 people, 299,918 households, and 202,174 families resided in the County with a population density of 476.3 people per square mile. Approximately 46% of the population resides within unincorporated Pierce County. Table 2-A shows the increase in population since the 2000 Census.

¹OFM, 2000 and 2010 Census.

**Demographics**

Figure 2-A shows the racial makeup of unincorporated Pierce County was 78.8% White, 5.0% Black or African American, 1.2% Native American and Alaska Native, 4.4% Asian, 1.5% Native Hawaiian or Other Pacific Islander, 6.3% from two or more races, and 2.9% some other race (all categories include Hispanic or Latino). Within these categories, 8% of the total population was Hispanic or Latino.

**Figure 2-A: Unincorporated Pierce County Race/Ethnic Origin (includes Hispanic or Latino)**

In Pierce County as a whole, the 2010 Census reported 299,918 households, of which 35.3% had children under the age of 18 living with them, 49% were married couples living together, 13% had a female householder with no husband present, and 32.6% were non-families.
Individuals made up 25.1% of all households and 7.9% of those were individuals who were 65 years of age or older. The average household size was 2.59 and the average family size was 3.09.

**Figure 2-B: Unincorporated Pierce County Age Categories**

As shown in Figure 2-B, the majority of unincorporated Pierce County’s 2010 population was in the Under 18 category and the remainder of the population was dispersed evenly throughout the other categories. Males accounted for 50.02% of the population, while females accounted for 49.98%. The median age was 35.7; 35 for males and 36.4 for females.

**Population Targets**

The Growth Management Act requires Pierce County to designate an Urban Growth Area(s) that is sufficient in size to accommodate the projected urban population growth for the 20-year planning period.

The basis for the County’s urban population target is a countywide projection range generated by the Washington State Office of Financial Management (OFM). Pierce County and its cities and towns were challenged to identify a 20-year countywide population forecast within the OFM range and then disaggregate the total to individual Urban Growth Areas and the rural area of the County.

Pierce County Council adopted targets in 2011 using the April 2007 population projections, and basing the target on the 2008 population estimate. The 2008 population estimates have since been updated with the 2010 Census.

</tr>
</tbody>
</table>

Table 2-C also shows that the countywide range in the 2012 projection series is: low–827,893; medium–967,601; high–1,080,829. The countywide population target, shown in Table 2-B, is within the high range of the 2012 population projection series. Although the target is not based on the most recent OFM population projection series, it is still within the range of the 2012 projections.

PIERCE COUNTY BUILDABLE LANDS REPORT

The Growth Management Act requires Pierce County to designate an Urban Growth Area(s) that is sufficient in size to accommodate the projected urban population growth for the 20-year planning period. The basis for the County’s urban population projection is a countywide projection range generated by OFM. Pierce County and its cities and towns are challenged to identify a 20-year countywide population forecast within the OFM range and then disperse the total to individual Urban Growth Areas and the rural area of the County.

Pursuant to RCW 36.70A.215, Pierce County and its cities and towns collect development data and establish assumptions for future growth in an effort to analyze future housing and employment capacity. In June 2014, Pierce County submitted its third Buildable Lands Report to the State Legislature that encompasses all incorporated and unincorporated areas. The Buildable Lands Report monitors growth since the last report cycle and uses assumptions based on the growth trends in order to estimate future capacity for the 20-year planning horizon. The results of the report are used as a basis to determine if the Urban Growth Area is appropriately sized.

URBAN GROWTH AREA CAPACITY METHODOLOGY

The methodology applied to estimate housing and employment capacity is detailed in the 2014 Pierce County Buildable Lands Report. The inventory categorizes lands as vacant, underutilized, or pipeline projects, and all other land is assumed to be undevelopable or built out. Vacant lands include all lands that typically do not have an established structure or land use associated with them. Vacant land is categorized as either a vacant parcel or a vacant single unit parcel, the distinction being that it is assumed vacant parcels have sufficient acreage to be further subdivided, whereas, the vacant single unit parcels are too small to be further subdivided and are counted as one unit per parcel. Underutilized lands are identified as having an existing use, but meet the criteria used to determine if they may be able to accommodate more growth. Pipeline projects are parcels with an application for a project that is assumed will build out during the 20-year time frame.
The methodology also assumes that not all of the property will be developed to its potential and available for housing within the next 20 years. To reflect this assumption, land is subtracted to account for supply availability. The full methodology is outlined in the 2014 Buildable Lands Report.

**CONCLUSIONS OF THE 2014 BUILDABLE LANDS REPORT**

Collectively, the statistics derived from the analyses indicate Pierce County's existing Urban Growth Areas contain an adequate amount of buildable land needed to accommodate the planned growth. While the analyses may indicate some jurisdictions do not have the housing or employment capacity to meet their needs, the surplus within other jurisdictions is adequate to meet the County's overall needs.

Summarizing the results of the report, as shown in Figure 2-C, the Pierce County housing need totals 115,483 units. The estimated housing capacity equals 184,962. This difference identifies an excess of residential capacity at approximately 60% of the countywide need. For the unincorporated Pierce County Urban Growth Area, the estimated housing capacity equals 40,058 units. Compared to housing need of 29,714 units, there is an excess capacity of approximately 35%.

The Pierce County employment need totals 160,885 employees, while the estimated employment capacity is 319,386 employees. This difference identifies an excess of employment capacity at approximately 98.5% of the countywide need. For the unincorporated Pierce County UGA, the estimated employment capacity equals 30,118 employees, compared to an adjusted employment need of 26,969 employees, resulting in an excess capacity of approximately 11.7%.

Within unincorporated urban Pierce County, 29.3% of the assumed housing capacity is from vacant land, 39.6% is from underutilized land, and 33.5% is from pipeline projects. The majority of residential capacity is from underutilized lands, which are more challenging to develop than vacant lands. It is also assumed a greater share of growth will be housed in areas zoned for multifamily/mixed use development.

**Figure 2-C: 2014 Buildable Lands Report Future Capacity vs. Need**

Housing Unit and Employment Target Allocations

The County adopted housing and employment targets for the 20-year planning period. Pierce County Transportation Planning developed a Transportation Analysis Zone (TAZ) based land use allocation model that allocated these targets throughout cities, towns, and unincorporated UGAs.

The method focused on allocating future growth to areas that had experienced growth in the last 20 years and still had capacity for future growth, as opposed to an even proportional method which spreads growth evenly across a jurisdiction where there is capacity. The approach assumes that growth will infill areas that have already experienced growth before expanding to outer regions that have not; growth begets more growth.

Data

Inputs included:

- 1990 and 2010 housing data from the census;
- 1990 and 2010 employment data from the Washington State Employment Security Department (ESD); and
- Inventory and capacity data from the 2014 Buildable Lands Report.

These data sets were used to determine where:

- Growth occurred;
- Development exists; and
- Capacity for more growth is located.

Target Allocation

The allocation totals for cities and towns are consistent with the adopted targets. Each jurisdiction’s target was then further allocated by TAZ. As directed by Pierce County Council Ordinance No. 2011-36s, the targets for urban unincorporated Pierce County were further subdivided by sub-area using Potential Annexation Area (PAA) boundaries.

Allocations for the PAAs, Frederickson Manufacturing/Industrial Center, and the remainder of the UGA not associated with a PAA are included in Table 2-D. Each jurisdiction’s target was then further allocated by TAZ.

¹Employment allocations do not match the estimated need shown in the 2014 Buildable Lands Report. Allocations used ESD employment data for 2010 where the report used 2010 existing employment data reported by PSRC.

### Land Use Inventory

The inventory shown in Table 2-E includes land use information about the unincorporated portions of Pierce County. The existing types of land uses can be used to gauge the proportion of total land area that the County will need to devote to each land use in the future. The existing land uses will be adjusted for expected shifts in needs or desires, and projections of future land uses will be derived.

### Land Use Map

The Growth Management Act ([RCW 36.70A.070](https://laws.wa.gov/bcs/36.70A.070)) requires that the Comprehensive Plan clearly show the general distribution of land, where appropriate, for agriculture, timber production, housing, commerce, industry, recreation, open spaces, general aviation airports, public utilities, public facilities and other land uses. The future land use map, Map 2-1, should also show cities and urban growth areas. The Comprehensive Plan Land Use map shows the general distribution of land uses, city boundaries and urban growth areas and is the representation of the goals and policies of the Comprehensive Plan for the organization and coordination of land uses.
The majority of new housing and jobs are intended to locate within the Urban Growth Areas (UGAs). Public spending for facilities, services, and open space is to be focused in the UGA to promote efficient use of public improvements and services, and enhance community diversity and livability. The UGAs include incorporated cities and towns, and the majority of Pierce County’s population and economic base.

The growth and development strategy directs future development to occur primarily within Urban Growth Areas. Major concentrations of development will be directed to occur in centers, mixed use districts, and high density residential districts. Moderate density single-family residential areas will serve as the principal land use for the remaining areas within the UGA.

The urban land use designations addressed in this section are as follows:

### Table 2-F: Urban Land Use Designations

### Urban Growth Area

An Urban Growth Area (UGA) is defined by a boundary which is intended to graphically show the separation of lands expected to be urban from those lands expected to be rural or devoted to mining, forestry, or agriculture. Each city and town within the County must fall within an Urban Growth Area. Additionally, urban lands in unincorporated portions of the County should be within an urban growth boundary. The Growth Management Act (GMA) bestows the responsibility for designating these UGAs upon the County; and further, GMA requires that the designations be contained in the County’s Comprehensive Plan.
ANNEXATION

Although the County has the ultimate responsibility for defining the UGAs, the design of the Urban Growth Area scheme is the result of a collaborative process with the cities and towns of the County.

The individual cities and towns within the Urban Growth Area (UGA), in collaboration with the County, have established Potential Annexation Areas (PAAs). Each PAA mapped within the UGA is based upon the information provided by the individual city or town. These individual city and town PAAs, within the UGA, are incorporated as part of the County's Comprehensive Plan.

Although the County and the cities and towns within the UGA concur that individual PAAs may change as growth management planning and implementation proceed, the affected municipalities and the County agree that PAA designations are provided under the terms of the June 30, 1992 Countywide Planning Policies (page 48, Policies 1.1 and 1.3) and RCW 36.70A.110.

Areas within the UGA, where requested individual Potential Annexation Areas overlap one another, have been identified as overlap areas on the Urban Growth Area/Potential Annexation Area map, Map 2-2. The County should not designate UGAs or PAAs within these overlap areas until such time as the requesting jurisdictions resolve the overlap conflicts by agreement and/or further cooperation with the County.

These designations are based upon the jurisdictions' commitment and ability to provide urban level services and facilities to these areas. Ultimately, the specific activities and land uses encouraged within these areas and the growth management system used will be identified through a joint planning process and subsequent negotiation and execution of interlocal agreements.

However, until such agreements are in place, the County's land use designation and growth management system will govern development proposals within the unincorporated areas. The County's land use designations within these unincorporated UGAs are generally consistent with comprehensive plans of the affected jurisdictions.

The biannual plan amendment process, as authorized by RCW 36.70A.130(2) and PCC 19C.10, will be used to designate Urban Growth Areas, as necessary, for cities and towns as the County's growth management abilities evolve. Likewise, it is expected that the plan amendment process will be critical in allowing necessary adjustments to the PAAs of jurisdictions within the UGA and making necessary and reciprocal modifications to the UGA itself.

INCORPORATION

In addition, the County has identified a Potential Incorporation Area (PIA) for the Employment Based Planned Community (EBPC) of Tehaleh and expects to designate additional PIAs upon further review. The Tehaleh PIA designation was based upon a variety of factors including: its size and projected population, which are comparable to those of other cities in Pierce County;
its EBPC designation and master plan, distinguishing it from other urban areas; its separate geographical identity, removed from nearby cities through distance, land use and topography; its mixture of urban densities and other uses needed for a complete city, including employment, civic, commercial, park and other uses; uses that establish a viable potential tax base; a sense of unique identity and community that has already developed; and the provision of urban services that are planned to serve the whole development, largely financed by the residents and not provided by nearby cities. These factors, as well as the expressed views of current residents, make incorporation a strong potential. PIAs are identified as part of the County's Comprehensive Plan.

This PIA designation includes additional parcels that are owned by others within the general boundaries of Tehaleh. These additional parcels are part of the logical boundary of the future incorporation area. Although they are not part of the Tehaleh Master Plan, they are in the UGA, are in the Cascadia Sewer Service Area, are served by the same street network, and are physically located so that they should be part of the same municipality.

Note: Disclaimer: The data layers are approximate and are intended only to provide an indication of real-world features. Additional data that have not been input may be present. This is not a survey. The County accepts no liability for errors or omissions. The County makes no warranty of fitness for a particular purpose.
ANNEXATION AND URBAN GROWTH AREA EXPANSION

GOAL LU-1 Promote the annexation of adjacent unincorporated urban areas by the neighboring city or town and the incorporation of suitable areas.

LU-1.1 Pierce County shall encourage annexation of adjacent unincorporated urban areas by neighboring cities and towns through outreach to residents, land owners, and other stakeholders.

GOAL LU-2 All unincorporated urban areas within the urban growth area shall be either affiliated with neighboring cities and towns as Potential Annexation Areas (PAAs) or identified as Potential Incorporation Areas (PIAs).

LU-2.1 Overlapping PAAs are not encouraged but may exist where two or more jurisdictions have mutual interest in an area.

LU-2.2 Any modification to an established PAA shall not result in an unincorporated urban island that is not affiliated with any city or town.

LU-2.3 The general preference is for unincorporated urban areas to be affiliated with neighboring cities or towns rather than being identified as a PIA. However, a PIA designation can be established where incorporation of an area is appropriate based upon: logical geographic boundaries; size; population; a potential tax base to support a City; a variety of uses needed for a City, including residential, businesses, civic and recreational; urban services and facilities provided other than by adjacent cities; a community identity; and other appropriate factors.

GOAL LU-3 Pierce County should establish a program that explores the possibility of incorporation of identified areas.

LU-3.1 Pierce County should establish stakeholder groups of local residents, service providers, businesses, and other interested parties to identify opportunities and challenges associated with the incorporation of identified areas.

LU-3.2 Pierce County should explore the economic viability of incorporation through the completion of incorporation feasibility studies. An incorporation feasibility study should include at a minimum:

LU-3.2.1 The area proposed to be included;
LU-3.2.2 Current estimate and future projections of population;
LU-3.2.3 Existing land uses and housing;
LU-3.2.4 Per capita assessed valuation;
LU-3.2.5 Current services provided to the community by the County, special purpose districts, school districts, other countywide authorities, and the state;
LU-3.2.6 Analysis of tax and revenue options for the operations of a new city;
LU-3.2.7 Revenue estimates;
LU-3.2.8 Expenditures – proposed city budget including operating expenditures and capital facilities and equipment expenditures;
LU-3.2.9 Land use policy;
LU-3.2.10 Provision of services by new city and impacts upon current service providers; and
LU-3.2.11 Analysis of alternatives.

GOAL LU-4 Facilitate the transformation of unincorporated urban areas into cities and towns through annexation.

LU-4.1 Pierce County should establish a program that promotes annexation of Potential Annexation Areas.

LU-4.1.1 Pierce County shall support annexation proposals that are consistent with the Pierce County Countywide Planning Policies and the Washington State Growth Management Act, when the area proposed for annexation is wholly within the annexing city’s adopted Potential Annexation Area (PAA).

LU-4.1.2 The County’s highest priority for annexation are unincorporated islands between cities and towns.

LU-4.1.3 Pierce County shall not support annexation proposals that would:

LU-4.1.3.1 Result in illogical service areas;
LU-4.1.3.2 Create or lead to a potential creation of unincorporated islands; or,
LU-4.1.3.3 Focuses solely on areas that would provide a distinct economic gain for the annexing city at the exclusion of other proximate areas that should logically be included.

LU-4.2 Pierce County should work towards establishing joint planning agreements between the County and its cities and towns

LU-4.2.1 Joint planning agreements should encompass a city or town’s Potential Annexation Area.

LU-4.2.2 A joint planning agreement is to serve as a mechanism where the County or a city can, prior to notice of annexation, identify potential objections and resolutions.

LU-4.2.3 The development and implementation of joint planning agreements between cities and the County shall be accomplished through reference to relevant adopted community plans and in consultation with representatives of appropriate Land Use Advisory Commission or community representatives if a commission has not yet been established for the area.

LU-4.2.4 Pierce County should explore the establishment of financial partnerships with its cities and towns to address needed infrastructure.
LU-4.2.5 Cities and towns should establish a timeline for service transitions and for annexation.

LU-4.2.6 Ensure that the County’s land use designations and associated development regulations are consistent with a city or town’s land use plans within its respective Potential Annexation Areas.

LU-4.3 Encourage the annexation or incorporation of unincorporated urban areas through improving the local economic market.

GOAL LU-5 The County should explore and implement financial incentives for a city or town to annex areas associated with its respective Potential Annexation Area.

GOAL LU-6 Contain and direct growth within the designated Urban Growth Areas (UGAs) where adequate public facilities exist or can be efficiently provided.

LU-6.1 Adopt measures individually or through joint planning to ensure that growth is timed and phased consistently with the provision of adequate public facilities and services.

LU-6.2 Prior to expansion of a Potential Annexation Area (PAA) affiliated with a city or town, a joint planning agreement must be in place for all PAAs affiliated with the jurisdiction.

GOAL LU-7 Review residential, commercial, and industrial development capacity no later than a year prior to a mandated Comprehensive Plan update to determine whether adjustment of the UGA is appropriate.

LU-7.1 The evaluation should encompass the capacity of lands within municipal limits and unincorporated urban Pierce County.

LU-7.2 Utilize the most recent information on population and development trends to augment the most recent capacity analysis when reviewing proposed new UGAs or expansion of existing UGAs.

LU-7.3 The land safety factor for the Pierce County UGAs should not exceed 25%, derived from the combined UGAs, not individual UGAs.

LU-7.4 The methodologies used to determine the capacity of the UGAs and to calculate the allowable number of dwelling units for individual development proposals shall be consistent with each other.

GOAL LU-8 Consider the following priorities for expanding the 20-year Urban Growth Area (UGA) boundary:

LU-8.1 Future expansion areas should be affiliated with a city or town.

LU-8.2 Lands with high concentrations of critical areas or designated as resource lands should be given the lowest priority for inclusion into the UGA, and should be included only when a compensatory program, such as the Transfer of Development Rights, is in place.
LU-8.3 Lands that are necessary to provide capacity for student population growth in those school districts that have completed a collaborative planning process with the County.

LU-8.4 Assure that urban level facilities and services are provided within the designated Urban Growth Areas.

LU-8.5 Ensure that future Urban Growth Area expansions are consistent with applicable provisions of the Growth Management Act (GMA) and State Environmental Policy Act (SEPA).

GOAL LU-9

Expansions of the UGA shall be approved only by the County Council through a Comprehensive Plan amendment process as established in Chapter 19C.10 PCC, if the following criteria are met:

LU-9.1 A need is demonstrated for additional residential or employment capacity within the urban growth area affiliated with an individual jurisdiction and a demonstrated countywide need; or the expansion results in a no net gain of housing unit or employment capacity to the countywide UGA. The demonstration of need shall be shown through a comparison of the adopted housing unit or employment targets against the housing or employment capacity as documented in the most recent Buildable Lands Report; and

LU-9.2 The jurisdiction’s observed development densities are consistent with the planned density assumptions as documented in the most recently published Buildable Lands Report as required by RCW 36.70A.215; and

LU-9.3 If the Buildable Lands Report identifies an inconsistency between the observed and assumed densities, the jurisdiction shall either demonstrate that reasonable measures were adopted to rectify the inconsistency, or document updated development data that indicates consistency.

LU-9.4 If a jurisdiction adopted reasonable measures, documentation shall be submitted that summarizes the monitoring results of the effectiveness of the measures in rectifying density inconsistencies.

LU-9.5 Documentation that adequate public facilities and services can be provided within the 20-year planning horizon is provided.

LU-9.6 Proposed UGA expansion areas shall be required to comply with the requirements of Pierce County’s TDR/PDR program.

LU-9.7 Proposed UGA expansion areas should be approved only if the proposing jurisdiction provides an analysis of:

LU-9.7.1 The underutilized lands, consistent with the Pierce County Buildable Lands program methodology, within its existing municipal boundaries and affiliated UGAs, and evidence of implementation strategies in place or being pursued to densify the underdeveloped lands;
LU-9.7.2 Housing goals or policies in place to encourage housing for all economic segments of the community; and

LU-9.7.3 How the proposal is consistent and reasonable with the jurisdiction’s adopted comprehensive plan.

LU-9.8 Future UGA expansion areas should be approved only if it is demonstrated that the area has the capability and capacity to provide urban level services while maintaining a healthy natural ecosystem.

LU-9.9 Future UGA expansion areas should avoid the inclusion of designated agricultural lands and critical areas.

LU-9.10 Adopted land use and design standards for proposed UGA expansion areas shall plan for design characteristics and infrastructure necessary to make transit a viable transportation alternative.

LU-9.11 Prohibit the expansion of the UGA into the 100-year floodplain of any river or river segment per RCW.

LU-9.12 Area(s) proposed to be removed from the UGA shall be rural in character and not have vested permits that will result in urban type development.

COMPACT URBAN COMMUNITIES

The PSRC Vision 2040 policies and the Pierce County Countywide policies direct the development of compact urban communities that have diversity of housing, high connectivity, and provide for multi-modal transportation including pedestrian, bicycle and transit. Many of the elements are found in Transit-Oriented Development (TOD). TOD is a land use strategy intended to promote efficient use of land and transportation infrastructure with places of relatively higher density, pedestrian-friendly development with a mix of land uses located within an easy walk of a bus or rail transit center.

The central Pierce County UGA presents opportunities and alternative ways to provide for centers/compact communities, these include Centers/Central Places and Transit-Oriented Corridors:

- **Centers/Central Places**: Identification of existing developed areas comprised of significant intersections or existing commercial/employment development that would serve as a focus of a future center/compact community; and

- **Transit-Oriented Corridor Center**: A Transit-Oriented Corridor is located along major corridors where existing development patterns provide the functions of a center, but in a linear corridor. These Corridors may be enhanced with transit and increased connectivity between transit-oriented residential and commercial areas.

An example of a Central Place/Local Center is the Garfield/Pacific Lutheran University area. This area is designated an Activity Center and has an existing Transit Center. The specific focus of the area is Garfield Street South which is being redeveloped into a mixed use commercial/residential center. This Central Place is identified in the Parkland Spanaway
Midland Community Plan. Other Central Places/Local Centers will be designated and mapped in the future.

**CENTERS/CENTRAL PLACES AND TRANSIT-ORIENTED CORRIDORS**

**GOAL LU-10** Designate Centers/Central Places and Transit-Oriented Corridors within the UGA. These Centers/Central Places and Transit-Oriented Corridors shall be characterized by the following:

- **LU-10.1** Clearly defined geographic boundaries;
- **LU-10.2** Intensity/density of land uses sufficient to support high-capacity transit;
- **LU-10.3** Pedestrian-oriented land uses and amenities;
- **LU-10.4** Pedestrian connections shall be provided throughout;
- **LU-10.5** Urban design standards which reflect the local community;
- **LU-10.6** Provisions to reduce single-occupancy vehicle use especially during peak hours and commute times;
- **LU-10.7** Provisions for bicycle use;
- **LU-10.8** Sufficient public open spaces and recreational opportunities; and
- **LU-10.9** Uses which provide both daytime and nighttime activities.

**GOAL LU-11** Recognize and map Central Places/Local Centers and Transit-Oriented Corridors through the comprehensive plan and community planning process.

- **LU-11.1** The Garfield/Pacific Lutheran University area is designated as a Central Place/Local Center.
- **LU-11.2** Recognize other Local Centers designated through community plans.
- **LU-11.3** Designate local centers as Centers of Local Importance (CoLI) and forward to Pierce County Regional Council for review and comment.

**GOAL LU-12** The County will develop high quality, compact communities that:

- **LU-12.1** Impart a sense of place;
- **LU-12.2** Preserve local character;
- **LU-12.3** Provide for mixed uses and choices in housing types; and
- **LU-12.4** Encourage walking, bicycling, and transit use.

**GOAL LU-13** The County shall design public buildings and public spaces that contribute to the unique sense of community and a sense of place.

**GOAL LU-14** The County shall design transportation projects and other infrastructure to achieve community development objectives of connectivity, walkability, bikability and transit support.
LU-14.1 Promote context-sensitive design of transportation facilities, both for facilities to fit in the context of the communities in which they are located, as well as applying urban design principles for projects in centers and transit station areas.

GOAL LU-15 Use community design that enhances the streetscape including:

LU-15.1 Wide sidewalks;
LU-15.2 Buildings that are located in close proximity to the right of way;
LU-15.3 Street trees;
LU-15.4 Landscape strips;
LU-15.5 Pedestrian amenities;
LU-15.6 Allowance for vertical mixed use development in selected places; and
LU-15.7 Transit amenities.

GOAL LU-16 Road designs in the centers and corridors must provide for all users including pedestrians, bicyclists and transit.

LU-16.1 Planning the design of the roads should focus on the particular need of that roadway to provide for the range of users.

GOAL LU-17 The Centers/Central Places and Transit-Oriented Corridors will be provided with transit amenities including bus stops, commuter parking and transit designated lanes.

GOAL LU-18 The County will coordinate with local transit providers to support high interval transit service that provides access to services within the entire Center/Central Place or Transit-Oriented Corridor and access to transit facilities that access regional centers of activity.

INFRASTRUCTURE FUNDING PRIORITY

The PSRC Vision 2040 policies and the Pierce County Countywide policies direct that transportation and economic development funds should be prioritized for Centers. The following types of improvements that promote compact urban communities and provide for multi-modal transportation including pedestrian, bicycle and transit:

- Amenities and community design elements that create a sense of place
- Wide Sidewalks
- Street trees
- Landscape strips
- Pedestrian amenities, benches, etc.
- Allowance for vertical mixed use development in selected places
- Transit amenities, bus stops, commuter parking, and transit designated lanes or corridors

GOAL LU-19 Infrastructure funding to support the growth and development of locally designated Centers/Central Places and Transit-Oriented Corridors shall be a high priority.
LU-19.1 The Capital Facilities Plan shall include a separate funding category that identifies infrastructure improvements and funding allocations for infrastructure improvements for Centers/Central Places and Transit-Oriented Corridors.

LU-19.2 The County shall develop plans and policies for designated Centers/Central Places and Transit-Oriented Corridors that identify the objectives to be met by future improvements.

LU-19.3 The County shall establish criteria for prioritizing improvements in Centers/Central Places and Transit-Oriented Corridors.

LU-19.4 Infrastructure identified in the Capital Improvement Plans shall support the policies and objectives of the Centers/Central Places and Transit-Oriented Corridors.

**Joint Development Funding Priority**

Joint development occurs when a public agency partners with other agencies, typically a transit agency, and private developers to develop property that may be owned by the agency and is generally located near a transit station. Partnership may also include the funding or construction of a major infrastructure components that facilitate a transit-oriented community or project even if property in owned privately.

**GOAL LU-20** The County will work with transit agencies to identify opportunities for use of publicly owned lands for joint use projects that enhance access to transit, increase transit ridership, and further the development of compact communities.

**GOAL LU-21** The County will work with private developers to create public-private projects where the joint action will create infrastructure improvements that will further the objectives of compact communities.

**GOAL LU-22** The County will prioritize and locate publicly accessed, public buildings within the Centers/Central Places or Transit-Oriented Corridors with the intent of adding services that are accessible by walking, biking and transit and furthering the objectives of compact communities.

**Urban Residential**

The land use designations that allow for residential uses range from single family to multifamily and mixed use at a variety of densities. The minimum density within the urban growth area is four dwelling units per acre, and in limited circumstances may be less than four in recognition of unique environmental characteristics as noted in the policies below.

**GOAL LU-23** Establish a minimum, base, and maximum density for all residential zones.

**LU-23.1** Ensure additional criteria are met if a property is developed at a density higher than the base.

Additional criteria include (LU-23.1):

- Site amenities
- Design features.
LU-23.2 Utilize a range of maximum densities to increase compatibility between neighboring residential zones.

LU-23.3 Provide density-based incentives.

LU-23.3.1 Mitigation necessary to address impacts of a development proposal will not be used as a basis for density incentives.

LU-23.3.2 Allow additional dwelling units achieved through the use of density incentives to be transferred off site to other urban residential areas based upon zoning.

LU-23.4 Allow for one accessory dwelling unit on a residential lot where a single-family dwelling exists.

LU-23.4.1 Accessory dwelling units within urban land use designations shall not be included in the calculation of residential densities.

</table>

¹When sewer is available.

²When density incentives are used, subject to compliance with design standards. The maximum density incentive granted should not exceed the maximum density generally allowed in a zone by more than 30%.

³For ground level development.

⁴For multi-level development.

⁵Permitted in excess of 25 if developed with a component of mixed use development containing both commercial and residential uses.

⁶No more than 8 units per acre consisting of single- or two-family units, or 12.5 units per acres for multifamily, should be allowed if sewer service is not available.
GOAL LU-24  Maintain the stability and integrity of residential neighborhoods through a variety of techniques.

LU-24.1  Encourage cluster development of residential lands to permanently protect sensitive features or reserve land for future urban development.

LU-24.2  Allow a range of housing types and designs.

LU-24.2.1  Encourage high density housing within commercial centers, and mixed use and multifamily districts.

LU-24.2.2  High density development should serve as a transition between low density development areas and commercial development.

LU-24.2.3  Encourage the integration of residential units within the same building(s) as commercial activity in mixed use designations.

GOAL LU-25  Require clustering on all residential lands within the Urban Growth Areas where sewers are not available.

GOAL LU-26  The allowable number of dwelling units within individual urban development proposals shall be calculated using net developable acreage.

LU-26.1  In determining net developable acreage, deductions shall be made for roads and environmentally constrained lands.

GOAL LU-27  Urban level facilities and services must be provided prior to or concurrent with development.

LU-27.1  These services include, but are not limited to, water, adequate sewage treatment, surface water management, and roads, where appropriate.

LU-27.2  Other types of services could include schools, sidewalks, bicycle paths, trails, parks and recreation.

GOAL LU-28  When creating new lots or placement of new housing in urban areas where sanitary sewer is planned but not yet available, consider a design, such as "shadow platting", which would allow for increased densities once sanitary sewer is available to the specific property, provided Health Department requirements are met.

GOAL LU-29  Encourage alternative sewage disposal methods approved by the Tacoma-Pierce County Health Department, provided that any developments served are consistent with allowed residential densities as adopted in the Pierce County Comprehensive Plan. In addition, legal lots of record which were recorded with the Pierce County Auditor before January 1, 1995, may also be served.

Techniques may include (LU-24):
- Community values
- Development type and compatibility
- Appropriate densities
- Affordability
- Critical area protection and capability
- Applicable mitigation activities
- Utilizing performance standards such as buffers
- Innovative building and development techniques
- Site amenities and design features
MODERATE DENSITY SINGLE-FAMILY

Areas which fall outside of a designated center or district are designated as Moderate Density Single-Family (MSF). This designation provides for single-family, two-family dwelling units, and in limited circumstances multifamily housing. Design standards for development within this designation should consider: a range of housing types; costs and densities; pedestrian and vehicular access and circulation; transit strategies; and environmental constraints.

GOAL LU-30
Implement the Moderate Density Single-Family land use designation through the following zone classifications: Moderate Density Single-Family (MSF) 4 to 6 units per acre, Single-Family (SF) 4 units per acre, and Residential Resource (RR) 1 to 3 units per acre.

GOAL LU-31
The Moderate Density Single-Family (MSF) designation allows for single- or two-family dwellings, and in limited circumstances multifamily housing.

LU-31.1  Prohibit commercial and industrial uses.
LU-31.2  Allow for limited civic use.
LU-31.3  Multifamily housing should be prohibited unless it is in the form of attached single-family housing that meets MSF densities.
LU-31.4  The Residential Resource (RR) zone is intended to provide for low-density single-family residential uses compatible or integrated with areas of unique open space character and/or environmental sensitivity.
LU-31.4.1  This zone is applied in areas that have high value environmental features that are both complex in structure and function and large in scope.

HIGH DENSITY SINGLE-FAMILY

The High Density Single-Family (HSF) land use designation is intended for moderate to high urban density single-family developments. Higher density single-family development is intended to expand the variety of housing types and choices available while maximizing the utilization of existing infrastructure within the Urban Growth Area.

GOAL LU-32
Implement the High Density Single-Family land use designation through the High Density Single-Family zone classification.

GOAL LU-33
Encourage high density single-family housing to expand the variety of housing types and maximize the use of existing infrastructure within the UGA.

LU-33.1  Allow for moderate to high urban density single-family developments.
LU-33.2  Allow for attached single-family development.

HIGH DENSITY RESIDENTIAL DISTRICT

High Density Residential Districts (HRDs) are composed of multifamily and high density single-family housing and limited neighborhood retail and service commercial which are located along
major arterials, state highways, and major transit routes that connect to Activity, Community, or Employment Centers, but are non-commercial or non-industrial in nature.

Developments will be located within walking distance of the major roadway. There will be a mix of development sizes and housing types within the HRDs. The HRDs will include design standards and placement criteria to ensure a compatible relationship with residential areas with lower density adjacent to the HRDs.

**GOAL LU-34**  
Implement the High Density Residential land use designation through the following zone classifications. High Density Residential (HRD), Residential/Office-Civic (ROC) and Moderate-High Density Residential (MHR).

**GOAL LU-35**  
Encourage HRDs to develop with high density single-family and multifamily housing that is served by transit routes, and connect with Mixed Use Districts, and Activity, Community, and Employment Centers.

**LU-35.1**  
Locate HRD’s along major arterials that are characterized by:

**LU-35.1.1**  
Minimal commercial or industrial development; and

**LU-35.2**  
Utilize site design techniques to create a smooth transition and ensure compatibility with adjacent lower density single-family areas.

**LU-35.3**  
Ensure mitigation of any significant increase in traffic volume caused by high density residential development on residential streets serving low to moderate density residential development.

**LU-35.4**  
Develop recreational open spaces within and between connecting developments.

**LU-35.5**  
Provide neighborhood retail and service commercial activities of limited size at intervals to prevent development of commercial strips.

**LU-35.6**  
Allow high density single- and two-family residential development.

**LU-35.6.1**  
Densities should be based on land characteristics and the availability of urban services.

**LU-35.7**  
Develop the Moderate-High Density Residential (MHR) zone primarily with multifamily housing.

**LU-35.7.1**  
 Permit single and two-family housing only when developed as a cluster or cottage subdivision.

**LU-35.8**  
Office uses are permitted in portions of the HRD designation recognized as transitional areas between commercial centers and districts and single-family neighborhoods and must comply with residential design standards.

**LU-35.9**  
Compatible civic uses are permitted in the HRD designation and must comply with residential design standards.
Urban Commercial

Pierce County intends to provide a predictable development atmosphere that emphasizes diversity in the range of goods and services provided, and ensures that as the economy changes, employment opportunities and associated land uses are balanced with a wide range of other uses.

GOAL LU-36  Encourage community facilities, retail trade, services, and multifamily development.

LU-36.1 Discourage detached single- and two-family residential, and auto-oriented commercial development.

LU-36.2 Discourage heavy industrial, manufacturing, or commercial development which is land intensive and includes a low number of employees per acre.

GOAL LU-37  Provide a predictable development atmosphere.

LU-37.1 Emphasize diversity in the range of goods and services provided.

LU-37.2 Locate shopping, service, and leisure-time activities in commercial areas.

LU-37.3 Ensure that as the economy changes, employment opportunities and associated land uses are balanced accordingly.

LU-37.4 Infill, renovate, or redevelop existing commercial properties before creating new commercial areas.

LU-37.4.1 Designate new commercial areas in response to growth or in underserved areas, only when a market analysis shows existing commercial areas are insufficient to meet local needs.

GOAL LU-38  Design or improve commercial sites to facilitate circulation by pedestrians, bicyclists, transit, and other alternative transportation modes.

LU-38.1 Retrofit commercial strip malls into pedestrian-oriented commercial nodes.

LU-38.2 Locate convenience and commercial services at transit centers to provide enhanced services and security to users of public transit facilities.

LU-38.3 Mix civic, recreational, residential, office, and open space uses within commercial areas to encourage walking and discourage driving for short trips.

LU-38.4 Promote safe, efficient commercial development along arterials and state routes.

LU-38.5 Develop vacant and underutilized properties as unified developments to provide multiple goods or services.

LU-38.6 Discourage commercial development in continuous strips along arterials.

LU-38.6.1 Prohibit the extension of existing commercial strips.

LU-38.6.2 Concentrate commercial areas and discourage the appearance of strip-like development.
LU-38.7 Orient major traffic generators to the main transportation network, grouping these uses into planned areas to avoid impacting residential streets and neighborhoods and to eliminate strip development.

LU-38.8 Separate adult businesses from facilities oriented toward children, and from other adult businesses.

**Activity Center**

An Activity Center (AC) has as its focus a recreational, cultural, or educational activity, around which develops a concentration of commercial, office, or high density residential development. The attraction draws people from throughout the area, not just surrounding neighborhoods or the community in which the activity is located.

**GOAL LU-39** Implement the Activity Center land use designation through the Activity Center zone classification.

**GOAL LU-40** Designate near recreational, cultural, and educational attractions, and design to meet the shopping, service, office, and multifamily housing needs of residents and visitors.

LU-40.1 Locate within or around any of the following uses:
- LU-40.1.1 College or university;
- LU-40.1.2 Regional public recreation complex;
- LU-40.1.3 Commercial recreation complex with a regional draw; or
- LU-40.1.4 Cultural complex composed of museum(s) and/or theater(s).

LU-40.2 Properly size to encourage pedestrian movement throughout the center.

LU-40.3 Locate on major transit routes.

**Community Center**

A Community Center (CC) has as its focus a significant commercial traffic generator, around which develops a concentration of other commercial and some high density multifamily developments. The commercial activity within the center is directed to a customer base drawn from more than one neighborhood.

**GOAL LU-41** Implement the Community Center land use designation through the following zone classifications: Community Center (CC), Residential/Office-Civic (ROC), and Moderate-High Density Residential (MHR).

**GOAL LU-42** Locate and design to meet shopping, service, and multifamily housing needs of the surrounding community.

LU-42.1 Properly size to serve the needs of more than one neighborhood while remaining small enough to be compatible with surrounding residential areas.

LU-42.2 Designate CCs as receiving zones for Transfer of Development Rights.
**Neighborhood Center**

A Neighborhood Center (NC) is a concentrated mix of small-scale retail, service commercial, and office development that serves the daily needs of residents within the immediate neighborhood. Residential development at various densities may occur within the center, if appropriate to the individual neighborhood.

**GOAL LU-43** Implement the Neighborhood Center land use designation through the following zone classifications: Neighborhood Center (NC), Residential/Office-Civic (ROC), and Moderate-High Density Residential (MHR).

**GOAL LU-44** Locate and design NCs to provide everyday shopping and services to a relatively small, nearby population.

**LU-44.1** Limit the size to keep NCs small and compatible with surrounding residential areas.

**Major Urban Center**

The Major Urban Center is a highly dense concentration of urban development with a commercial focus. A significant multi-family residential presence in the area is encouraged. Buildings should not have height restrictions. It is an area of regional attraction and a focus for both the local and regional transit systems. The geographic area around South Hill Mall is Pierce County's existing Major Urban Center. Commercial, office and multi-family development are encouraged within Major Urban Centers. Low density residential, businesses with a low number of employees per acre, and auto-oriented commercial uses should not be located in Major Urban Centers. Design standards should emphasize internal pedestrian circulation.

**GOAL LU-45** Encourage development of Major Urban Centers to meet the needs of the region's economy, to provide employment, shopping, services, multi-family development and leisure-time activities in Urban Areas, and to transform Pierce County from a commuter economy to a jobs-based economy.

**LU-45.1** Encourage retail trade, service, finance, insurance, real estate, multi-family housing, pedestrian and transit-oriented facilities development within the Major Urban Centers.

**LU-45.2** Discourage detached single-family residential, two-family residential, and auto-oriented commercial development.

**LU-45.3** Discourage industrial, manufacturing or commercial development which is land intensive and employs a low number of employees per acre.

**LU-45.4** Require developments to meet design standards that further the Major Urban Center objectives.

**LU-45.4.1** Sidewalks, skywalks, boardwalks, bicycle paths, and other means of internal pedestrian and non-motorized circulation are a priority.

**LU-45.4.2** Sites should be developed without front yards.

**LU-45.4.3** Parking should be shared and parking management programs implemented.
LU-45.4.4 Control vehicular access.
LU-45.4.5 Landscaping, plazas, and other amenities should be required.
LU-45.4.6 Multi-level parking facilities are encouraged.
LU-45.5 Community facilities are encouraged to locate in Major Urban Centers.
LU-45.6 Major Urban Centers should be designated as receiving zones for transfer of development rights.

**Mixed Use District**

Mixed Use Districts (MUDs) are concentrations of commercial, office, and multifamily developments located along major arterials, state highways, and major transit routes, and between Activity or Community Centers. Commercial activity in Mixed Use Districts caters to a customer base beyond the surrounding neighborhoods or community due to its placement on a roadway used by residents of more than one community.

Auto-oriented commercial and land-intensive commercial with a low number of employees per acre should be the primary use within Mixed Use Districts. The individual commercial activities or developments in these districts are not of a size or character to be considered major activity or traffic-generating uses.

Multifamily and office uses are allowed within Mixed Use Districts to provide economic diversity and housing opportunities near transit routes and business activity. There will be a mix of size and type of development within the Mixed Use Districts. These districts will include design standards and placement criteria to ensure a compatible relationship with residential areas adjacent to the Mixed Use Districts.

**GOAL LU-46** Implement the Mixed Use District land use designation through the following zone classifications: Mixed Use District (MUD), Commercial Mixed Use District (CMUD), Office Mixed Use District (OMUD), Residential/Office-Civic (ROC), and Moderate-High Density Residential (MHR).

**GOAL LU-47** Encourage the reorientation of historically commercial strips to less congested, transit-compatible districts of mixed uses and intensities.

LU-47.1 Locate along major transportation routes characterized by auto-oriented commercial development.
LU-47.2 Allow for auto-oriented and land-intensive commercial development.
LU-47.2.1 Encourage intensive commercial and office development.
LU-47.2.2 Promote low impact development designs to reduce the amount of impervious area.
LU-47.3 Establish performance standards for efficiency, functionality, and aesthetics.
LU-47.4 Encourage developments to access side streets rather than directly onto the corridor roadway.
LU-47.4.1 Provide incentives to control vehicular access along major arterials.

LU-47.5 Utilize common access points onto the roadway and allow access for employees, patrons, and residents of abutting developments.

LU-47.6 Provide incentives for pedestrian-friendly developments.

LU-47.7 Define building heights in consideration of anticipated land uses, surrounding land uses, safety and emergency measures, transportation networks, and efficient use of land.

LU-47.8 Designate MUDs as receiving zones for Transfer of Development Rights.

GOAL LU-48 Residential uses in MUDs should serve as a transition between commercial areas and adjacent residential neighborhoods.

LU-48.1 Encourage high density detached single-, two-family, and multifamily residential development.

LU-48.2 Utilize incentives for inclusion of a multifamily residential component in commercial developments.

**Urban Village**

An Urban Village (UV) is a mix of commercial and residential activity designed in a manner that creates a focal point or central place for a community. Urban Villages encourage the evolution of central places within communities to provide for shopping, service, entertainment, and housing for residents and visitors.

A mix of pedestrian-oriented businesses and supporting residential development is intended to create a vibrant place where the community's residents can work, live, shop, or be entertained. A mix of commercial and residential activity may be horizontal or vertical design.

**GOAL LU-49** Locate and design UVs to create unique shopping, living, and entertainment opportunities for both community residents and visitors.

LU-49.1 Evaluate the area's redevelopment potential, surrounding residential densities, and existing community facilities that economically support a central place concept.

LU-49.2 Consider the existing and planned, motorized and nonmotorized circulation routes.

LU-49.3 Address a coordinated approach to the build out of an Urban Village through the development of a community plan.

LU-49.4 No more than three UVs should be located within a single community planning area.

**GOAL LU-50** Promote land use patterns that economically support commercial businesses.

LU-50.1 Encourage commercial businesses that accommodate a range of compatible activity and support a central place concept.

LU-50.2 Permit types of activities that encourage people to spend leisure, entertainment, or shopping time within the area.
LU-50.3 Discourage land-intensive commercial activity.
LU-50.4 Discourage businesses that accommodate quick convenience shopping.
LU-50.5 Discourage fast-food establishments.
LU-50.6 Encourage federal, state, and local government services to locate within UVs to draw people into the area.
LU-50.7 Encourage mixing commercial activity and high density residential units through horizontal or vertical design.
   LU-50.7.1 Strongly encourage a vertical mix of commercial businesses and residential units in specific circumstances.
LU-50.8 Encourage higher density housing to support commercial activity.
   LU-50.8.1 Require a residential housing component to contribute to the economic viability of businesses.
   LU-50.8.2 Ensure higher residential densities are located around a node of commercial activity to implement a horizontal mix of uses.
   LU-50.8.3 Encourage developments to integrate residential units within the same building(s) as commercial activity to implement a vertical mix of uses.
      LU-50.8.3.1 The type of mixed use should be decided through the development of a community plan.
GOAL LU-51 Project a consistent streetscape and site design to distinguish UVs from other areas within the community.
   LU-51.1 Encourage development to integrate amenities including courtyards, plazas, benches, artwork, and lighting into site design to create unique pedestrian experiences.
   LU-51.2 Encourage innovative pedestrian-oriented site design that creates a unique business character to attract potential customers.
   LU-51.3 Ensure commercial businesses are developed with pedestrian-oriented design.
      LU-51.3.1 Auto-dependent design should be prohibited.
GOAL LU-52 Implement the Urban Village land use designation through the following zone classification: Urban Village.

Urban Industrial

Employment Center

An Employment Center (EC) often contains office parks, manufacturing, other industrial development, or a combination of activities. It may also include commercial development as a part of the center, as long as the commercial development is incidental to the employment function.
Designation of adequate areas for Employment Centers is one component of meeting the needs of a growing jobs-based economy. Master planning for Employment Centers is encouraged to ensure efficient access, facilitate timely provision of public services, and provide safety and design standards for location of uses.

**GOAL LU-53** Implement the Employment Center land use designation through the following zone classifications: Employment Center (EC), Community Employment (CE), Public Institution (PI), Employment Services (ES), and Research-Office (RO).

**GOAL LU-54** Designate industrial areas:

- **LU-54.1** Where there is adequate land, public facilities and services, and street capacities available within the 20-year planning horizon;
- **LU-54.2** Adjacent to or in proximity to land designated EC;
- **LU-54.3** Within proximity to major transportation thoroughfares, including rail;
- **LU-54.4** Adjacent to or in proximity to adequate water, sanitary sewer, power and natural gas utilities capable of servicing commercial/industrial development;
- **LU-54.5** Near historical employment generating operations;
- **LU-54.6** On properties that are not constrained by significant critical areas such as wetlands, steep slopes or other environmental factors limiting development potential;
- **LU-54.7** Characterized by larger parcels, typically averaging more than five acres;
- **LU-54.8** Within Urban Growth Areas;
- **LU-54.9** In a manner which attracts and retains businesses;
- **LU-54.10** Geographically dispersed throughout the County to meet the industrial and manufacturing needs of a growing jobs-based economy; and
- **LU-54.11** Only if there is a demonstrated need to provide for more land in the area based on shortages of developable land, and when the expansion is compatible with any applicable community plan.

**GOAL LU-55** Promote the grouping of uses which will mutually benefit each other, or provide needed services.

- **LU-55.1** Encourage planned developments of multiple buildings or uses which provide a mixture of low and moderate-intensity industrial, research, office, and supporting commercial uses.
- **LU-55.2** Encourage intensive manufacturing businesses to be clustered in industrial parks along major transportation links to minimize the impact on less intensive surrounding land uses.

**GOAL LU-56** Provide a diverse range of goods and services to ensure that as the economy changes, employment opportunities are balanced with a wide range of other land uses.
LU-56.1  Ensure enough land is designated as industrial to meet employment targets.

LU-56.2  Establish distinct land use types and zoning classifications for industrial, research, and office development which accommodate a broad range of economic development activities in appropriate locations.

LU-56.3  Ensure no net loss of land designated for industrial uses.

LU-56.3.1  Redesignate parcels from the EC designation to another designation only when an equivalent area of suitable land is added to the EC designation in the same Comprehensive Plan amendment cycle, or through a community plan adopted within the prior two years. The no net loss requirement does not apply in the event a parcel is determined to be unlikely developable for industrial uses due to adjacent incompatible uses, the amount of critical areas on the parcel, or if the parcel is determined to be of insufficient size or proper location for industrial use, then the legislative body may consider redesignating the parcel.

LU-56.3.2  Complete a comprehensive analysis of industrial lands needs and availability.

LU-56.3.2.1  Identify criteria for siting
LU-56.3.2.2  Review existing zoning classifications
LU-56.3.2.3  Recommend properties that should have the zoning modified

LU-56.3.3  Rezoning property to accommodate difficult to site public uses, including schools, may be authorized subject to the County's "no net loss" of land designated for industrial uses policy except rezoning property for public uses within the designated Frederickson “Manufacturing/Industrial Center” is prohibited.

LU-56.4  Location and design should facilitate access and circulation by transit, car and van pools, pedestrians, bicyclists, and other alternative transportation modes.

LU-56.5  Encourage developments to consider visibility and convenient access from major arterials and highways, proximity to environmentally sensitive lands, and the desired character of the industrial area.

LU-56.6  Allow commercial and residential uses that support and serve the daily needs of the workforce when the neighboring zone classifications do not allow for such uses.

LU-56.7  Prohibit new detached single-family residential with limited exceptions.

LU-56.8  Development should be required to undergo a formal site plan review process to minimize impacts on neighboring properties.

LU-56.9  Encourage master planning for industrial areas, including such features as open space, landscaping, integrated signage, traffic control, and overall management and maintenance through covenants or other property management techniques.

LU-56.10  Encourage large, contiguously-owned properties to be developed as a unified whole.
LU-56.11 Provide sites with a variety of parcel sizes to accommodate both large and small businesses, and particularly those of sufficient size to permit development of large industrial facilities.

**FREDERICKSON REGIONAL MANUFACTURING/INDUSTRIAL CENTER**

The Frederickson Regional Manufacturing/Industrial Center is located within the urban unincorporated area, southeast of Tacoma and south of Puyallup. The center contains the intersection of 176th St. E. and Canyon Road E., and goes as far south as 208th Street. The boundaries are depicted in Map 2-3.

The Employment Center in Frederickson was designated as a Regional Manufacturing/Industrial Center in 1995 in anticipation of future development. Employment doubled from 2000-2010 from 1,580 jobs to a total of 3,394. Since then it has reached close to 4,000 employees. The Frederickson Manufacturing/Industrial Center (M/IC) still contains a significant amount of vacant land for future development and is characterized by large blocks averaging 102.8 acres, and large industrial parcel sizes averaging 6.2 acres, which will enable it to accommodate large manufacturing and industrial development projects. Since designation, the boundary has been adjusted to remove properties with environmental constraints, vested residential plats, parks, and open space to focus on properties that are conducive to industrial development.

**Map 2-3: Frederickson Manufacturing/Industrial Center**
The Frederickson M/IC is considered medium sized in terms of total gross acreage (2,651 acres), and has a smaller number of jobs compared to other designated regional centers. The center contains mostly employment-oriented activity. Major industry sectors include Manufacturing (69%), Wholesale, Transportation, and Utilities (9%), and Suppressed/Other (22%). Of the total number of jobs, the vast majority are in goods-dependent industries that are typically appropriate for Regional Manufacturing/Industrial Centers. The two largest employers are The Boeing Company and Toray Composites (America), which combined make up more than half of the employment within the center. The current employment density is 1.5 employees per acre. The target for the Frederickson M/IC is 13,700 total employment (9,700 additional) within the 20-year planning period. This target would create employment density of 5.6 employees per acre.

**GOAL LU-57**  
Recognize the Frederickson Employment Center as a Regional Manufacturing/Industrial Center and focus employment growth to this area.

**LU-57.1**  
Encourage the type of development that will focus a significant share of employment growth to the Frederickson M/IC.

**LU-57.1.1**  
Emphasize efficient size and shape, planning for transportation facilities and services, urban design standards, and protection from incompatible land uses.

**LU-57.1.2**  
Discourage developments with low employment rates that cover large expanses of land.

**LU-57.2**  
The County shall prioritize infrastructure funding for projects supporting the Frederickson Industrial Center.

**LU-57.2.1**  
Identify and implement infrastructure improvements which enhance the viability and attractiveness of the Frederickson Industrial Center.

**LU-57.2.2**  
Coordinate with stakeholders to provide critical infrastructure to encourage the concentration of urban manufacturing and industrial land uses in the Frederickson Industrial Center.

**LU-57.3**  
Establish center-specific employment targets, transportation-mode split goals, a market analysis for the area, and information on public service improvement financing and projects beyond roads.

**LU-57.3.1**  
Meet an employment target of 13,700 total jobs within the 20-year planning period.

**OTHER URBAN LAND USE DESIGNATIONS**

**EMPLOYMENT-BASED PLANNED COMMUNITY**

**GOAL LU-58**  
Encourage development of new, self-sufficient, planned communities that address the full range of needs of the residents, including housing, jobs, services, and recreation.
LU-58.1 Establish an Employment-Based Planned Community (EBPC) land use classification to allow for EBPC developments approved pursuant to the planned unit development or planned development district permit process.

LU-58.2 Develop EBPCs within the Urban Growth Area.

LU-58.2.1 EBPCs must meet the following criteria:

LU-58.2.2 EBPC development must be at least 320 acres or more in size.

LU-58.2.3 New infrastructure is provided for and impact fees are established consistent with the requirements of RCW 82.02.050;

LU-58.2.4 Transit-oriented site planning and traffic demand management programs are implemented;

LU-58.2.5 Buffers are provided between the EBPC and adjacent urban development;

LU-58.2.6 A mix of uses is provided to offer jobs, housing, and services to the residents of the EBPC;

LU-58.2.7 Affordable housing is provided within the EBPC for a broad range of income levels;

LU-58.2.8 Environmental protection has been addressed and provided for.

LU-58.3 By allowing EBPCs, the County is not committing to provide levels of public services and facilities which would serve the development.

LU-58.3.1 Any extension of services and facilities must be in accord with other provisions of the Comprehensive Plan.

LU-58.4 Require the proponent to submit an infrastructure and public facilities plan, including an analysis of financing options that conform to the proposed phasing plan and assure concurrency.

LU-58.5 EBPCs must be developed with an Employment Center in the first component of development.

LU-58.5.1 Residential development will not be accepted as the exclusive use in the initial phases of an EBPC.

LU-58.5.2 Over the course of project development, the EBPC shall maintain an appropriate mix of jobs, services, recreation, and housing as established by the initial approval.

LU-58.6 Require EBPCs to provide their approved levels of employment in tandem with their residential development.

LU-58.6.1 Monitor this balance through the periodic review of the development’s traffic impacts as required by the Hearing Examiner.
**Master Planned Community**

**GOAL LU-59**  
Encourage Master Planned Community (MPC) developments within an Urban Growth Area as a way to achieve well-designed, compact urban development with a balance of uses, more efficient use of public facilities, and greater open space.

**LU-59.1**  
MPC developments should be allowed provided that any approval shall include a phasing plan to ensure that the various segments of the development are served by adequate public facilities and services.

**LU-59.2**  
MPC developments must be at least 320 acres in size.

**LU-59.3**  
MPC developments should consider including the following:

- **LU-59.3.1**  
  An appropriate mix of housing, services, and recreation;

- **LU-59.3.2**  
  Neighborhoods with a variety of housing options, including affordable housing for a range of income levels, consistent with a jobs-housing balance;

- **LU-59.3.3**  
  A phasing plan to ensure orderly urban growth and ability to respond to market demands for economic development and housing;

- **LU-59.3.4**  
  An infrastructure and public facilities plan, including an analysis of a range of financing options, where appropriate, that conform to the proposed phasing plan;

- **LU-59.3.5**  
  Site planning that encourages transit use and nonmotorized transportation, and a transportation demand management plan;

- **LU-59.3.6**  
  Open space to promote both active and passive recreation, and centers for community activities and assembly; and

- **LU-59.3.7**  
  Measures to protect critical areas and conserve resource lands.

**Major Institution**

**GOAL LU-60**  
Establish a Major Institution Overlay for Pacific Lutheran University. The designation should include the existing campus located on 150 acres in the Parkland area, and may include other lands surrounding the university as a result of future Comprehensive Plan amendments.

**LU-60.1**  
The overlay will be implemented by a Major Institution Master Plan (MIMP) that will be approved by the Pierce County Hearing Examiner and establish allowed facilities and uses, including those facilities and uses typically associated with the university, and may include educational facilities, housing, commercial uses, and supporting infrastructure.

**LU-60.2**  
Provide measures to ensure that the uses and activities associated with the university are compatible with the surrounding land uses and natural systems on adjacent lands.
Rural lands are lands located outside of an Urban Growth Area (UGA). They are separate from those lands that are designated Resource lands. While there are designated Resource lands outside the UGA, resource uses are allowed in all rural designations.

The context of rural areas is provided by the adjacent lands, such as designated forest land, and the land uses, such as designated agricultural land, that are interspersed within the rural areas. Rural areas in Pierce County are generally located between an urban growth boundary and forest lands utilized primarily for commercial timber production. Except for incorporated cities, all of the southern county, a part of the eastern county, the peninsulas, and most islands are characterized by rural settlement and activities. The presence of Fort Lewis exerts considerable influence on the south part of the County. There are considerable local differences within the rural areas in terms of physical environment and settlement pattern. For example, a suburban development pattern exists in some limited areas such as the southern part of the Gig Harbor Peninsula. Diversity in the existing rural environment provides a unique local identity for each rural area.

Typically, rural areas have received their identity from a rural way of life rooted in history and resource-based industries such as commercial fishing, aquaculture, lumber milling, logging, dairying, daffodil or berry farming, horse ranching, and mining. More recently, recreation and other associated uses have come to dominate in areas with outstanding natural features and scenic beauty. Counties, small towns, and rural centers provide limited services to rural residents. Many people choose to reside in rural areas because of the desired quality of life and relative affordability.

Rural areas provide for rural uses incorporating existing as well as historic patterns of settlement and character. Rural areas can function as a buffer between urbanized areas and resource land. They can supply lands that may be added to an urban growth area over time.

Major components of the Rural section are as follows:

A. Encourage and support economic vitality of the County’s rural area in ways that protect the rural way of life and are compatible with the rural environment. One of the means to accomplish this goal is to not allow urban-level service extensions including sewer lines into rural areas except to remedy groundwater contamination problems to correct health hazards or when there is an existing formal binding agreement to serve an approved development.

B. Allow a range of rural densities within the carrying capacity of the natural environment. The residential range provides some options for property owners and developers to utilize density incentives if open space is set aside through clustering of dwelling units on a portion of a site, thus balancing the concern for property rights with the need to conserve and efficiently utilize rural land and the environment, provided the increased density is compatible with the rural character of the surrounding areas.

C. A mix of uses is directed to locate in Rural Centers which include Rural Activity Centers, Rural Neighborhood Centers, and Rural Gateway Communities. Rural Gateway
Communities are located near major recreational facilities including the entrances to Mount Rainier National Park. The major functions of the Rural Centers are servicing the retail and other commercial and business needs of the local communities and providing employment opportunities including those related to tourism and natural resource-based industries.

D. Respect the carrying capacity of the natural environment and protect important elements of the rural environment, including its scenic and historic resources, in order to preserve the basis of a rural way of life.

Rural Character

Rural areas are characterized by low densities with scattered residential sites and moderate-sized to large open acreages for farm or forest use, often with an owner’s home on such acreage. Commercial and non-commercial agricultural and forestry and other natural resource-based practices are consistent with rural areas. Rural areas are characterized by having individual services (septic tanks, water wells) and/or by district services (some water districts, fire districts, etc.) and having minimal roads (except thoroughfares).

The Rural Area designations include areas meeting one or more of the following location criteria:

A. All lands outside of feasible or currently planned extension areas (i.e., an urban growth area) for public service facilities needed to support urban level development intensity.
B. All lands outside of long-term commercially significant forest resources.
C. All lands outside of long-term commercially significant agricultural resources.
D. Lands developed in rural uses on soils poorly suited to development at urban level densities with on-site disposal of sewage.
E. Lands where good opportunities exist for small-scale farming and forestry (large-scale farms and forested lands are designated as Resource Lands).
F. Lands where a Rural Area designation will help buffer nearby Resource Lands from conflicting urban uses.

Population Growth Expected in the Rural Areas

The population growth projected for the rural areas is approximately 32,000 persons during the 20-year planning horizon.

Rural areas are characterized by low densities with scattered residential sites and moderate to large-sized open acreages for farm or forest use. Agriculture, forestry, and other natural resource-based practices are consistent with rural areas. Rural areas are characterized by having individual services and/or by district services and having minimal roads.

**GOAL LU-61**  Rural character is defined as:

**LU-61.1**  An environment highlighted by the natural landscape, native vegetation, wildlife habitat, and large areas of open space.

**LU-61.2**  An economy and lifestyle supported by agricultural and forestry activities, small-scale natural resource industries, cottage industries, and services that serve needs of local residents and tourists.

**LU-61.3**  A visual character enhanced by scenic resources and territorial views.

**LU-61.4**  A landscape attuned with the use of the land and water by wildlife and fish.

**LU-61.5**  A land use pattern protected from conversion into uses that require urban level services except for extension of sewer to school facilities that meet Additional Rural Policies - Schools in Rural Areas LU-78.5.

**LU-61.6**  An area served by limited public services and facilities.

**LU-61.7**  A built environment developed in a manner that preserves watercourses, aquifer recharge areas, and the natural hydrologic cycle.

**LU-61.8**  A land use pattern that is depicted through limited commercial services and low density residential development.

**GOAL LU-62**  Ensure land uses and activities are consistent with and preserve rural character.

**LU-62.1**  Encourage and support economic vitality in ways that protect the rural way of life and are compatible with the rural environment.
LU-62.2 Prohibit urban level service extensions, including sewer lines, into rural areas, except:

LU-62.2.1 To remedy groundwater contamination problems to correct health hazards; or
LU-62.2.2 When there is an existing formal binding agreement to serve an approved development.
LU-62.2.3 For public facilities and utilities to serve a school sited in a rural area pursuant to Additional Rural Policies – Schools in Rural Areas LU-78.5.

LU-62.3 Explore opportunities for establishing development standards for rural areas that would consider the differences between urban development requirements and rural development needs.

LU-62.4 Respect the carrying capacity of the natural environment, and protect important elements of the rural environment, including its scenic and historic resources to preserve rural character.

LU-62.4.1 Encourage low-density residential and resource-based activity as primary uses.
LU-62.4.2 Allow for limited non-residential land uses that support rural densities.
LU-62.4.2.1 Promote cluster development as a means to increase flexibility in site development, preserve open space, reduce development cost, provide buffer strips to separate land use, and facilitate low impact development techniques and design to preserve environmental quality. Best Management Practices shall be used taking into consideration soil types and slopes when clustering development.
LU-62.4.3 Encourage home occupation or cottage industry as another means for non-residential uses.
LU-62.4.4 Allow agricultural sales involving products such as produce, dairy products, flowers, and handcrafted items in commercial areas.
LU-62.4.5 Locate commercial animal production, boarding, and slaughtering uses in rural and agricultural areas.
LU-62.4.6 Support the raising of crops in rural and agricultural areas.
LU-62.4.6.1 Crop processing facilities should be located in commercial, industrial, and agricultural areas.
LU-62.4.6.2 Limited processing activities may occur in rural areas.

Rural Residential

Rural residential areas are planned at low densities that require rural service levels. They are intended to contain diverse housing opportunities through a mix of large lots and clustering.

Low impact development standards are (LU-62.3):
Land use management strategies that emphasize conservation, use of on-site natural features and site planning to minimize impervious surfaces, native vegetation loss, and stormwater runoff.
Long-term rural areas should provide for low residential densities and appropriate public improvements and services to provide for a rural lifestyle and protect rural character.

**GOAL LU-63**
Allow a variety of rural residential land uses and densities that are consistent with the rural lifestyle and within the carrying capacity of the natural environment.

**LU-63.1**
Provide options for property owners and developers to utilize density incentives if open space is set aside.

**LU-63.2**
Allow for one accessory dwelling unit on a residential lot where a single-family dwelling exists.

**LU-63.2.1**
Accessory dwelling units within rural land use designations shall not be included in the calculation of residential densities.

**LU-63.3**
Maintain and promote rural residential land uses that:

- **LU-63.3.1** Promote a low density rural land use pattern;
- **LU-63.3.2** Preserve rural character;
- **LU-63.3.3** Encourage resource-based activities; and
- **LU-63.3.4** Protect environmentally sensitive features.

1 If 50% or more of the property is designated as open space.
2 If 75% or more of the property is designated as open space.
3 When it can be demonstrated that the increase in density will not result in adverse impacts to the resources being protected and 50% of the gross acreage is dedicated in perpetuity as open space.
4 If allowed in a community plan.

**RURAL FARM**

**GOAL LU-64**
Protect agricultural activities on lands that do not qualify as designated Agricultural Resource Lands of long-term commercial significance.

**LU-64.1**
Establish the Rural Farm designation based on current or historic agricultural use, including the following factors:

**LU-64.1.1**
The property shall be a minimum of one acre in size;
LU-64.1.2 The property is located outside a Rural Center or designated Resource Land designation;

LU-64.1.3 The property meets one of the following conditions:

LU-64.1.3.1 The property is currently enrolled in the Current Use Assessment program for productive farm and agriculture; or

LU-64.1.3.2 The property owner requests designation as Rural Farm through a Comprehensive Plan amendment process.

LU-64.2 Recognize agricultural properties that may or may not contain prime soils supporting the Agricultural Resource Land designation, but are or have been used for agricultural activities to increase the agricultural base within the County.

LU-64.3 Provide all the protections to agricultural activities within the Rural Farm designation which are afforded to those activities in the Agricultural Resource Land designation.

LU-64.4 Allow a range of uses that would be permitted in the Agricultural Resource Land designation or Rural Residential designations.

LU-64.5 Use community planning and Comprehensive Plan amendment processes to implement or revise the Rural Farm designation as follows:

LU-64.5.1 Rural Separator, Rural Sensitive Resource, Rural 10, or Rural 20 designations may be redesignated to Rural Farm pursuant to the criteria outlined above.

LU-64.5.2 Rural Farm designations may be redesignated to an adjacent Rural Residential designation, provided that the property directly abuts one of these designations and the property is converted to that designation (e.g., a Rural Farm designated property abuts a R10 property and would be changed from Rural Farm to R10).
boundary defines the rural center and the area, within which, additional more intensive rural use may locate.

All County rural centers must be consistent with the LAMIRD criteria. Pierce County adopted policies requiring the evaluation of rural centers for LAMIRD consistency as part of the development of community plans. The determination of LAMIRD consistency for rural centers in community plan areas was made as part of community plan adoption and for non-community plan areas as part of the 2015 Comprehensive Plan update. All rural centers in Pierce County have been reviewed and found consistent with the LAMIRD criteria.

The establishment of any new rural center or the expansion of a rural center must be consistent with the LAMIRD criteria of RCW 36.70A.070 (5)(d).

GOAL LU-65  The most intensive uses of rural land allowed in rural areas should be directed into rural centers.

LU-65.1  Rural centers serve the following purposes:

LU-65.1.1  To provide centers where rural residents and others can gather, work, shop, entertain and, where appropriate, reside;

LU-65.1.2  To provide a focus for the surrounding rural area that is appropriate in character and scale in rural environment;

LU-65.1.3  To provide an alternative to strip developments along arterials and state routes;

LU-65.1.4  To provide services to tourists and other visitors recreating in the major recreation facilities; and/or

LU-65.1.5  To provide an opportunity to develop facilities that can function as a community center in those areas where an incorporated town does not serve that role for the surrounding area.

LU-65.2  Establish standards and design guidelines to protect environmental quality, rural character, and significant natural and scenic amenities and features the communities value.

LU-65.3  Provide for accessory dwelling units, senior housing and group homes, within Rural Centers.

LU-65.4  Provide four categories of Rural Centers: Rural Activity Centers, Rural Neighborhood Centers, Rural Gateway Communities and Rural Industrial Center.

LU-65.5  Recognize isolated areas of commercial/business park development which had existing uses or areas of higher intensity use on July 1, 1990, and were not identified as an RNC in a community plan as of January 2012. The size of the area and determination of the logical outer boundary as defined by the LAMIRD criteria, should be established by amendment to a community plan and an area-wide map amendment.
GOAL LU-66  Commercial uses should be limited to areas that support rural neighborhoods and rural tourist areas.

LU-66.1  Non-residential uses of rural intensity include industrial and commercial uses which:

LU-66.1.1  Depend upon being in a rural area;

LU-66.1.2  Do not require urban level services;

LU-66.1.3  Are compatible with the functional and visual character of the rural area;

LU-66.1.4  Are smaller in size/scale and utilize a smaller percentage of impervious cover than the same land use allowed in an urban area;

LU-66.1.5  Support the everyday needs of rural residents and tourists;

LU-66.1.6  Are related to and dependent upon natural resources; and

LU-66.1.7  Include public and commercial recreational and associated uses.

GOAL LU-67  The establishment of any new rural center or the expansion of a rural center must be consistent with the LAMIRD criteria of RCW 36.70A.070 (5)(d).

RCW 36.70A.070 (5)(d) Limited areas of more intensive rural development (LAMIRDS) criteria require that rural commercial centers are based on (LU-67):

- Lands that do not extend beyond the logical outer boundary of an existing area or use that was established as of July 1, 1990.
- Existing areas delineated by the built environment, but that may also include infill areas of undeveloped lands
- The logical outer boundary addresses the need to preserve the character of existing natural neighborhoods and communities.

RURAL ACTIVITY CENTER

The Rural Activity Center (RAC) designation creates areas where residents can gather, work, shop, and entertain; and tourists traveling to outlying recreation areas can obtain needed services. The most intensive uses of rural land allowed in rural areas should be allowed in Rural Activity Centers where adequate facilities and improvements exist or can be provided. Generally, RACs will provide for services for a larger rural area and include such uses as grocery stores, drug stores, restaurants, general retail, personal and business services, financial services, civic uses and automobile servicing, sales and repair.

GOAL LU-68  Rural Activity Centers should provide for more intensive uses to provide employment, shopping, services, and housing opportunities that will reinforce these areas as rural centers, at a scale which is compatible with surrounding roads, utilities, and rural character.

LU-68.1  Ensure immediate access onto state routes or major arterials.

LU-68.2  Allow intensive uses where adequate facilities and improvements exist or can be provided.

LU-68.3  Expansion should be compatible with other adjacent uses and avoid areas of natural hazards.
LU-68.4 Permit residential development consistent with the residential density allowed in the adjacent rural designations.

LU-68.5 Rural Activity Centers may only be established or expanded consistent with the LAMIRD criteria of RCW 36.70A.070 (5)(d).

**RURAL NEIGHBORHOOD CENTER**

The Rural Neighborhood Center (RNC) designation is intended to serve the everyday needs of local rural residents. RNCs provide limited convenience shopping and services, and retain a scale and intensity that is appropriate for maintaining rural character. Generally, RACs will provide for services for a smaller rural area and include such uses as convenience stores, gas stations, personal services, small retail outlets and civic uses.

**GOAL LU-69** Rural Neighborhood Centers should provide limited convenience shopping and services which meet the daily needs of residents of the surrounding rural area.

LU-69.1 Ensure immediate access onto state routes, or major or secondary arterials.

LU-69.2 Residential development should be permitted consistent with the residential density permitted in the adjacent rural designations.

LU-69.3 New development should exhibit a scale and intensity that is appropriate for maintaining rural character.

LU-69.4 Discourage commercial development in continuous strips.

LU-69.5 Promote coordinated and planned commercial developments.

LU-69.6 Recognize areas of commercial/business park development.

LU-69.7 Rural Neighborhood Centers may only be established or expanded consistent with the LAMIRD criteria of RCW 36.70A.070 (5)(d).

LU-69.8 The size and logical outer boundary of isolated areas of commercial/business park development shall be determined in the community plan by Comprehensive Plan amendment.

**RURAL GATEWAY COMMUNITY**

The Rural Gateway Community (GC) designation provides for a mix of commercial and higher density residential housing. The types of uses and activities allowed within the designation vary depending on the implementing zone.

The GC designation currently applies to four historical commercial nodes that have served as tourist areas approaching Mount Rainier National Park from either side. The Rural Gateway Communities include Greenwater and the Upper Nisqually Valley centers: Elbe, Ashford and the National Park entrance.

The Greenwater Gateway Community is distinguished from the Upper Nisqually Centers in that it is a commercial center in it’s entirely and as such the boundaries must meet the LAMIRD criteria. In contrast the Upper Nisqually Gateway Community are a community plan structure...
that includes a mix of tourist commercial, village residential as well as larger rural residential parcels. Within the Upper Nisqually Gateway Communities areas of more intensive use are designated with Tourist Commercial and Village Commercial designations. The boundaries of these commercial areas have been found to be consistent with LAMIRD criteria and may only be expanded if consistent with the LAMIRD criteria of RCW 36.70A.070 (5)(d).

GOAL LU-70  Rural Gateway Communities should provide commercial services to accommodate the needs of visitors and tourists.

LU-70.1  Locate near major recreational facilities and opportunities to provide facilities and services necessary to support tourism and the surrounding community.

   LU-70.1.1  Housing accommodations for tourists, visitors, and workers and their families;
   LU-70.1.2  Commercial uses serving tourists, visitors, and residents;
   LU-70.1.3  Outdoor recreational facilities and uses;
   LU-70.1.4  Facilities and services necessary to support tourism-related uses;
   LU-70.1.5  Cultural facilities including theaters, galleries, arts and craft centers, interpretive centers; and
   LU-70.1.6  Transportation facilities necessary to link tourism with surrounding recreational opportunities.

LU-70.2  Ensure immediate access onto state routes or major arterials.

LU-70.3  Discourage commercial development in continuous strips.

LU-70.4  Residential density may be higher than the surrounding rural area.

   LU-70.4.1  Density calculations will not include land devoted to overnight lodging or commercial purposes.

LU-70.5  Develop procedures to ensure overnight lodging cannot be utilized as full-time residential units.

LU-70.6  Rural Gateway Communities should provide commercial services to meet everyday needs of the surrounding residents.

LU-70.7  The boundaries of Upper Nisqually GCs may be revised, as part of the Comprehensive Plan amendment or Community Plan update process.

LU-70.8  The boundaries of the Greenwater Rural Gateway Community and the Village Commercial and Tourist Commercial designated areas in the Upper Nisqually Rural Communities may only be expanded consistent with the LAMIRD criteria of RCW 36.70A.070 (5)(d).

LU-70.9  Encourage light industry in Gateway Communities to provide stable, year-round family wage employment for residents.
RURAL INDUSTRIAL CENTER

The Rural Industrial Center (RIC) designation allows light industrial uses that are related to food, agriculture, or intermediate manufacturing and final assembly. It does not allow heavier industrial uses that produce substantial waste byproducts or wastewater discharge or noise impacts incompatible with a rural area. Currently, the only RIC is in the Alderton-McMillin Community Plan area.

GOAL LU-71  Recognize and designate the McMillin Park of Industry area for rural industrial uses.

LU-71.1  Establish a designated Rural Industrial Center (RIC) that encompasses property vested for industrial activity within and adjacent to the McMillin Park of Industry.

LU-71.2  Ensure the designated RIC meets the criteria to allow for more intensive uses within a rural area.

GOAL LU-72  Reserve land in the RIC for manufacturing/light industrial uses.

LU-72.1  Limit the permitted uses to manufacturing/light industrial activity, preferably served by rail.

LU-72.2  Promote railway facilities including transfer facilities and laydown yards.

LU-72.3  Discourage heavy industrial, residential, and commercial services.

LU-72.4  Ensure that industrial activities do not require the expansion of urban services.

LU-72.5  Ensure that industrial uses do not negatively impact the environment or degrade water quality.

LU-72.6  Minimize any impacts on the community and surrounding neighborhoods.

LU-72.7  Explore developing regulations that facilitate the relocation of existing cottage industries to the RIC when expansion of the cottage industry is desired and the use is consistent with permitted uses in the RIC.

GOAL LU-73  Minimize impacts to State Routes and the local road system from the Rural Industrial Center to the greatest extent possible.

LU-73.1  Developments should incorporate local rail service into their operations as a means to reduce traffic.

LU-73.2  Industries requiring rail service are encouraged to locate within Rural Industrial Centers.

LU-73.3  Parcels within a Rural Industrial Center shall not have direct access to a state highway.

LU-73.4  Access to all parcels within a Rural Industrial Center shall be from an internal access road.
OTHER RURAL LAND USE DESIGNATIONS

MASTER PLANNED RESORT

GOAL LU-74  Allow within Pierce County, the two categories of Master Planned Resorts (MPRs) subject to the following criteria and standards:

LU-74.1  Proposals for MPRs must conform to RCW 36.70A.360; or

LU-74.2  Proposals for existing MPRs must conform to RCW 36.70A.362 and the following criteria:

LU-74.2.1  The resort was in existence on July 1, 1990;

LU-74.2.2  The resort is largely self-contained and integrated into a development that includes short-term visitor accommodations associated with recreational facilities within the resort boundaries in a setting of significant natural amenities;

LU-74.2.3  New urban land uses in the vicinity of the existing resort are prohibited except in areas specifically designed for urban growth in the Comprehensive Plan;

LU-74.2.4  On- and off-site infrastructure impacts shall be fully considered and mitigated;

LU-74.2.5  The County finds that the land is better suited and has more long-term importance for the existing resort than for the commercial harvesting of timber or agricultural production; and

LU-74.2.6  The County finds that the resort plan is consistent with the Development Regulations for critical areas.

LU-74.2.6.1  On sites where Pierce County does not have jurisdictional authority to apply the County Development Regulations for critical areas, the resort plan shall be consistent with requirements for critical areas as administered by the government entity having jurisdictional authority.

LU-74.3  Services and facilities needed to support such development are provided by the developer on a fair-share basis.

LU-74.4  On- and off-site impacts and uses of the site are mitigated through site development standards and guidelines.

LU-74.4.1  Site plan review of MPRs shall be conducted through the public hearing process.

LU-74.5  Any proposed expansion or changes to any existing MPR shall be subject to the same PUD review process as a new MPR.

LU-74.6  The overall residential density may be higher within a MPR than the surrounding rural area.

Standards and guidelines include (LU-74.4):
Aesthetic, visual, and environmental considerations to incorporate and retain on-site features and aesthetic qualities of the surrounding rural community.
LU-74.7  The density of overnight lodging within MPRs may be greater than the surrounding area.

LU-74.7.1  Procedures should be developed to ensure overnight lodging within MPRs cannot be utilized as full-time residential units.

LU-74.8  The focus of residential areas in a MPR shall be short-term visitor accommodations.

LU-74.8.1  A MPR may include other residential uses within its boundaries, but only if the residential uses are integrated into and support the on-site recreational nature of the resort.

LU-74.9  If Pierce County does not have jurisdictional authority to apply one or more particular land use controls over a development proposal, a proposal for a MPR shall be consistent with development requirements as administered by the government entity with jurisdictional authority.

LU-74.10  Lands designated MPR shall be developed pursuant to approval of a PUD consistent with the conceptual plans reviewed under 19C.10.055 D., except that the zone classification in place at the time of MPR designation approval shall control development of the land until a PUD permit is approved by the Hearing Examiner.

NEW FULLY CONTAINED COMMUNITIES

GOAL LU-75  Prohibit new fully contained communities outside of the designated urban growth area.

RURAL AIRPORT

GOAL LU-76  Establish an Airport Overlay-Rural Airport designation on land adjacent to rural airports to buffer the airport from incompatible uses.

LU-76.1  Establish Rural Airport Overlay boundaries using each airport’s area of influence.

LU-76.2  Provide buffering between those more intense uses related to aviation activities and the rural uses authorized in the Rural Residential designations.

LU-76.3  Limit land uses to low density and low intensity uses including forestry uses, agricultural uses, walking and biking trails, golf courses, and single-family dwelling units.

LU-76.4  Density should reflect the surrounding rural residential density.

GOAL LU-77  Establish an Essential Public Facility – Rural Airport Designation at the Tacoma Narrows Airport. Establish a Rural Airport Overlay adjacent to the Tacoma Narrows Airport to buffer the airport from incompatible uses.

LU-77.1  Designate the property at the Tacoma Narrows Airport as Essential Public Facility-Rural Airport.
LU-77.1.1 Allow for airport related uses on that portion of the Tacoma Narrows Airport located south of Stone Road.

LU-77.2 All properties located within 1,000 feet of the Essential Public Facility-Rural Airport Designation outside the City of Gig Harbor's UGA shall be designated Rural Sensitive Resource or Rural 10 with a Rural Airport Overlay.

LU-77.2.1 Land use activities that are incompatible with general aviation airport uses shall be discouraged in the Rural Airport Overlay.

LU-77.2.2 Rural land uses shall be limited to low density and low intensity uses including forestry uses, agricultural uses, walking and biking trails, golf courses, and single-family dwelling units.

LU-77.2.3 Residential density shall be limited to 1 dwelling unit per 10 acres for new subdivisions. A minimum lot size of 5 acres is required. A bonus density that will provide for 2 dwelling units per 10 acres may be permitted when 50% of the development is retained in open space.

Schools in Rural Areas

GOAL LU-78 Schools, institutions, and other community facilities may be located in rural areas.

LU-78.1 Expansion of an existing site is preferred over the creation of a new site.

LU-78.2 Ensure the location and design of proposed facilities in the rural area are harmonious with the existing character of the area.

LU-78.3 Ensure coordination between the County and each school district siting schools in the rural area.

LU-78.3.1 Each school district siting schools in the rural area shall participate in the County’s periodic updates to its Comprehensive Plan as required by RCW 36.70A.130(1)(b) by:

- Coordinating its enrollment forecasts and projections with the County’s adopted population projections;
- Identifying school siting criteria with the County, cities, and regional transportation planning organizations;
- Identifying suitable school sites with the County and cities, with priority to siting urban-serving schools in existing cities and towns in locations where students can safely walk and bicycle to the school from their homes and that can effectively be served with transit; and
- Working with the County and cities to identify school costs and funding for the capital facilities plan element required by RCW 36.70A.070(3).
LU-78.4 New schools in the rural area serving students from an urban area shall not be incorporated into the calculations to determine school impact fees for a school district nor receive funding from school impact fees.

LU-78.5 The extension of public facilities and utilities to serve a school sited in a rural area may be authorized by the County provided the following requirements are met:

LU-78.5.1 The applicable school district board of directors must adopt a policy addressing school service area and facility needs and educational program requirements;

LU-78.5.2 School districts must make a finding, with the concurrence of the County Council and the legislative authorities of any affected cities, that the district’s proposed site is suitable to site the school and any associated recreational facilities that the district has determined cannot reasonably be collocated on an existing school site, taking into consideration the policy adopted in LU-78.5.1 and the extent to which vacant or developable land within the growth area meets facility needs and educational program requirements;

LU-78.5.3 The County and any affected cities that provide sewer service agree to the extension of public facilities and utilities to serve the school sited in a rural area that serves urban and rural students at the time of concurrence as referenced in LU-78.5.2;

LU-78.5.4 If a sanitary sewer line is extended beyond the urban growth area to serve a school, private property in the rural area may connect to the sewer utility if:

- The property has a failing onsite sanitary sewer system; or
- The property owner requests connection provided:
  - The property is located no further from the public facility or utility than the distance that, if the property were within the urban growth area, the property would be required to connect to the public facility or utility;
  - The property may only develop at existing zoning densities; and
  - There may be no request to expand the Urban Growth Boundary based solely on the extension of the sewer.

### Rural and Resource Agricultural Activity

**GOAL LU-79** Support and strengthen the local and regional agriculture-based economy and lifestyle.

**LU-79.4** Conserve and enhance the agricultural land base.

**LU-79.4.1** Maintain local, regional, state, and national agricultural reserves.

**LU-79.5** Encourage agricultural activities as an appropriate land use throughout the rural area.
LU-79.5.1  Ensure adequate accessory uses are allowed.

LU-79.6  Facilitate the availability of locally-grown, healthy food options for residents.

LU-79.7  Reduce barriers to agriculture.

LU-79.8  Allow production, sales, and marketing of farm and related products throughout agricultural lands.

LU-79.8.1  Allow direct farm marketing, U-pick, value-added product sales, wineries, nursery sales, and accessory uses such as sales of arts and crafts or antiques.

LU-79.8.2  Discretionary land use review should be required for farm activities that continue for more than 60 days and generate heavy traffic, excessive noise, or other significant impacts to the community.

LU-79.8.3  Encourage farm-related uses including value-added products or products used for farming or farm tourism.

LU-79.8.4  Allow the sale of agricultural supplies such as feed, grain, fertilizers, and small farming equipment.

LU-79.8.5  Large suppliers and equipment sales should be located in Rural Neighborhood Centers, industrial areas, or nearby urban areas.

LU-79.8.6  Allow non-agritourism craft distilleries as defined in RCW 66.04.010(12) in rural areas, at an appropriate rural scale and consistent with community character and where at least half of the raw materials used in the production are grown in the State of Washington.

LU-79.8.6.1  Non-agritourism craft distilleries are similar to other agricultural uses such as primary processing, packing, shipment, and cold storage plants and should be considered in the land use designations that permit these use types.

LU-79.8.6.2  The total area that encompasses the craft distillery building, sampling/sales building, storage buildings, and parking shall not exceed 1 acre and should be permitted at a rural scale.

LU-79.8.6.3  Limit the entire non-agritourism craft distillery production and retail sales/product sampling area to a total of 8,000 square feet. The area for retail sales/product sampling shall be limited to a maximum of 3,000 square feet of this total.

LU-79.9  Allow local farmers flexibility to stay in business throughout the year.

LU-79.10  Provide programs, policies, and other regulations to achieve agricultural conservation and support agricultural activities.

Examples of farm-related uses (LU-79.5.3):
- Bakery sales
- Restaurants
- Microbreweries and wineries
- Sales of feed or farm equipment
- Recreational activities and educational tours
- Company picnics
- Birthday parties
- Weddings
LU-79.10.1 Give high priority to agriculture in land acquisition programs.
LU-79.10.2 Support agencies and organizations that play a role in agricultural conservation.
LU-79.10.3 Preserve the high-quality agricultural soils for future farming.
LU-79.11 Protect agricultural operations from incompatible uses and ensure the vitality of the agricultural industry.
LU-79.11.1 Prohibit developments that impede farm management and operations.
LU-79.12 Recognize that some critical areas have been legally altered and continue to be used for agricultural activities, and that the responsible use and maintenance of such areas for agricultural activities may continue.
LU-79.13 Promote the importance of farm management plans.
LU-79.13.1 Work with agencies and advisory groups to develop informational materials and educational opportunities regarding best management practices for agricultural activities.

RESOURCE LANDS

The Resource Lands designation indicates areas where Pierce County’s land use plans, regulations, and incentives will promote long-term commercially significant resource use. These natural resources are an important part of the regional economy, providing jobs, tax revenue, valuable products, and raw materials for local use and export. Farmlands and forested lands also provide aesthetic, recreational, and environmental benefits to the public while contributing to the diverse character of Pierce County.

<table>

<td>Agricultural Resource Land (ARL)</td>
</tr>
<tr>
<td></td>
<td>Forest Land (FL)</td>
</tr>
<tr>
<td>Overlays</td>
<td>Mineral Resource (MRO)</td>
</tr>
</tbody>
</table>

GOAL LU-80 Utilize resource lands at sustainable levels to provide raw materials, value-added products, and jobs necessary for future generations.

LU-80.4 Conserve and preserve resource lands as a limited resource of both environmental and economic value.
LU-80.5 Encourage retention of properties of sufficient size to make resource industry economically feasible.
LU-80.6 Encourage the preservation of those tracts of land used for resource practices.
LU-80.7 Promote the use of best management practices (BMPs).
LU-80.8  Consider a program that would allow the direct purchase of those development rights on existing resource lands.

LU-80.9  Ensure that the use of resource lands takes priority over use of adjacent lands.

LU-80.10  Coordinate conservation policies with other agencies and their respective programs.

LU-80.11  Encourage and recognize the multiple uses and values of resource lands.

GOAL LU-81  Conserve rural resources.

LU-81.4  Preserve the land and water required by natural resource based activities, including the protection of critical areas, natural wildlife, rural lifestyles, outdoor recreation, and other open spaces and protect air and water quality and availability.

LU-81.5  Minimize conversion of agricultural and forestry land by providing cluster development and buffer strips between these designated lands and residential developments.

LU-81.6  Protect important elements of rural character including its scenic and historic resources.

LU-81.6.1  Discourage billboards and off-site advertising on resource lands.

LU-81.7  Minimize the amount of impervious surface in development.

LU-81.7.1  Site development standards should include provisions for limiting paved parking, widths, and lengths of paved access roads and driveways, and site coverage in general, allowing shared access roads and using permeable construction material for roads where feasible.

LU-81.8  Minimize the use of constructed drainage facilities and encourage alternative perpetually maintained methods of surface water management such as grass covered swales, on-site retention areas, retaining vegetative cover, etc.

LU-81.9  Encourage Best Management Practice regarding animal wastes or forestry practices affecting water quality downstream.

LU-81.10  Provide incentives, such as tax reduction, to landowners who voluntarily provide public benefits such as protecting wildlife corridors, historic and cultural sites, and scenic amenities.

LU-81.11  Protect important land features such as ridgelines by discouraging their alteration.

GOAL LU-82  Allow for one accessory dwelling unit on a residential lot where a single-family dwelling exists.

LU-82.4  Accessory dwelling units within resource land use designations shall not be included in the calculation of residential densities.
Agricultural

Agricultural lands are distinct from rural lands and include lands that have been designated as having long-term commercial agricultural significance. In November 1991, Pierce County, on an interim basis, classified and designated agricultural lands of long-term commercial significance, which were located outside the Urban Growth Areas. The criteria for designation were reviewed and the interim criteria became the final criteria for the adopted 1994 Comprehensive Plan.

While the expression of planning goals in the GMA is linked to natural resource industries, including productive timber and fisheries, a separate policy for agricultural lands was proposed because of their unique importance in Pierce County and their relationship to Urban Growth Area boundaries and policies. Although the GMA does not expressly require a countywide planning policy on agricultural lands, the requirement was added by the Interlocal Agreement: Framework Agreement for the Adoption of the Countywide Planning Policies (Pierce County Council Resolution No. R91-172, September 24, 1991).

In 2004, the County created the Agricultural Resource Lands (ARL) designation (Ordinance No. 2005-87s). At that time, the County established specific criteria for ARL designation and used the Natural Resource Conservation Service soil database as a key criterion focused on prime farmland soils.

In 2018, the County reviewed the criteria for the designation of ARL lands. Revisions were made to the ARL criteria based on a study “A Fresh Look at Pierce County agriculture.” This resulted in the creation of four Agricultural Production Districts. The individual districts reflect the unique agricultural characteristics of each area. Properties within each of the districts were reviewed and designated using customized criteria for ARL designation that address the unique characteristics of each district. The four Agricultural Production Districts are shown in Map 2-4.

**GOAL LU-83** Implement the Growth Management Act's planning goal related to maintaining and enhancing natural resource-based industries by preserving and enhancing the agricultural land base which is being used for, or offers the greatest potential for, production of agricultural products.

**LU-83.4** The conservation and enhancement of the County's agricultural land base serves the following purposes:

- **LU-83.4.1** Supporting the local and regional economic base for agriculture;
- **LU-83.4.2** Maintaining local, regional, state and national agricultural reserves;
- **LU-83.4.3** Preserving the high quality agricultural soils for future farming;
- **LU-83.4.4** Facilitating the availability of locally grown, healthy food options for residents;
- **LU-83.4.5** Retaining natural systems and natural processes;
- **LU-83.4.6** Alleviating some of the pressures to urbanize;
- **LU-83.4.7** Supporting the rural lifestyle; and
**LU-83.4.8** Providing environmental benefits, such as air quality and habitat.

**LU-83.5** The County encourages agricultural activities as an appropriate land use throughout the rural area.

**LU-83.6** Agricultural activities are also allowed in the urban area.
Agriculture Production Districts:
- Bonney Lake / Buckley Plateau
- Central & Southern County
- Peninsula
- Puyallup / Orting Valley

Map 2-4: Agriculture Production Districts
AGRICULTURAL RESOURCE LANDS DESIGNATION CRITERIA

LU-84.4 Lands should be considered for designation as agricultural resource lands based on three factors:

- **LU-84.4.1** The land is not already characterized by urban growth.
- **LU-84.4.2** The land is used or capable of being used for agricultural production. This factor evaluates whether lands are well suited to agricultural use based primarily on their physical and geographic characteristics.
  - **LU-84.4.2.1** In determining whether lands are used or capable of being used for agricultural production, the County shall use the land-capability classification system of the United States Department of Agriculture Natural Resources Conservation Service as defined in relevant Field Office Technical Guides.
- **LU-84.4.3** The land has long-term commercial significance for agriculture.
  - **LU-84.4.3.1** In determining whether lands have long-term commercial significance for agriculture, the County should consider the ten criteria listed under WAC 365-190-050.
- **LU-84.4.4** Consider excluding properties already characterized by urban growth or characterized by more intensive rural development, such as:
  - **LU-84.4.4.1** Lands designated as rural centers;
  - **LU-84.4.4.2** Lands rezoned to rural centers;
  - **LU-84.4.4.3** Lands that are part of a preliminary plat approved prior to February 1, 2005, or a final plat recorded prior to February 1, 2005, including any associated open space or other non-buildable tracts identified on the face of the plat;
  - **LU-84.4.4.4** Lands covered by a non-residential development permit for uses other than agriculture.
  - **LU-84.4.4.5** Lands with mobile home parks; and
  - **LU-84.4.4.6** Properties owned by governmental agencies prior to the effective date of the 2015 Comprehensive Plan Update for public use as identified in a Capital Facilities Plan adopted as part of the Pierce County Comprehensive Plan or an adopted long-range planning document.
  - **LU-84.4.4.7** Land that is irrevocably dedicated to non-farm use.
  - **LU-84.4.4.8** Designated forest and timber lands as identified by Pierce County, RCW 84.33, and RCW 84.34 shall be excluded.
LU-84.4.5  Designated forest and timber lands as identified by Pierce County, RCW 84.33, and RCW 84.34 shall be excluded.

LU-84.5  Designation of Agricultural lands of "long-term commercial significance" requires consideration of size of the land and soil composition and the land’s proximity to populated areas. The following criteria shall be considered when designating land as Agricultural Resource Land.

LU-84.5.1  Location in rural areas (outside the UGA).
LU-84.5.2  Parcel size on the effective date of Ordinance No. 2018-39.
LU-84.5.3  Amount of prime farmland soils.
LU-84.5.4  Larger parcels abutting the property.
LU-84.5.5  Property owner request for designation.

LU-84.6  Designate four Agricultural Production Districts to reflect the different agricultural characteristics of the County.

LU-84.6.1  Designated Agricultural Resource Lands shall be located within the four Agricultural Production Districts.

LU-84.6.2  Agricultural Resource Lands shall be designated by the following criteria in the four Agricultural Production Districts:

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Bonney Lake/ Buckley Plateau</th>
<th>Central/ South Pierce County</th>
<th>Peninsula</th>

</tr>
</tbody>
</table>

LU-84.7  Landowner intent. While landowner intent, by itself, cannot be used as a rationale for de-designation, it can be used as a criterion for inclusion into the ARL designation. Property owners requesting inclusion into the ARL designation shall not be assessed a Comprehensive Plan Amendment processing fee.
GOAL LU-85  Use the community planning and joint planning agreement processes to make refinements to Agricultural Resource Lands designation as follows:

LU-85.4  Joint planning agreements and community plans may recommend re-designation of Agricultural Resource Lands to Rural 5 for a buffer around a city or town Urban Growth Area, using the criteria specified in this Title.

LU-85.5  Community plans may recommend that parcels not meeting the criteria of the Title be designated as Agricultural Resource Lands:

LU-85.5.1  When contiguous ownership involves parcels that meet the criteria of this Title, except that some parcels are below the threshold size of 5 acres,

LU-85.5.2  When the soil type is present, but the size of the parcel is below the threshold of 5 acres, or

LU-85.5.3  When the soil type is not present, but the property is being used for commercial agriculture and the landowner requests inclusion.

LU-85.6  Community plans and joint planning agreements may recommend de-designation of Agricultural Resource Lands to correct errors in designation.

LU-85.7  Community plans can make refinements to the implementing regulations consistent with the provisions of this Title.

AGRICULTURAL LANDS DE-DESIGNATION

GOAL LU-86  Provide the criteria and process for removing properties from the Agricultural Resource Lands Designation. Pierce County will consider applications for de-designation of ARL zoning as part of the Comprehensive Plan amendment process described in Title 19C PCC. Application fees shall be waived for properties that were originally designated in error or voluntarily designated through a property owner request.

LU-86.4  Removal of properties from the Agricultural Resource Lands designation must be evaluated against the same criteria as designation.

LU-86.5  Removal of properties from the Agricultural Resource Lands designation shall be limited to the following processes:

LU-86.5.1  Allow for the de-designation of ARL properties.

LU-86.5.1.1  The approval of a Map Amendment to correct technical errors or revert voluntarily designated ARL parcels to another rural land use designation where the property does not meet one or more of Pierce County’s ARL designation criteria.

LU-86.5.1.2  The property is shown to no longer have long-term commercial significance for agricultural.
LU-86.5.1.3 For the purpose of determining if a property continues to have long-term commercial significance, the County may consider other factors in conjunction with the ten criteria listed under WAC 365-190-050(3)(c).

LU-86.5.2 The adoption of a community plan that includes re-designation of parcels consistent with the Comprehensive Plan.

LU-86.5.3 The approval of a Map Amendment to establish a Rural 5 buffer for a city or town, following a recommendation of an approved joint planning agreement consistent with the provisions of the Comprehensive Plan.

LU-86.5.4 De-designation of Agricultural Resource Lands for the purpose of expanding a Rural 5 buffer for a city or town shall only be considered during the Compliance review required by RCW 36.70A.130.

LU-86.5.5 De-designation of agricultural resource lands for the purposes of expanding the Urban Growth Area, provided that such de-designation is allowed for and consistent with the applicable community plan.

LU-86.6 Agricultural Resource Lands cannot be amended directly into the Urban Growth Area unless permitted by the applicable community plan.

GOAL LU-87 Implement the Agricultural Resource Lands with development regulations that support and enhance farming.

LU-87.4 Provide a base and maximum residential density of 1 unit per 10 acres.

LU-87.5 Allow uses that support the economic viability of farming and protect the farming operations from incompatible uses. In addition to the basic agricultural land uses of crop production, agricultural services, and animal production/boarding, provide for the permitting of more intensive agriculture-related uses, such as small contractor yards, cold storage, small restaurants, with minimum parcel size requirements. For the more intensive agriculture-related uses with the potential for heavy truck traffic, excessive noise, or other significant environmental impacts, such uses may be allowed with an administrative or conditional use permit.

LU-87.6 Ensure that allowed uses support and are agriculture-related.

LU-87.7 Community plans may provide for variations in the density and uses allowed under the following guidelines:

LU-87.7.1 A community plan can include density exceptions with a maximum residential density no greater than 1 unit per 5 acres. Community plans may include provisions for clustering of lots provided that the parent parcel is 20 acres or larger in size and the clustering results in no more than 10 lots per cluster. The remaining unclustered area must be dedicated to agriculture. Lots created after February 1, 2005, shall not be used to de-designate Agricultural Resource Lands using the criteria in the Comprehensive Plan.

LU-87.7.2 The implementing regulations for a community plan may provide for a density exception for housing seasonal farm workers in a community planning process.
LU-87.7.3 A community plan may provide for only the following civic uses on parcels at least 40 acres in size, where 90% of the site is dedicated or available for farming activities: religious assemblies not to exceed 30,000 square feet of building area, and small public safety stations (fire and sheriff).

GOAL LU-88 Provide programs, policies and other regulations to achieve agricultural conservation and support agricultural activities:

LU-88.4 Developing a purchase of development rights program or transfer of development rights program;

LU-88.5 Giving high priority to agriculture in land acquisition programs sponsored by the County, such as Conservation Futures, Purchase of Development Rights, and the Conservation District Assessment;

LU-88.5.1 The Agricultural Resource Lands designated properties in the Alderton-McMillin community planning area shall be given high priority because of the value of the agricultural soils in those areas.

LU-88.5.2 The Agricultural Resource Lands designated adjacent to cities and towns shall be given high priority because of the pressures to urbanize, heritage of farming, and the value of the agricultural soils.

LU-88.6 Leasing development rights for a term of years;

LU-88.7 Implementing anti-nuisance right-to-farm rules that have been adopted by Pierce County;

LU-88.8 Making preferential tax treatment available;

LU-88.9 Continuing support for the Pierce County Farm Advisory Commission (PCFAC), Pierce Conservation District, Washington State University Cooperative Extension, and other agencies and organizations that play a role in agricultural conservation;

LU-88.10 Investigating other innovative techniques to achieve agricultural conservation;

LU-88.11 Coordinating with other jurisdictions, tribes, and special districts, and engaging in the joint planning of agricultural lands;

LU-88.12 Coordinate agricultural land conservation policies with other Countywide Planning Policies through:

LU-88.12.1 Correlating agricultural land conservation policies with Urban Growth Area policies and with public facility and service provision policies – to avoid the extension of urban services into areas intended for continued agricultural use;

LU-88.12.2 Ensuring that public facility and service extensions, even if not directly serving the agricultural lands, do not stimulate the conversion of agricultural land or make its conservation and protection more difficult; and

LU-88.12.3 Joint jurisdictional planning of agricultural land;
LU-88.13 Develop a process for accepting donations of agricultural lands, and develop a program for continuing agricultural operations on donated agricultural lands or County-owned agricultural lands;

LU-88.14 Support local and regional direct marketing campaigns;

LU-88.15 Implement ways to improve the permitting process for, and minimize costs associated with, construction of farm-related structures, and to minimize costs associated with permitting;

LU-88.16 Expand the existing tax incentive programs to provide further benefits to farmers;

LU-88.17 Use existing publicly owned land or acquire farmland to create a lease-back program to farmers;

LU-88.18 Analyze the effect of reducing stormwater fees for agricultural lands.

LU-88.19 Make the purchase of locally grown produce a priority for the County's purchasing programs; and

LU-88.20 Investigate the possibility of establishing an agriculture regulatory ombudsman.

GOAL LU-89 Encourage the provision of an effective stewardship of the environment to conserve Agricultural Resource Lands and agricultural activities.

LU-89.4 Address the effect of agricultural practices on non-point source pollution and groundwater impacts.

LU-89.5 Take measures to minimize any adverse impacts of agricultural activities utilizing best management practices.

GOAL LU-90 Protect agricultural operations from incompatible uses and ensure regulations are in places that maintain the vitality of the agricultural industry.

LU-90.4 Extend the agricultural policies to locations within or adjacent to agricultural activities throughout the County:

LU-90.4.1 Protect such areas from encroachment by incompatible uses;

LU-90.4.2 Protect related development such as farmers markets and roadside stands; and

LU-90.4.3 Protect smaller sized agricultural parcels which are not individually viable for production, but which taken cumulatively with other smaller sized parcels in the area, have long term significance for agricultural production.

LU-90.5 Minimize the conflict of incompatible uses in areas adjacent to Agricultural Resource Lands and other agricultural activities by using measures including, but not limited to:

LU-90.5.1 Setbacks and buffer strips; and

LU-90.5.2 Public education concerning resource activities.
LU-90.5.3 Provisions to require notification to residential properties within 500 feet of designated Agricultural Resource Land, that activities may occur on the ARL land that are not compatible with residential development.

LU-90.6 Farming is encouraged throughout the rural area. Pierce County's regulation of farming should be consistent with these guiding principles:

LU-90.6.1 Homeowner covenants for new subdivisions and short subdivisions in the Rural Area should not restrict farming;

LU-90.6.2 Agricultural management practices shall not be construed as public nuisances when carried on in compliance with applicable regulations, even though they may impact nearby residences; and

LU-90.6.3 County environmental standards for agriculture should protect environmental quality, especially in relation to water and fisheries resources, without discouraging farming.

LU-90.7 Pierce County should use incentives to encourage farming, including, but not limited to:

LU-90.7.1 Tax incentives;

LU-90.7.2 Expedited permit review and/or permit exemptions for resource activities complying with "best management practices"; and

LU-90.7.3 Reduced or eliminated processing fees for subdivisions for the purpose of recombining substandard lots and "right to farm" provisions that would apply to all new development.

LU-90.8 Streamline permit processes to promote the continued viability and maintenance of agricultural lands without compromising environmental or public health safeguards.

LU-90.9 Incentives to experiment with innovative farm technology.

LU-90.10 Residential uses allowed near designated Agricultural Resource Lands should be developed in a manner which minimizes potential conflicts and reduces unnecessary conversion of farm lands.

FARMLAND CONSERVATION STRATEGY

GOAL LU-91 Encourage the development of a Farmland Conservation Strategy using available programs and services to fulfill the County’s commitment to the local agriculture sector including:

LU-91.4 The use of public funds to make strategic purchases of farmland.

LU-91.5 Voters approved bond funds, backed by a property tax, to acquire development rights.

LU-91.6 Purchase of development rights through a farmland preservation program.
LU-91.7  Real Estate Excise Tax as allowed by Washington State law authorizing counties to levy a tax of up to 1 percent on real property transactions.

FOREST

GOAL LU-92  Lands should be designated as forest resource lands of long-term commercial significance based on three factors:

LU-92.4  The land is not already characterized by urban growth.

LU-92.5  The land is primarily devoted to growing trees for long-term commercial timber production.

LU-92.6  The land has long-term commercial significance which is defined as:

LU-92.6.1  The growing capacity, productivity, and soil composition of the land for long-term commercial production.

LU-92.6.2  Consideration of the land’s proximity to population areas, and the possibility of more intense uses of the land as indicated by the following criteria as applicable:

LU-92.6.3  The area should be located outside of the Urban Growth Area (UGA), and have limited public services and facilities.

LU-92.6.4  Should be buffered from urban land use designations by compatible rural land use designations.

LU-92.6.5  Forest lands consist of predominantly large parcels that are at least 40 acres or greater in size.

LU-92.6.6  While landowner intent cannot be used as a rationale for de-designation, it can be used as a criterion for inclusion when reflected by the tax status of the land (inclusion in the County’s Current Use Assessment program as timberland).

GOAL LU-93  Limit development on designated Forest Resource Lands.

LU-93.4  Maintain the vitality of forestry, including early selective harvesting, or selective clearing to reduce fire hazard or to follow an approved forest management plan.

LU-93.5  Use incentives to encourage forestry.

LU-93.6  Remove land from the designation only when it has been demonstrated that the land is no longer suitable for long-term forest production.

LU-93.7  Ensure that forestry use activities are conducted in a manner that is compatible with rural residential character.

LU-93.8  Allow Christmas tree farms and the direct marketing of forest products associated with the holiday season.
LU-93.9  Allow custom milling and forest product sales on sites that engage in forest practice operations.

LU-93.10  Wood chipping activities may occur on-site only during forest practice activities that occur on the site.

MINERAL

Pierce County used the population forecast for the 20-year planning period to estimate the quality of gravel needed in the county area. The Washington State Department of Natural Resources (DNR) uses 11.3 tons/per person/per year as the estimate of volume. Given the large road projects projected for Pierce County, 15 tons/per person/per year were used to generate the estimate.

The population for each year was multiplied by 15, and summed up to arrive at the total tons of gravel needed during the 20-year planning period. This was then converted to cubic yards in order to compare with the amount of gravel available.

GRAVEL QUANTITY AVAILABLE

DNR provided a database of currently permitted and active mining sites, as well as locations where gravel deposits are expected to exist. The projected total excluded developed sites and JBLM.

Industry standards suggest forty feet is a realistic average depth of excavation for gravel sources. The existing sites are not full of gravel, and many of the potential sites will not be economically viable to develop due to long haul routes and lack of road access. Therefore, for comparison a range of gravel thickness from 5’ to 40’ was assumed. The resulting volumes were converted to cubic yards in order to compare with the amount of gravel needed.

RESULTS

Given the above assumptions, Pierce County will need 190 million cubic yards of gravel. Assuming a 25’ material thickness and considering only the DNR presently permitted active mining sites, there would be just 105 million cubic yards available. However, if the potential mining sites are also considered at an assumed 25’ thickness, there would be an additional 1.8 billion cubic yards available, approximately 10 times more than is needed. While it must be understood that excavating materials from this entire area is likely not realistic (due to difficulty and expense of development, accessibility, long haul routes, future competing land uses and development, etc.) it does demonstrate that if needed there are adequate mineral resources in Pierce County.

GOAL LU-94  Maintain and enhance mineral resource-based industries.

LU-94.4  Maintain, map, and classify known and potentially significant economically developable mineral deposits within Pierce County as identified by the Washington State Department of Natural Resources.
LU-94.5 Ensure excavated land has an ultimate economic use which will complement and preserve the value of adjoining land.

LU-94.6 Allow extractive industries to locate where prime natural resource deposits exist, provided these sites are separated by buffer strips from existing residential areas and restored for appropriate re-use after removing the resource material.

LU-94.7 If the demand for mineral resources is documented in the future, use the following criteria to designate Mineral Resource Overlay areas:

LU-94.7.1 The mineral deposit must contain at least one million cubic yards of extractable sand, gravel, or rock material;

LU-94.7.2 The size must be at least 40 acres; and

LU-94.7.3 The new area must be outside the Urban Growth Area.

LU-94.7.4 Allow property owners to have a Mineral Resource Overlay (MRO) placed on their property.
URBAN, RURAL, AND RESOURCE

The policies in this section govern a variety of land use designations and land use activities that may be found in any portion of the County.

The distribution of land designated Urban, Rural, and Resource is shown in Map 2-5. The total acreage and percent of land designated as urban, rural, and resource lands are outlined in Table 2-K.

GENERAL

GOAL LU-95       Allow development to occur only when adequate public facilities and services are available and the carrying capacity of the natural environment is not exceeded.

GOAL LU-96       Ensure the property rights of landowners are protected from arbitrary and discriminatory actions.

GOAL LU-97       Private property shall not be taken for public use without just compensation having been made.

GOAL LU-98       Ensure timely permit review and information dissemination to avoid delays or discourage growth from where it is intended to be focused.

GOAL LU-99       Allow land use changes only when these changes are accompanied by specific documentation or proposed plans showing how the transportation system can adequately support the needs of existing and proposed development.

LU-99.4          Pierce County will establish threshold levels for this policy so that small landowners will not be unfairly disadvantaged, and will tie implementation of this policy to impact mitigation planning that seeks to fairly allocate the costs of transportation improvements among and between the County and all affected parties.
AIRPORTS

Pierce County is served by Seattle-Tacoma International Airport in south King County, two military base airports, and a number of smaller airports owned by the public and private sector. The largest airports located in the County are the military air facilities on Joint Base Lewis McChord (JBLM), McChord Field and Gray Field. General aviation is served by the Tacoma Narrows Airport, Thun Field and several other small private airports. Pierce County owns both the Tacoma Narrows and Thun Field airports. Other small private airports in the County include Spanaway Airport in Spanaway, Shady Acres Airport in the Frederickson/Graham area, Swanson Field in the Eatonville area, and Ranger Creek State Airport near Crystal Mountain.

TACOMA NARROWS AIRPORT

Tacoma Narrows Airport is a regional airport that is used for small business jet travel and general aviation. The airport serves businesses, recreational flying, flight instruction, medical services, the media, the military, and law enforcement. There are approximately 60,000 operations at the airport each year.

Pierce County purchased the airport from the City of Tacoma in 2008. The County is currently preparing a Master Plan Update for the airport which will be the first master plan update since the purchase. The last master plan update was completed in 2003.

The Tacoma Narrows Airport is designated an Essential Public Facilities and policies related to the airport are found in the Essential Public Facilities Element and the Land Use Element.

THUN FIELD AIRPORT

Pierce County also owns Pierce County Airport-Thun Field in Puyallup. Located in central Pierce County 21 miles southeast of Tacoma, Pierce County Airport/Thun Field functions as a key community transportation and emergency services facility. The runway at Thun Field, measuring 3,650 feet long by 60 feet wide, is capable of handling all general aviation aircraft, from light sport to small business jets.

In order to protect airport operations and surrounding land uses, the County has established the overlay zones including the Airport Overlay – Rural Airports Designation and Airport Overlay-Small Airports Designation. The Airport Overlay - Rural Airports Designation is assigned to the Tacoma Narrows Airport while the Airport Overlay -Small Airports Designation is assigned to all other airports.

GOAL LU-100 Ensure compatibility between airports and surrounding developments.

LU-100.4 Coordinate with airports, the Aviation Division of the Washington State Department of Transportation, and other affected parties.

LU-100.5 Utilize airport overlays to protect the public’s health, safety, and welfare and to address incompatible uses with airport operations.
**LU-100.6** Establish Tacoma Narrows Airport as an Essential Public Facility.

---

**Small Airport**

**GOAL LU-101** Establish an Airport Overlay-Small Airport designation for small public use airports in unincorporated Pierce County to protect the airports from incompatible uses, consistent with the requirements of [RCW 36.70A.510](https://app.leg.wa.gov/billsummary?BillNumber=36.70A.510&Year=2017) and [36.70.547](https://app.leg.wa.gov/billsummary?BillNumber=36.70.547).

**LU-101.4** Establish Small Airport Overlay boundaries using each small airport’s area of influence.

---

**Current Use**

The Current Use Open Space Taxation Act states that it is in the best interest of the State to maintain, preserve, conserve and otherwise continue in existence adequate open space lands for the production of food, fiber and forest crops and to assure the use and enjoyment of natural resources and scenic beauty for the economic and social well-being of the state and its citizens. Upon removal of classification, an additional tax, interest and penalty shall be due.

The law provides for three classifications:

- **Farm and Agricultural** - Land primarily devoted to the production of livestock or agricultural commodities for commercial purposes.
- **Timber** - Land in any contiguous ownership of five acres or more, which is primarily devoted to the growth and harvest of timber for commercial purposes.
- **Open Space** - Land retained in its natural state. Land that would enhance, protect or preserve natural areas, i.e. parks, sanctuaries, historic sites, scenic resources, streams, beaches.

**GOAL LU-102** Foster partnerships between interest groups to promote participation in the Current Use Assessment program.

**LU-102.4** Provide information on obtaining financial assistance.

**LU-102.5** Educate on the uses and limitations of the Current Use Assessment (tax incentive) program.

---

**Essential Public Facility – State Corrections Overlay**

**GOAL LU-103** Establish an Essential Public Facility – State Corrections Overlay for the McNeil Island Corrections Center on McNeil Island. The designation should include only the Main Institution located on approximately 89 acres and the existing north complex facility on approximately 87 acres, and should not include any other land on McNeil Island.

**LU-103.4** Establish allowed facilities and uses, including those facilities and uses typically associated with a State corrections center, but not including facilities associated with a sexual offender program.
LU-103.5  Provide measures to assure that the uses and activities associated with the State Corrections designation are compatible with the land uses and natural systems on adjacent lands and shorelines.

**HOME OCCUPATIONS AND COTTAGE INDUSTRIES**

**GOAL LU-104**  Allow home occupations, daycare facilities, and cottage industries.

**LU-104.4**  Recognize the importance of the home-based business sector.

**LU-104.5**  Encourage environmentally friendly home occupations and industries as a means of low impact employment.

**LU-104.6**  Promote local professional services so business owners don’t need to travel out of the area to purchase services.

**LU-104.7**  Explore options for flexibility, such as creating separate regulations for home occupations in different industry sectors.

**LU-104.8**  Ensure compatibility with the underlying land use designation.

**LU-104.9**  Ensure activities are maintained and carried out in accordance with the conditions of approval.

**LU-104.10**  Relocate to an appropriate area if the use grows beyond the limits of the underlying designation.

**MILITARY LAND DESIGNATION AND COMPATIBILITY**

Pierce County is engaged in a collaborative planning effort involving Joint Base Lewis McChord and local governments surrounding this military installation. The goal of this effort is to encourage compatible development and redevelopment in surrounding areas. The effort is designed to balance the sustaining the local military mission with long term community land use needs. The policies represent Pierce County’s commitment in support of this effort.

Two land use designations have been established to recognize federal and state military installations within unincorporated Pierce County. These designations are not intended as an attempt to govern land use activities, rather as a mechanism to recognize the presence of military lands within unincorporated Pierce County.

**GOAL LU-105**  Recognize the unique character of land uses associated with military operations and support structures.

**LU-105.4**  Designate the portions of Joint Base Lewis-McChord and Camp Murray that contain urban level of services and characteristics as Urban Military Lands.

**LU-105.5**  Designate the portions of Joint Base Lewis-McChord that lie outside the UGA as Rural Military Lands.
LU-105.6 The application of the Military Lands designations shall be consistent with official federal and state military installation master plans.

GOAL LU-106 Provide the military installations with opportunities to participate in the review and development of land use programs, policies, and decisions that affect them.

LU-106.4 Consider the military installations as an affected agency for land use planning decisions.

LU-106.5 Invite the military to participate as members on growth management committees.

LU-106.6 Provide opportunities for the military to participate in local and regional planning issues and programs.

LU-106.7 Establish periodic meetings of elected local, state, and federal officials and military commanders on growth management issues of mutual concern.

LU-106.8 Environmental policies adopted by the military should continue to reinforce the environmental policies of surrounding jurisdictions.

LU-106.9 Comprehensive Plan policies pertaining to environmental issues should agree with and not degrade the environmental policies of the military installations.

LU-106.10 Consider amendments necessary to provide consistency and compatibility between the County's Comprehensive Plan, Development Regulations, and the Joint Base Lewis-McChord (JBLM) Joint Land Use Study (JLUS) upon completion of the JLUS which is anticipated to occur in October 2015.

GOAL LU-107 Recognize the possibility of military lands reverting back to Pierce County.

LU-107.4 If military lands revert back to Pierce County, the County should adopt interim regulations that restrict development of the reverted property until such time a sub-area plan is adopted.

LU-107.5 The County should coordinate with adjacent cities and towns to identify the desired character of the reverted property.

GOAL LU-108 Recognize aircraft noise as a health impact and an environmental constraint when developing land use classifications and regulations.

LU-108.1 Promote cooperation between Joint Base Lewis-McChord and Pierce County to address the reduction or mitigation of noise-generating uses.

LU-108.1.1 Establish a disclosure process advising property owners of possible noise impacts to property around JBLM.

GOAL LU-109 Recognize safety issues associated with training, artillery, and small-arms activities on Joint Base Lewis-McChord.

LU-109.1 Future construction adjacent to the installation should provide for fire protection at Fort Lewis boundaries.
LU-109.2 Incorporate the Installation Compatible Use Zone Study (ICUZ) noise contour maps and the "Recommended Land Uses for Installation Compatible Use Zone (ICUZ) Program Noise Zones" for Noise Zone II.

LU-109.3 Prohibit the following land uses within Noise Zone II:

LU-109.3.1 New residential uses, unless the design of the structure and general site plan incorporate noise-reduction measures to meet the Department of Housing and Urban Development (HUD) standards;

LU-109.3.2 Public services and quasi-public services such as hospitals, public meeting rooms, and libraries, and cultural, recreational, and entertainment land uses, unless the design of the structure and general site plan incorporate noise-reduction measures to meet HUD standards; and

LU-109.3.3 Schools, daycare facilities, and other facilities which incorporate outside activities.

LU-109.4 Direct the following land uses away from property abutting the installation boundary:

LU-109.4.1 High density residential;

LU-109.4.2 Public buildings (such as schools, medical facilities, public meeting facilities, and churches); and

LU-109.4.3 Cultural facilities.

LU-109.5 Cooperate with Joint Base Lewis-McChord and Camp Murray in developing plans for circulation improvements in and around the installations.

LU-109.5.1 The viability of cross-base corridors (arterial or highway) should be determined on the basis of detailed studies of population projections, military mission, land availability, land use projections, and environmental analysis of alternative routes and corridors.

LU-109.5.2 Plan public services, transportation, land use, and other decisions on the ability of the public transportation network to meet access needs without depending on military roads.

LU-109.5.3 Cooperate in the development of mitigation plans for military road closures that affect public use.

**Nonconforming Uses and Vesting**

**GOAL LU-110** Maintain consistency with State vesting laws.
APPROVED DISCRETIONARY LAND USE ACTIONS

GOAL LU-111  Concomitant agreements and discretionary land use actions approved prior to the effective date of the Comprehensive Plan, any subsequent Plan amendment, or any Pierce County development regulation shall be allowed to develop on the basis of the controls contained in the decision granting approval; provided that they remain in compliance with the conditions of approval. Also building permits shall not be issued unless the action meets concurrency requirements, as determined by those agencies responsible for administering concurrency policy, in effect at the time of submittal of building permit applications.

LU-111.1  Concurrency requirements may include, but are not limited to, imposition of impact fees.

NONCONFORMING USES

GOAL LU-112  Allow the expansion of nonconforming uses that do not detract from the intent of the Comprehensive Plan, according to specific criteria. Types of nonconforming uses that the Council determines by Ordinance to be a nuisance or detrimental to public health safety or welfare may be terminated according to a reasonable amortization timetable, or reasonable conditions added.

LU-112.1  Develop standards for identifying those uses or groups of uses that are inconsistent with the Land Use designations, but are still consistent with the intentions of the Plan.

LU-112.2  Allow limited outright expansion of nonconforming uses.

LU-112.2.1  Develop standards that would allow for limited outright expansion of nonconforming uses considering at least existing and proposed site intensity and coverage.

LU-112.3  Allow major expansion of nonconforming uses if specific conditions to make them more compatible with allowed uses are met.

LU-112.3.1  Develop standards that would allow for major expansion of nonconforming uses considering items such as buffers, screening, lighting, and noise.

LU-112.3.2  Existing nonconforming uses may be converted to other uses so long as the proposed use is of equal or lesser intensity, would create equal or lesser environmental impacts, and would be compatible with allowed uses.

OPEN SPACE NETWORK

The GMA requires that the designation, proposed general distribution and location of open space and recreational lands be identified in local comprehensive plans. Identification of areas suitable for open space corridors within and between Urban Growth Areas (UGAs) is also required. These open space areas provide diverse functions including: protecting
environmentally sensitive lands, which are often ill-suited for commercial and residential development; separating incompatible land uses; linking communities and businesses; and creating corridors for wildlife migration and nonmotorized transportation routes.

Open space corridors serve as buffers within and between urban growth areas. The Open Space Corridors map, Map 2-6, is not intended to have regulatory effect but rather provide general guidance for open space preservation efforts. The Open Space Corridors map may be refined in the future based on more detailed analysis through community planning, watershed basin planning, fish and wildlife habitat planning, and other open space planning efforts.

**DESIGNATION OF AN OPEN SPACE NETWORK**

**GOAL LU-113** Establish an open space network linking open space areas via greenbelt corridors throughout Pierce County.

**LU-113.1** Pierce County shall designate an Open Space Corridors Map which identifies the general location of open space areas and corridors in Pierce County.

**LU-113.1.1** The map is based upon the high priority open space categories as set forth in Title 19D.170, Open Space Priorities.

**LU-113.1.2** The map should be refined based on the development of more detailed open space information obtained through community plans, open space plans, watershed basin plans, fish and wildlife habitat plans, or similar planning efforts.

**LU-113.2** Additional areas should be considered for designation as open space including:

**LU-113.2.1** Wooded areas that serve a functional purpose in climate, noise, light, habitat, and pollution control.

**LU-113.2.2** Environmentally or geologically unique areas, and scenic view points and scenic corridors as defined in Chapter 2.114 PCC, Current Use Assessment Administrative Procedures.

**LU-113.2.3** Lands that can provide for a separation between communities, thereby preserving character, preventing sprawl, and creating a buffer between urban and rural areas or other land uses.

**LU-113.3** Incorporate landscaped greenbelt areas into the open space network.

**LU-113.3.1** Establish and maintain greenbelts within the Plan area that provide multi-use functions such as buffers between incompatible uses, separation between communities and rural/urban areas, visual relief from the built environment, and passive open space recreation areas.

**LU-113.3.2** Utilize greenbelts for pathways and integrate this system into the nonmotorized transportation network.
LU-113.3.3 Encourage the planting of native vegetation within greenbelt areas but recognize that other non-native species, such as turf, may be appropriate for the intended use.

LU-113.3.4 Integrate built structures such as children's play equipment, play areas, climbing rocks, water features, benches, trails, and picnic tables into greenbelt systems. Trails shall be made of permeable pavement or materials.

LU-113.3.5 Greenbelt areas should integrate or bridge critical areas, such as wetlands, fish and wildlife habitat areas, or designated open space areas, when possible.

OPEN SPACE ACQUISITION, PRESERVATION, AND CONSERVATION

GOAL LU-114 Utilize a number of techniques and innovative measures to acquire and conserve open space.

LU-114.1 Consider the use of overlays, special zoning districts (e.g., agricultural zoning or sensitive resource zones), design standards, low impact development strategies, and large-lot zoning to preserve high priority open space areas.

LU-114.2 Provide incentives for open space preservation by allowing innovative measures such as cluster zoning, transfer of development rights, and zero-lot-lines.

LU-114.3 Consider the use of real estate excise taxes (Chapter 82.46 RCW) to acquire open space lands, including the following authorized taxing sources:

LU-114.3.1 A 1/4 of 1% tax for capital facilities (RCW 82.46.010);
LU-114.3.2 Second 1/4 of 1% tax for capital facilities (RCW 82.46.035); or
LU-114.3.3 "Tree tax" of up to 1% for acquisition and maintenance of conservation areas (RCW 82.46.070).

LU-114.4 Utilize Conservation Futures Program funding (Chapters 2.96 and 2.97 PCC) to acquire open space lands.

LU-114.5 Provide increased opportunities for current-use or preferential tax assessment (Chapter 84.34 RCW) for open space lands by promoting public enrollment in the program.

LU-114.6 Pursue public acquisition of open space lands through actions such as:

LU-114.6.1 Fee-simple purchase;
LU-114.6.2 Less than fee-simple purchase (i.e., purchase of development rights, conservation easements);
LU-114.6.3 Voluntary donations with tax incentives;
LU-114.6.4 Land transfers or exchanges;
LU-114.6.5 Limited development techniques (develop a portion of the site for economic return and leave remainder as open space).
LU-114.7 Promote private (land trusts) acquisition of open space lands.

LU-114.8 Consider pursuing a number of funding mechanisms to acquire open space lands, including but not limited to:

LU-114.8.1 Property tax levies;
LU-114.8.2 General obligation bonds and limited general obligation bonds;
LU-114.8.3 Intergovernmental funds (e.g., State grants);
LU-114.8.4 User fees;
LU-114.8.5 Foundation monies.

LU-114.9 Examine the potential of County surplus lands for open space purposes and consider transferring these lands to a local land trust.

GOAL LU-115 County programs that provide for the acquisition and/or preservation of open space shall have established priorities.

LU-115.1 Priorities for the preservation of open space shall be in conformance with the policies established in Chapter 19D.170, Pierce County Open Space Priorities.

LU-115.2 These priorities shall be coordinated with any subsequent updates of the Parks and Recreation Plan for the County.

LU-115.3 At a minimum, the priorities will be used for the following programs and regulations:

LU-115.3.1 Conservation Futures Program (open space acquisition);
LU-115.3.2 Current Use Assessment Program-Public Benefit Rating System (tax incentive);
LU-115.3.3 Development Regulations – Zoning (density bonus incentive).

GOAL LU-116 Ensure that Pierce County open space properties, open space passive recreation parks, conservation easements, and conservation futures covenants are managed and maintained to provide long-term stewardship of the open space function and value.

GOAL LU-117 Recognize that open space is an integral part of an area's infrastructure and that it should be provided concurrent with development, and with minimum percentages of public open space required per development.

LU-117.1 Require that new residential developments set aside a percentage of total land area as open space in perpetuity.

LU-117.1.1 Ensure that the designated area best serves the purpose of open space (e.g., the area should match areas on the Open Space/Greenbelts Map) and can be linked to adjacent open space areas to provide greenbelts.

LU-117.1.2 Where linkages and greenbelts occur, ensure that public easements are provided.
LU-117.1.3 Where land is not suitable for open space purposes, require the acquisition (or contribution towards acquisition) of nearby open space lands. These nearby lands should be identified on the Open Space Corridors Map.

LU-117.2 Design standards for development within designated open space/greenbelt areas should be implemented through the community planning, basin planning, or other similar planning efforts. At a minimum, the following should apply:

LU-117.2.1 Open space in urban areas should remain substantially undeveloped and exemplify the Pacific Northwest character (retention and replanting of native vegetation).

LU-117.2.2 Open spaces should be located contiguous to other open space areas, creating the potential for open space corridors.

LU-117.2.3 Open space in urban areas should be readily accessible to residents where appropriate.
Map 2-6: Open Space Corridors Map

Note:
This map indicates the general location of significant open space areas within Pierce County. This map does not change the rights property owners are entitled to under the land use designation identified as the Comprehensive Plan Land Use Designation Map. Portions of the areas identified, such as the Fort Lewis Military Reservation, contain areas held available for open space purposes.
GOAL LU-118  Designate specific public lands and private parks, campgrounds, historical sites or tourist attractions for park and recreational purposes when identified through a city, community, or regional planning process.

LU-118.1  Public lands identified for the Park and Recreation designation may include historical sites, tourist attractions, or property improved with park or recreational facilities. Unimproved public lands may be designated Park and Recreation when identified for future regional park uses.

LU-118.2  Privately owned properties identified for the Park and Recreation designation may only include properties improved with park, campground, or other recreational amenities that are open to the general public with or without a fee.

LU-118.3  The Park and Recreation designation shall be applicable in Urban and Rural designations. Resource Lands shall not be designated or zoned Park and Recreation.

LU-118.4  Development and improvement of park and recreational facilities, other than new regional parks, on sites designated as Park and Recreation, should be permitted outright. New regional parks should require Conditional Use Permits.

LU-118.5  Uses permitted on Park and Recreation designated sites may include passive or active recreation.

LU-118.6  The conversion of lands designated as Park and Recreation to other uses is discouraged.

LU-118.7  Publicly owned or managed land which is readily accessible via existing public roads or where roads can be reasonably extended to access the site should be considered for possible park and recreation sites. Public park and recreation sites should be located close to their prospective users.

LU-118.8  Sites or areas within a park site used for active recreational uses should be nearly level, dry and readily useable. However, the site should be suitable for the type of recreation proposed; activities which require differences in topography should be sited accordingly.

LU-118.9  Land which includes significant historic, archaeological, scenic, cultural or unique natural features should be considered for incorporation into the park and recreation system.
PUBLIC AND COMMUNITY FACILITIES

LOCATION CRITERIA

GOAL LU-119  Public and community facilities will be located in consideration of the following criteria.

LU-119.1  Public facilities should be designed around the service delivery standards with service levels appropriate to the people using each facility.

LU-119.2  Recreation facilities, schools, libraries, medical area facilities, sheriff and other community facilities, should be convenient to people using them.

LU-119.3  Community facilities should be located in centers or in areas with direct access to major thoroughfares.

LU-119.4  Public facilities should be located on sites which are economical to develop and reasonably level.

LU-119.5  Major parks, because of space needs, should be allocated by regional need.

LU-119.6  Schools, because of health and safety issues, should be protected from traffic.

LU-119.7  Cultural facilities, educational institutions, and spectator sports facilities, because of service areas, should be located central to their function or where complementary functions could be located.

LU-119.8  Branch government offices should be easily accessible and located in centers.

LU-119.9  Community facilities should be located on level or gradable land and avoid geologically hazardous areas.

LU-119.10  Community facilities should be located outside of floodplains, wetlands, riparian areas, or other critical areas, and constructed to protect major aquifers providing drinking water for the community.

LU-119.11  Community and public facilities which are associated with infrastructure corridors should be located with regard to such factors as terrain, the geological and hydrological conditions, the site's proximity to population concentrations and water supply, and the potential for supporting higher land uses.

GOAL LU-120  Coordinate the orderly provision of public facilities and services with public and private development activities in a manner that is compatible with the fiscal resources of the County through the development and adoption of a Concurrency Management System.

LU-120.1  Development activity shall be conditioned upon facilities being in place as the impacts of the development occur.

LU-120.2  Provisions for the review of applications for development and the timing of the actual impacts caused by development will be adopted as part of Pierce County's Concurrency Management System.
GOAL LU-121  Public facilities and utilities shall be located to maximize the efficiency of services provided, minimize costs, and minimize impacts upon the natural environment.

GOAL LU-122  Developments with requirements that exceed the capacity of the Capital Facilities Plan should not be allowed to develop until such services can be provided and maintained.

GOAL LU-123  The Comprehensive Plan and development regulations will be used to ensure compatibility with other land uses when siting essential public facilities.

   LU-123.1  Establish criteria for siting essential public facilities.

   LU-123.2  Caution will be used when locating capital facilities in critical areas.

   LU-123.3  In communication with State agencies, emphasize the importance of their compliance with County policies.

PUBLIC INSTITUTION

GOAL LU-124  Recognize major parcels of land serving the cultural, educational, recreational, and public service needs of the community through the Public Institution designation.

   LU-124.1  The Public Institution designation may be applied to urban or rural institutions and facilities.

GOAL LU-125  Identify lands owned by governmental agencies for public use or benefit with the Public Institution designation or other land use designation that supports and protects these uses.

REZONING AND REDESIGNATING

GOAL LU-126  Provide strict guidance and review criteria for rezones to ensure planning goals are properly implemented and resulting changes are compatible with surrounding uses.

GOAL LU-127  Consider the availability of adequate potable water and other services when reviewing proposals for modifications to the land use designation or zoning classification.

GOAL LU-128  Utilize inventory of flood hazard or flood-prone properties in determining appropriate land use designations and zoning.

TRANSFER OF DEVELOPMENT RIGHTS/PURCHASE OF DEVELOPMENT RIGHTS

GOAL LU-129  Maintain and implement transfer of development rights (TDR) and purchase of development rights (PDR) programs to provide the public benefit of permanently conserving resource and rural agricultural lands, recreational trails, open space, and habitat areas through acquisition of the development rights on those lands.
**LU-129.1**  Allow residential density credits to transfer to urban areas in exchange for permanent preservation of agricultural lands and timberland through the TDR program.

**LU-129.2**  Transfer of development rights from ARL properties should be a higher priority than transfer from Rural Farm zoned properties.

**Utilities**

Most utilities are provided by agencies other than the County government. The coordination between agencies is important to the livability of the County.

**GOAL LU-130**  Provide for the locating of utility facilities.

**GOAL LU-131**  Base the type of land use and development intensity on the existence or planned construction of utility facilities.

**Community Plans**

Community plans result from partnerships that unite the County and citizens of a planning area. The majority of unincorporated County population resides in community plan areas. Community plans describe how the general policies of the Comprehensive Plan apply in a specific community and address local issues that are not in a general comprehensive plan. The purpose of the community planning process is to enhance community values and identify and assure sensible growth and development.

Community plans provide for a more refined scale and level of detail than can be attained under the broad guidelines of a comprehensive plan. Community plans augment and enhance the Comprehensive Plan so as to enhance a community character. Because of the diversity in the character of various parts of the County, Comprehensive Plan policies may not address specific issues confronting individual communities. Conversely, due to the distinct nature of community plan areas, not all community plan policies should be applied countywide. The community plan area boundaries are shown in Map 2-7.

**Community Autonomy**

**GOAL LU-132**  Foster the autonomy of communities.

**LU-132.1**  Support and incorporate methods which can establish or preserve community autonomy.

**LU-132.2**  Community plans should be used as a means of implementing Comprehensive Plan policy as follows:

**LU-132.2.1**  By applying Comprehensive Plan policy to specific parcels or groups of parcels of land within the community planning areas.
LU-132.2  By identifying community design characteristics which are used in project reviews (special district reviews, site plan reviews, conditional use permits, unclassified use permits, etc.).

LU-132.3  Establish or use existing community councils and/or other groups to make recommendations on land use designations, design standards, transportation improvements, capital facility improvements, densities, and development proposals within the community planning area using the policies of the Comprehensive Plan and development regulations.

LU-132.4  An effective communication system should advise citizens in community plan areas of proposed developments and policy decisions that would affect their community plan or planning area.

**COMMUNITY CHARACTER**

**GOAL LU-133**  Foster and retain community character.

**LU-133.1**  Adopt planning "standards" for the development of a community plan.

**LU-133.1.1**  Community plans shall involve the people of the community in plan development and amendment.

**LU-133.1.2**  Community plans should articulate a vision for the community.

**LU-133.1.3**  Community plans should identify features and characteristics of communities to be retained, developed, preserved, enhanced or corrected.

**LU-133.1.4**  Community plans should consider areas for commercial, industrial, residential, capital facilities, recreation and other land uses.

**LU-133.1.5**  Community plans shall contain policies that supplement the policies of the Comprehensive Plan.

**LU-133.1.6**  Community plans may identify design features to be encouraged in capital facilities, multifamily residential, commercial and industrial construction and landscaping. Design features may include site planning, building design and other features which affect the character of a community.

**NEW COMMUNITY PLANS**

**GOAL LU-134**  Support communities in the development of new community plans.

**LU-134.1**  Adopt a process for initiating the development of new community plans.

**LU-134.1.1**  Community plans may be initiated by one of the following means:

**LU-134.1.1.1**  Communities can request new community plans by submitting a petition to the Pierce County Executive and County Council that:

**LU-134.1.1.1.1**  Identifies the proposed area; and

**LU-134.1.1.2**  Identifies reasons why a community plan is needed, such as:
| LU-134.1.1.2.1 | The need to preserve historical or heritage areas |
| LU-134.1.1.2.2 | New problems identified |
| LU-134.1.1.2.3 | Change in local conditions |
| LU-134.1.1.2.4 | Previous solutions have proven unworkable or to have unacceptable side effects. |

**LU-134.1.2** Community plans may be initiated by the Pierce County Executive or County Council in order to implement policies of the Comprehensive Plan.

**LU-134.2** New community plan areas should be established on the basis of the following priorities:

- **LU-134.2.1** Public health, safety, or welfare;
- **LU-134.2.2** Previous commitments by the County through legislative action to prepare a plan; and
- **LU-134.2.3** Evidence of community support.

**LU-134.3** New community plan areas shall meet the following criteria:

- **LU-134.3.1** Contain a Commercial Center, Mixed Use District, Employment Center, or Rural Center;
- **LU-134.3.2** Have a common association or identity as a town, center, or destination; and
- **LU-134.3.3** Have boundaries as follows:
  - **LU-134.3.3.1** Contiguous with other community plans or municipal boundaries or designated rural lands;
  - **LU-134.3.3.2** Reflecting school district or other service area boundaries; or
  - **LU-134.3.3.3** Defined by topography and natural land features or manmade constructions, transportation arterials, road and rail, etc.

**LU-134.4** Upon the initiation of a community plan in the rural area of the County, all rural centers shall be evaluated and updated as necessary to be consistent with Growth Management Act provisions in **RCW 36.70A.070(5)** for LAMIRDs.

**LU-134.5** Community planning boards should focus on policy choices and regulatory options that can be effectively implemented and shown to be beneficial and desirable for the community.

**LU-134.6** Community planning boards should, with the assistance of PALS staff, share innovative or updated information throughout the plan formation process with other planning boards or land use advisory commissions to determine if there is a need or desire for changes countywide.
LU-134.7 Implement community plans through land use regulations and administrative decisions where possible, capital facilities provisions and other public programs, as applicable.

LU-134.8 Community plans should be developed in consultation with the following entities:
   LU-134.8.1 Community groups;
   LU-134.8.2 Governmental departments and agencies as applicable;
   LU-134.8.3 Neighboring cities, towns, or communities;
   LU-134.8.4 Affected Indian Tribes; and
   LU-134.8.5 Utility and service providers.

LU-134.9 Community plans should use existing land use designations rather than creating new designations and zoning classifications.

LU-134.10 Amendments to community plans shall be undertaken when changes to the Comprehensive Plan make community plan policies incompatible or inconsistent.

**CONSISTENCY WITH DEVELOPMENT REGULATIONS**

**GOAL LU-135** Promote predictability and consistency in development regulations implementing community plans.

LU-135.1 One set of development regulations shall apply countywide.
   LU-135.1.1 The development regulations shall provide a range of alternatives that recognizes and provides for local uniqueness and character.
   LU-135.1.2 Communities may select from the range of alternatives to achieve their desired character.
   LU-135.1.3 Communities may recommend changes to the development regulations to achieve the desired character as articulated in an adopted community plan. Proposed new regulations shall be able to be applied to all similar situations or locations in other parts of the County.
   LU-135.1.4 Communities may recommend the creation of additional new zoning classifications that are consistent with land use designations identified in the Comprehensive Plan; however, these classifications may be applied only to parcels within the jurisdiction of a community plan adopted or updated after August 1999, which specifically allows such classifications.
   LU-135.1.5 Densities and uses may vary among communities only when consistent with the countywide land use designation and zone classifications.
   LU-135.1.6 Community plan regulations regarding permit processes or amendments to regulations should be considered for countywide application when beneficial and desirable for all communities.
LU-135.2  Eliminate and discourage redundant regulations, procedures and inconsistent, unnecessary overlays in community plan areas.

INTRODUCTION

The Capital Facilities Element is comprised of these policies and the Capital Facilities Plan (CFP) itself. The policies found in this element provide guidance to the CFP, a long-range plan for predictable infrastructure provision. The CFP details the County’s current understanding of the projected capital improvement needs and financing sources that support the County's current and future population and economy. The Capital Improvement Program (CIP) is the operational implementation of the Capital Facilities Plan.

Capital Facilities is an element of this Comprehensive Plan, as required by Washington's Growth Management Act (GMA). The GMA requires the element to identify public facilities that will be needed to address development expected to occur during the next six years. The CFP is adopted by ordinance as an amendment to the Comprehensive Plan each year.

The adopted CFP is an investment strategy, defining:

- What public facilities are needed;
- Where they will be provided;
- When projects will occur; and
- How they will be financed.

The CFP does not authorize the expenditure of funds. Rather, the funds for capital projects are appropriated annually in the County's operating budget.

The County establishes standards for the desired level of service for each type of public facility and determines the necessary capital improvements to maintain or achieve that level of service for existing and future populations. The County can provide public facilities only when funds are available. When authorized, the County may require others to provide public facilities.

GOAL CF-1 County expenditures for facilities and infrastructure must be consistent with the adopted Comprehensive Plan.

GOAL CF-2 Prepare and maintain a financially feasible six-year schedule of capital improvements in a Capital Facilities Plan.

CF-2.1 Use the Capital Facilities Plan, Six-Year Transportation Improvement Plan, Unified Sewer Plan, Coordinated Water System Plan, Surface Water Management Plan, and the Rivers Flood Hazard Management Plan to determine the existing and proposed availability of infrastructure for new areas for residential, commercial, and industrial growth.

CF-2.1.1 The absence of a Capital Facilities Plan for a school district under the County's CFP does not limit the Hearing Examiner’s authority, if any, to review the impact from residential development on schools while reviewing applications for land developments.

CF-2.2 Establish and update level of service (LOS) standards for applicable capital facilities in the CFP.

<tr>
<td>Library</td>
<td>The level of service target for Pierce County libraries is 0.61 to 0.71 square feet per capita by 2030, which was the planning horizon for the Pierce County Library 2030: Facilities Master Plan.</td>
</tr>
<tr>
<td>Regional Parks</td>
<td>The PROS Plan establishes a LOS standard for parks based on investment per capita.</td>
</tr>
<tr>
<td>Roads</td>
<td>Pierce County has established traffic volumes (V), service thresholds (S), and V/S Service Standards that are used for determining transportation concurrency on jurisdictional roadways. The Capital Facilities Plan describes these V/S thresholds and identifies roadway locations where these thresholds are exceeded in the current year and future 6 year period.</td>
</tr>
<tr>
<td>Sanitary Sewer</td>
<td>The LOS of 220 gallons per day per residential equivalent plus a 15% reserve capacity meets current level of service requirements.</td>
</tr>
<tr>
<td>Schools</td>
<td>As determined by individual school district.</td>
</tr>
<tr>
<td>Solid Waste</td>
<td>The SWMP reaffirmed waste reduction and recycling as County priorities and set a goal to reduce per capita waste disposal needs from 4.5 pounds per day (2007 level) to less than 1.1 pounds per day by 2032.</td>
</tr>
<tr>
<td>Surface and Storm Water</td>
<td>The level of service (LOS) for stormwater facilities is detailed in the current version of the Pierce County Stormwater and Site Development Manual.</td>
</tr>
<tr>
<td>Management, and River Levees</td>
<td>The LOS for flood management facilities along major rivers refer to the current version of the comprehensive Rivers Flood Hazards Management Plan.</td>
</tr>
</tbody>
</table>
GOAL CF-3 Ensure that adequate infrastructure is provided to accommodate economic growth.
  
  CF-3.1 Direct growth where adequate public facilities exist, or where they can be efficiently provided.
  
  CF-3.2 Ensure the necessary urban services are available in urban areas to support business development.
  
  CF-3.3 Target areas of high growth for future infrastructure improvements.
    CF-3.3.1 Give priority to designated commercial and industrial lands.
  
  CF-3.4 Direct infrastructure resources to areas identified for planned industrial development.
    CF-3.4.1 Phase public facilities and infrastructure in designated industrial areas.
  
  CF-3.5 Lobby the federal government for revenue sharing or similar programs for the financing of needed infrastructure.
  
  CF-3.6 Consider the use of recycled materials in the construction of facilities.
  
GOAL CF-4 Construct needed capital improvements which:
  
  CF-4.1 Repair or replace obsolete or worn out facilities;
  
  CF-4.2 Eliminate existing deficiencies; and
  
  CF-4.3 Meet the needs of future development and redevelopment caused by previously issued and new development permits.
  
GOAL CF-5 Rank possible sites for planned public facilities and services using a priority system.
  
  CF-5.1 Allocate public services to sites that provide the greatest possible returns, unless private property owners assist with the costs involved in extending or providing service.
  
  CF-5.2 Give priority to the maintenance and improvement of public facilities in commercial areas and along major routes connecting commercial areas to residential neighborhoods.
  
GOAL CF-6 Establish a system of concurrency management to relate capacity of facilities to the approval of development permits when concurrency is required.
  
  CF-6.1 Provide non-capital alternatives to achieve and maintain the adopted standard for level of service.
  
  CF-6.2 Condition development projects in a manner that guarantees public facilities will be in place or that adequate mitigation will be provided as the impacts of the development occur.
  
  CF-6.3 Annually review public facilities to determine if there is sufficient capacity to meet the needs and to maintain acceptable levels of service for existing and approved development.
CF-6.4 Identify the necessary facilities to maintain adopted levels of service to serve anticipated development and eliminate deficiencies.

CF-6.5 Consider the impacts of development on public facilities.

CF-6.6 Issue final development permits only when there is sufficient capacity of Category A and Category B public facilities available to meet the adopted levels of service for existing and proposed development.

GOAL CF-7 Coordinate the providers of water, sewer, power, natural gas, telecommunications, cable television, transportation systems, and other infrastructure.

CF-7.1 Coordinate infrastructure provision among jurisdictions.

FUNDING

GOAL CF-8 Use a realistic, financially feasible funding system based on revenue sources available according to applicable laws.

CF-8.1 The estimated costs of all needed capital improvements shall not exceed conservative estimates of revenues from sources that are available pursuant to current statutes, and not rejected by referendum, if required.

CF-8.1.1 Conservative estimates cannot exceed the most likely estimate.

CF-8.2 Require both existing and future development to pay for the costs of needed improvements.

CF-8.3 Finance enterprise and non-enterprise funds used for capital improvements with:

CF-8.3.1 Debt to be repaid by user fees and charges, and connection or capacity fees; or

CF-8.3.2 Current assets; or

CF-8.3.3 A combination of debt and current assets.

CF-8.4 Limit the use of debt financing to provide more capacity than is needed within the schedule of capital improvements for non-enterprise public facilities.

CF-8.5 Consider the ability to pay for the subsequent operating and maintenance costs before providing a public facility or accepting a public facility provided by others.

CF-8.6 Support initiatives that will provide funding for unmet infrastructure needs.

CF-8.7 Allocate funding for public infrastructure to encourage infill, land assembly, redevelopment, and land conversion for commercial and industrial development, with priority toward areas with substantial private development.

CF-8.8 Use impact fees for schools, parks, and roads.
GOAL CF-9 Include all the capital improvements projects required for concurrency and listed in the schedule of capital improvements for expenditure during the appropriate fiscal year.

CF-9.1 The County may omit any capital improvements when a binding agreement has been executed with another party to provide the same project in the same fiscal year.

GOAL CF-10 Prioritize funding for infrastructure projects within the UGA in the Transportation Improvement Program (TIP) and the Capital Facilities Plan (CFP).

CF-10.1 Recognize that the TIP and CFP need to include rural area projects which focus on rehabilitation, restoration, and safety improvements within the rural area.

EMERGENCY RESPONSE

GOAL CF-11 Pursue funding to develop emergency plans and provide information to prepare for disaster events.

GOAL CF-12 Consolidate emergency services that create stronger and more cost-effective service.

GOAL CF-13 Prepare to respond to possible disaster events affecting islands.

FIRE

GOAL CF-14 Support fire districts’ efforts to:

CF-14.1 Respond to the increasing demand for services;

CF-14.2 Establish a team to provide rescue operations in cooperation with other agencies;

and

CF-14.3 Promote the use of volunteers for emergency services and public health and safety training.

GOAL CF-15 Provide support services to the fire districts.

GOAL CF-16 Communicate with fire districts regarding design of new developments and the layout of water system plans.

LAW ENFORCEMENT

GOAL CF-17 Provide an adequate number of law enforcement staff, based upon population growth and crime rate, to address safety concerns.

GOAL CF-18 Locate new law enforcement facilities in the UGA and where there is direct access to major arterial roads.
GOAL CF-19  Pursue partnerships with adjacent jurisdictions to enhance police services.

PUBLIC SCHOOLS

GOAL CF-20  Coordinate land use planning and school district capital facilities planning.

CF-20.1  School facilities should meet the needs of the existing and future population.

CF-20.1.1  The County shall work collaboratively with the School Districts to identify strategies to accommodate student populations in proximity to their residences.

CF-20.1.2  Strategies may include providing an inventory of developable land to a School District, identifying surplus County owned properties, modifying development regulations to eliminate barriers to school property development or redevelopment, rezoning suitable urban lands, or adjusting the urban growth area consistent with UGA expansion policies.

CF-20.1.3  Adequate school facilities should be provided concurrent with need. Pierce County should employ a variety of strategies to support school districts’ ability to provide adequate school facilities including, but not limited to, school impact fees, property dedication, school supportive zoning, and development phasing/timing or other project specific mitigation.

Public School Districts:
- Bethel
- Carbonado
- Clover Park
- Dieringer
- Eatonville
- Fife
- Franklin Pierce
- Orting
- Peninsula
- Puyallup
- Steilacoom
- Sumner
- University Place
- White River
- Yelm

Private Schools:
- Cascade Christian Schools
- Life Christian School and Academy
- Bellarmine Preparatory School
- Charles Wright Academy

Other Institutions:
- Tacoma Community College
- Pierce College
- University of Puget Sound
- Pacific Lutheran University
- Central Washington University extension centers
- University of Washington Tacoma

See the Rural Section of the Land Use Element for Rural School Policies
CF-20.1.4 In coordination with school districts, Pierce County may establish a committee of school district representatives, at least one year prior to each mandated Comprehensive Plan Update. The committee should be responsible for conducting a review of each school district’s capital facilities plan which describes the capacity, enrollment projections, standard of service, and capital facility needs of the district(s). In the event potential school facility capacity deficiencies are identified, the committee may make recommendations to the school district(s) and Pierce County on actions that may be taken in response to the projected deficiencies.

CF-20.2 Ensure school impact fees help pay the costs associated with serving new development.

CF-20.3 Coordinate annually with school districts to determine if the current impact fee payments are effective.

CF-20.3.1 Request an account of how the fees are being utilized.

CF-20.4 New schools in the rural area serving students from an urban area shall not be incorporated into the calculations to determine school impact fees for a school district nor receive funding from school impact fees.

PUBLIC LIBRARIES

GOAL CF-21 Encourage the Pierce County Library system to maintain the existing level of service.

GOAL CF-22 Use the annual capital facilities planning process to monitor the library system’s ability to serve future population growth.
Chapter 4: CULTURAL RESOURCES ELEMENT

  Sustainability ....................................................................................................4-4

Economic Development and Tourism ..............................................................4-4

Outreach and Education .....................................................................................4-5
INTRODUCTION

Pierce County’s historic and archeological resources are similar to our natural resources. Like wetlands, forests, agricultural lands, and other natural resources, historic properties are a finite and endangered resource. Like our natural resources, when a historic or archeological site is destroyed, it is lost forever. Cultural resources—historic buildings, monuments, archeological sites—are statements of Pierce County’s identity.

WHAT ARE CULTURAL RESOURCES?

Cultural resources are those buildings, structures, sites, or associations that are generally 50 years or older.

Cultural resources consist of three main types:

a) Historic structures and landscapes (buildings, structures, historic districts, objects, and landscapes);

b) Archeological sites (battlefields, campsites, cemeteries, burial sites, rock carvings, village sites, fishing sites, trading sites, and ceremonial sites); and

c) Cultural properties that were held in spiritual or ceremonial honor which may no longer show the evidence of man-made structures but retain a historical association with an event or period.

WHAT IS HISTORIC PRESERVATION?

Preservation is keeping properties and places of historic and cultural value in active use by accommodating appropriate improvement while maintaining the key, character-defining features that contribute to their significance as cultural resources. This process keeps cultural resources intact for the benefit of future generations. Pierce County’s preservation program includes conservation of the established historic Home community.

In preserving our far-ranging cultural resources, these policies are to be as inclusionary as possible. Buildings, structures, districts, and historic and prehistoric archaeological sites, as well as landscapes and traditional cultural properties, should be considered.

As historical knowledge progresses, it is important to examine different properties for their potential significance, and to re-examine some that may not have been fully understood at an earlier time. Older surveys may have focused only on architectural significance or more obvious historic themes, missing significant resources that can be evaluated in another context.

GOAL CR-1

Identify, protect, and enhance historic properties and cultural landscapes throughout unincorporated Pierce County.

CR-1.1

Use current professional standards for cultural resource management of historic properties.
**IDENTIFICATION**

**GOAL CR-2** Recognize the importance of resources that reflect the uniqueness and diversity of Pierce County in surveys, inventories, and local, state, and national registration programs.

**CR-2.1** Identify and evaluate archeological and historic sites for potential historic landmarks status.

**CR-2.2** Expand the focus of preservation efforts beyond that of the physical environment to include the cultures and stories behind the resources.

**PROTECTION**

**GOAL CR-3** Protect cultural resources through land use actions.

**CR-3.1** Consider cultural resources as part of initial project planning, review, and development.

**CR-3.2** Develop and enforce protections for cultural resources.

**CR-3.3** Protect sacred sites to preserve people’s cultural roots and connections to the past.

**CR-3.4** Integrate historic preservation activities with those activities that share mutually supportive goals such as recreation, tourism, economic development, environmental protection, natural resource protection, and affordable housing.

**CR-3.5** Balance growth with preservation by emphasizing it as a tool for revitalizing communities.

**CR-3.6** Ensure consistency with the goal of protecting historic character of the properties listed in the Pierce County Register of Historic Places.

**CR-3.7** Use the Pierce County Landmarks Commission as a resource to review alterations to listed properties.

**CR-3.8** Use the Washington State Historic Building Code when the Pierce County Landmarks Commission reviews alterations, additions, and change in use occupancy to structures listed on the National Register of Historic Places and the Pierce County Register of Historic Places.

**CR-3.9** Encourage the nomination of cultural resources to the local, state, and federal historic registers.

**CR-3.10** Maintain a cultural resource inventory to be used in the identification of significant structures and places eligible for nomination.

There are three historic registers for which properties may be eligible:
- **National Register of Historic Places**
- **Washington Heritage Register**
- **Pierce County Register of Historic Places**

Each register is guided by its own set of codes.
CR-3.11 Maintain the Pierce County Register of Historic Places to recognize and preserve cultural resources of local significance.

CR-3.12 Design regulations and standards that provide flexibility to accommodate preservation and re-use of historic properties.

CR-3.13 Support the preparation and use of local design guidelines/standards for rehabilitation (consistent with the Secretary of the Interior’s standards) and new development in historic and traditional communities.

**INCENTIVES**

**GOAL CR-4** Establish incentives that encourage maintenance and preservation of historic properties.

CR-4.1 Apply Current Use Taxation to historic properties.

CR-4.2 Use a portion of historic document (HDOC) funds to assist with preservation planning, training, and funding the Pierce County Historic Preservation grant cycle.

**STEWARDSHIP**

**GOAL CR-5** Provide stewardship of County owned cultural resources.

CR-5.1 Maintain County owned cultural resources appropriately by following the Secretary of the Interior’s Standards for Rehabilitation, in consultation with Pierce County.

CR-5.2 Acquire and preserve historic properties for priority use by the County and other public agencies.

**SUSTAINABILITY**

Stewardship of existing building stock can reduce environmental impacts. Re-using a building preserves the energy and resources invested in its construction, avoids landfill impacts, and reduces the need to produce new construction materials. The economic benefits of protecting local historic districts are well documented. These include higher property values, job creation in rehabilitation industries, and increased heritage tourism.

**GOAL CR-6** Encourage adaptive reuse of resources that no longer serve the community’s needs, such as encouraging reuse of old structures.

CR-6.1 Encourage building renovation and redevelopment which are compatible with the historic character of each community.

**ECONOMIC DEVELOPMENT AND TOURISM**

**GOAL CR-7** Encourage historic themes in economic development plans that protect historic character.
CR-7.1 Develop and promote heritage tourism as a means for economic development.
CR-7.2 Establish the resources to develop trade and marketing programs that work in coordination with cultural events.
CR-7.3 Establish or expand partnerships with agencies and entities involved in economic development.
CR-7.4 Develop methods to link cultural resource preservation with local economic development strategies, such as rehabilitation of commercial buildings, neighborhood revitalization, and tourism.

**OUTREACH AND EDUCATION**

**GOAL CR-8** Foster collaboration between the community and property owners to nominate important eligible historic properties to the Pierce County Register of Historic Places or other applicable historic registers.

CR-8.1 Ensure there is early consultation with tribal organizations and other interested parties.
CR-8.2 Increase collaboration and partnerships between preservationists and a diverse array of nontraditional partners.
CR-8.3 Collaborate with stakeholders to highlight and identify best practices for productive use and greater appreciation of historic properties.
CR-8.4 Establish and maintain government-to-government relations with local Tribal Preservation Officers (TPO) for the preservation of archeological sites and traditional cultural properties.
CR-8.5 Identify mutual benefits of state and federal agency programs and budgets that can be achieved by cooperating and coordinating on preservation-related issues.

**GOAL CR-9** Provide increased opportunities to access and interact with historical and cultural resources to help people recognize, embrace, and actively participate in the management of their heritage.

CR-9.1 Protect, preserve, restore, and maintain historical and cultural resources throughout the County for the education, enjoyment, and enrichment of present and future generations.
CR-9.2 Keep the public informed about County historic preservation activities.
CR-9.3 Continue to educate communities about the strong connections among preservation, community character, quality of life, environmental stewardship, and economic competitiveness.
CR-9.4 Explore opportunities to educate the public about the importance of historical and cultural resources, and ways to use and protect them.

INTRODUCTION

The Design and Character Element is a new addition to the Pierce County Comprehensive Plan, and a direct result of community planning. Community character and design are further defined within the community plans with more detailed policies that are truly specific to each community. Design values and intentions differ between different County communities. Development projects should be designed in a manner that responds to the unique characteristics of their individual community and specific site, but also to fit into the wider context of the County.

The character and design found within a community reflects many aspects of the citizens who live there. Some areas feel urban while others have a distinctly rural flavor. The character and design of an area often provides a glimpse into fundamental values and preferences for social interactions. Simply put, character reflects the heart and soul of a community.

Design deals with the physical elements that compose the character of our communities—the streets, parks, buildings, open space, and neighborhoods that determine the way our community looks and feels. It is a blending of land use planning, architecture, landscape architecture, and environmental protection. Design looks at the way in which buildings, streets, public places, natural features, and other development relate to one another and the people who use them.

While the regulation of appearance and design is often a basic component of urban regulatory systems, it is also one of controversy. Many people feel that such regulation is inherently subjective and hence inappropriate for government. However, design regulation is not only capable of making a substantial difference in the character of a community and its quality of life, but it also plays an important role in how the community perceives itself and how it is perceived by visitors.

Through proper design methods, improvements such as street construction, park development, and commercial, industrial, residential, and civic development can be effectively coordinated with each other to promote a unified image. Design directly affects land use patterns, transportation planning, community and neighborhood livability, and overall quality of life.

This element provides policies for site and building design which will enhance the image the County would like to portray to its own residents and visitors. The policies in this element are intended to create a basis for design, and be built upon using further defined community standards and design regulations.

RESOURCES:

- Design Standards and Guidelines
GOAL D-1  Encourage development that is visually attractive, consistent with the community’s identity, compatible with surrounding uses, and respectful of the natural environment.

D-1.1  Encourage an orderly arrangement of buildings, landscaping, and circulation elements that support the functions of a site.

D-1.2  Ensure that landscape designs meet the functional requirements of developments by reinforcing site design, and providing adequate on-site screening and buffering.

GOAL D-2  Enhance the aesthetics of major roadways by utilizing streetscape and boulevard concepts.

D-2.1  Encourage streetscape design on major roadways.

D-2.1.1  Use tree planting and native vegetation to enhance the visual quality of streetscapes.

D-2.1.2  Separate pedestrian walkways from roads with planting strips near schools, commercial, recreation, and other high use areas.

D-2.1.3  Design and locate drainage grates to minimize bicycle and wheelchair hazards.

GOAL D-3  Enhance residential neighborhood quality and promote a strong sense of community.

D-3.1  Encourage modulation of multifamily buildings to make the building mass appear smaller.

D-3.1.1  Discourage multifamily buildings consisting of large blank walls, particularly when visible from adjacent streets.

D-3.2  Encourage dwelling units with a variety of architectural features such as porches, stoops, balconies, decks, or other well-defined pedestrian entrances.

D-3.2.1  Features should be visible from the street.

D-3.2.2  Emphasize each unit through variations in details such as trim, roofline and pitch, porch design, and color.

D-3.3  Promote common recreation and open space areas within residential developments.

D-3.4  Allow residential units to be oriented toward the street.

D-3.5  Design high density developments to be compatible with surrounding lower density residential uses.

D-3.6  Ensure that accessory dwelling units comply with design standards.
D-3.7 Design standards for moderate density single-family development should consider:

D-3.7.1 A range of housing types, costs, and densities;
D-3.7.2 Pedestrian and vehicular access and circulation;
D-3.7.3 Transit strategies; and
D-3.7.4 Environmental constraints.

GOAL D-4 Improve overall mobility through the location and design of residential developments.

D-4.1 Discourage vehicular access points in multifamily developments onto shared streets with lower density residential areas.

D-4.2 Locate new multiple-level, multifamily development close to the right-of-way in a Mixed Use or High Density Residential District.

D-4.2.1 When any multifamily development of two or more levels abuts or is across a residential or collector arterial from a MSF designation, the development shall be set back a distance equal to or greater than the height of the building.

SITE DESIGN

GOAL D-5 Encourage creative and innovative solutions to housing issues through quality design which is functional as well as livable.

D-5.1 Increase density while maintaining desirability.
D-5.2 Encourage development of mixed-use communities and housing to diversify and increase density of housing developments.
D-5.3 Make use of zero-lot-line provisions to further implement new site layout and design.
D-5.4 Encourage cluster development of residential lands, preserving environmental quality and providing facilities and services more efficiently and economically.
D-5.5 Harmoniously situate new housing developments within existing neighborhoods.
D-5.6 Carefully design new residential buildings which extend higher than the adjacent buildings to minimize impacts on privacy and solar access.
D-5.7 Encourage housing development in close proximity to public transit.
D-5.8 Preserve existing housing units, when appropriate and feasible, with special emphasis on historically significant structures.
D-5.9 Design a model residential development site that incorporates innovative design and layout techniques.

GOAL D-6 Encourage design of multifamily developments that provides residents a safe, friendly living environment.
D-6.1 Organize buildings, open space, and circulation to provide opportunities for residents to experience or express a sense of territory around a housing unit.

D-6.2 Locate pedestrian pathways around and through a development to minimize visual and physical intrusion into the private areas of each housing unit.

D-6.3 Use lighting to increase visibility at night and to increase security and safety.

D-6.4 Locate residential buildings to create usable open space and to improve a development’s visual qualities.

D-6.5 Design parking lot entries into multifamily developments to complement pedestrian entry.

**Urban Commercial**

**GOAL D-7** Commercial areas should be functional, display aesthetic value, and create a safe environment that meets the needs of all users.

D-7.1 Promote high quality, market-feasible architecture.

D-7.2 Encourage an appropriate display of scale and proportion.

D-7.3 Encourage commercial developments to include:

- D-7.3.1 Signage;
- D-7.3.2 Building design;
- D-7.3.3 Sidewalks and crosswalks;
- D-7.3.4 Artwork;
- D-7.3.5 Landscaping;
- D-7.3.6 Common areas;
- D-7.3.7 Street furniture;
- D-7.3.8 Lighting; and
- D-7.3.9 Open space.

D-7.4 Strongly encourage architectural and site design when the development is visible from a major roadway.

D-7.5 Encourage joint development of sites where there is potential for shared facilities.

D-7.6 Promote amenities within commercial developments that address safety.

- D-7.6.1 Include techniques in building and site design that reduce vandalism.

D-7.7 Encourage a visual and physical transition in setbacks, landscaping, and architectural style between differing land uses.

**Shared facilities may include (D-7.5):**
- Common building walls
- Shared driveways
- Landscaping

**Safety elements may include (D-7.6):**
- Adequate lighting
- Easily accessible parking
- Cleanliness
D-7.8 Minimize visual, noise, and odor impacts of service areas and utility maintenance areas on surrounding uses and streets through site design, landscaping, and screening.

D-7.9 Enhance the quality of outdoor gathering spaces within commercial areas with pedestrian amenities.

GOAL D-8 Emphasize user safety in the design and location of interior transportation facilities.

D-8.1 Encourage compatibility between drivers and pedestrians.

D-8.2 Minimize the space devoted to vehicular circulation by encouraging shared driveways and ensuring efficient internal circulation.

D-8.3 Provide pedestrian walkways and bikeways that connect to all buildings, surrounding sidewalks, parking areas, adjacent properties, transit stops, and trails.

D-8.4 Separate pedestrian facilities to the greatest extent possible from motorized traffic.

D-8.5 Discourage large expanses of parking areas through a variety of techniques.

D-8.6 Use texture, lighting, raising, or signing to make marked, established crosswalks and trails more visible to motorists.

D-8.7 Provide direct access for pedestrian and bicycle traffic to destinations without having to traverse parking areas.

Techniques include (D-8.5):
- Landscaping within and around parking areas
- Creating a distinct street edge with landscaping and building placement
- Minimizing parking between structures and the street
- Distributing smaller parking areas around the site
- Connecting parking areas in adjoining commercial developments where possible
- Underground parking
- Orienting at least one building entry to a major public street

GOAL D-9 Ensure functional industrial areas without adversely affecting surrounding properties.

D-9.1 Include landscaping, plazas, and other amenities.

D-9.2 Define building heights in consideration of anticipated land use, surrounding land use, safety and emergency measures, transportation networks, and efficient use of land.

D-9.3 Minimize the impacts on adjacent, non-industrial land uses through appropriate landscaping, screening, buffer strips, graduated intensity, and similar methods.
GOAL D-10 Minimize aesthetic impacts of activities, and maintain rural character.
  D-10.1 Protect significant natural, scenic, and historic resources.
  D-10.2 Maintain the character of established commercial areas.
  D-10.3 Discourage billboards and off-site advertising.
    D-10.3.1 Ensure commercial design standards are financially feasible for small business.
  D-10.4 Encourage the use of wood or other natural materials finished in natural colors.
  D-10.5 Project a small-scale character in building mass through choice of materials.
    D-10.5.1 Reduce the visual scale of commercial, civic, or industrial structures adjacent to residential development.
  D-10.6 When adequate right-of-way exists, separate pedestrian pathways from the road by the drainage way or other buffer.

RURAL INDUSTRIAL CENTER

GOAL D-11 Ensure proposed industrial uses are functionally and visually compatible with the surrounding rural character.
  D-11.1 Reinforce the set boundaries of the Rural Industrial Center (RIC) through strict site design, landscaping, and the construction of external roads.
  D-11.2 Design industrial buildings to appear smaller from adjacent streetscapes.
  D-11.3 Articulate public entrances through architectural detail.
  D-11.4 Prohibit reflective glass.

GOAL D-12 Use signage for business identification purposes only rather than for advertising.
  D-12.1 Design and locate building and freestanding signs in a manner that is compatible with the rural character and neighborhood.
  D-12.2 Prohibit pole signs.
  D-12.3 Choose building and freestanding signs without internal illumination.
  D-12.4 Limit the size of individual business signs to be consistent with the rural character.
  D-12.5 Identify an industrial park with only one sign along SR 162.
  D-12.6 Identify an industrial park using a monument style sign.
## Urban, Rural, and Resource

**GOAL D-13** Consider and protect important environmental features in the design of any development.

- **D-13.1** Promote the retention of clusters of trees.
- **D-13.2** Minimize the obstruction of territorial views and scenic vistas.
- **D-13.3** Protect and enhance scenic routes.
- **D-13.4** Protect viewsheds, skylines, and ridgelines.
- **D-13.5** Screen or remove negative elements.

## Home Occupations

**GOAL D-14** Harmoniously integrate home occupations and cottage industries within the existing residential surroundings.

- **D-14.1** Encourage landscaping and screening to blend uses.
- **D-14.2** Require site design to mitigate noise, lighting, and visual impacts to neighboring properties.
- **D-14.2.1** Provide incentives for new and existing structures to conform to design guidelines.

## Outdoor Lighting

**GOAL D-15** Utilize lighting to assist with vehicle and pedestrian safety and accentuate special features of buildings without imposing on neighboring residential properties or wasting energy.

- **D-15.1** Promote a consistent visual image in the use of lighting.
- **D-15.2** Maintain street lighting in areas of safety concern, such as at intersections and on arterials near facilities.
- **D-15.3** Avoid using roadway illumination in rural areas unless required to enhance safety.
- **D-15.3.1** Ensure that street lighting is consistent with safety requirements and the rural character.

## Signs

**GOAL D-16** Establish a system of sign controls that is uniform, balanced, and minimizes the number and size of signs while ensuring an opportunity for effective advertising.

- **D-16.1** Adequately control the size, type, design, and location of signs.
D-16.2 Address the removal of nonconforming signs over time.
D-16.3 Promote the clear identification of and direction to businesses.
D-16.4 Complement site and building design.
D-16.5 Encourage visual consistency at street level and for passing motorists.

**Sustainable Design**

**GOAL D-17** Conserve energy through materials and systems that reduce energy and resource consumption.

D-17.1 Promote the capture and re-use of existing on-site resources.
D-17.2 Encourage energy-efficient lighting solutions.
D-17.3 Promote materials and systems with long life cycles to reduce replacement waste.
D-17.4 Encourage the use of recycled building materials.
D-17.5 Promote recyclable or conservation-oriented building materials and techniques.
D-17.6 Encourage water quality treatment techniques within overall site design.
D-17.7 Encourage building, landscaping, and site design that maximize passive solar gain.

**INTRODUCTION**

Pierce County strives to strengthen existing business and industry and assist new business to locate in the County. This adds to the diversity of economic opportunity and employment, increasing the ratio of jobs to housing, and decreasing the proportion of workers commuting long distances to work.

The main goal of the Economic Development Element is to support the business community. This is done through policies and programs that protect companies from incompatible neighboring uses; connect them with available resources; help them navigate government regulations; assure room for new or expanding companies; protect and enhance freight corridors; support resource-based uses, and; provide and support educational opportunities for businesses and the labor force. Those areas of focus are intended to enhance the ability of businesses to operate profitably in Pierce County and thereby increase opportunities for employment and improve the *jobs-housing balance*. Businesses are the entities that create jobs. Increasing employment opportunities within the county requires more than making sure there is sufficient land to accommodate businesses. It requires proactively working with companies so they can be as competitive as possible. By increasing the number of jobs close to where people live and play, the proportion of the workforce that commutes out of the county for work can be decreased, with a simultaneous increase in quality of life.

**COMMUTE TRENDS**

Table 6-A shows that just over 70% of the labor force living in Pierce County also work in Pierce County. The vast majority of workers who commute out of Pierce County for employment work in King and Snohomish counties. About 86,000 people, or nearly 28% of the labor force, regularly commute north. Another 11,000 workers travel to Kitsap and Thurston counties, with about 5,500 traveling to other locations. Having those workers who commute out of the county work closer to home would reduce traffic congestion and air pollution, as well as make more time available for them to spend with their families or be involved in civic life.

Pierce County’s economy is anchored by three main industry clusters, including healthcare and medical services, commerce related to the Port of Tacoma, and the military operations at Joint Base Lewis-McChord. While manufacturing still provides an important base of economic activity that exports value and therefore brings new dollars into the county, the service sector has steadily increased as a proportion of total employment for the last four decades. Most recently, earnings from goods-producing industries have declined from 18.4% of non-farm earnings in 2001, to 13.6% in 2013. At the same time, the non-goods-producing sectors increased from 81.6% of non-farm earnings to 86.4%.

Comparison of industry employment in Pierce County to the United States as a whole reflects the core anchor industries, but also reflects the diversity of the local economy. The top five private-sector industries according to location quotient (LQ), a measure of relative employment concentration, are: Construction with 7.75% of private employment; Transportation and Warehousing with 5.59% of private employment; Health Care and Social Assistance with 20.65% of private employment; other Services with 4.51% of private employment, and; Retail Trade with 14.91% of private employment. Manufacturing accounts for 7.75% of private employment which is substantially lower than the national proportion of 10.62%.

Industries in Pierce County with the greatest relative industry concentration or total share of employment are not the industries with the highest average annual wages. Construction, which ranks first in LQ, ranks 10th in average annual wage, Transportation and Warehousing ranks 11th, Health Care and Social Assistance ranks 12th, Other Services ranks 18th and Retail Trade ranks 17th. Of those five industries, Other Services and Retail trade pay well below the overall county average and account for 17.4% of the total employment. The highest compensated industries, Utilities, Finance and Insurance, and Management of Companies, account for only 3.5% of total employment. Federal, state and local government employment accounts for 20.5% of total employment and ranks 9th in average annual wage, while manufacturing, which ranks 4th in wages accounts for 6.3% of total employment.

One of the most striking shifts in the structure and composition of industrial activity can be attributed to the Federal civilian and military sectors. Federal civilian and military operations constituted the largest industry category in the County in 1970, accounting for fully 24.2% of non-farm earnings. By 2001, this had dipped to 12.3%. With the advent of two wars in the Middle East and Army transformation, the sector increased steadily until 2011 when it represented 21.7% of total non-farm earnings.

**WAGES AND EARNINGS**

As shown in Table 6-D, the average wage per job in Washington as a percent of the national average has fluctuated in the past four decades from a high of 110% in 1999 to a low of 96.5% in 1988. Pierce County's percentage of national average wage per job has stayed fairly stable during that time, averaging 92.5%. The county's percentage of Washington's average wage per job also remained fairly stable from 1970 through 1995, averaging 92.6%. It then fell sharply from 1996 through 2000 and hovered around that lower rate through 2013, averaging just 86.2%, indicating that some benefits from a stronger economy in parts of Washington have not been felt across all areas.

Trends in employment, wages and industry change have been long-standing. With data from the U.S. Bureau of Economic Analysis, components of income were compared with the State, the nation and other Washington counties. Pierce County, with the 2nd largest population in Washington also had the second highest total personal income in 2013. The County had 11.8% of the State’s population and captured 10.5% of the total State personal income. Average annual change in total personal income in Pierce County, adjusted for inflation, has remained fairly steady in each of the successive past four decades, from 2.7% in the 1970s, to 2.9% in the 1980s, and 1990s, returning to 2.7% in the 2000’s. Pierce County ranked 34th in income growth in the State in the 1970s, 10th during the 1980s, 17th in the 1990's, and 9th in the 2000’s.

Paralleling a national trend, net industry earnings grew much less than property income and transfer payments in Pierce County. Transfer payments (income from retirement or social service sources) increased 233% in real terms between 1970 and 2000, and another 106% from 2001 through 2013. Property income (income from dividends, interest, rents and royalties) grew by 211% and 74% respectively. Net industry earnings (wages from employment), in comparison, increased a modest 75% in the earlier period and 57% most recently. By 1989, roughly one out of every three dollars of Pierce County personal income came from either transfer payments or property income. That proportion stayed fairly steady through the 1990s, but had increased to 36% by 2013. Part of this change is due to the presence of military installations in the County which contributes to a high concentration of military retirement pensions and veterans' benefit payments.

In 2013, per capita income in Pierce County was $43,982. Per capita income was $783 or 1.7% below that of the national average and $3,735 or 7.8% below the Washington average. Pierce County ranked 8th among Washington’s 39 counties in per capita income in 2013. The difference between per capita income in Pierce County and the nation grew fairly steadily from the 70’s through the 90’s. Per capita income was 106% of the national average in 1970, but slipped to a four-decade low of 91% in 1988 and 1989, before rising to 103% in 2009 and dropping somewhat to 98% in 2013. During the same period, State per capita income fluctuated relative to the national average from a low of 101% to a high of 109%.

**Employment and Education**

One correlate of the very low industry concentrations in industries such as Information, Professional and Technical Services and Management of Companies is low levels of educational attainment relative to other counties in the region, shown in Table 6-E. Of the 5 counties that border the southern end of Puget Sound, Pierce County has the highest proportion of 18- to 24-
year-olds with less than a high school diploma, and at 17.4%, a rate higher than the state as a whole. It also has the second lowest rate in the region of young people with a Bachelor’s degree or higher, and at 6.2% that rate is lower than the state as a whole. For the population 25 years and older, Pierce County has a higher rate of people who have completed 9th through 12th grade without achieving a diploma than other counties in the region and the State as a whole, and lower rates of attaining Bachelor’s and Graduate degrees, and has the highest proportion of people who’s highest level of educational attainment is high school.

Source: U.S. Census Bureau, 2009-2013 5-Year American Community Survey

The impact of lower education levels on poverty and earnings is dramatic and persistent, as shown in Table 6-F. In all five South Sound counties and the State as a whole, between 22% and 27% of people age 25 and older with less than a high school degree are in poverty, while for people with a Bachelor’s degree or higher the rate ranges from 3.2% to 4.2%. Just achieving a high school equivalency is associated with a poverty rate half that of non-completers.
Earnings follow a similar pattern. In Pierce County, people with less than a high school diploma have median earnings just over half that of people who have completed high school equivalency. Earnings continue to rise with increased levels of education. For Pierce County residents, having some college or an associate’s degree, which includes certification from a vocational/technical program, is associated with median earnings nearly equal to the countywide median for all workers 25 years and older.

Resource-Based Industries

Resource-based industries represent a relatively small portion of employment, wages and economic output in Pierce County. But they play an important role in the overall land use strategy and economic activities in rural areas. Farming, ranching, aquaculture, mining and forestry make use of living landscapes to generate goods and raw materials for the urban areas, as well as export out of the county which brings in new money. Food and landscape plants find their way into farmers markets, stores and restaurants. Clams, oysters and geoduck are served.
in local restaurants and are favorite imports in Asian countries. Sand and gravel from Pierce County has been used in the construction of the region’s cities for over a century, and the timber harvested here is used to frame and furnish homes and make paper products for everyday life. In addition to their realized economic contribution, the rural resource lands also assist with natural functions such as storm water control, carbon uptake and biological diversity.

GOODS MOVEMENT

Seventy percent of the goods that arrive at the Port of Tacoma by ship are transported to markets in other parts of the nation, and those that are manufactured by local industry are mainly shipped to markets outside of Pierce County. Given the importance to the Pierce County economy of activities at the Port of Tacoma and the manufacturing and the transportation and warehousing industry clusters, it follows that the area is dependent on a robust transportation network. Freight transportation networks, like any networks, are most efficient and robust when redundancy is built into the system. Existing freight corridors that connect the Frederickson Manufacturing and Industrial Center with the Port of Tacoma, and connect all of the areas of industrial concentration in Pierce County to markets in other regions are incomplete and lack redundancy. A complete freight transportation network, including the completion of SR 167, SR 704 and the Canyon Road northerly extension, would increase system efficiency and reliability, and facilitate the creation of well-paying jobs in the County.

Businesses create jobs, and an operating environment supportive of new and expanding businesses is also conducive to job creation. The challenges facing Pierce County’s economy, such as lower levels of educational attainment, lower concentrations of high-paying industries and lower average wages contribute to a high level of out-commuting by the local labor force. The policies contained in the Economic Development Element are intended to address some of the core issues of workforce and business development, as well as support the completion of the County’s freight transportation network and recognize the importance of resource-based industries to the rural areas. (See Map 6-1 and Map 6-2)
Map 6-2: Connections Needed to Complete the Freight Network
ECONOMIC VITALITY

GOAL EC-1  
Encourage employment growth within designated areas throughout the County.

EC-1.1  
Protect existing viable business activities from incompatible neighboring uses.

EC-1.1.1  
Recognize the urban or rural context of the area where business development efforts are pursued.

EC-1.2  
Create and encourage partnerships between government and business.

EC-1.2.1  
Develop coordinated programs that provide a variety of assistance to small businesses.

EC-1.2.2  
Develop an inventory of available business assistance programs.

EC-1.2.3  
Provide information and technical assistance to aid the retention and expansion of existing business.

EC-1.2.4  
Create new mechanisms to fund infrastructure and support commercial and industrial development.

EC-1.2.5  
Encourage redevelopment to convert outdated and underutilized land and buildings to high-valued or appropriate land uses, when such ventures provide public benefits.

EC-1.3  
Assist businesses with government regulation.

EC-1.4  
Consider the cumulative financial impacts on businesses when adopting new regulations, policies, and decision making processes.

EC-1.4.1  
Coordinate with other local and regional jurisdictions and organizations to minimize duplication of efforts and maximize resources.

EC-1.5  
Expand economic activity and diversify the economic base by encouraging growth opportunities and recruiting new business to the region.

EC-1.5.1  
Support the work of the Puget Sound Regional Council’s Prosperity Partnership and regional economic development strategy.

EC-1.5.2  
Support the work of the Economic Development Board in promoting local industry clusters.

EC-1.6  
Support work to enhance the military value of Joint Base Lewis-McChord.

EC-1.7  
Encourage programs that support tourism and recreation.

EC-1.7.1  
Encourage the development of appropriate facilities for tourist use.

INDUSTRIAL USES AND FREIGHT MOVEMENT

GOAL EC-2  
Emphasize new industrial development and expansion of existing uses within industrial areas.
EC-2.1 Support the state’s allowance of industrial revenue bonds.
EC-2.2 Determine the long-range demand for commercial and industrial space and identify suitable areas for commercial and industrial development.
EC-2.3 Reserve land for future industrial development on large sites well suited for industrial uses based on current population growth forecasts and recent trends in industrial job density.
EC-2.4 Work closely with Pierce County cities and towns to assist with industrial development throughout the County.
EC-2.5 Ensure that Frederickson is maintained as a Regional Manufacturing/Industrial Center under the Puget Sound Regional Council criteria for centers.
EC-2.6 Support PSRC designation of a Manufacturing/Industrial Center as proposed by the cities of Sumner and Pacific.
EC-2.7 Support and actively engage in efforts to complete the freight movement transportation network throughout the County, concentrating on completion of State Routes 167 and 704, and congestion relief for Interstate 5.
EC-2.8 Provide sufficient road capacity in commercial/industrial areas to allow freight traffic to flow smoothly and be kept away from residential areas.
EC-2.9 Develop regulations and zoning which encourage industrial development.

COMMERCIAL AREAS

GOAL EC-3 Develop programs that support economically vibrant commercial areas throughout the County.
EC-3.1 Provide education and marketing assistance,
EC-3.2 Encourage programs that highlight property maintenance and façade improvement.
EC-3.3 Support community events.
EC-3.4 Work with existing business associations.
EC-3.5 Evaluate the needs unique to each area.
EC-3.6 Provide a point of contact within County government to help address needs.

RESOURCE-BASED USES

GOAL EC-4 Emphasize the importance of resource industries as a part of Pierce County’s heritage, which provide public benefit, including open space, hydrologic function, and food security.
EC-4.1  Enhance and protect resource-based industries and promote their ability to provide public goods.

EC-4.2  Raise awareness of and facilitate consumer access to local resource products.

EC-4.2.1  Reduce barriers to resource production.
EC-4.2.2  Include resource industries in business development programs.
EC-4.2.3  Promote the Transfer of Development Rights (TDRs).
EC-4.2.4  Provide information regarding Current Use Assessment and other such programs to reduce operational costs.
EC-4.2.5  Consider requiring title notification for parcels adjoining resource uses where such protections could help avoid conflicts.
EC-4.2.6  Support development of accessory and associated uses such as non-timber forest products, custom saw mills, food processing, and resource tourism.
EC-4.2.7  Coordinate with applicable organizations to assist local resource-based businesses.

EC-4.3  Promote the sale of primarily locally grown agricultural products between May and November as they are harvested.

EC-4.4  Consider and mitigate potential negative impacts to existing agricultural operations.

EC-4.4.1  Locate new development to minimize or prevent future conflicts.
EC-4.5  Commit resources to improving the viability of agriculture.
EC-4.6  Investigate and implement a variety of methods to provide funding for agricultural viability.

BUSINESS AND WORKFORCE EDUCATION AND TRAINING

GOAL EC-5  Actively participate in the development of a properly educated and trained workforce.

EC-5.1  Encourage all levels of educational opportunities and training for Pierce County citizens such as universities, colleges, vocational schools, and apprenticeship programs.
EC-5.2  Provide educational opportunities to businesses on topics that are not sufficiently addressed through other venues.

GOAL EC-6  Encourage business owners to participate in local programs and educational seminars.

EC-6.1  Target and promote educational opportunities that teach small business operation.

Industries include (EC-4.1):
- Agriculture
- Aquaculture
- Forestry
- Mining
- Marine-related businesses
EC-6.2  Promote available information, technical assistance, and loans for business expansion and job creation.

EC-6.3  Provide information and technical assistance to aid expansion of existing businesses.

EC-6.3.1  Coordinate business assistance activities with other local organizations.

EC-6.4  Utilize the resources of local organizations to provide business services.

GOAL EC-7  Promote job search and skills training opportunities for employers and potential employees.

Adaption / Mitigation ............................................................................................ 7-10
INTRODUCTION

The Environment Element emphasizes maintaining our natural environment and protecting people’s lives and properties through responsible land use management. Pierce County has historically been an attractive area to live in because of attributes of the natural environment; clean air and water, lush forest areas, and a beautiful physical setting situated between saltwater and mountains. Protection of clean air, land, and water is essential if residents of Pierce County are to maintain a healthy lifestyle and have the resources to support population growth and economic development.

Critical areas are defined in the Growth Management Act (GMA) to include wetlands, areas with a critical recharging effect on aquifers used for potable water (aquifer recharge areas), fish and wildlife habitat areas, frequently flooded areas, and geologically hazardous areas. These areas are further defined in Washington Administrative Code (WAC) 365-190.

Achieving conservation and restoration of the environment and protection of lives and property are possible through responsible land use management. Strategies emphasized in this element which achieve these goals include maintenance or improvement of water and air quality, noise control regulations, protection of critical areas, and education to further awareness of environmental issues.

GOAL ENV-1 Conserve and protect critical and environmentally sensitive areas.

ENV-1.1 Recognize the importance of critical areas in supporting and protecting human life and safety.

ENV-1.2 Recognize the importance of critical areas in contributing to a high quality of life.

ENV-1.3 Adopt appropriate regulations and processes to protect environmental resources.

ENV-1.4 Establish annual countywide and agency-specific performance goals included within a sustainability plan or strategic (business) plan, and budgets.

ENV-1.5 Coordinate with other entities to protect critical areas, address environmental issues, and fulfill ecosystem restoration obligations.

ENV-1.6 Explore partnerships with agencies to provide public awareness and educational opportunities that promote environmental stewardship.

RESOURCES:
- Chapter 17A.40 PCC Stormwater Drainage
- Title 18D PCC Development Regulations – Environmental
- Title 18E PCC Development Regulations – Critical Areas
- Title 18J PCC Development Regulations – Design Standards
- Chapter 19D.120 PCC Pierce County Coordinated Water System Plan
- Puget Sound Clean Air Agency
- Tacoma-Pierce County Health Department
ENV-1.7 Provide current and future property owners information regarding land use restrictions associated with the property.

ENV-1.8 Coordinate with state, federal, educational institutions, and Tribal agencies to access the most current and best available science.

**Vegetation Retention**

**GOAL ENV-2** Ensure native vegetation is retained and protected in public and private development.

ENV-2.1 Accurately identify pre-project vegetative conditions through the use of aerial photographs and site visits.

ENV-2.2 Conserve and restore native vegetation with emphasis on riparian vegetation.

ENV-2.3 Provide education on the environmental functions and processes provided by native vegetation.

ENV-2.4 Determine reasonable standards for clearing that can be done for development.

ENV-2.4.1 Require mitigation for vegetation removal.

**Air Quality**

Pierce County is working to improve winter time air quality. Winter time wood smoke from people heating their homes contributes the majority of pollution in the air. The concerns are both human health and economic development.

**GOAL ENV-3** Attain a high level of air quality to ensure a reduction in adverse health impacts and to provide clear visibility for the scenic views.

ENV-3.1 Continue to work to meet federal and state air quality requirements.

ENV-3.2 Encourage use of clean heating sources to decrease air pollution.

ENV-3.3 Provide information to the public on proper use of wood stoves.

ENV-3.4 Develop land use practices which improve air quality, including infill development and concentrating high density land uses which reduce vehicle trips.

ENV-3.5 Recognize the relationship between reducing vehicle trips and reducing carbon emissions.

ENV-3.6 Encourage development and implementation of transportation-based strategies that reduce pollutants, smog, and diesel air-toxins.

Puget Sound Clean Air Agency is a special purpose, regional government agency chartered by state law in 1967 under the Washington Clear Air Act.

**Strategies include (ENV-3.6):**

- The increased usage of transit
- Nonmotorized transportation modes
- The promotion and accommodation of high occupancy vehicles
- The promotion of alternative energy-based transportation infrastructure and fuels
ENV-3.7  Pursue the use of alternative cleaner-burning fuels.

ENV-3.8  Eliminate residential burning of garbage and yard debris by providing curbside solid and organic waste collection services.

ENV-3.9  Consider air quality benefits when reviewing mandatory garbage collection or organic waste subscription services.

GOAL ENV-4  Coordinate air quality improvement efforts with agencies and jurisdictions to monitor transportation demand management programs benefits, share technical information on air quality, and integrate land use and transportation policies.

ENV-4.1  Coordinate with local agencies and jurisdictions to develop transportation control measures and similar mobile source emission reduction programs that may be warranted to attain or maintain air quality health standards.

ENV-4.2  Coordinate with agencies to provide information on air quality problems and measures to improve air quality.

WATER QUALITY

The water quality of streams, lakes, groundwater, and Puget Sound influences the economic, recreational, and natural environments of Pierce County.

Aquifers provide the primary source of domestic and industrial water for most of Pierce County. Aquifer recharge area soils are highly permeable and allow for the infiltration of surface waters into groundwater. Below the surface, the infiltrating water enters the aquifer, a saturated geologic layer which can yield sufficient quantities of water to be used as a source of public or private water supply. The use of low impact development is a priority in order to help protect and enhance the environment, air and water quality, and the availability of water.

GOAL ENV-5  Protect aquifers and surface waters to ensure that water quality and quantity are maintained or improved.

ENV-5.1  Ensure coordination among all appropriate County departments and other agencies in the review and analysis of water quality.

ENV-5.2  Identify and map important aquifers, aquifer recharge areas, and surface waters.

ENV-5.3  Ensure adequate recharge of aquifers utilized for domestic water supplies, and protect the quality of water in those aquifers.

ENV-5.4  Manage and plan water resources on a watershed basis.

ENV-5.5  Develop standards for activities that may adversely impact water quality or quantity in aquifers, watersheds, and surface waters, consistent with state and federal laws.

ENV-5.6  Require performance standards for new development and retrofitting of existing facilities.
ENV-5.7 Encourage the incorporation of permit information from the Tacoma-Pierce County Health Department into the County’s permit review system.

ENV-5.8 Encourage the proper disposal of agricultural animal waste.

ENV-5.9 Require the correction of failing septic systems to prevent contamination of surface water and groundwater.

ENV-5.10 Protect water quality in commercial and recreational shellfish areas.

ENV-5.11 Protect water quality and quantity necessary to support healthy fish populations.

ENV-5.12 Give preference to natural solutions for maintaining aquifer recharge quantity and quality, including the maintenance of undisturbed vegetation for new developments located within mapped aquifer recharge areas.

ENV-5.13 Reduce runoff pollutants into surface and groundwater.

ENV-5.13.1 Address stormwater runoff and problems of nonpoint source pollution.

ENV-5.14 Require the use of low impact development principles and best management practices for stormwater drainage including use of infiltration systems, such as bioretention, rain gardens, and permeable pavement, to maintain water quality for fish and wildlife.

ENV-5.14.1 Examine local factors such as densities and soil types when determining appropriate standards and technologies.

ENV-5.14.2 Design new developments to minimize areas of impervious ground cover.

ENV-5.15 Coordinate with other interested agencies and groups to strengthen educational programs on practices that protect groundwater and surface water quality and methods to conserve water resources.

ENV-5.16 Ensure information regarding saltwater intrusion and techniques for prevention are available.

ENV-5.17 Promote public education on the appropriate type, amount, time, and location for application of pesticides.

ENV-5.18 Conservation measures and best management practices should include a range of technical and land use options.

ENV-5.19 Applicants for building permits, subdivisions, and divisions of land must demonstrate that the potable water needed to support the new development is available and meets drinking water standards.

**SHORELINES**

**GOAL ENV-6** Recognize the adopted Pierce County Shoreline Master Program is the Shoreline Element of the Comprehensive Plan.

ENV-6.1 Implement the approved Shoreline Master Program.
GOAL ENV-7 Establish a long-term plan to evaluate and mitigate the cumulative impacts of land use activities on shorelines.

- ENV-7.1 Ensure coordination among all appropriate County departments in regards to regulated activities along shorelines.
- ENV-7.2 Implement a tracking process to monitor shoreline development, unauthorized activities, mitigation, and restoration.
- ENV-7.3 Establish a review and analysis process to assess the efficiency of the County’s shoreline regulations.

FISH AND WILDLIFE

Pierce County contains a rich diversity of fish and wildlife habitats. Preservation of a full range of habitats provides numerous benefits to county residents, including: ensuring the preservation of rare species and maintaining ecosystems; significant economic benefits from commercial and recreational fishing and hunting; preservation of cultures, lifestyles, and livelihood which center on fish and wildlife resources; and providing aesthetic and open space values which contribute to the overall quality of life in a community.

GOAL ENV-8 Maintain and protect habitat conservation areas for fish and wildlife.

- ENV-8.1 Adopt criteria to determine the presence or absence of fish and wildlife, and their habitat areas.
- ENV-8.2 Place regulatory emphasis on protecting and achieving no net loss of critical habitat areas.
- ENV-8.3 Maintain fish and wildlife movement corridors.
- ENV-8.4 Emphasize the importance of healthy riparian corridors.
- ENV-8.5 Discourage incompatible land uses near habitat conservation areas.
- ENV-8.6 Pursue the permanent protection of fish and wildlife habitat conservation areas through various financing and acquisitions strategies.
- ENV-8.7 Encourage landowners to maintain and enhance habitat areas.
- ENV-8.8 Educate landowners on the importance of habitat conservation areas.
- ENV-8.9 Work with other jurisdictions to address species and habitat restoration and recovery issues.
- ENV-8.10 Encourage public education and outreach efforts that educate the public on ecosystem resources.
- ENV-8.11 Seek cooperation with all entities on issues impacting fish and wildlife habitat.
  - ENV-8.11.1 Support efforts for research and monitoring fish and wildlife species and habitat quality.
TERRESTRIAL AND AQUATIC ECOSYSTEMS

GOAL ENV-9  Maintain and where necessary improve terrestrial and aquatic ecosystems so that they maintain viable, reproducing populations of plants and animals

ENV-9.1  Implement the recommendation of the watershed action plans as adopted by County Council.

ENV-9.2  Coordinate ecosystem restoration strategies with federal, state, and non-profit organizations in watersheds regulated or managed by the County.

ENV-9.3  Identify lands that represent the highest level of biological diversity and promote conservation of these ecosystems.

ENV-9.4  Establish a program to identify long term cumulative impacts and identify mitigation options.

HAZARDOUS AREAS

Flooding is the most common natural disaster to occur in Pierce County, posing threats to lives, properties, and resources. Floods occur when a stream or river receives more water than its channel can accommodate. Severe flood damage can occur when river channels migrate to new locations. Floodways are areas that can be the greatest direct risk to life and property. Floods can originate from natural causes such as heavy rainfall, snowmelt or high groundwater. However, human activities can often increase the frequency and magnitude of flood events. Frequently flooded areas are normally adjacent to rivers or other water bodies and include the entire 100-year floodplain, that area which has a 1% chance of flooding in a given year. The floodplain receives water which overflows from the main channel of a stream or river.

Landslide and erosion hazards are common in hillside areas with steep and unstable slopes. The entire County is at risk in the event of an earthquake. However, areas underlain by certain geologic materials are more prone to ground shaking or liquefaction (the collapse of the ground caused by liquefied soil)—these areas are considered seismic hazard areas. Mine hazard areas are found in the old coal mining regions in eastern Pierce County. Hazards commonly associated with these areas are abandoned open mine shafts and the risk of ground collapse because of failure of underground mine tunnels. Volcanic hazards are found in the river valleys which originate on Mount Rainier. The major volcanic hazard to populous regions of Pierce County is catastrophic mudflows which periodically inundate these valleys.

GOAL ENV-10  Avoid endangerment of lives, property, and resources in hazardous areas.

ENV-10.1  Adopt criteria to determine the presence or absence of hazardous area including geologic and flood hazards.

ENV-10.1.1  Provide public access to available data for known hazardous and critical areas.

ENV-10.2  Develop standards so that future development minimizes threats to lives, property, and resources.
ENV-10.2.1 Require appropriate standards for site development and structural design in areas where the effects of the hazards can be mitigated.

ENV-10.2.2 Encourage low densities and low intensity land use activities in hazardous areas.

ENV-10.2.3 Direct critical and community facilities away from areas subject to catastrophic, life-threatening hazards where the hazards cannot be mitigated.

ENV-10.2.4 Direct sewer lines, utilities, and public facilities away from hazardous areas.

ENV-10.3 Maintain existing flood hazard reduction facilities on rivers and streams including dams, dikes, levees, and revetments.

ENV-10.4 Maintain natural river channel configurations whenever possible.

ENV-10.5 Pursue the public acquisition of flood hazard areas to minimize fiscal, environmental, property, and human loss.

ENV-10.6 Continue to participate in the National Flood Insurance Program Community Rating System so residents can obtain flood insurance.

ENV-10.7 Ensure damage to property and people is minimized.

ENV-10.7.1 Maintain an evacuation plan and lahar warning system for volcanic hazard areas.

ENV-10.7.2 Ensure that evacuation routes, procedures, and actions are in place.

ENV-10.7.3 Educate residents about hazards and what to do and where to go in the event of a natural disaster.

Wetlands

Wetlands are areas which have saturated soils or standing water for a part of the year, soils categorized as hydric, and vegetation associated with wetlands. Areas such as swamps, marshes, and bogs are generally considered wetlands.

GOAL ENV-11 Establish appropriate long-term protection to ensure no net loss of wetlands.

ENV-11.1 Adopt criteria to determine the presence or absence of wetland areas.

ENV-11.2 Allow flexibility in wetland management or mitigation methods.

ENV-11.2.1 Allow the option of mitigation banking.

ENV-11.3 Allow innovation and equitable wetland management methods which protect public health, safety, or welfare.

ENV-11.4 Require wetland mitigation for impacts that cannot be avoided.

ENV-11.4.1 Consider regional needs for wetland functions when identifying mitigation requirements.
ENV-11.4.2 Locate mitigation actions within the same watershed, or ideally within the same sub-basin, if it is the best option for wetland function.

ENV-11.5 Consider regional needs when evaluating mitigation proposals.

ENV-11.6 Allow the management of wetland sites that have been legally altered.

ENV-11.7 Educate landowners on the importance of wetland systems.

ENV-11.8 Pursue the permanent protection of important wetland areas in Pierce County.

LIGHT POLLUTION

GOAL ENV-12 Reduce light pollution.

ENV-12.1 Encourage the use of reflectors and appropriate aiming on new outdoor lighting to minimize the upward scattering of light.

NOISE POLLUTION

GOAL ENV-13 Reduce, mitigate, and where possible eliminate noise problems.

ENV-13.1 Allow innovative methods of reducing or mitigating noise.

ENV-13.2 Reduce, mitigate, and where possible eliminate problems associated with noise-generating land uses.

ENV-13.3 Promote cooperation between Joint Base Lewis-McCord and Pierce County to address the reduction or mitigation of noise generating uses.

ENV-13.3.1 Establish a disclosure process advising property owners of possible noise impacts to property around JBLM.

BEST AVAILABLE SCIENCE, REVIEW, AND ADAPTIVE MANAGEMENT

The GMA (RCW 36.70A.172) requires that local jurisdictions include the best available science (BAS) in developing policies to designate critical areas and adopt development regulations. Pierce County is required to update, as necessary, these regulations based on BAS as part of the Comprehensive Plan Update. Original regulations for protection of geologically hazardous areas, aquifer recharge areas, wetlands, fish and wildlife habitat areas and frequently flooded areas were adopted in 1991 and 1992 and underwent a BAS review and update in 2002. An additional review during the 2015 update of Pierce County policies and regulations, it indicates that the regulations are based on BAS.

GOAL ENV-14 Designate and protect all critical areas using best available science.

ENV-14.1 Give special consideration to conservation and protection of anadromous fisheries.

GOAL ENV-15 Recognize the value of adaptive management for providing flexibility in administering critical area and shoreline regulations.
ENV-15.1 Establish a review and analysis process to assess the efficiency and effectiveness of County environmental regulations.

ENV-15.2 Prioritize post-project compliance monitoring.

ENV-15.3 Utilize new technologies and methodologies where appropriate to resolve environmental problems.

ENV-15.4 Ensure that staff members with expertise are involved in the review process for all critical area matters and all shoreline application types, including exemptions.

ENV-15.5 Require that regulated activities occur with avoidance of impacts as the highest priority, and apply lower priority measures only when higher priority measures are determined to be infeasible or inapplicable (see Table 7-A).

Table 7-A: Mitigation Sequencing

<table>

<tr>
<th>Mitigation Sequencing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Higher Priority</td>
</tr>
<tr>
<td>Avoid the impact entirely by not taking a certain action or parts of actions.</td>
</tr>
<tr>
<td>Minimize impacts by limiting the degree or magnitude of the action and its implementation by using appropriate technology or by taking affirmative steps to avoid or reduce impacts.</td>
</tr>
<tr>
<td>Rectify the impact by repairing, rehabilitating, or restoring the affected environment.</td>
</tr>
<tr>
<td>Reduce or eliminate the impact over time by preservation and maintenance operations.</td>
</tr>
<tr>
<td>Compensate for the impact by replacing, enhancing, or providing substitute resources or environments.</td>
</tr>
<tr>
<td>Lower Priority</td>
</tr>
<tr>
<td>Monitor the impact and compensation of projects and take appropriate corrective measures.</td>
</tr>
</tbody>
</table>

Adaptation / Mitigation

The County recognizes environmental conditions change. The adaption to these changes is best addressed using an interdisciplinary approach. Policies which provide methods to address these changes can be found in various Elements such as:

- Surface Water Management - Utilities Element
- Flood Hazard Reduction – Environment

Mitigation, including the reduction of greenhouse gases is addressed through the various policies of the Comprehensive Plan. These policies promote reduction in the vehicle miles traveled and the use of alternative energy sources. They can be found in various Elements such as:

- Multi-modal Transportation System – Transportation Element
- Compact Communities – Land Use Element
- Air Quality – Environment Element
- Alternative Energy – Utilities Element
Chapter 8: ESSENTIAL PUBLIC FACILITIES ELEMENT

CONTENTS

Introduction .......................................................................................................................... 8-2
Identification ....................................................................................................................... 8-2
Siting Considerations ......................................................................................................... 8-2
Recognition of Existing Facilities ...................................................................................... 8-4
Participation ....................................................................................................................... 8-4
**INTRODUCTION**

Essential Public Facilities are defined in the Growth Management Act (GMA) and include large, usually difficult to site facilities such as prisons, solid waste facilities, wastewater facilities, and airports. The County and its cities and towns may have additional public facilities that are essential to providing services to Pierce County residents.

GMA requires that comprehensive plans set out a process for identifying Essential Public Facilities to ensure that they are not precluded from being sited. This element outlines the process for identifying Essential Public Facilities, defines location criteria for siting facilities, and establishes appropriate development standards. The process recognizes and builds upon objectives and approaches adopted in the Pierce County Development Regulations implementing the Comprehensive Plan. The Development Regulations provide for sufficient, properly zoned land to accommodate any potential land use that may be wanted or needed in Pierce County.

**IDENTIFICATION**

**GOAL EPF-1** Establish a process for identifying and siting Essential Public Facilities.

**EPF-1.1** The facility meets the definition of an Essential Public Facility consistent with the GMA provision in RCW 36.70A.200; or

**EPF-1.2** The facility is a public facility of statewide significance and is identified in the State Office of Financial Management list of capital projects consistent with RCW 36.70A.200(4).

**Siting Considerations**

**GOAL EPF-2** Ensure that siting criteria reflect the facility needs to support projected population growth over at least 20 years and provide flexibility to accommodate technological advances.

**EPF-2.1** Site new facilities or expansions to existing facilities to be consistent with the Pierce County Comprehensive Plan.

**EPF-2.2** Work cooperatively with jurisdictions and agencies throughout the region to equitably site Essential Public Facilities.

**EPF-2.3** Establish an interjurisdictional approach to siting Essential Public Facilities.

**EPF-2.4** Consider land use compatibility when siting facilities.

**EPF-2.4.1** Establish development regulations that make facilities compatible with their surroundings.

**EPF-2.4.2** Enable the facility to be permitted outright in appropriate zoning classifications.
EPF-2.5 Require a new permit application when a proposed expansion of a designated Essential Public Facility exceeds the parameters specified in the original permit approval.

EPF-2.6 Essential Public Facilities shall not be precluded from locating in the County and shall be permitted when meeting applicable policies and regulations.

EPF-2.6.1 Conduct an analysis when a specific land use or category of land uses is proposed to be precluded from locating within Pierce County. To be precluded, the analysis must show that the proposal is not an Essential Public Facility or not an allowed use.

EPF-2.7 Establish means for mitigating a disproportionate financial burden and public health on jurisdictions caused by the siting of Essential Public Facilities.

EPF-2.7.1 The County shall review:

EPF-2.7.1.1 Forecasted needs based on the facility's service area and the level of service standard, with an allowance for technological innovations that may affect the forecasted needs;

EPF-2.7.1.2 Existing capacity at similar public facilities located elsewhere in the local community, county, region, or state, based on the service area and the level of significance;

EPF-2.7.1.3 The distribution of similar facilities to demonstrate that no one host community, county, or region is unduly burdened by concentration of such facilities;

EPF-2.7.1.4 Alternative sites that may include locations outside the unincorporated portion of the County;

EPF-2.7.1.5 The long and short-term public benefits and costs stemming from the social, economic, public health, and fiscal impacts from the development of the facility on the surroundings;

EPF-2.7.1.6 Public facilities, services, and utilities needed to support the proposed facility;

EPF-2.7.1.7 Public health and safety;

EPF-2.7.1.8 Nuisance effects from the facility to the surroundings;

EPF-2.7.1.9 Description of site requirements;

EPF-2.7.1.10 Operational and other requirements of the facility, including state and federal requirements, if applicable; and

EPF-2.7.1.11 Public involvement.
RECOGNITION OF EXISTING FACILITIES

GOAL EPF-3  Recognize the solid waste disposal facility located at 304th St. E. and east of SR 161, the Tacoma Narrows Airport, and the McNeil Island Corrections Center as existing Essential Public Facilities, consistent with definitions in the GMA and the Countywide Planning Policies.

EPF-3.1  Designate the property at the Tacoma Narrows as Essential Public Facility-Rural Airport.

EPF-3.1.1  Allow for airport related uses on that portion of the Tacoma Narrows Airport located south of Stone Road.

EPF-3.1.2  Allow R10 uses, other than residential uses, on that portion of the Tacoma Narrows Airport property located north of Stone Road.

EPF-3.2  Include within the Essential Public Facility-State Corrections Overlay on McNeil Island only the main institution located on approximately 89 acres and the existing north complex facility on approximately 87 acres (not any other land on McNeil Island).

EPF-3.2.1  Establish allowed facilities and uses, including those facilities and uses typically associated with a state corrections center, but not including facilities associated with a sexual offender program.

EPF-3.2.2  Provide measures to ensure that the uses and activities associated with the Essential Public Facility-State Corrections Overlay are compatible with the land uses and natural systems on adjacent lands and shorelines.

EPF-3.3  Establish an Essential Public Facility-Solid Waste Facility Overlay for the existing solid waste facility located at 304th St. E. and east of SR 161.

EPF-3.3.1  Consider designating future solid waste facilities using the Essential Public Facility-Solid Waste Facility Overlay.

PARTICIPATION

GOAL EPF-4  Provide broad participation by affected agencies, interests, and citizens.

EPF-4.1  Consult with affected agencies, utilities, and interested citizens of the County in preparing recommendations.

EPF-4.2  Provide opportunities for effective review and comment.

EPF-4.3  In communications with state agencies, emphasize the importance of their compliance with County policies adopted pursuant to the Growth Management Act.

INTRODUCTION

Housing is one of the most regulated commodities in our society to ensure the health, safety, and general welfare of its inhabitants. Housing of all types is closely related to economic and social conditions. Availability is influenced by national, regional, and local conditions. A complex series of costs affecting housing production result from changes to government assistance programs, private investment, interest rates, lending practices, local government zoning codes, environmental regulations, development and building costs, market, and availability. Price increases adversely affect the ability of households at or below median income levels to obtain adequate housing.

Housing is typically thought of in terms of multifamily apartment developments, duplexes and triplexes, and single-family homes. It includes stick-built homes, modular housing, manufactured housing, and mobile homes. The arrangement of dwelling units includes traditional units, accessory units, and a variety of non-traditional housing techniques designed to provide for people's wants and needs at a wide range of costs.

Other types of housing are necessary to meet the needs of the changing population and social conditions. Planning for housing means more than providing enough land for residential development; it means encouraging the construction of housing to meet the needs of a changing population.

HOUSING PROFILE

The housing stock in unincorporated Pierce County comprised of 140,160 dwelling units in 2010. This was a 21.6% increase from the 2000 housing unit estimate of 115,227. Table 9-A shows that single-family (one unit) housing was the predominant housing type equaling 72.8% of the total housing stock.

**Condition**

According to the single-family housing unit data shown in Table 9-C, 3,519 homes (3.7%) are in fair to extremely poor condition, and 197 of those are considered unlivable. These are homes that will require moderate to substantial rehabilitation of major elements to maintain a safe and decent condition. The remaining 92,059 units are in good or average condition, needing no major repair to serve as decent and livable housing stock.

Opportunity exists for housing to be rehabilitated or redeveloped. Three resources are available to assist in rehabilitation: government assisted programs, private non-profit organizations, and private financial institutions. The total 1,100 dwelling units that comprise the poor, very poor,
The extremely poor and unlivable categories can be examined for the purpose of identifying possible redevelopable dwelling units.

**Market and Affordability**

Assuming that 30% of a household's annual income will be expended for rent or mortgage payments, the annual income required to afford the average monthly payment for each type of dwelling unit is portrayed in Table 9-D.

¹Source: Zillow; Based on the Pierce County median home value of $239,000 and median condo value of $169,000

**Home Values**

In program years 2013-14 and 2014-2015 the County undertook a market study for the HOME program to determine 95% of median value of homes in the Urban County (Excluding the cities of Tacoma, Lakewood, and Bonney Lake). Note that the survey determined the median values for existing housing and housing newly constructed separately. The results of that survey are listed below:

- Median value on October 30, 2013 for existing housing was $225,000.
- Median value on October 30, 2013 for new construction housing was $279,990.
- Median value on July 15, 2014 for existing housing was $227,500.
- Median value on July 15, 2014 for new construction housing was $289,450.

In the Urban County from October 2013 to July 2014 the market rose 1.1% for existing housing and 3.27% for new construction housing.

**Future Housing Need**

Based on the adopted housing targets compared to the existing housing stock, there is a need for an additional 37,773 additional housing units within the 20-year planning period. Of this total, 28,270 dwelling units would be needed in urban unincorporated Pierce County, and 9,503 housing units would be needed in rural lands. **Housing capacity** is further outlined in the *Buildable Lands Report*.

**Special Needs Populations**

There are groups of the population requiring special housing accommodations. Special accommodations include group housing with a shared living space, or accessible housing for people with disabilities. Special needs populations include homeless, single parents, physical or mentally disabled, and other individuals or groups as designated by HUD. A special needs housing project is housing that is specifically targeted to provide shelter and appropriate supportive services for those with special needs.

**Homeless**

People become homeless for many reasons. The type of housing and related support services needed depends on the individual's needs.

Three general categories of homelessness are:

- Temporary homeless
- Short-term homeless
- Long-term homeless

Emergency shelters are needed for all categories to provide individuals and families with a safe, warm place to sleep. Temporary and short-term homeless people also need reliable temporary housing to get back on their feet financially. Transitional housing assistance should be from three to twenty-four months to allow them to stabilize their living situation and develop the necessary skills to live independently in non-assisted housing.
The most difficult population of homeless to provide for is those with severe mental illness or drug addictions. A number of strategies may be required before any permanent housing situation can be obtained. In all circumstances, appropriate supportive services are needed when working with these populations:

- Medical care is needed at shelters to meet emergency needs.
- Safe havens are needed for persons who are severely dependent on drugs or alcohol.
- Transitional housing is needed for persons with personal behaviors or mistrust of systems that must be overcome before permanent housing is appropriate.

**AGING AND DISABLED**

In some cases, physically disabled people need physical barriers removed and other modifications made to their residences to move about safely and maintain normal daily life activities.

The elderly population of the County continues to grow and is distributed among owner-occupied and rental units. The low-income elderly who own their homes do not always have resources to maintain them. As a result, their residences have a high incidence of deferred maintenance. Many elderly persons are disabled and in need of special housing assistance, including the removal or modification of barriers that will allow them to live safely and independently at home.

State policies are encouraging and developing in-home care as a method by which many persons can remain in their homes. Financial issues, including the payment of property taxes, insurance, and utilities, also need to be addressed. There are cases where it is no longer possible for individuals to live in their own residence by themselves even with in-home care. Alternatives include adult family homes, nursing homes, or convalescent centers.

**SEVERE MENTAL ILLNESS**

Individuals with severe mental illness may require the services of institutionalized care either in a group home, nursing facility, congregate care, or other form of housing. Due in part to the high cost of the operation of mental health institutions and the changes in federal and state laws, more persons with mental

**Temporarily homeless** include people who have experienced:

- A loss of income
- An illness in the family
- Unanticipated bills which prevents rent from being paid

**Short-term homeless** are primarily single people or couples without minor children who are:

- Lacking permanent employment
- Pregnant teenagers who have left the family home
- Homemakers who have been displaced due to separation or divorce
- Victims of domestic violence

**Long-term homeless** can include people with:

- Mental or physical disabilities
- Alcohol or drug addiction
- Mental illness
- Chronic unemployment
- Released offenders
illness are being placed in supervised supportive housing that is based in the community. Permanent supportive housing is needed for disabled or mentally ill persons who have certain capacities to live in a semi-independent environment.

**PERSONS WITH AIDS AND RELATED DISEASE(S)**

People with AIDS and related diseases often require a variety of housing types depending on the nature and severity of their condition. Affordable housing that is close to necessary services and integrated into the community is needed. Housing options include transitional housing, assisted living, permanent housing, and shared housing.

**NEED BY INCOME**

**LOW INCOME**

Low income is defined as households whose income at or below 80% of the average median income (AMI). Those that fall within this economic level are often faced with paying more than 30% of their gross annual income for housing, which is considered to be "cost burdened," and many are considered to have special needs as described below. Many of these households are severely cost burdened whereby they pay more than 50% of gross income for housing expenses.

Households in this category include homeowners, renters, and those who own manufactured housing and lease the land on which the dwelling is sited. Often on fixed incomes or working at lower paying jobs, their incomes do not keep pace with the rate of escalating housing costs.

Table 9-H shows the majority of very low income households have one or more of the four housing problems. By far the biggest housing problem is cost burden.

**EXTREMELY LOW INCOME**

Extremely low-income is defined as households whose income at or below 30% of the median income. Those that fall within this economic level are more than likely faced with paying more than 30% of their gross annual income for housing, which is considered to be "cost burdened," and many are considered to have special needs as described below. Most of these households are severely cost burdened whereby they pay more than 50% of gross income for housing expenses.

Households in this category include homeowners, renters, and those who own manufactured housing and lease the land on which the dwelling is sited. Often on fixed incomes or working at lower paying jobs, their incomes do not keep pace with the rate of escalating housing costs.

Table 9-I shows the majority of extremely low income households have one or more of the four housing problems. By far the biggest housing problem is cost burden. Table 9-J and Table 9-K outline the cost burden of lower income households.

AFFORDABLE HOUSING

The Growth Management Act does not provide a definition of affordable housing; it is the responsibility of each jurisdiction to define this term in a manner consistent with its Countywide Planning Policies. It is Pierce County's perception that affordable housing encompasses all economic segments of the community; However, low-income households with incomes less than 80%, and specifically very low-income households with incomes less than 50%, of the Pierce County median income have much less ability to find housing that is affordable. Pierce County defines affordable housing as housing for which a household does not pay more than 30% of their gross income for housing costs which includes rent or mortgage and utilities.

The U.S. Department of Housing and Urban Development (HUD) publishes The Metropolitan Statistical Area Income Limits. The development of affordable housing for very low-income households who are below 50% of median income shall be given special emphasis in the policy section of the Housing Element.

The HUD defined income limits for the Pierce County area as of 2014 are shown in Table 9-L.

Source: PSRC Subsidized Housing Summary Table, 2013

PIERCE COUNTY CONSOLIDATED PLAN

The County prepares a Consolidated Plan for submission to HUD every five years that details how the County plans to use the entitlement funds it receives from HUD including HOME, CDBG and ESG. The plan includes an affordable housing needs assessment, a housing market analysis, and a strategic plan for affordable housing. The current plan covers 2015 through 2019. As part
of the market analysis section of the plan, the County conducted a countywide survey of subsidized affordable rental housing units. Note that the County will continue to update the survey a minimum of every five years to coincide with the preparation of the Consolidated Plan.

The strategic plan section of the Consolidated Plan includes goals for the number of affordable housing units to be developed and/or preserved over the five year period of the plan. The goals are reviewed and updated annually at the end of HUD's program year. The revised goals are submitted to HUD through the annual action plan. The actual number of affordable housing units developed and/or preserved are included in the year-end report (CAPER) submitted to HUD and the end of each program year. The 2015-2019 Consolidated Plan, annual action plans, CAPER and affordable housing survey can be located on the Community Connections website.

In addition, the Washington State Department of Commerce conducted a statewide needs assessment of affordable housing by County. The Department of Commerce affordable housing needs assessment for Pierce County can be located on the Community Connections website.

SOLUTIONS TO HOUSING ISSUES

The Housing and Land Use Elements provide direction to accommodate enough affordable housing for all economic segments of the community. Land use strategies may include: allowance for accessory dwelling units; infill development; rehabilitation of existing housing; mixed use development; and smaller lot sizes. Regulatory strategies may include streamlined approval processing and priority permit processing.

The Land Use Designations Map in the Land Use Element identifies ten land use designations within an Urban Growth Area to accommodate projected housing needs: Moderate Density Single-Family, High Density Single-Family, Master Planned Communities, Activity Centers, Community Centers, Neighborhood Centers, Mixed Use Districts, High Density Residential Districts, and Urban Villages. Of these designations, the Moderate Density Single-Family, High Density Single-Family, and the High Density Residential Districts are to accommodate only residential uses.

Low income and government assisted households can be provided single-family or multifamily structures. Housing policies in this Comprehensive Plan encourage income diversity within neighborhoods and guarantee an adequate supply of housing for all economic segments of the population.

It is the intent of the policies within the Housing Element to create solutions for affordable housing that collectively address all economic segments of the population, emphasizing low income, very low income, and extremely low income households ($\leq 80\%$ area median income, $\leq 50\%$ area median income, and $\leq 30\%$ area median income, respectively).
GOAL H-1  Allow for a range of housing types in appropriate areas of the County.

H-1.1  Encourage a variety of housing types that allow high densities and creative use of land within the urban area.

H-1.2  Ensure that housing types within the rural and resource areas retain the rural character, and respect the features of the lands.

H-1.3  Encourage creative solutions to housing issues through quality design which is functional as well as livable.

GOAL H-2  Encourage the development of new housing within the Urban Growth Areas where facilities and services exist or are planned.

H-2.1  Increase density in communities with existing infrastructure.

H-2.2  Allow for accessory dwelling units, cottage housing, and Katrina cottages to reduce housing costs for residents.

H-2.3  Redevelop properties where infrastructure exists.

H-2.3.1  Ensure that housing structures do not exceed infrastructure capabilities.

H-2.3.2  Identify County surplus property that could be used for developments that provide for affordable housing.

H-2.3.3  Develop a process for disposing of County surplus properties for affordable housing purposes.

GOAL H-3  Consider the economic implications of regulations and practices on housing costs.

GOAL H-4  Promote and assist in the development of the necessary financial tools to address affordable housing for County citizens.

GOAL H-5  Seek way to prevent discrimination in the development and maintenance of housing.

GOAL H-6  Promote the availability of special needs housing.

AFFORDABLE HOUSING

GOAL H-7  Create solutions for affordable housing issues that benefit all economic segments of the population.

H-7.1  Investigate and implement planning and zoning tools that have been identified as techniques to achieve affordable housing, including:

H-7.1.1  Transfer of Development Rights;

H-7.1.2  Development and redevelopment of vacant, blighted properties that are already utilizing existing infrastructure;

H-7.1.3  Construction of accessory dwelling units, cottage housing, and Katrina cottages as ways to realize affordable housing; and
H-7.1.4 Voluntary and inclusionary housing methods to require housing attainable by households earning 80% or less of the County median household income within developments.

H-7.2 Promote innovative programs and techniques that minimize the cost of affordable housing.

H-7.2.1 Provide incentives for developers to construct affordable housing for households earning 80% or less of the median household income for the County.

H-7.2.2 Consider fee exemptions for residential projects that incorporate housing affordable to households earning 80% or less of the County median household.

H-7.3 Seek funding for nonprofit developers to build affordable housing.

H-7.4 Ensure consistent, streamlined regulations and procedures.

H-7.4.1 Consider allowing bonus densities.

H-7.4.2 Consider allowing reduced design standards such as parking, height restrictions, and bulk requirements.

H-7.4.3 Provide for expedited permitting.

H-7.4.4 Ensure building practices do not compromise human health, structural integrity, or longevity.

H-7.5 Implement the federally funded program, which provides assistance to households earning below the County median income, who are willing to help build or remodel their own housing.

H-7.6 Coordinate with Pierce County cities and towns to ensure a fair share distribution of affordable housing within new master planned communities.

H-7.7 Require inclusionary housing provisions in future developments associated with Comprehensive Plan amendments to increase development potential.

H-7.8 Identify specific development fees and processes that may be waived if a residential development guarantees inclusionary housing provisions.

H-7.9 Integrate required affordable housing units within a development.

H-7.9.1 Encourage provision of units through various types of housing structures.

H-7.9.2 Ensure the architectural features of the affordable units are consistent with the overall project.

H-7.10 Regulatory amendments to implement inclusionary housing provisions should define:

H-7.10.1 The number of affordable units;

Various types of housing structures include (H-7.9.1):
- Accessory dwelling units
- Single-family detached
- Single-family attached
- Duplex
- Triplex
- Fourplex
- Multifamily
H-7.10.2 The level of affordability achieved for low income households;
H-7.10.3 The duration of time that the units would be maintained as affordable; and
H-7.10.4 A method for monitoring and maintaining affordability over time.
H-7.11 Pierce County’s goal is to, at a minimum, provide low-income affordable housing for 25 percent of the adopted population growth target.

**Manufactured/Mobile Home Parks**

**GOAL H-8** Consider allowing mobile home parks in Moderate Density Single-Family areas, Mixed Use Districts, and High Density Residential Districts.

H-8.1 Allow for the placement of manufactured housing within mobile home parks in addition to the traditional single-wide mobile home units.

**GOAL H-9** Advocate state legislative actions addressing manufactured/mobile home communities.

H-9.1 Support state legislation that promotes long-term preservation of existing manufactured/mobile home parks in their present use, and the ability of residents to purchase their park.

H-9.2 Consider a current use tax incentive conditioned on maintaining the land use as a manufactured/mobile home park and requiring repayment of abated taxes in the event of a manufactured housing community closure or change of use.

**Housing Education and Awareness**

**GOAL H-10** Promote education and awareness addressing compatibility between various dwelling types and community standards.

**GOAL H-11** Encourage training, seminars, programs, and partnerships that educate about middle and lower income housing options.

H-11.1 Provide information on alternative housing markets, advantages of smaller, higher density housing developments, and on nontraditional dwelling types, occupancy styles, and construction methods.

**Existing Housing Stock**

**GOAL H-12** Reuse the existing housing stock to help meet the housing demand.

H-12.1 Explore and identify opportunities to reutilize and redevelop existing parcels where rehabilitation of existing buildings is not cost-effective.

H-12.2 Review regulatory restrictions prohibiting rehabilitation of existing housing stock.

H-12.3 Develop and implement rehabilitation programs and opportunities to reuse existing housing stock.
DIVERSITY IN HOUSING

GOAL H-13 Recognize the different physical, social, and economic needs of the residents.

H-13.1 Provide a broad range of housing choices in terms of cost, size, design, and suitability for various household types, e.g., families, elderly, couples, and persons with disabilities or special needs.

H-13.2 Review and revise the development code to permit temporary shelter and transitional housing and supportive services that assist homeless individuals and families.

H-13.3 Review and revise the development code to permit single room occupancy units that are defined separately from group homes.

GOAL H-14 Promote the availability of special needs housing and the necessary supportive services, and support the availability of this housing for all individuals and households.

H-14.1 Encourage and support the development of affordable special needs housing in Pierce County by providing incentives and technical assistance for housing development.

H-14.2 Strengthen inter-jurisdictional efforts to ensure a fair, equitable and rationale distribution of low-income, moderate-income and special needs housing consistent with land use policies, transportation, and employment locations.

MONITORING

GOAL H-15 Monitor the success of the housing policies in accomplishing the goals

H-15.1 Conduct an assessment of the housing demands and monitor the achievement of the housing policies not less than once every 5 years.

H-15.2 Develop a series of benchmarks to measure the development of affordable housing units for low income populations.
INTRODUCTION

Multiple Pierce County agencies acquire and manage land for open space purposes - from recreation, to habitat conservation, to flood hazard reduction.

Pierce County’s definition of open space is organized into categories around functional attributes of open space, or the expressed reason for preservation of the value attributed to that type of open space. Policies for the management and preservation of open space for habitat are very different than policies for working lands or outdoor recreation.

For example, a property with a high value wetland may be acquired for preservation for the stormwater function provided by the wetland, and would be classified as open space for public health and safety. The property would be managed first for stormwater function. It may have secondary value as wildlife habitat, and partial value as part of a trail system, but the secondary values are implemented only if they do not interfere with the primary stormwater function.

DEFINITION

Open Space - any parcel or area of land or water which is devoted to a functional open space use as defined by any one of the following categories:

A. **Habitat.** Open space for the preservation of plant and animal habitat may include habitat for fish and wildlife species; rivers, streams, bays, and estuaries; and coastal beaches, lakeshores, and banks of rivers and streams.

B. **Working Lands.** Open space used for the managed production of working lands may include forest lands, agricultural lands, and areas of economic importance for the production of food or fiber.

C. **Outdoor Recreation.** Open space for outdoor recreation may include athletic fields, recreation facilities, playgrounds, picnic areas, meadows, wooded areas, and trails; and access to beaches and shorelines for swimming, fishing, boating, and beachcombing.

D. **Community-Defined Values.** Open space for community-defined values may include areas used for buffers between communities, respites from the built environments, and for connecting with nature; and areas of outstanding scenic, historic, and cultural value.

E. **Public Health and Safety.** Open space for public health and safety may include areas used for stormwater management, flood control, water quality for public use, air quality, and carbon sequestering.

</tbody>
</table>

This section lists general open space policies that pertain to all types of open space. Policies for specific types of open space are listed in various elements of the Comprehensive Plan that relate to the different categories of open space.

**GOAL OS-1**

County programs that provide for the acquisition and/or preservation of open space shall have established priorities.

**OS-1.1** Priorities for the preservation of open space shall be in conformance with the policies established in [Chapter 19D.170](#), Pierce County Open Space Priorities.

**OS-1.2** These priorities shall be coordinated with any subsequent updates of the Parks and Recreation Plan for the County.

**OS-1.3** At a minimum, the priorities will be used for the following programs and regulations:

- **OS-1.3.1** Conservation Futures Program (open space acquisition);
- **OS-1.3.2** Current Use Assessment Program/Public Benefit Rating System (tax incentive); and
- **OS-1.3.3** Development Regulations-Zoning (density bonus incentive).

**GOAL OS-2**

Ensure that Pierce County open space properties, open space passive recreation parks, conservation easements, and conservation futures covenants are managed and maintained to provide long-term stewardship of the open space function and value.
OS-2.1  Publicly-owned or acquired open space properties may be transferred to a local land trust for long-term management and stewardship where appropriate.

OS-2.2  Pierce County should work closely with local and national land trusts and with other private and nonprofit organizations interested in open space in the management of Pierce County open space properties.

OS-2.3  Pierce County should review its land holdings to determine if any parcels fall within the adopted open space/greenbelt network that might be suitable for transfer to a local land trust.

OS-2.4  Linkages between open space and screening buffers occur, encourage the provision of public easements.

OS-2.5  Where possible, open spaces should be located contiguous to other open space areas creating the potential for open space corridors.

INTRODUCTION

The values of Pierce County residents and their aspirations for the future are guiding forces in this Park, Recreation, and Open Space Element. This element defines the vision, goals, and objectives that illustrate the preferred future for the parks, open spaces, trails, facilities, and programs provided by Pierce County Parks and Recreation (PCParks).

For consistency and clarity, the term ‘park system’ will be used throughout this document to refer to all parks, open spaces, trails, facilities, and recreation programs managed by PCParks.

A vision is an aspirational description of what an organization would like to achieve or accomplish in the future. It is intended to serves as a clear guide for choosing current and future courses of action. The Pierce County Vision for parks, recreation, and open space is:

Create livable communities by providing opportunities for people to:

- Connect with Nature
- Live Healthy Lifestyles
- Share Vibrant Community Spaces
- Learn about Sustainable Practices

PARK SYSTEM

GOAL PR-1  Provide a regional park system that supports opportunities for active and passive recreation, promotes healthy lifestyles, and conserves and enhances significant environmental or historical resources.

PR-1.1  Assume direct responsibility for the development, operation, and maintenance of facilities that have regional benefits and align with PC Parks’ vision and primary role as a regional service provider.

PR-1.1.1  Support countywide sports, recreation programs, and special events through the provision of facilities.

PR-1.1.2  Support objectives in adopted Community Plans that align with the role of a regional park provider and meet identified countywide needs.

PR-1.2  Plan for the annexation or incorporation of unincorporated Urban Growth Areas.

PR-1.2.1  Land-bank sites for local parks identified in Community Plans if capital funding is designated for that purpose.

PR-1.2.2  Land-bank sites should only be developed in partnership with a local jurisdiction as part of an agreement to transfer the site to the local jurisdiction.

PR-1.2.3  Establish a list of transitional properties that are not part of the regional system and may be transferred to other jurisdictions.

“Transitional properties” (PR-1.2.3): Those properties that are better served by a local jurisdiction.
PR-1.2.4 Actively seek opportunities to transfer local parks to jurisdictions associated with potential annexation areas.

PR-1.3 Ensure the park system is integrated with and complements other park and recreation service providers in Pierce County.

PR-1.3.1 Forge partnerships for park development with local jurisdictions or park districts when regional facilities are consistent with meeting the needs of city and county residents.

PR-1.3.2 Develop where appropriate a select number of regional facilities that are oriented to the highest competitive playing standard for multi-agency use.

PR-1.3.3 Focus development of new ball fields on field complexes developed in partnership with a school district or other service provider.

PR-1.4 Ensure land acquisitions, donated property and land-banked sites are consistent with the vision set forth in this Plan.

PR-1.5 Ensure an equitable distribution of park facilities across the County.

PR-1.6 Develop new facilities only if on-going operation and maintenance funding is provided at a level necessary to safely operate and maintain the facility at adopted levels of service.

PR-1.7 Implement a whole system management approach to improving and maintaining the park system through integration of long term sustainability; promoting flexibility of uses and activities; ensuring equity across the system; providing a variety of activities; ensuring adequate support facilities; and, designing with cost effective methods and partnerships.

GOAL PR-2 Promote active, healthy lifestyles through the development of park system facilities and programs that reduce obesity and enhance the health of County residents.

PR-2.1 Ensure facilities and programs are available for all people regardless of ability, age, race, ethnicity, or income.

PR-2.2 Ensure healthy food and snacks choices when provided at events and within park facilities.

PR-2.3 Prohibit the use of tobacco within the park system.

PR-2.4 Work toward an interconnected system of parks and trails in the urban area that safely connects to schools, civic facilities, shopping, and recreational facilities.

PRIORITIZATION OF FACILITIES AND PROJECTS

GOAL PR-3 Prioritize the use of park capital facility funding sources.

PR-3.1 Capital projects should be prioritized based on:

PR-3.1.1 First maintain the system by preserving the quality and capacity of the existing facilities.
PR-3.1.1.1 Capital replacement decisions should be based on safety, loss of function, regulatory upgrades, end of useful life and a balance of cost benefit.

PR-3.1.2 Second, increase the capacity at existing park sites by upgrading or adding new facilities to flexibility for multiple uses or increase public use.

PR-3.1.3 Third, increase system capacity by developing new park facilities at new park sites.

PR-3.2 Prioritize development of new park sites based on:

PR-3.2.1 Demonstrated need.

PR-3.2.2 Population served.

PR-3.2.3 Ability to implement programming which advances PCParks vision.

PR-3.2.4 Improves equity of service.

LOCATION CRITERIA

GOAL PR-4 PCParks sites will be located in consideration of the following:

PR-4.1 Readily accessible via public roads or where roads can be reasonably extended to access the site.

PR-4.2 Located close to prospective users.

PR-4.3 Within the Urban Areas of the County, sewer, potable water and other utilities should be available within reasonable distance from the site.

PR-4.4 Sites should be suitable for the type of recreation proposed.

DEVELOPMENT STANDARDS

GOAL PR-5 Develop facilities that exemplify sustainable practices, connect to surrounding neighborhoods, universally accessible, safe, and cost effective to maintain.

PR-5.1 Provide attractive, vibrant community facilities and spaces that promote opportunities for citizens to learn about sustainable practices.

PR-5.2 Incorporate sustainability practices into the development, management, and maintenance of the park system.

PR-5.3 Development of facilities should contribute to community identity.

PR-5.4 Provide facilities that are accessible for all populations and are adaptable to changing recreational, demographic, and economic trends.

PR-5.5 Provide park system properties that are connected to the surrounding communities through safe pedestrian and bicycle routes.
PR-5.6 Incorporate scenic viewpoints.
PR-5.7 Buffer facilities from incompatible uses.
PR-5.8 Develop and manage the park system to maximize opportunities for recreation, public access, and participation without high cost capital investments.
PR-5.9 Design recreation facilities with the flexibility and capacity to support increased programming, respond to changing needs, and provide year-round opportunities.
PR-5.10 Develop and implement unified standards to minimize future design and maintenance costs and to promote an identifiable image for the park system.
PR-5.11 Use Master Plans to guide park development and ensure public support. Plans should identify types of uses and development, public access, stewardship, and restoration.
PR-5.11.1 Ensure capital projects are consistent with the Master Plan in type of use and intensity.

**Stewardship**

**GOAL PR-6** Manage the park system in a sustainable and environmentally beneficial manner that contributes to a healthy, livable community, and a rich natural park experience.

- **PR-6.1** Stewardship management plans should be prepared for all park system properties.
  - **PR-6.1.1** Management of park properties and open space lands should be based on the purpose for which they were acquired and consider the regional context of ecosystems and adjacent land uses.
  - **PR-6.1.2** Management of individual open space lands should follow good stewardship practices that protect and preserve natural and cultural resources.
- **PR-6.2** Develop minimum park standards that would allow public access to undeveloped properties on a limited basis.

**Funding**

**GOAL PR-7** Develop secure funding strategies to adequately build, maintain, operate, and promote the park, recreation, and open space system.

- **PR-7.1** Develop partnerships with public and private agencies to increase park and recreation benefits for County citizens.
- **PR-7.2** Establish protocol for accepting donations for the park system.
- **PR-7.3** Periodically evaluate park impact fees and other revenue sources to meet increased system demands due to growth.
- **PR-7.4** Implement asset management system to support cost effective long term maintenance of the park system.
**PR-7.4.1** Implement and fund maintenance protocols that maximize the life of park assets.

**PR-7.4.2** Invest in preventative maintenance and upgrades to the park system to maximize long-term benefits.

**PR-7.5** Ensure operation and maintenance costs are included when acquiring, developing, or renovating parks facilities and open space lands.

**PR-7.5.1** Adjust the operating budget accordingly to maintain clean, safe, and inviting parks.

**REGIONAL COORDINATION**

**GOAL PR-8** Serve as a regional coordinator, leading the effort to forge partnerships and foster opportunities for countywide collaboration for parks, open space, trails, water access, programs, and services.

**PR-8.1** Provide leadership in the joint planning and provision of programs with other park and recreation providers to meet County recreation needs.

**PR-8.2** Coordinate with other park agencies and districts to provide a range and supply of formal recreation facilities and programs in Pierce County.

**PR-8.3** Lead efforts to coordinate and partner with county departments, cities and other agencies to define, identify, retain, and conserve open space lands and recreational opportunities.

**PR-8.4** Provide technical assistance to local jurisdictions for the conservation, development, operation and maintenance of parks and recreational facilities of interest to local communities.

**EDUCATION AND OUTREACH**

**GOAL PR-9** Engage Pierce County residents in the planning, stewardship, and programming of the park system.

**PR-9.1** Provide effective community outreach and marketing to increase public awareness and support of recreation services.

**PR-9.2** Promote Pierce County as a recreation and tourist destination by increasing name recognition and marketing the region’s system of open spaces, park facilities and activities.

**PR-9.3** Increase public awareness of the County amenities, location, and value of the park system.

**PR-9.4** Enhance customer service by making information and registration more accessible to the community.
PR-9.5  Promote volunteerism to enhance community ownership and stewardship of the County’s park system.

PR-9.6  Provide opportunities for public input in park planning and design decisions.

TRAILS

GOAL PR-10  Provide a connected system of trails that link communities to parks, open spaces, public facilities, and areas of interest and provide nonmotorized transportation and recreation opportunities.

PR-10.1  Create healthy communities by promoting active lifestyles, reducing reliance on the automobile and offering opportunities for recreation through the trail system.

PR-10.2  Accommodate nonmotorized transportation modes safely and comfortably.

PR-10.3  Improve transportation by completing the regional interconnected trail system and encouraging its use for commuting.

GOAL PR-11  Develop regional trail routes, crossings and trail facilities that are accessible to all.

PR-11.1  Reduce accessibility barriers and provide safe crossing of streets and other transportation routes.

PR-11.2  Ensure safety of all users through the provision of well maintained, visible, and well signed trail corridors with adequate emergency access.

GOAL PR-12  Incorporate design techniques that offer a variety of experiences while minimizing impacts to the natural environment and neighboring uses.

GOAL PR-13  Provide access for equestrian use in the rural area on routes that serve public stables or other equestrian pathways and do not limit other transportation uses in the corridor.

GOAL PR-14  Develop planting standards that prohibit vegetation from negatively impacting the long term maintenance of the trail network.

Design should take into consideration (PR-11.1):
- Visibility
- Pavement markings
- Signage
- Intersection angle
- Pavement texture
- Use of color
- Lighting

If deemed necessary, use techniques such as (PR-11.2):
- Emergency call boxes
- Geographic positioning identifiers (GPS)
- Lighting
- Security vehicle access
- Landscaping

FACILITIES AND SERVICES

GOAL PR-15  Provide facilities and trail support services to accommodate the needs of trail users.

PR-15.1  Provide rest stations, restrooms, seating, picnic tables, water fountains, bike racks and recycling/trash receptacles at reasonable distances.
PR-15.2 Site trailheads in areas that allow for shared parking and infrastructure with other community facilities or major destination points such as libraries, schools, community centers, and shopping complexes.

PR-15.3 Provide for wildlife or scenic viewing opportunities where appropriate.

**MAINTENANCE**

**GOAL PR-16** Provide trail maintenance that is responsive, cost effective and resourceful for the long term success of the regional trails system.

**REGIONAL CONNECTIVITY**

**GOAL PR-17** Provide and enhance connectivity to important County and regional destinations, between multiple jurisdictions, and to neighboring counties.

- **PR-17.1** Create connections between key community destinations.
- **PR-17.2** Connect to trails in neighboring counties and to trails in local jurisdictions.
- **PR-17.3** Work with Federal, State, and local agencies to identify and procure public property to further the regional trail system.

**GOAL PR-18** Coordinate with cities and local communities, federal agencies, tribes, park districts, user groups, and neighboring counties to develop a successful regional trail system.

- **PR-18.1** Coordinate and cooperate with surrounding jurisdictions and providers to create a seamless regional trail system.
- **PR-18.2** Encourage special purpose districts, cities, towns, ports, tribes, and community plan areas to provide trail connections and provide access to the regional trail system.
- **PR-18.3** Encourage developers and private land owners to provide trail connections through developments to the regional trails system.
- **PR-18.4** Promote public/private partnerships in development, implementation, operation, and maintenance trail projects.

**WATER ACCESS**

**GOAL PR-19** Provide public waterfront access through the provision of public piers, swimming beaches, motorized and nonmotorized boat launches, public boat moorage, and water viewpoints.

- **PR-19.1** Cooperate with other agencies to acquire and preserve shoreline access.

**Community destinations include (PR-17.1):**
- Regional and county park sites
- Schools
- Employment centers
- Transit centers
- Significant natural areas
- Landmarks

**Methods may include (17.3):**
- Land dedication
- Purchase
- Use of vacated rail lines (rail-banking) and other rights-of-way
- Donation of land
- Public easements
- Use agreements
PR-19.2 Enhance the existing system of water trails to support recreation opportunities for nonmotorized watercraft users.

PR-19.3 Provide access to shorelines in a manner that is aesthetically compatible with the adjacent properties and sensitive to ecological function.

PR-19.4 Provide for increased shoreline and water access in concert with increased demand from growth and development.

PR-19.5 Promote appropriate water access to help inspire appreciation and stewardship of aquatic resources and habitat.

PR-19.6 Support the development of the Kitsap Peninsula Water Trails Management Plan in collaboration with jurisdictions in Kitsap and Mason Counties.

PR-19.7 Explore implementation of the Kitsap Peninsula Water Trails Management Plan as applicable to facilities in Pierce County.

**RECREATION PROGRAMMING**

**GOAL PR-20** Provide recreation programs that serve regional needs and encourage greater participation in areas not served by other providers.

**PR-20.1** Focus on core program areas that support PCParks’ vision of encouraging active, healthy lifestyles, connecting people to nature, supporting vibrant communities, and providing opportunities to learn about sustainability practices.

**PR-20.1.1** Provide or collaborate with multidisciplinary health partners in developing programs that support improved physical activity, health, and well-being.

**PR-20.1.2** Provide environmental programming that accommodates direct exposure to nature as a means of contributing to physical and emotional health.

**PR-20.1.3** Educate the public about how they may achieve health and wellness.

**PR-20.2** Provide innovative, facility-based special events to provide social and cultural recreation opportunities.

**PR-20.3** Tailor programs and services to the demographics and needs of the community.

**PR-20.4** Identify and reduce physical and financial barriers to participation.

**PR-20.5** Ensure equitable programming for all regardless of age, abilities, race, ethnicity, or income.

**OPEN SPACE**

**GOAL PR-21** Provide a system of open space experiences and corridors to support livable communities, offer relief from the built environment, allow people to connect with nature and ensure the long-term health of the natural environment and citizens.
PR-21.1 Provide leadership for the planning, coordination and conservation of open space corridors that include unique environmental systems and scenic vistas on a countywide basis.

PR-21.2 Incorporate natural areas and unique ecological features into the park system to protect threatened species, conserve significant resources and habitat, and retain migration corridors that are unique and important to local wildlife.

PR-21.3 Provide open space corridors within the unincorporated Urban Growth Area (UGA) to protect wildlife corridors, provide open spaces for people to enjoy and to create buffers between communities.

PR-21.4 Coordinate and support open space identification, acquisition, and management with other County departments and agencies to look for opportunities to leverage resources and reduce expenditures.

PR-21.5 Protect property valued for plant, fish, and wildlife habitat rarity, diversity, or connectivity.

PR-21.5.1 Preserve opportunities for people to observe and enjoy fish and wildlife.

PR-21.5.2 Prioritize acquisition of habitats that are considered unique in the Puget Trough or West Cascade ecoregion, are identified biodiversity management areas, contain listed species, or provide habitat connection to these areas.

PR-21.5.3 Prioritize the acquisition of habitat that completes an interconnected network of corridors or spaces.

PR-21.6 Acquire habitat that is supported by multiple county goals in adopted county or inter-jurisdictional plans.

PR-21.7 Develop partnerships with public agencies and jurisdictions, private organizations and businesses for implementation of habitat conservation across the county.

PR-21.8 Manage, restore, and maintain publicly owned habitat and open space lands.

PR-21.8.1 Develop and implement stewardship management plans for open space properties.

MULTI-MODAL TRANSPORTATION SYSTEM

The population of Pierce County and the demand on the transportation system are both expected to increase significantly over the 20-year planning period. To keep our economy and environment healthy, it is essential for the transportation system to be able to meet the demands of tomorrow. The challenges of addressing transportation needs include population growth, transportation financing, and the variety of policy options for addressing issues. The County strives to meet the transportation needs of the community while achieving the lowest long-term costs.

In order to accommodate needs of all aspects of moving people and goods, it is becoming increasingly important to consider all modes of travel and a wide range of transportation options. The County supports an increase in the use of transit and other alternatives to the single-occupant vehicle. Alternatives to single-occupant vehicles are needed to reduce the cost of transportation and to provide the infrastructure to attract and retain businesses.

Transportation improvements include the information and infrastructure to change travel habits. Transit strategies include improved bus service, high occupancy vehicle lanes, vanpools, and carpools with safe and convenient access to park-and-ride lots. Active transportation systems include facilities to support activities such as bicycling, walking, and skating. It is anticipated that Transportation Demand Management will play a greater role in integrating transit, ride sharing, and active transportation systems.

Pierce County's urban travel needs are met by a system of freeways and arterials, bike trails and bike lanes, a bus transit system, commuter rail, and light rail. In addition, the County is served by a maritime port, several general aviation airports, and ferry services. Joint Base Lewis-McChord (JBLM) is a major military facility with complex transportation systems and travel needs.

TRANSPORTATION SYSTEM DEVELOPMENT

GOAL T-1  Collaborate in the development of a countywide multimodal transportation system that considers the mobility needs of all residents, emphasizes safety, minimizes impacts to the natural and built environments, and facilitates goods movement.

T-1.1  Strategically expand capacity and increase efficiency of the system to move goods, services, and people to and within the Urban Growth Area.

T-1.2  Focus on investments that produce the highest benefits with the least amount of environmental impacts.

The urban transportation system includes (T-1.1):

- Roadways
- Fixed-route public transit and shuttle services
- Bicycle and pedestrian facilities
- Water, rail, air, and industrial port and intermodal facilities
- Passenger and freight rail

For more background and technical information see the Technical Sections of this Element
T-1.3  Provide information to users of all modes on the rules of the road.

GOAL T-2  Forecast traffic to plan for transportation infrastructure that accommodates planned growth and maintains service standards.

T-2.1  Base traffic forecasts on assumptions from the Land Use Element of the Comprehensive Plan and adopted County population, housing, and employment growth targets, which are consistent with the Vision 2040 Regional Growth Strategy.

GOAL T-3  Invest in all five categories of MOPIA (Maintenance, Operations, Preservation, Improvements, and Administration) in stewardship of the transportation system. Maintenance, Operations, and Preservation are the highest priorities.

T-3.1  Lower the overall life-cycle costs through effective maintenance and preservation programs.

T-3.2  Adequately maintain roadways, rights-of-way, and associated County property, while adhering to established levels of service.

T-3.3  Promote an efficient roadway system through operational activities, improvements, and education.

T-3.3.1  Recognize that operational improvements can lead to a reduction in the need for new project construction.

T-3.4  Preserve the County roadway system.

T-3.4.1  Repave and overlay roadways in a timely manner

T-3.4.2  Replace or refurbish infrastructure when needed.

T-3.5  Improve roadways through widening and extensions to keep pace with growth and enhance safety, particularly in urban areas.

T-3.6  Provide adequate staffing to administer the maintenance, operations, preservation, and improvement activities.

GOAL T-4  Place a high priority on roadway safety.

T-4.1  Complement Washington State’s zero death and disabling injury target through safety improvements and education.

GOAL T-5  Prioritize transportation capacity improvements in the following order:

T-5.1  Upgrade or build new transportation facilities to encourage and support growth and economic development in urban areas of the County.

T-5.2  Upgrade or build new transportation facilities in the more rural areas of the County to serve large lot, low density residential development at appropriate service levels.

T-5.2.1  Construction of new roads and addition of travel lanes should be avoided in the rural area, except when essential for safe and efficient interurban travel.
GOAL T-6  Place particular emphasis on the development of an interconnected, multimodal transportation system within designated centers and along corridors connecting centers.

T-6.1  Provide for the needs of freight movement and employees to and from the Frederickson Manufacturing/Industrial Center by ensuring a variety of transportation modes, and designing and funding road improvements to accommodate freight movement.

RIGHT-OF-WAY

The land that contains transportation corridors is referred to as right-of-way. Right-of-way exists for roads, trails, rail lines, and access to navigable waters.

GOAL T-7  Acquire and preserve rights-of-way.

T-7.1  Preserve right-of-way for future transit alignments and high capacity transit.

T-7.2  Require dedication of right-of-way as a condition for development.

T-7.3  Request donations of right-of-way to the County.

T-7.4  Include donated right-of-way in development density calculations so developers who donate are not penalized.

T-7.5  Purchase rights-of-way.

T-7.6  Purchase development rights from property owners.

T-7.7  Require property owners to grant public easements.

T-7.8  Preserve County rights-of-way that terminate at navigable waters.

T-7.9  Preserve rail rights-of-way for future rail or other transportation purposes.

T-7.9.1  Identify abandoned or to be abandoned rail lines and rights-of-way.

T-7.9.2  Support and encourage the State allocate funds for the preservation of identified rail lines and rights-of-way.

T-7.10  Protect public rights-of-way from encroachment by any structure, vegetation, landscaping materials, or other obstruction.

T-7.11  Establish minimum setbacks for property improvements to preserve sufficient right-of-way to serve future transportation needs.

T-7.12  Assess the potential uses of rights-of-way for all forms of travel to preserve and implement their highest and best transportation use.

Right-of-way can be used to (T-7):

- Protect access and provide safety for all users
- Preserve the integrity of County roads, drainage systems, and other publicly-provided and maintained facilities
ROADWAYS

The road system in Pierce County consists of Federal, State, County, city, and privately-owned facilities. The County's road system connects with the interstate and state highway system, and city streets, as well as numerous privately constructed and owned roads throughout the County.

GOAL T-8 Encourage direct routing and greater connectivity of the arterial road system, while minimizing impacts to residential neighborhoods and the environment.

GOAL T-9 Utilize traffic calming measures, as appropriate, to reduce high traffic volumes and speeds through residential neighborhoods.

T-9.1 Allow on-street parking on minor local and residential streets.

GOAL T-10 Provide for the safe use and presence of farm vehicles on the rural roadway network.

T-10.1 Coordinate with the farming community to understand the specific operational needs of their industry.

T-10.2 Encourage discussion and analysis of impacts of connectivity as it relates to agricultural lands.

ACCESS

GOAL T-11 Consolidate access to state highways, and major and secondary arterials in order to complement the highway and arterial system.

T-11.1 Identify access to private developments through a system of collector arterials and local access streets.

T-11.2 Consolidate access in developing commercial and high density residential areas through shared-use driveways, frontage roads, and local access streets.

T-11.3 Encourage landowners developing property along highways, and major and secondary arterials to jointly prepare comprehensive access plans that emphasize efficient internal circulation and discourage multiple access points to major roadways.

T-11.4 Consider access management to reduce the number of conflict points between pedestrians and vehicles, with the intention of improving pedestrian safety.

T-11.5 Discourage gated communities that impair emergency vehicle access.

Access control is intended to (T-11):

- Reduce interference with traffic flow on arterials
- Reduce conflicts between motor vehicles and active transportation users
- Discourage through traffic on local access streets or private access roadways
Active TRANSPORTATION

Active transportation systems (nonmotorized) include sidewalks, trails, bike lanes, and roadway shoulders to accommodate pedestrians, bicyclists, and skaters for both transportation and recreational purposes.

GOAL T-12

Develop an interconnected countywide system of active/nonmotorized transportation facilities that provide travel options, promote physical activity and well-being, contribute to a healthier population and cleaner environment, and enhance safety.

T-12.1

Prioritize trail development to form the core of the active transportation system, linking communities, centers, tourist attractions, and other destinations.

T-12.1.1

Work collaboratively with other organizations, including Pierce County Parks and Recreation to develop the Pierce County Regional Trail System, community nonmotorized connections, and local access.

T-12.2

Endorse the concept of complete streets, which promotes roadways that are safe and convenient for all users.

T-12.3

Design and construct complete streets wherever feasible and practicable.

T-12.4

Work to construct missing links in the active transportation system and access to the network.

T-12.5

Inform the community about the economic transportation system performance, and environmental, health, and social benefits of active transportation.

T-12.6

Develop improved programs to encourage increased levels of active transportation.

GOAL T-13

Require the installation of bicycle racks and secure bicycle parking at larger employment sites and within designated centers.

GOAL T-14

Develop, maintain, and improve pedestrian amenities for routes connecting commercial areas to residential neighborhoods, civic uses, and schools.

T-14.1

Realize both the recreational and transportation value of these routes.

T-14.2

Accommodate students’ travel to school and bus stops using safe walking corridors.

T-14.3

Accommodate pedestrians and bicyclists on arterials unless precluded by environmental or physical constraints.

T-14.4

Require developers to include active transportation elements (non-motorized) in all projects.

GOAL T-15

Support active transportation travel modes as a trip reduction strategy.

Active transportation facilities include (T-12):
- Trails
- Pathways
- Sidewalks
- Bike lanes
- Paved shoulders
- Wide curb lanes
- Shared use roadways
T-15.1 Provide facilities for bicyclists and pedestrians to access public transit.

TRANSIT

Transit service in Pierce County is provided by Pierce Transit, Intercity Transit, and Sound Transit. Pierce Transit provides local fixed-route bus service, express bus service to Gig Harbor, a demand response SHUTTLE service for persons with disabilities who are unable to use the fixed-route system, a rideshare program that includes vanpooling, and park-and-ride facilities to support these services. Intercity Transit provides express bus service between Olympia and Tacoma. Sound Transit provides express bus service to Seattle, south King County, and Sea-Tac International Airport, Sounder commuter rail between multiple Pierce and King County cities, and the Tacoma Link light rail.

GOAL T-16  Encourage and cooperate with transit agencies to provide services that meet the needs of residents.

T-16.1 Coordinate with transit agencies to increase the number of routes and frequency, as funding becomes available, especially to underserved areas and designated centers within the unincorporated area.

T-16.2 Cooperate with transit agencies in the location of transit centers, park and ride lots, rail stations, and bus stops.

T-16.3 Support efforts to develop tourist-related transit service that reduces vehicle trips to local attractions, especially Mount Rainier.

T-16.4 Work with transit agencies to improve bus and rail connections to popular bicycle and pedestrian routes and ferry terminals.

T-16.5 Encourage transit agencies to add bicycle lockers and other amenities to accommodate multimodal connections.

T-16.6 Work with transit agencies to identify improvements within the County right-of-way to support transit operations and rider access to transit facilities.

T-16.7 Support the development of the regional park-and-ride lot system.

T-16.8 Encourage the placement of transit shelters that are well lit, clearly visible, well marked, posted with easy-to-read schedules and route maps, equipped with litter receptacles, and that protect users from inclement weather.

T-16.9 Coordinate with the Pierce County Coordinated Transportation Services Coalition to address mobility for people with special transportation needs and to implement the countywide Coordinated Transportation Plan recommendations.

GOAL T-17  Encourage residential developers to provide waiting areas, including bus shelters, for the safe congregation of children transported by bus to school.

GOAL T-18  Encourage transit oriented development and prioritize facilities that help connect people to transit, such as sidewalks, trails, crosswalks, and bicycle parking.
### Ferry

Pierce County is served by two ferry routes, one operated by the County and the other by the Washington State Department of Transportation (WSDOT). The WSDOT ferry route is between Point Defiance in Tacoma and Vashon Island. The Pierce County ferry route connects Anderson and Ketron Island to the mainland in the town of Steilacoom. Both routes accommodate both motor vehicles and passengers.

**GOAL T-19**  Consider the Pierce County Ferry System an extension of the County roadway system.

### Rail and Freight

The efficient movement of freight is a priority for supporting economic development and providing living wage jobs. Movement of goods and services can be achieved using rail systems, trucking, and shipping.

**GOAL T-20**  Work with local communities, the Washington State Department of Transportation, railroads, labor groups, and shippers to:

- **T-20.1**  Identify and preserve all rail lines and services;
- **T-20.2**  Coordinate and implement passenger and freight rail service preservation projects consistent with a regional transportation program; and
- **T-20.3**  Consider localized rail service as a means of public transportation.

**GOAL T-21**  Provide for the needs of freight movement and employees within the Frederickson Manufacturing/Industrial Center by ensuring a variety of transportation modes and funding road improvements to accommodate freight movement.

**GOAL T-22**  Work in cooperation with WSDOT, cities, JBLM, Port Authorities, and other entities to plan and implement projects and programs to meet freight mobility and access needs.

**GOAL T-23**  Support efforts to construct transportation facilities that will benefit freight movement, including the proposed extensions of the SR 167 freeway and SR 704 (Cross-Base Highway).

### Air Transport

Pierce County is served by Seattle-Tacoma International Airport in south King County, two military base airports, and a number of smaller airports owned by the public and private sector.

The largest airports located in the County are the military air facilities on Joint Base Lewis McChord (JBLM) - McChord Field and Gray Field. General aviation is served by the County-owned Tacoma Narrows Airport and Thun Field and several other small private airports.

**GOAL T-24**  Participate in regional airport planning to ensure that County needs are met and that County concerns are addressed.

- **T-24.1**  Support the preservation of air navigation resources and facilities.
T-24.2 Provide adequate ground transportation to move people and goods to and from airports.

**Concurrency and Level of Service**

Level of service standards exist for all arterials and transit routes to serve as a gauge to judge performance of the system. These service standards should be regionally coordinated.

To gauge the performance of the County road system, Pierce County Council adopts level of service standards (hereafter referred to as service standards or standards). The standards are set according to the [Capital Facilities Element](#) of this Plan. The standards reflect the maximum acceptable level of congestion throughout the County.

**GOAL T-25** Establish service standards for County arterials and reflect the level of service standards for state highways to monitor the performance of the system, evaluate improvement strategies, and facilitate coordination for funding.

T-25.1 Annually report transportation concurrency on County roadways based on the adopted County service standard, which reflects the maximum allowable level of congestion on roadways.

T-25.2 Consider the impacts on neighboring jurisdictional roadway facilities, inclusive of the Washington State Department of Transportation (WSDOT), when developing and administering service standards.

T-25.3 Pursue the concept of Ultimate Capacity as applicable to the county roadways. Roadways designated as ultimate capacity facilities would be improved to certain specified levels. These types and levels of improvements would not necessarily meet current or future Pierce County Roadway Concurrency Management System standards. Provisions should be made for providing adequate operational safety and nonmotorized improvements when appropriate. Targeted Transportation Demand Management measures may also be considered.

**GOAL T-26** Transportation improvements or strategies to accommodate the impacts of development must be made concurrent with the development.

T-26.1 Consider varied strategies in the concurrency program to address substandard service standards.

T-26.2 Consider targeted application of transportation demand strategies on roadways that exceed service standard thresholds.

T-26.3 Prohibit development in areas that are served by facilities that do not meet concurrency standards.

**GOAL T-27** Tailor concurrency programs for centers to encourage transit-oriented development.
TRANSPORTATION DEMAND MANAGEMENT

Transportation Demand Management (TDM) involves strategies that are targeted towards reducing drive-alone travel. TDM efforts include education, incentives, and the provision of infrastructure.

GOAL T-28

Encourage alternate travel modes within an efficient multimodal transportation system that reduces and shifts travel demand to improve the flow of people and goods.

T-28.1 Partner with other agencies to implement travel demand management (TDM) programs.

T-28.2 Emphasize transportation investments that provide and encourage alternatives to single-occupancy vehicle travel and increase travel options, especially to and within centers, and along corridors connecting centers.

ENVIRONMENTAL AND PUBLIC HEALTH

GOAL T-29

Impacts on health and the natural and built environments shall be important considerations when designing and implementing facilities.

T-29.1 Use low impact development practices or environmentally appropriate approaches for the design, construction, and operation of facilities to reduce and mitigate environmental impacts.

T-29.2 Locate and construct improvements to discourage adverse impacts on water quality and other environmental resources.

T-29.3 Design facilities to fit within the context of the built or natural environment in which they are located.

T-29.4 Strive to use and encourage the use of cleaner fuels and lower-emission vehicles.

T-29.5 Mitigate unavoidable environmental and health impacts, including cumulative impacts.

T-29.6 Where appropriate, use recycled materials in the construction of facilities.

T-29.7 Consider landscaping and other types of buffers along major facilities, where appropriate.

T-29.7.1 Preserve the natural environment and existing vegetation as much as possible.

Strategies to implement TDM include (T-28.1):

- Assist employers and employment centers to promote alternatives to commuting in single-occupant vehicles.
- Inform the public about the benefits of alternative travel modes, especially those relating to physical health and the environment.
- Provide tools and technology, including social media, to disseminate travel options and route information.
- Invest in capital facilities that support alternative modes of travel including park and ride lots, transit amenities, and bicycle and pedestrian projects.
- Focus TDM and TSM strategies to address travel behavior in congested corridors and urban centers.
- Encourage developers to provide bus shelters and stops, bicycle parking, and carpool parking.
T-29.8 Solicit and incorporate the concerns and comments of interested parties regarding environmental issues into the planning, design, construction, operation, and maintenance of the system.

T-29.9 Minimize changes to existing topography and impacts to critical areas.

T-29.9.1 Avoid the removal of trees outside the safety perimeter of roadways in the rural areas.

T-29.9.2 Relocate or replace any trees removed as part of any roadway projects if feasible.

T-29.10 Include roadside native vegetation and trees in the buffer areas adjacent to arterials.

T-29.10.1 Ensure that any plantings do not affect driver visibility or line of sight.

GOAL T-30 Develop a system that minimizes negative impacts to human health and provides opportunities for healthy, non-polluting travel options.

T-30.1 Protect the system against disaster.

T-30.1.1 Develop prevention and recovery strategies, and plan for coordinated responses.

T-30.2 Consider the impacts of noise on both the transportation facility user and the larger population when locating and designing future transportation facilities.

COORDINATION, IMPLEMENTATION, AND FUNDING

GOAL T-31 Coordinate the planning, design, and implementation of improvements with other agencies.

T-31.1 Coordinate with the Puget Sound Regional Council, Pierce County Regional Council, transportation agencies, other organizations, and other jurisdictions in developing and updating the regional plan and the programming efforts that cross jurisdictional lines.

T-31.2 Create interlocal agreements that address development impacts on one another’s facilities, including potential developer mitigation measures.

T-31.3 Coordinate with social service organizations and transit agencies to provide services that meet the needs of transit-dependent residents.

GOAL T-32 Develop a multi-year financing plan that identifies sustainable funding sources adequate to construct and maintain the system.

T-32.1 Prioritize funding transportation improvements in designated regional, local, and manufacturing/industrial centers and in the transportation corridors that provide linkages to these centers.

T-32.1.1 Create a reassessment strategy if revenue forecasts fall short of expectations.
T-32.1.2 The reassessment strategy should include a discussion of how additional funding will be raised, or how land use assumptions will be reassessed to ensure that service standards will be met.

GOAL T-33 Reduce the need for new capital improvements through investments in operations, pricing programs, demand management strategies, and system management activities that improve the efficiency of the current system.

GOAL T-34 Address anticipated revenue shortfalls through such forums as the newly formed Transportation Benefit District and programs such as the updating of the Traffic Impact Fee Program. This forum and program will assess how to develop additional funding in the context of current land use assumptions and adopted service standards.

T-34.1 Consider the following funding options and possibilities in developing additional revenue for the comprehensive plan time horizon:

T-34.1.1 Changes in state law to allow additional funding sources such as road utilities and additional local option financing mechanisms;

T-34.1.2 Lobbying the state legislature for a more equitable distribution of state funds generated by a jurisdiction and received by that jurisdiction;

T-34.1.3 Reduction or elimination of either/both the Traffic Law Enforcement transfer from the Road Fund (currently $2.65 million per year), or the voter-approved Road Fund Levy Shift (currently over $12 million per year), and further restricting the use of the Road Fund levy to the maintenance, operation, preservation, administration, and improvement of transportation facilities;

T-34.1.4 Encouraging public/private partnerships for financing transportation projects;

T-34.1.5 Sharing costs with other jurisdictions for needed improvements that solve shared transportation objectives;

T-34.1.6 Maximize opportunities when appropriate to utilize the cost recovery mechanism as found in Chapter 12.36 PCC. The cost recovery mechanism would facilitate the cost sharing of projects among private developers and possibly, the County. This would potentially accelerate construction of particular transportation improvements or for additional transportation facilities and services needed to serve new developments, in proportion to the impacts and needs generated by individual projects

T-34.1.7 When cost effective, encourage the use of Road Improvement Districts by local residents to upgrade public and private roads and develop new roads consistent with County public road standards;

T-34.1.8 Continue to seek federal funding for transportation projects that support the military mission and fund the mitigation of its traffic impacts;
**T-34.1.9** Continue to leverage County funds to the highest level by pursuing non-County funding sources for transportation funds and using County funds as matching funds.
The following sections are technical information to supplement the policies and background in the previous section.
PREFACE

This Pierce County Transportation Element represents the first major revision in the County’s transportation plan since June 1992. The Transportation Element has been kept current through the twenty three years since the adoption of that plan through a series of amendments. Some of the amendments were technical in nature, many substantive. This Transportation Element is notable in that it is offered within the context of a larger Comprehensive Plan Update.

SO WHAT HAS CHANGED AND WHERE ARE WE NOW?

Much has changed since 1992. The planning landscape has changed in terms of the people, political geography, regulatory environment, technologies, economy, finance, and environment. Let us review some of the key developments since 1992 that affect how we look at transportation planning in Pierce County today.

THE POLITICAL GEOGRAPHY

The boundaries and land area of unincorporated Pierce County have changed in the past twenty three years. State legislation has set the table for the emergence of new cities and the continued expansion of older ones through annexation of unincorporated lands. Since the first Transportation Plan came three new cities, Lakewood, University Place, and Edgewood. It is notable that this update of the County Comprehensive Plan offers policies that reinforce and encourage the continued process of annexation and incorporations.

PEOPLE

The concept of political geography as described above is important in transportation planning as the boundaries and coverage of this county directly relates to the population and facilities that the County serves. As the unincorporated land areas of this county decrease, so does the population within those areas. This Transportation Element will discuss the changing demography and trends of the County that will influence the demand for transportation and how it will be served.

THE PLANNING SETTING

The transportation planning policies and practices of all levels of agencies and governments have changed enormously. New terms such as Sustainability, Smart Growth, Concurrency, Project Prioritization, MAP 21, Intelligent Transportation Systems, and Climate Change have been added to the lexicon of the transportation planning profession. These are only few of the new terms.
**THE REALITY**

The on the ground reality for transportation planning is somewhat of a *mix* of possibilities. There are enormous opportunities in such things as new high speed transit in nearby cities and a more extensive network of regional bus services developed since 1992. But there is also the almost doubling of traffic and resultant congestion on our state freeway system. There are also the budgetary realities at all levels of government and transportation agencies that have affected both the revenue and expenditure sides.

**THE ASPIRATION**

This Transportation Element considers the current planning setting and projects to the future. It does this through a largely *data driven* process of assessing travel needs, demographics, understanding its financial resources, and proposing approaches to addressing these needs.

It aspires to deliver a transportation future for Pierce County that is safe, sustainable, financially balanced and viable. The strategies presented in this Element are consistent with state law, and regional and countywide policies. It is in this context and more, that we offer the Transportation Element.

**EXISTING CONDITIONS AND TRENDS**

**DEMOGRAPHICS AND TRAVEL**

Pierce County has a mix of demographic and travel patterns that strongly affect the demand for transportation services. This demand or use for the system then influences this jurisdiction’s actions in providing for those services. This section examines current demographic and travel related trends extracted from Census data for the time periods of 1990 and 2010. This cross-section of census periods provides a perspective of demographic change occurring between the adoption of the first transportation plan (1992) to the present day condition.

**POPULATION**

The population of Pierce County in 2010 was 795,225 residents reflecting an increase of more than 200,000 people from 1990. In 1990, the population in cities/unincorporated was 246,278/339,925 respectively. In 2010 the balance changed to 428,487/366,738. These figures at face value may lead one to believe that a significant number of unincorporated residents simply moved to the cities. However, the reality is that the population shift is primarily due to the incorporation of the cities of Lakewood, University Place, and Edgewood in that time period. In 1990 these three jurisdiction’s populaces were counted as unincorporated, whereas in 2010 they were counted as incorporated.
**Age**

According to US Census Bureau data, the distribution in population among age brackets between 1990 and 2010 has changed slightly with increasing elderly population as displayed in Figure 12-A. Note the 30 to 44 years category appears more significant in the graphs due to representing a 15 year age span (versus ten years for most other categories). The 65+ age group also represents a larger age span. The difference in age span of the groups acts to skew the graph.

**Travel Mode**

Pierce County single-occupant-vehicle (SOV) mode for commute trips share falls between 75% and 80% according to Census data. The distribution in mode share has not changed significantly over the 20-year period. The share of carpool and public transportation has remained relatively similar, as shown in Figure 12-B.

**Travel Time**

Figure 12-C shows that the average commute travel time continues to increase in Pierce County. The graphs show that travel times have increased significantly in the unincorporated area, while city travel times have remained relatively stable over the 20-year period.

COUNTY TO COUNTY TRAVEL

A significant portion of Pierce County’s residents’ travel is to King County for work. Another significant and growing trend is Pierce County providing jobs for Thurston and King County residents.

TRAVEL PERFORMANCE AND LEVEL OF SERVICE

Pierce County’s Transportation Concurrency Management System (TCMS) addresses the Washington State Growth Management Act (GMA) requirement that directs certain counties and cities to set and maintain level of service standards for the arterial roadway system. Pierce County TCMS has been applied for the Transportation Plan Update to identify County-maintained arterial roadways that have projected concurrency deficiencies in 2030 based on the modeled roadway improvement assumptions, estimated population and employment changes, and the adopted Service Standard. This analysis informs and provides recommendations to Pierce County staff and policymakers regarding present and future arterial roadway concurrency issues.

SERVICE LEVEL METHODOLOGY

Pierce County measures traffic conditions on pre-defined arterial segments. Pierce County’s system analyzes County-maintained arterials in a unit called concurrency segment. A concurrency segment may consist of one or more roadway links, whose limits are usually defined by either intersecting arterials (existing or proposed) or jurisdictional boundaries. A link is a single section of roadway as represented in context of the travel demand model. The Transportation Plan Update 2030 modeled roadway network includes 1,018 concurrency segments, comprised of over 2,000 modeled arterial links in unincorporated Pierce County. Defining a concurrency segment is based on the following principles. First, the variation of traffic volumes within a segment should be minimized. Second, the required data for the concurrency analysis should be relatively easy to collect and process. Third, the service level of
the measured segment should be easily interpreted and understood. Lastly, the measurement should realistically reflect the daily operating condition of the facility.

**ARTERIAL SERVICE LEVELS**

The Service Level of an arterial, as defined by Pierce County, is the observed daily traffic volume divided by a Service Threshold, which produces a Volume/Service (V/S) ratio. The Service Threshold is similar to a capacity measure and varies depending on the number of lanes of a facility and the presence of adequate channelization (turn lanes and/or turn pockets). Table 12-B lists the adopted Pierce County Service Thresholds.

<table>
<thead>
<tr>

<td>19,800</td>
</tr>
<tr>
<td>Rural 4</td>
<td>31,600</td>
<td>39,600</td>
</tr>
</tbody>
</table>

Service Threshold was defined by Annualized Average Daily Traffic (AADT).
1. Urban Classifications include arterials with Federal Urban Arterial status and/or within the County's Urban Growth Area.
2. Rural Classifications include arterials that are not classified as Urban per the above definition.
3. Turn Channelization consists of a roadway having a center two-way left turn lane or exclusive turn pockets at key locations.
4. Three-lane thresholds pertain to uneven 3-lane arterials, which have one lane in one direction and two lanes in the other. Assumes 60% of a 2-lane capacity is in the direction with one lane (e.g. 0.6*17,600=10,560), plus 40% of a 4-lane capacity in the direction with two lanes (e.g. 0.4*35,200=14,080). Example total = 10,560+14,080=24,640 or 24,600. If turn channelization is present, the Service Threshold increases to 30,800.
5. An additional capacity Service Threshold of 47,400 was derived for 4-lane arterials possessing access control. This capacity is applied to 176th St E after completion of capacity improvement.
6. Details of the methods used to create Service Thresholds can be found in the Pierce County Traffic Impact Fee Rate Study and the Technical Memorandum #3 of the Pierce County Traffic Impact Fee Notebook (September 30, 2005)

While the Service Threshold measures the traffic saturation level based on daily V/S ratio, the adopted Allowable Arterial Service Standard sets the threshold at which a roadway is considered to have failed concurrency. The Allowable Arterial Service Standard for long range planning in the Transportation Plan is 1.0.

**END-OF-YEAR 2010 TRAFFIC VOLUME ESTIMATION**

The current daily V/S ratio is derived by dividing the observed or estimated end-of-year 2010 daily traffic volume by the Service Threshold for each link. It is not viable to collect traffic counts on every link in the concurrency system, so a subset of County arterials was identified for annual count collection. After the data was assembled, it was further processed to match the count data with the corresponding model links. For those links that have 2009 traffic...
counts but not 2010, regression equations were developed to estimate 2010 daily volumes. The remaining link volumes were estimated based on traffic volumes of adjacent roadways.

**FORECASTED TRAFFIC VOLUMES**

The forecasted daily volumes were post-processed by applying the net change between 2010 and 2030 model outputs to the 2010 observed or estimated counts. This procedure is intended to minimize the impacts of individual link based forecasting errors that are inevitable in almost all travel demand models.

**COUNTY ARTERIAL PERFORMANCE**

The Service Level of a concurrency segment is based on the weighted average of daily V/S ratio which is defined as:

\[
\text{Weighted Segment Daily V/S} = \frac{\sum (\text{Link Volume} \times \text{Link Length}) / \sum (\text{Link Length})}{\sum (\text{Link Threshold} \times \text{Link Length}) / \sum (\text{Link Length})}
\]

The use of the weighted average is designed to smooth data variations among individual model links contained in a concurrency segment. The V/S ratios resulting from these calculations are then compared with the Pierce County Service Standard of 1.0 to determine whether a particular segment is out of compliance with the Standard. Details and examples of TCMS procedures and outputs can be found in the latest published Transportation Concurrency Management System Annual Report.

**STATE LEVEL OF SERVICE**

As per WAC 365-196-430(1)(iii) regarding level of service standards for highways, the condition of state highways was examined in this Transportation Element. The methodology used is consistent with the County methodology listed above with some approved changes to capacity thresholds. This methodology is based on Florida Department of Transportation (FDOT) Level of Service methodology. Washington State Department of Transportation (WSDOT) has reviewed the methodology and outputs and has given consent.

**HIGHWAYS OF STATEWIDE SIGNIFICANCE AND REGIONALLY SIGNIFICANT STATE HIGHWAYS**

The LOS standards for Highways of Statewide Significance (HSS) are determined by Washington State Department of Transportation (WSDOT). WSDOT and the Puget Sound Regional Council together determine the Regionally Significant State Highways (non-HSS). These roadways are graphically depicted in Appendix B-3 and Appendix B-4. Per WSDOT staff comments, HSS tables
and maps with V/S in urbanized areas refers to V/SVd, which is equivalent to LOS D and in rural areas V/SVc which is equivalent to LOS C. Non-HSS have been categorized into 3 tiers:

- Tier 1 – Inner urban area: state routes within a 3-mile buffer around the most heavily travelled freeways and designated urban centers.
- Tier 2 – Outer urban area: state routes outside the 3-mile buffer that connect the main urban growth areas to the first set of satellite urban growth areas.
- Tier 3 – Rural areas: regionally significant state routes in rural areas that are not in Tier 2.

Table 12-C lists LOS standards applied to the different categories. Appendix Table B-1 lists the Florida Department of Transportation (FDOT) LOS threshold tables for the different standards.

**Evaluation of Current County Maintained Arterial System**

In 2010, the entire County maintained arterial system consisted of approximately 700 roadway miles in the unincorporated area. Urban arterials accounted for about two-thirds of the roadway miles and rural arterials account for the other one-third. Figure 12-D exhibits the detailed breakdown of each functional class in both urban and rural areas. It is observed that there are significantly more urban roadway miles across each functional class.

**Figure 12-D: Roadway Miles by Functional Class**
The estimated total daily vehicle miles traveled (VMT) in 2010 was over 2,850,000 on the County arterial system. The estimated total vehicle hours traveled (VHT) is about 81,000. Table 12-D presents a detailed breakdown of VMT and VHT by roadway functional classes in urban and rural areas. Generally, the percentages of VMT and VHT on both urban and rural arterials are closely matched to the hierarchy system of road functional classification. Urban major arterials carry the highest amount of VMT and VHT than any other sub-group, followed by urban secondary and collector.

### COUNTY ARTERIAL PERFORMANCE 2010

The 2010 roadway performance measurement is determined by the ratio of daily traffic counts and the assumed arterial capacity (see Table 12-B for generalized capacities). The computation was calculated for every modeled County classified arterial in the unincorporated area. Map 12-1 graphically portrays 2010 daily V/S ratios on all County arterials. Table 12-E reveals that there were twelve segments with daily V/S ratios of 0.95 or over in 2010. Ten of twelve segments surpass the daily V/S 1.0 ratio threshold, thus were out of compliance with the Standard. The remaining two segments had ratios below the threshold.

All identified 2010 deficient roadways were improved and brought into compliance. However, Spanaway Loop Rd S. from Military Rd S to approximately 820 feet south of Military Rd fell out of compliance again in 2012, shortly after striping to add a southbound lane. It is noted that Table 1-5 as shown below reflects more current segment limits used in the analysis. This Transportation Element proposes an approach to address this capacity issue with a concept.
referred to as *Ultimate Capacity* defined in the *Population, Jobs, Travel Characteristics, and Performance* section.

2010 State Highway Performance

While Pierce County is responsible for maintaining, operating, and monitoring its own local network of roadways, it is important to acknowledge the importance and function of the state roadways. The state highways perform a critical role in carrying traffic within and outside the county. It is important to understand the operations of the state highway network in assessing the overall performance of the transportation system.

State highway performance for 2010 was post-processed and analyzed in a separate database developed specifically for this analysis. The daily V/S ratios were calculated by using the same method as for County arterials. Table 12-G portrays base year (2010) highway performance in terms of daily V/S ratios. It shows that highway segments with daily V/S ratios of 1.0 or above account for more than 51% of VMT and over 55% of VHT of the totals for State highways.

Map 12-2 graphically depicts the daily V/S ratios on State highways. The figure shows congestion on most of the regional freeways including I-5, SR 167, and SR 512. Numerous segments on the surface highways of SR 7, SR 161, SR 162, and SR 410 also show congestion.

Pierce County Transit Service Providers

Since the completion of the 1992 Transportation Plan, transit in this County has both expanded and contracted. The formation and initiation of Sound Transit has brought light rail into downtown Tacoma, Commuter rail into a number of cities of Pierce County, and express bus service to many areas of the County. Local and regional networks are depicted in Map 12-4 and Map 12-5, respectively. While there has been an expansion of regional transit service, there has also been a decrease of the transit area coverage offered by Pierce Transit. The Pierce Transit Benefit Area (PTBA) is shown in Map 12-3, which is the area where an incremental sales tax is collected to fund Pierce Transit operations. The cities of Bonney Lake, Buckley, DuPont, Sumner, and Orting as well a portion of the unincorporated county, are no longer part of the PBTA. Figure 12-E shows annual boardings by service type.

Pierce Transit provides local fixed route bus service and is also contracted by Sound Transit to operate some express bus service. In addition, Pierce Transit coordinates vanpool service and provides SHUTTLE (paratransit specialized) service. Map 12-3 shows the service area for SHUTTLE.

Figure 12-E: Annual Boardings (Pierce Transit)

Shuttle Service Areas based on Fixed Route Service Changes
Effective September 28, 2014

This map was developed by Pierce Transit. It is provided for reference only and is not intended to show map scale accuracy or all inclusive map features.
Map 12-4: Pierce Transit System Map (as of February 15, 2015)
Map 12-5: Sound Transit System Map
CURRENT TRANSPORTATION PLANS, PROGRAMS, AND PROJECTS

BACKGROUND

In order to understand and effectively engage in the transportation future of Pierce County, it is important to understand the many plans and programs that influence, both directly and indirectly, the future of transportation in this County. This section provides information on a select number of the transportation plans that have been consulted in the development of this Transportation Element. Also referenced here are a number of programs and projects that directly relate to and sometimes implement the transportation plans.

TRANSPORTATION PLANS AND PROJECTS

WASHINGTON STATE DEPARTMENT OF TRANSPORTATION

The Washington State Department of Transportation (WSDOT) has a wide range of transportation plans and programs relating to almost all modes of travel. Among these plans and programs are:

- The 2015-2018 Statewide Transportation Improvement Program- This document is required in order for the State and jurisdictions to receive more than $2 Billion in funding within the program time period.

- The 2007-2026 Washington Transportation Plan- This is described as a data driven guide to transportation priorities. It is a compendium of the state of the State’s transportation services and facilities that culminates in policy recommendations for moving forward.

- The 2007-2026 Highway System Plan focuses on the state highways and is a component of the State Multimodal Transportation Plan. It is currently undergoing revision.

WSDOT has a number of other plans covering ferries, nonmotorized, rail, and generalized freight transport.

THE PUGET SOUND REGIONAL COUNCIL

The Puget Sound Regional Council (PSRC) covers the four counties of Kitsap, Snohomish, King and Pierce and their respective incorporated areas. Plans and projects of special note include:

- Vision 2040- Built around the theme of People, Prosperity, and Planet, this plan adopted by the constituent jurisdictions in 2008, provides both a policy and a technical template around which member jurisdictions develop their local plans.

- Transportation 2040- This plan is the transportation companion to Vision 2040 and identifies how the additional 1.5 million people and 2.2 million jobs will be accommodated by our transportation system.
• It should be noted that PSRC, like WSDOT, has a wide range of plans covering modes or programs such as Transportation Demand Management and Nonmotorized Travel.

• Transportation Prioritization – PSRC staff and constituent jurisdictions developed a methodology that takes all regional transportation projects and evaluates them using criteria derived from current plans. The resultant scoring from this process results in projects being categorized as being within the Constrained or Unprogrammed portion of the regional plan. Within the category of the Constrained portion of the plan are the subcategories of approved, conditionally approved, and unprogrammed. This categorization was used to balance the regional plan’s financial strategy. It is important to note that only the Constrained List projects are eligible to apply for the competitive federal transportation funding that PSRC administers.

**PIERCE COUNTY**

• The 1992 Transportation Plan – The plan was developed over a four year period and involved extensive technical studies and examined a variety of land use scenarios. This plan preceded the development and adoption of the comprehensive plan. This was originally a standalone document, until it later became was incorporated into the Transportation Element of the 1994 Pierce County first Comprehensive Plan. This document developed both policies and projects that carried over into the subsequent Transportation Element updates.

• The Pierce County Nonmotorized Transportation Plan – Pierce County council adopted this plan in June 1997, at which time it became part of the Transportation Element of the Comprehensive Plan. This plan created a vision, policies, and projects focusing on nonmotorized travel in the county. Nonmotorized transportation planning is exclusively discussed in the Active Transportation/Nonmotorized Transportation section of this Element.

• Various Pierce County Community Plans – There are 11 community plans that contain a transportation component and are listed in the previous section of this Element. The County facilitated meetings with communities reaching and documenting consensus on transportation policies and project needs.

• Traffic Impact Fee Program – Adopted in 2006, the Traffic Impact Fee Program is currently active in the County.

• The Transportation Concurrency Management System.

• Six-Year Transportation Improvement Program – Describes future plans for transportation programs, projects and priorities.

• Corridors and Connectors – This is an Ordinance adopted by the County Council in 2012 (Ordinance No. 2012-81), promoting the preservation of Right-of-Way for projects that allow additional connections within our roadway system (See Map 12-8 and Map 12-9). These maps are adopted as part of the Ordinance.
The Traffic Impact Fee (TIF) Program identifies 2025 corridor and intersection needs for County roadways. The TIF includes a schedule of fees for developers based on their location and proposed land use action. The TIF Program will be updated in the near future. Map 12-6 shows the 2025 roadway improvement needs that are part of the current system.

Map 12-6: Road Improvements Needed by 2025

Pierce County’s Transportation Concurrency Management System (TCMS) plays a vital role in maintaining system performance by identifying and monitoring currently congested locations and predicting potential near term congestion. Solutions are typically identified and prioritized in the Pierce County Six-Year Transportation Improvement Program (TIP). For currently identified congested locations see Map 12-7.
Map 12-7: 2012 Daily V/S Ratios
BACKGROUND

To understand trends in transportation demand we must understand why people travel. Common reasons include commuting to work, traveling to school, to shop, vacation, visiting friends, and for business purposes. Future demographic and travel predictions, informed by past trends and policy driven targets, inform transportation policies and investment decisions. This section examines forecasted land use and predicted travel patterns for the current 2010 to 2030 planning horizon.

POPULATION AND JOB GROWTH

Pierce County expects to accommodate more than 200,000 new residents and 150,000 new jobs within the 20-year planning period, as shown in Figure 12-F. The majority of growth is expected within cities and concentrated within regional centers consistent with the Puget Sound Regional Council’s (PSRC) Vision 2040 Regional Growth Strategy (RGS).

Figure 12-F: Pierce County- Population and Employment History and Forecasts

The Pierce County Council adopted Growth Targets are reflected in the Land Use and Transportation Elements. These targets align with the Office of Financial Management (OFM).
County projections from 2007 (used in target setting) and more recent 2012 projections. (RCW 43.62.035). Figure 12-G depicts the relationship between the OFM numbers and County Target.

Figure 12-G: Adopted Growth Targets

OFM cohort data reveals elderly population grows significantly within the 20-year planning period. The proportion of population ages 65+ grows from 87,785 (11% of total) in 2010 to 185,413 (19% of total) by 2030. See Figure 12-H.

Figure 12-H: The Growing Elderly Population
We expect more than 75,000 new residents and nearly 30,000 jobs within the 20-year planning period in unincorporated Pierce County. Pierce County’s cities combined expect approximately 144,000 jobs and 134,000 population growth as shown in Figure 12-I.

Unincorporated growth is mostly expected within the urban area. For details see Pierce Ordinance No. 2011-36s for adopted growth targets.

**Figure 12-I: Population and Employment Growth Projections in Pierce County 2010-2030**

**Figure 12-J: Pierce TAZ**

Population and job growth targets are distributed to small areas referred to as traffic analysis zones (TAZs), shown in Figure 12-J, to support transportation forecast modeling and analysis.

Pierce County developed an allocation model to estimate the proportion of growth by TAZ using buildable lands capacities and constraints. A schematic of the process and inputs is shown in Figure 12-K.

**Figure 12-K: Schematic of the process and inputs**
Planned developments are allocated directly to TAZs in proportion to site development plans and/or land capacity. The Frederickson Manufacturing/Industrial Center (M/IC) is included as an employment control total allocation for multiple TAZs. Table 12-H shows the number of housing units and jobs allocated to major developments.

27% 7%

Summary of Key Land Use Assumptions and Inputs:

- Adopted growth targets consistent with PSRC Vision 2040 RGS forecasts used in Land Use and Transportation Elements.
- Targets coordinated and used regionally.
- Buildable lands data provided land capacity information for allocating future growth consistent with future planned land use, zoning, observed densities, and development regulations.
- Environmental constraints developed for buildable lands data limit/prohibit growth where appropriate.
- Planned developments are directly allocated using latest expectations.
- Growth allocation is modeled in rough proportion to buildable lands capacity.
- The land use allocation model is consistent with planned land use, zoning and observed densities in buildable lands, urban growth areas, and all zoning and development regulations.

Travel

To understand trends in transportation demand we must understand why people travel. Common reasons include commuting to work, traveling to school, to shop, vacation, visiting friends, and for business purposes. Pierce County’s analysis tools are structured to consider these and other reasons for travel to predict current and future travel behavior. Figure 12-L shows the major steps in the travel demand model process.
GMA requires Forecasts of traffic for at least ten years based on the adopted land use plan to provide information on the location, timing, and capacity needs of future growth (RCW 36.70A.070(6)(a)(iii)(E)).

Twenty years of forecasted land use growth as contained in the Land Use Element were used to predict future travel conditions. Travel models predict current and forecasted travel using occupied housing units also referred to as households. The adopted countywide housing unit target (440,588) is modeled as 411,000 households consistent with a natural vacancy rate of 6.5%. Unincorporated housing unit growth adopted at 29,714 is modeled as a 27,783 increase in households. An employment growth target of just over 160,000 jobs was distributed by jurisdiction, roughly maintaining today’s employment breakdown by employment sector. Jobs are expected to increase at a faster rate than population within Pierce County.
Pierce County Comprehensive Plan | Transportation Element

Pierce County has developed a customized set of computer programs and mathematical procedures, referred to as the travel model that implements the steps shown in Figure 12-L, to simulate current and future travel patterns and conditions within the four counties of the Puget Sound region. The travel model provides detailed information on travel characteristics, system usage, and potential impacts of future growth and development. The travel model projects transportation conditions for the year 2030. Existing and future conditions are then analyzed and solutions to projected congestion explored.

**Types of Proposed Motorized Roadway Improvements**

The list of proposed motorized projects is divided into 5 categories: Assumed County Projects, Corridors and Connectors, Economic Development, Concurrency Needs and Ultimate Capacity projects. The types of proposed motorized projects are be found in Table 12-I.

<table>
<thead>
<tr>
<th>Project Categories</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assumed County Projects</td>
<td>This list is a summary of projects completed on county facilities from the base year (2010) to current year. It also includes a few projects that are currently assumed to be constructed by 2030.</td>
</tr>
<tr>
<td>Corridors and Connectors</td>
<td>Projects within this category are derived directly from the Corridors and Connectors program (Ordinance No. 2012-81). Not all Corridor and Connector projects were added to the proposed list. Projects perceived to provide a greater corridor level connection and projects with a higher probability of completion have been added to this category.</td>
</tr>
<tr>
<td>Economic Development</td>
<td>These corridor improvements promote regional mobility and help to facilitate connectivity between industrial/manufacturing centers within the county. They enhance interaction between state, county, and city facilities.</td>
</tr>
<tr>
<td>Concurrency Needs</td>
<td>Review of existing and forecast traffic data such as AADT, operations, and Level of Service to provide added capacity to road segments that are projected to fall below the County’s LOS standard by 2030.</td>
</tr>
<tr>
<td>Ultimate Capacity</td>
<td>This list identifies corridors that are assumed to be built out to their full road configuration with no foreseeable capacity improvements provided by the county. For further details on Ultimate Capacity refer to Pierce County policy <a href="#">T-24.3</a></td>
</tr>
</tbody>
</table>

**Intersection Improvement Projects**

For the purpose of developing a financial plan that would consider all capital improvements in the future years, intersection improvements will be examined in a programmatic approach, assuming an average of 3 signalized intersection projects and 4 channelization projects per year. The assumed cost for these improvements is $10 million a year. Capacity, safety, and
operational concerns will be taken into account when determining intersection improvement priorities.

**ANALYSIS OF FUTURE ROADWAY SYSTEM PERFORMANCE**

The outlined V/S analysis methodology and process in the *Existing Conditions and Trends* section was also applied to analyze the 2030 roadway performance. Similar measurements were used to identify future congested roadway segments for both County and State roadways. For the purposes of the future roadway network configuration a list of state and city projects were held fixed in the different county scenarios. Discussion with Washington State Department of Transportation staff provided a list of projects with high probability of completion by 2030. Six- year Transportation Improvement Program lists were examined for city projects and those city projects with sufficient funding secured were included. These projects are mapped in Appendix B-2, Map 12-14.

Two different county roadway networks were tested under the 20-year housing and employment targets in our analysis and can be found on Map 12-12.

A. Limited Action – 2010 roadway network plus assumed roadway projects (Appendix Table C for the detailed list of roadways included in the analysis).

**ANALYSIS OF 2030 COUNTY ROADWAY SYSTEM**

One of the key measurements for future roadway performance analysis is to understand the distributions or usages of different roadway segments by their daily V/S ratios which directly reflect the service conditions of our roadway system. In this section of analysis, only County maintained arterials were included. Highways were analyzed separately and are reported in the following section.

Table 12-J presents a breakdown of daily V/S ratio ranges by VMT and VHT for both Limited Action and Preferred Actions scenarios. Map 12-10 and Map 12-11 depict the V/S for these two scenarios. In general, the Preferred Action networks provide better traffic flows in terms of service level due to the additional County road improvements. Another important observation is the total VMT and VHT on those segments with daily V/S ratios approaching 1.0 or above. In both network scenarios, only small percentage of the total unincorporated VMT and VHT occurs on these segments. The majority of future usage, 90% or above, will be on roadways with relatively lower daily V/S ratios in 2030. Roadways that show a V/S greater than 1.0 after the improvements are completed will be monitored and analyzed further through the Transportation Concurrency Management System Annual Report.

Future transportation improvement needs were identified in a manner similar to base year analysis. However, the future year analysis requires not only the forecasted 2030 daily traffic volumes for different network alternatives but also the intended improvements to address the needs for the new growth. Appendix Table C lists all identified County roadway improvements that are needed by 2030. Map 12-12 graphically depicts the locations of projects on County roadways.

</tbody>
</table>

It should be noted that Table 12-K does not list County roadway improvements within the Assumed Projects and Ultimate Capacity categories. For a complete list of road improvements by segments including all project categories, please refer to Appendix Table C.

An additional analysis was conducted to understand the changes between Limited and Preferred scenarios. Table 12-L displays results of this comparison. The segments with daily V/S ratios of 1.0 or over show the largest percentage decreases of both VMT and VHT. In other words, the identified 2030 road improvement projects effectively address our future congestion by providing additional roadway capacity or connections, which greatly improve the future mobility for all drivers.

The analyses of the Federal/State highway system focus on the highway daily V/S ratios by its daily usage through the measurements of VMT and VHT. Table 12-M displays the detailed V/S ratios breakdown by Limited Action and Preferred Action. In both scenarios, the VMT and VHT data display a similar pattern in terms of percentage of these metrics that occur on highways with the highest daily V/S ratios. It reveals that around 50% of future VMT will occur on those highway segments with V/S ratios equal to or over 1.0. More dramatically, close to 60% of VHT will occur on those highways with daily V/S ratios equal to or greater than 1.0 in 2030 for both network scenarios. Daily V/S ratios resulting from the two scenarios can be viewed on Map 12-13 and Map 12-14.

Table 12-N compares the changes of VMT and VHT between two scenarios (Limited vs. Preferred). It shows the decreases of both VMT and VHT on the highway system with the improvements of additional County roadway facilities in the Preferred Action, although no additional improvements are identified for highways within Pierce County. It implies that the highway system will benefit greatly by the County’s roadway improvements identified in the Preferred Action scenario. Overall, the estimated VMT travel on the highway system will decline by roughly 62,900 miles. More noticeably, there will be large reductions of VMT and VHT for those highway segments with the worst congestion. Table 12-M shows that highway segments with daily V/S ratios of 1.0 or are expected to experience decreases of approximately 212,600 miles and nearly 8,000 hours, largely due to County roadway improvements.

Map 12-14: State Facilities Preferred Alternative – 2030 Daily V/S Ratios

Legend

State Facilities Preferred Alternative: 2030 Daily V/S Ratios
THE RECOMMENDED PLAN

THE KEY COMPONENTS

The key components for the continuing planning, administration, operation and improvement of the future transportation system are the following:

1. The transportation policies that are updated in this Comprehensive Plan
2. The County’s highest **regional** project priorities includes the following:
   
a. The Puget Sound Gateway Project- This is the *package of projects* that would complete the SR 509 and SR 167 connections to I-5. This project advances regional mobility and completes critical freight links between the ports of Seattle and Tacoma. This project supports the regional economy and promotes job growth. While this is a state highway project, the County fully endorses it. A critical *piece* of the larger Gateway Project is the extension of SR 167 to the Port of Tacoma as shown in Map 12-15.

Map 12-15: Puget Sound Gateway Project

Source: WSDOT
b. The Completion of the Canyon Road East Corridor – This project would serve the Frederickson and Port of Tacoma Regional Manufacturing Industrial Centers.

**Map 12-16: Canyon Road East Corridor Project**

The Canyon Road East Corridor Project would increase connectivity to the Port of Tacoma and also capitalize on the SR 167 Completion or “Gateway” Project.
c. I-5 Interchange improvements – Starting from SR 16 and moving down to the Joint Base Lewis McChord interchanges, the traffic congestion has become more acute not simply due to JBLM traffic but also due to growth in background traffic.

Map 12-17: I-5 Interchange Improvements

3. The County’s Arterial Network

This list of candidate projects is comprised of the compendium of project recommendations gathered from the **Transportation Plan of 1992**, The past County Community Plans, the Corridors and Connectors Study, the ongoing Transportation Concurrency Management Program, and the Traffic Impact Fee Program. It is notable that while some of the County road needs relate to transportation concurrency, there are projects are targeted to build more connectivity into our roadway network. These projects are recommended to provide better mobility options for residents in the urban areas.
The Population, Jobs, Travel Characteristics, and Performance section recommends a specific set of improvements that are categorized as Concurrency, Economic Development, and Corridors and Connectors. These project costs are found in the Financing the Transportation Future section.

Map 12-18: County Road Improvement Projects

It should be noted that among these recommendations are roads that would be designated as “Ultimate Capacity.” A roadway with the designation of ultimate capacity would be improved to a certain operational capacity and would indicate the need to make certain that the full operational and safety needs are met. Also required is a stronger understanding and linkage between the motor vehicular circulation, nonmotorized needs, and transit and ridesharing opportunities.

4. Nonmotorized Planning and Transportation Demand Management

These topics are covered in the Active Transportation/Nonmotorized Transportation and Transportation Demand Management (TDM) sections.

5. Last here, but in certain terms first, the primary priority of this Element is the maintenance, operations, and preservation of the transportation system. The safety of the system is served in part by sound operations and maintenance but there are also specific safety projects that are part of the larger program.
FINANCING THE TRANSPORTATION FUTURE

Figure 12-M: Forecasted Transportation Revenues and Expenditures (2015-2030)

- **Revenue TBD**
  - Pierce County Council formed a Transportation Benefit District (TBD) in December 2014. The TBD provides an opportunity for the Council to discuss the longer term transportation funding shortfall and how to address it.
  - $151,400,000

- **TIF (Traffic Impact Fee)**
  - The TIF charges new development for a share of their impact upon the County road network.
  - $142,000,000

- **Grants**
  - The County applies to a large number of grant sources. Many of these grants are competition based.
  - $179,000,000

- **Miscellaneous**
  - Includes revenue generated from property sales and fees.
  - $4,100,000

- **Forest Tax**
  - The County receives revenues from timber harvests.
  - $5,800,000

- **Fuel Tax**
  - The County allocation of State Gas Tax.
  - $167,700,000

- **Property Tax**
  - This is the County’s key transportation funding source for its maintenance and operations of the road system.
  - $724,000,000

**Forecasted Total Transportation Revenues**

**Forecasted Total Transportation Expenditures**

- **Improvement Costs**
  - These costs include new corridors, connecting roadways, widening existing roadways and nonmotorized and safety improvements.
  - $451,000,000

- **Preservation**
  - These projects include asphalt overlay and shoulder restoration. Preservation assures that the County achieves the “lowest lifecycle cost” of its infrastructure.
  - $265,000,000

- **Maintenance & Operations**
  - This covers a wide array of activities addressing various activities such as repairing potholes, bridges, guardrail and sidewalks. It also encompasses snow and ice removal, refreshing the paint on roadway striping, controlling vegetation, and repairing signs.
  - $624,000,000

- **Administration**
  - This includes the staff and facilities necessary to manage transportation services, acquire grant money, and comply with federal and state grant rules.
  - $90,000,000

$0.0B $0.1B $0.2B $0.3B $0.4B $0.5B $0.6B $0.7B $0.8B $0.9B $1.0B $1.1B $1.2B $1.3B $1.4B

Pierce County Comprehensive Plan | Transportation Element
TRANSPORTATION NEEDS AND RESOURCES

It is anticipated that in future years, Pierce County will face more difficult choices in how it spends its transportation funds. As discussed earlier, the past Community Plan forums have voiced that the improvement needs are important for both motorized and nonmotorized travel. It has become more apparent that the transportation needs will continue to be greater than the financial resources at hand.

Figure 12-M above compares the forecasted aggregate transportation needs (expenditures) with the revenues (resources). A key value of the above graphic is in comparing the aggregate future revenues with the expenditures for the same time period. The graphic indicates that the aggregate expenditures are greater than the revenues by an estimated $151,400,000. This potential “imbalance” between the revenues and expenditures is identified in the above graphic on the revenue side as Revenue TBD (Transportation Benefit District). This section offers more detail in the nature of both the current revenue sources and the expenditure categories.

KEY FINANCE ACTIONS

Pierce County will address the revenue shortfall through a variety of forums and programs such as the already formed Transportation Benefit District (TBD) and the Traffic Impact Fee Program revision effort. The TBD is a forum that will allow a more detailed understanding of the revenue and expenditure options and resultant impacts on the County’s finances and transportation service delivery. It is anticipated that the TBD discussion will advance a financial plan in approximately two years. This plan will more fully describe the options for financing the desired projects and programs for the planning period.

The County has also recently initiated efforts to revise its Traffic Impact Fee (TIF). The update of the TIF would assist in understanding a number of important revenue assumptions, the amount for which new development should pay for additional capacity with the transportation system. The TIF is in the "critical path" of financial decision making as it has been designed to pay for a significant share of roadway capacity costs in the long term.
**TRANSPORTATION REVENUE SOURCES**

The following table summarizes transportation revenues and the aggregate levels anticipated by 2030:

<table>
<thead>
<tr>
<th>Revenue Source</th>
<th>2030 Forecasted (Total)</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Traffic Impact Fee</td>
<td>$142,000,000</td>
<td>The traffic impact fee (TIF) was first collected in 2007. These fees go towards capital improvements that bring new capacity to the transportation system. The TIF cannot be used toward existing deficiencies in the system.</td>
</tr>
<tr>
<td>Grants</td>
<td>$179,000,000</td>
<td>Pierce County has received significant grant amounts from both federal and state funding sources. While it is recognized that the competitive environment has significantly increased for grant opportunities, the expectation is that in order to raise the indicated amount, Pierce County would need to raise significantly more grants funds in the future.</td>
</tr>
<tr>
<td>Miscellaneous</td>
<td>$ 4,100,000</td>
<td>This revenue category includes funds generated by the issuance of ROW permits and revenues through property sales.</td>
</tr>
<tr>
<td>Forest Tax</td>
<td>$ 9,800,000</td>
<td>This is also known as the “Timber Tax” and represents the County’s share applied toward its roads.</td>
</tr>
<tr>
<td>Property Tax</td>
<td>$ 784,000,000</td>
<td>In 2014, Pierce County collected a maximum of $2.11 per $1000 of assessed valuation on property within the boundaries of unincorporated Pierce County. These funds go to activities associated with the maintenance, operations, and improvement of the roadway and bridge systems within the county.</td>
</tr>
<tr>
<td>Fuel Tax</td>
<td>$167,700,000</td>
<td>While there is only one “fuel tax” within the State of Washington, the funds from this tax are distributed from three legislative measures that starts with the “Pre-2003” State Motor Vehicle Fuel Tax.</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>$1,286,600,000</strong></td>
<td></td>
</tr>
</tbody>
</table>
TRANSPORTATION EXPENDITURES

</table>

This Transportation Element estimates the future improvement needs of the County roadway network at $451M. This amount assumes that improvements are categorized and funded in the following manner: Economic Development projects ($210M), Intersections ($100M), Transportation Concurrency ($65M), Nonmotorized ($20M), Corridor and Connector Projects
(26M), and Safety ($30M). Figure 12-N below shows the percentage distribution of these projects.

Three relevant roadway projects relating to Concurrency, Corridors and Connectors, and Economic Development, are graphically depicted in Map 12-12. The other project categories are more programmatic at this time.

The earlier sections of this report focus upon the improvement of the transportation system. Often the tendency is to pay particular attention to the infrastructure, such as where new roads might be constructed or widened. That is the improvement component of the plan. The improvement projects stand out in aggregate and sometimes individually relative to the rest of the larger basket of transportation services that the County provides the community.

While building new capacity is important, it is not the most important deliverable offered by the County. By policy and in practice, the most important services provided by the County are in taking care of what is in place (maintenance), seeing to the day to day tasks (operations), and replacing the existing assets in the optimal time frame (preservation). The following narrative describes some of the maintenance, operations and preservation activities performed by the County.

**THE FULL COST ACCOUNTING FOR TRANSPORTATION**

Maintaining, operating, and preserving the County’s 1,500 centerline miles of roadway is a long-term investment. It may at times be attractive to local governments to prioritize the
improvement projects ahead of sound maintenance and operations programs. However, the long-term outcomes of deferred road maintenance are often financially devastating and unpopular with citizens. For these reasons, this Plan takes into account what will be needed to maintain, operate, and preserve the County’s existing roadway network. The overall goal of the County’s transportation program is to maintain our transportation system assets with the lowest overall lifecycle cost.

The County continues to maintain its existing transportation assets by:

- Repairing potholes, damaged pavement, bridges, storm drainage systems, guardrail, and sidewalks;
- Grading gravel roads and shoulders;
- Controlling roadside vegetation;
- Inspecting and repairing as needed County traffic signs, luminaires, and traffic signal control components;
- Repainting and refurbishing pavement markings (such as crosswalks, arrows, etc) and restriping roadways;
- Replacing raised pavement markers;
- Responding to citizen calls; and,
- Maintaining the County’s ferry system, including the ferry boats, docks, and terminals.

**Operations**

Operations include activities required to safely operate the County’s transportation system. These include:

- Street sweeping;
- Roadside mowing;
- Cleaning storm drains;
- Removing snow and ice from roadways;
- Removing roadside litter and dead animals;
- Responding to roadway emergencies such as floods, wind storms, mudslides, hazardous materials spills, earthquakes, and volcanic events;
- Responding to citizen concerns and inquiries;
- Collecting data about the County’s transportation system, such as information related to traffic counts and crashes;
- Completing traffic studies and analysis as needed, as well as reviewing traffic impacts from new developments;
- Paying power costs needed to run the County’s traffic signals and lighting systems; and,
- Operating the County’s ferry system, which includes costs such as fuel for the ferries, staff to run the ferries and operate the facilities, and insurance.
**Preservation**

Preservation is the replacement or repair of an asset; whereas maintenance is considered to be a routine activity. Examples of preservation activities are:

- Repaving or overlaying existing roadways, and
- Replacing or refurbishing bridges; sidewalks; retaining walls; guardrails; electrical systems (traffic signals, roadway lighting, etc.); boat launches; pavement markings; and traffic signs.
- Preserving the County’s transportation system also includes replacing or refurbishing the ferries, ferry docks, terminals, and the ferry ticket system.

**Improvements**

**Safety Improvements**

- Projects that work toward safety for the travelling public include:
  - Intersection improvements (turn lanes and traffic signals);
  - Pedestrian improvements;
  - Rural road improvements, such as shoulders, guardrail, and rumble strips; and,
  - Traffic enforcement and education.

**Capacity Improvements**

The Population, Jobs, Travel Characteristics, and Performance section of this document shows the roadway needs within the 20-year planning period. These projects do the following:

- Address anticipated traffic congestion (Concurrency);
- Attract employers to add jobs (Economic Development);
- Add to the continuity of our roadway network (Corridors and Connectors);
- Facilitate travel to future developments (typically paid by the development community) or are assumed to be already in place, such as the 176th Street East widening (Assumed Projects).
- The above projects will cost approximately $300M. It is also assumed that the County will continue to improve intersections throughout the planning horizon. It is anticipated that the County will expend approximately $150M in this endeavor.

**Administration**

The County provides maintenance and operations staff; personnel to manage the County’s transportation budget and apply and administer federal and state grants; and the engineering
and planning staff needed to maintain the current transportation system as well as respond to future County transportation needs. Administration costs also include the physical space staff needs to complete their day-to-day work.

**REVENUES**

The major source of revenues for transportation in our County are:

- Property Tax (tax on private and commercial real estate);
- Fuel Tax (tax per gallon of motor vehicle fuel);
- Forest Tax (tax on logging sales);
- Ferry Receipts (fares);
- Transportation Impact Fees (TIF – fees paid by developers);
- Grants (revenue granted from state or federal agencies).

Some of the revenue sources are subject to fluctuations in the economy (REET, TIF, development), people’s changing habits (fuel tax), or changes in outside agency priorities (grants). Even property tax, which has historically been a stable source of revenue, is capped as of 2002 at a 1% growth rate, plus the value of new construction. This cap has significantly affected receipts, and the gap between receipts and inflation is growing. Given the unpredictability of these revenue sources, the transportation budget will need to be updated periodically to identify needed adjustments in spending or revenue.

**Revenue Shortfall**

*RCW36.70A.70(6) requires as follows:*

A transportation element that implements, and is consistent with, the land use element.

(a) The transportation element shall include the following subelements:

(iv) Finance, including:

(C) If probable funding falls short of meeting identified needs, a discussion of how additional funding will be raised, or how land use assumptions will be reassessed to ensure that level of service standards will be met;

The above state law gives certain guidance to jurisdictions facing financial shortfalls in the transportation system. Among the responses that may be considered by the County:

- The County could review its current land use and decide how to reduce the future demand on the roadways;
- The Service Standards could be changed either on a global or selective basis. One notes that the use of Ultimate Capacity is used for targeted and specific use that requires other actions from the County;
- The transportation budget could be altered to reduce certain types of services;
- Additional funds may be raised for transportation using existing or new sources.
**ACTIVE TRANSPORTATION/NONMOTORIZED TRANSPORTATION**

**BACKGROUND**

Active transportation, also known as nonmotorized transportation, is increasingly recognized as an important consideration when planning and designing transportation systems. Active transportation modes include walking, bicycling, skating, skateboarding, and travel in wheelchairs and other mobility assistive devices. Active transportation occurs on trails, sidewalks, bike lanes, roadway shoulders, and within the travel lanes. Transit service is an important counterpart to many active transportation trips, since access to and from bus and rail is often made by a nonmotorized means.

Pierce County began formally planning for nonmotorized travel in the 1990s. The 1992 Pierce County Transportation Plan included policy language instructing the County to develop a comprehensive plan for nonmotorized transportation. After an extensive public involvement process, the Pierce County Nonmotorized Transportation Plan (NMTP) was adopted in 1997. The latter plan contains policies and an extensive list of prioritized project recommendations, both on road and off road. The NMTP later became a section of the Transportation Element of the Pierce County Comprehensive Plan.

Subsequent to the NMTP, Pierce County has adopted Community Plans for 11 different unincorporated areas of the county. Most of the Community Plans have included nonmotorized project recommendations which primarily have either reinforced or supplemented the nonmotorized project recommendations in the NMTP. The Community Planning efforts revised the NMTP project descriptions and relative priorities in many cases. A more detailed discussion on project recommendations occurs later in this section.

**ACTIVE TRANSPORTATION PLANNING REQUIREMENTS**

In 2005, the Growth Management Act (GMA) was amended with the passage of Engrossed Substitute Senate Bill 5186 (ESSB 5186). This amendment requires the transportation element of a comprehensive plan to include a pedestrian and bicycle component to include collaborative efforts to identify and designate planned improvements for pedestrian and bicycle facilities and corridors that address and encourage enhanced community access and promote healthy lifestyles.

Under the GMA, the Puget Sound Regional Council (PSRC) is required to review and certify the transportation elements in comprehensive plans to ensure that they conform to GMA transportation planning requirements and are consistent with PSRC’s regional growth strategy and transportation plans (Vision 2040 and Transportation 2040). The PSRC Local Comprehensive Plan Checklist requires a pedestrian and bicycle component that includes strategies, programs, and projects to improve walking and bicycling. The Vision 2040 Multicounty Planning Policies (MPP) provide specific direction on the ways that Comprehensive...
Plans need to be consistent with regional policy. The following MPPs are particularly pertinent to contents of the active transportation section of Comprehensive Plans:

- **MPP-T-11** Prioritize investments in transportation facilities and services in the urban growth area that support compact, pedestrian- and transit-oriented densities and development.

- **MPP-T-14** Design, construct, and operate transportation facilities to serve all users safely and conveniently, including motorists, pedestrians, bicyclists, and transit users, while accommodating the movement of freight and goods, as suitable to each facility’s function and context as determined by the appropriate jurisdictions.

- **MPP-T-15** Improve local street patterns – including their design and how they are used – for walking, bicycling, and transit use to enhance communities, connectivity, and physical activity.

- **MPP-T-16** Promote and incorporate bicycle and pedestrian travel as important modes of transportation by providing facilities and reliable connections.

The [Pierce Countywide Planning Policies](#) also include policies relating to active transportation. In particular, policy TR-12 states that the County shall plan and implement programs, as appropriate, for designing, constructing and operating transportation facilities for all users, including motorists, pedestrians, bicyclists, and transit users. Pierce County policies relevant to nonmotorized planning and implementation are found at the end of this section.

**EXISTING NONMOTORIZED PROJECTS**

As mentioned earlier, there are nonmotorized project recommendations with the [Nonmotorized Transportation Plan (NMTP)](#) and the 11 Community Plans. When a project is coincident in the NMTP and a Community Plan, the Community Plan project description and priority rating takes precedence since the Community Plans are more recent documents and are intended to provide detail to the countywide Plan.

The projects in all of the plans were selected by citizen committees. To give projects a relative sense of priority, the committees were asked to place each project in one of four categories: Premier, High, Medium, and Low. The NMTP projects by category are listed in Table 12-R.

</table>

Pierce County Comprehensive Plan | Transportation Element
As Table 12-R shows, the roads in the unincorporated area (County) are classified in the NMTP as three different project types. The proposals on an *Existing County Road* consist of paved shoulders, sidewalks, wide curb lanes, and/or a trail or pathway adjacent to the roadway. The proposals on a *New County Road* refer to new roads that are proposed for construction that will have pedestrian and bicycle facilities when built. The *County Trail or Path* category encompasses proposals for exclusive nonmotorized facilities that are not within a County road right-of-way. In total, there are 402 projects in the unincorporated area proposed within the NMTP. It should be noted that some of these projects have now been constructed or have been annexed by Cities.

Table 12-R also lists projects in the NMTP that are planned by municipalities and the State or Federal government. These were not given a priority rating, since they are out of the control of Pierce County.

The Community Plan projects are listed in Table 12-S, identified by the area and priority rating. Only those Community Plan projects that included nonmotorized elements are listed.

Map 12-19: Nonmotorized Project Recommendations in Adopted County Plans
Map 12-20: Nonmotorized Project Recommendations in Adopted County Plans
PROGRAMS AND STRATEGIES

Pierce County has numerous existing programs and strategies that address the provision and promotion of active transportation facilities and travel. The effort to address and promote nonmotorized travel will increase and diversify over time. The following is a summary of existing and proposed programs related to active transportation.

COMPLETE STREETS

Policy 12.2 in this document instructs the County to endorse the concept of complete streets, which promotes roadways that are safe and convenient for all users. In 2014, the Pierce County Council adopted Ordinance 2014-44s, pertaining to the provision of complete streets. Complete streets is a term used to describe project implementation that provides for safe and convenient roadways for all users, including pedestrians, bicyclists, transit riders, and motor vehicle drivers of all ages and abilities. The ordinance was listed in The Best Complete Streets Policies of 2014, a report published by the National Complete Streets Coalition, a program of Smart Growth America.

The ordinance specifically pertains to newly constructed or reconstructed roads and directs Pierce County to provide features for all users when building new roadway connections or completing major reconstruction of a road. In the urban area, these roadway elements typically would include paved shoulders for bicyclist and sidewalks for pedestrians and other users. In the rural area, where sidewalks are not typically constructed, the improvement would typically consist of a paved shoulder. In some cases, a gravel shoulder or roadside trail or pathway might be constructed.

The Complete Streets ordinance includes provisions for precluding the construction of elements for all modes where there are extreme technical, fiscal, or environmental challenges or other reasons where such improvements are not in the best interests of the County or residents. In these cases, the ordinance recommends that the County consider nearby facilities where nonmotorized users can travel in absence of complete streets implementation on the facility that is under construction.

The ordinance also directs the County to consider projects on roadways that are not undergoing major construction, such as standalone shoulder paving and sidewalk construction. Pierce County has several standalone active transportation projects listed in the 2015 Transportation Programs document, which is a six-year program of projects that is published annually. One of these projects, Park Avenue South between 125th Street South and Garfield Street South, was awarded a $429,000 grant from the 2014 Washington State Transportation Improvement Board Urban Sidewalk Program.

SAFE ROUTES TO SCHOOLS

Pierce County coordinates with school districts to plan and implement safe routes to school for students who travel by nonmotorized means. The three elements of a successful program are engineering and infrastructure improvements, education and encouragement activities, and
enforcement. The County regularly applies for grant funding through the State’s Safe Routes to
School grant program, but has had limited success in the funding competition. The County
strives to expand upon this program and achieve more success in obtaining funding. In 2015,
Pierce County has allocated $200,000 for staff support for developing a plan with public school
districts for identifying priorities, feasibility, and financing options for walking routes near
schools.

TRANSPORTATION DEMAND MANAGEMENT

Pierce County has been involved in Transportation Demand Management (TDM) activities since
the 1990s. The primary focus has been on working with large employers to reduce the number
of drive-alone commute trips, as required by the Washington State Commute Trip Reduction
(CTR) Act.

Pierce County is now investing in more all-inclusive strategies to encourage travel behavior
changes for all types of trip purposes. Bicycling and walking to destinations are important
components of any TDM program. Goal T-27 in this document instructs the County to
encourage alternate travel modes within an efficient multimodal transportation system that
reduces and shifts travel demand to improve the flow of people and goods. In order to develop
a successful TDM program, there must be connectivity to other modes such as walking
bicycling, cars, and transit. A combination of modes often come into play when taking transit
(i.e., walking or bicycling to a transit stop or station). Or sometimes the TDM strategy is simply
planning for one mode, such as bicycling or walking. The Transportation Demand Management
(TDM) section describes the Pierce County TDM Plan and strategies in greater detail.

TRAIL DEVELOPMENT

The Pierce County Parks and Recreation Department is the lead agency developing trails in the
unincorporated areas of the County. Pierce County Public Works provides support in this effort,
including project design and right-of-way acquisition activities. Pierce County coordinates with
municipalities and organizations such as ForeverGreen Trails and the Foothills Rails-to-Trails
Coalition in planning and implementing trail projects.

Natural and built environmental constraints preclude trail construction in some areas, making
sidewalks and roadway shoulders essential extensions of the trail system. Policy 12.1.1 in this
document instructs Public Works to work collaboratively with other organizations, including
Pierce County Parks and Recreation to develop the Pierce County Regional Trail System,
community nonmotorized connections, and local access.

Trail development in the County has largely focused on the Regional Trail System, through the
guidance of the Pierce County Parks, Recreation, and Open Space Plan. The 25-mile long
Foothills Trail in eastern Pierce County, seventeen of which is currently paved, is the most
notable example of trail development in the unincorporated area. More recently, the Public
Works and Parks and Recreation Departments are collaborating to identify a system of
community connectors that would link schools, parks, and neighborhoods in Pierce County and
tie into the Regional Trail System. The desire is to develop a system of trails where possible;
however, it is clear that constraints will require some of the connectors to be sidewalks and/or roadway shoulders.

**AMERICANS WITH DISABILITIES ACT**

The [Americans with Disabilities Act](https://www.ada.gov) (ADA) became Federal law in 1990 and has been updated numerous times over the years. ADA requires public entities to inventory facilities for deficiencies and create a transition plan to bring facilities into compliance with accepted standards. In 2014, Pierce County inventoried all sidewalks, curb ramps, pedestrian crossings, and traffic signal systems located on public roadways in unincorporated Pierce County to determine whether they were in compliance.

In 2015 the County initiated an ADA Transition Plan to document the strategy and timeline for bringing pedestrian facilities into ADA compliance. Ultimately, all facilities will need to be compliant. It should be noted that the ADA Transition Plan will only address existing facilities, not the construction of new facilities.

**IMPLEMENTATION**

As noted earlier, there are a number of roadway improvement projects that have constructed nonmotorized improvements as part of the larger project. Key examples of such projects are the Canyon Road East corridor south of SR 512 and the 176th Street East corridor. Both of these projects increased the number of through lanes and added significant sections of sidewalk for the community.

While these projects are significant in scope, it is evident that there is strong community support for more nonmotorized facilities. This desire for additional walkways and paths has been (and continues to be) expressed in numerous meetings held in community forums. As noted earlier, there are many plan recommendations within the Community Plans and the Nonmotorized Transportation Plan, but very few specifically nonmotorized projects are funded and implemented. The strategy for this Transportation Element calls for the targeting of approximately $20 million through 2030 for the purpose of constructing nonmotorized facilities. These funds may also be used to address projects that may be required as part of the Transition Plan efforts.

One target for expending the above noted $20 million may focus on the needs arising from the ongoing work with the schools, communities, and other stakeholders to build more facilities under the Safe Routes to School Program. The County Council has already tasked staff with reporting on the issue of Safe Routes to School. This Transportation Element suggests that both the short and long term funding capacity of the County be examined to support a program that would work with the local schools and other interested parties to develop partnerships and apply for grant opportunities that would strengthen the chances of winning awards for such a program. For example, in developing this nonmotorized section, Public Works staff worked with the Parks Department in developing a very conceptual network of possible candidate active transportation facilities that could link not only schools to communities but other places.
Figure 12-O below shows a very preliminary product that requires more stakeholders to discuss not just the need for specific types and location of active transportation facilities but also the funding and scoping of tasks involved in achieving success in realizing these valued facilities. It is anticipated that the conversations with nonmotorized stakeholders and an understanding of the needs and resources will result in an updated nonmotorized/Active Living strategy.

**Figure 12-O: Conceptual Graphic – Active Living Facilities**
ULTIMATE CAPACITY

This Transportation Element recommends that the County endorse and adopt measures that would enable the designation of Ultimate Capacity Roadways. As noted earlier, the end result of this designation would allow certain roadways to carry traffic above their designated service standard without being subject to the transportation concurrency requirements. It is important to note that such roadways in being Ultimate Capacity would be reviewed for their operational and safety needs for all users, both motorists and pedestrians. Identification of these needs may also bring certain nonmotorized projects forward for possible implementation.

TRANSPORTATION DEMAND MANAGEMENT (TDM)

INTRODUCTION

Previous sections of this Transportation Element describe a number of both current and future challenges to the mobility of Pierce County and others. As noted earlier, our community is experiencing longer travel times on a number of our state highways and county arterials. The 1992 Transportation Plan recommended an extensive list of highway improvement projects to address the current and anticipated deficiencies. Important capacity projects were constructed in the subsequent years.

This Transportation Element notes that there are still appropriate times to build additional capacity into the roadway system. Also, this Element recommends a more complete roadway network that provides both accessibility and higher levels of mobility within the County. There are a number of connectors and corridors that would serve that purpose.

WHAT IS TRANSPORTATION DEMAND MANAGEMENT (TDM)?

The term Transportation Demand Management (TDM) is no single program or strategy but refers to actions that allow us to use our transportation system more efficiently. High Occupancy Vehicle (HOV) lanes are a long standing example of TDM on our state freeway system. The designation of lanes for carpools and buses allow more people to move in the same amount of space and time. While there are presently no HOV lanes on Pierce County jurisdiction roadways, there is strong evidence of Ridesharing. Ridesharing covers a wide range of transportation evident through our region, including Pierce Transit buses, vanpools, carpools, and taxis. TDM is used in the form of pricing in the High Occupancy Toll (HOT) lanes that are seen north on SR 167.
WHY IS TDM A GOOD IDEA?

All of the TDM strategies can help achieve the following:

• Saves Money – Building additional lanes and new roads has become more expensive. Well designed TDM programs may have a role in decreasing the need for certain types of infrastructure improvements.

• Increase Mobility Opportunities for All – As noted earlier in this Plan, it is estimated there will be approximately 185,400 people between the ages of 65 and above living in Pierce County by the 20-year planning horizon. In 2010 there were 87,800 of that same age group living in the county. This demographic will grow from approximately 11% to 19% of the respective total population. If there are improvements in such services as transit, this type of group could benefit.

• Decrease Energy Consumption and Total Cost – Generally, more people in fewer vehicles equate to less energy used and lower overall costs. It is important to note that while there is a cost savings to a collective group of the population, there may be significant individual savings to each commuter who takes a bus and does not incur costs for gasoline, wear and tear on the vehicle and in some cases, increasing parking costs.

• Improve the Environment – Fewer overall vehicles on the roads equates to lower emission levels and less pollution of air and water.

• Make the community more livable – TDM becomes more significant in a community, the greater presence of ridesharing and other services such as transit orients a community to a higher level of activity.

PIERCE COUNTY NEEDS A SUCCESSFUL TDM PROGRAM

The collective sum of needed County road improvement projects are not environmentally viable and/or exceed our ability to pay. The Financing the Transportation Future describes the high costs associated with building additional capacity on the roadway network within the county. It may easily cost up to $5 M dollars per mile to add one lane on a roadway. As noted earlier in this Element, the roadway improvement costs cannot come at the expense of the cornerstone of a financially responsible and constrained approach of managing our transportation system.

There may also be environmental impacts to adjacent communities that are not proportionate to the benefits of road projects. This Transportation Element recommends that the County designate certain roadways as having Ultimate Capacity. In those corridors where such a designation is indicated, there would be a high level of study and possibly strategies that would attempt to understand if alternative actions such as TDM would play a role in giving affected travelers options for travelling specific corridors.
Pierce County has experience in developing TDM programs

Pierce County is the lead agency for state required Commute Trip Reduction (CTR) efforts in Pierce County. As the lead agency, Pierce County provides the administration oversight, coordinates commuter programs and services, and partners with WSDOT, PSRC, Pierce Transit, Downtown On the Go and the CTR-affected cities. All of the CTR-affected cities, except for the City of Tacoma, contract with Pierce County for basic administration of their CTR Ordinances.

The passage of the state CTR law in 1991, spurred the most populous counties into the TDM arena. Since then, CTR has been the cornerstone of Pierce County’s TDM program.

In the beginning extensive work was completed to develop zones and goals, identify affected employment sites, and develop employer and commute support services. To this day, a TDM/CTR Work Group oversees the CTR efforts in Pierce. The Work Group formally operates under the name Pierce Trips.

Several employer services and programs are in place to help employers with development and implementation of their CTR programs. These services and programs were developed to help employers meet commute trip reduction goals established in the CTR law. Pierce Trips continues to be able to provide these services at no cost to employers through successful federal Congestion Mitigation and Air Quality (CMAQ) grant awards. These programs include:

- Employer site visits and commute options program development assistance
- Training and networking opportunities
- Marketing materials such as posters and brochures
- Campaigns, promotions and incentives
- Emergency Ride Home
- Ridematching and transit trip planning assistance
- Recognition and Awards
- Commuter Information Centers, HOV parking signs and hangtags
- Trip tracking calendar and database
- Online support services

Trip reduction efforts are expanding in Pierce County. Pierce County recognizes that the commute trip is a percentage of the total trips on our roadways. In order to more efficiently manage our network and contribute positively to the livability of our communities, Pierce County must provide more access to all modes for all trips. Initial expansion efforts include:

- Supporting partner endeavors
  - Downtown On the Go, a transportation advocate for Downtown Tacoma
  - University of Washington-Tacoma Trip Options Program enhancements
- Carshare growth in Pierce County
- Focus on the I-5 TDM Corridor between the Thurston/Pierce border and City of Tacoma
  - Formation of JBLM TDM Working Group consisting of JBLM, Pierce County and Pierce Transit staff
  - Formation of a JBLM Stakeholders Group consisting of partner agencies
Development of a JBLM TDM Strategic Implementation Plan

- Collaborating on the Neighborhood based outreach programs
  - City of Tacoma resident outreach program, Stadium In Motion
  - Joint Base Lewis-McChord outreach program, JBLM In Motion
  - City of Puyallup outreach program with a transit/train emphasis, Puyallup In Motion

THE CONSTRAINTS

TRANSIT IS NOT EVERYWHERE

Pierce Transit has cut its routing and frequencies through most of its service area. This makes the concept of leveraging transit as part of a TDM program more challenging.

LAND USE

Unincorporated Pierce County’s historic and current residential development pattern generally conforms to low and moderate density single-family housing. A few major arterials provide for the majority of the commercial and office uses many miles removed from the bulk of the residences in Pierce County. The lack of significant mixed use developments results in a situation where many unincorporated residents drive to their destinations.

Unincorporated Pierce County accounted for over 53% of the overall County housing growth from 2001 to 2010. The low density spread of population makes it challenging to achieve a critical mass of riders along certain corridors.

Figure 12-P: Development Patterns

The Transportation Plan Preview studied five corridors within Pierce County. In all five corridors the residential density was far below the standard threshold levels to sustain transit service.

MOVING THE TDM PROGRAM – THE OPPORTUNITIES

TDM by definition encapsulates strategies that attempt to reduce or redirect the demand for travel. Congestion occurs when the demand for the roadway network exceeds the available supply. Traditional strategies have focused on the supply side such as increasing lanes or
constructing new roads. These have provided for short term relief but demand will eventually outpace these efforts. By replacing or supplementing this with TDM Pierce County may reduce the need for costly construction projects as TDM decreases roadway demand thereby relieving congestion. Pierce County is currently focusing TDM efforts in certain corridors and subareas, which will hopefully be effective in reducing traffic in specific areas.

A well managed TDM program within Pierce County will expand upon the Commute Trip Reduction (CTR) laws currently in effect. The CTR laws target large employers who establish programs to help their employees find alternate mode choices for their commutes. The program has proven successful already and we continue to extend its reach. By encouraging rideshare or nonmotorized commute options we alleviate congestion throughout peak periods when it matters the most.

In comparison to typical supply side strategies, TDM strategies often cost significantly less. While large TDM infrastructure projects such as rail can incur an expense comparable to the expansion of roadways, TDM often employs inexpensive solutions. This allows planners to experiment with a mix of TDM strategies to target different audiences without too much financial commitment. Some TDM efforts such as CTR rely on more private investment than on government and public funding.

TDM can also boost a project’s ability to receive funding. Some grant funds such as CMAQ largely apply to TDM related activities. Other funding sources award points to projects that incorporate TDM that could make or break an award of funds. Such funding has already allowed us to continue and expand our TDM program. Road projects generally receive much more funding than TDM projects. As a counter, our history has shown that we have a higher probability to gain TDM funding compared with our ability to attain roadway funding. In the future we may see a comparative advantage in TDM funding as opposed to roadway construction funding because of the relatively low costs of TDM and effectiveness in gaining funds.

**JBLM**

As noted above the County is now working with JBLM in identifying strategies for removing some of the approximately 100,000 daily trips that cross its boundaries. While funds may be more readily available than before to construct a number of important roadway projects in the JBLM area, it is unlikely that given the magnitude of roadway congestion that a total fix will be implemented in the near future.

There is a potential for additional work to move forward on this front.

**Sound Transit Success**

Sound Transit (ST) has made an impact on how Pierce County residents travel. The scatter plot in Figure 12-Q shows the residential origins of a sample of Sumner commuter rail station riders. This is a parking lot survey showing that unincorporated residents do use the rail station.
This scatter plot of residential location shows that the travel shed or the area of influence of the rail station goes well beyond the five mile ring. The attraction of commuter rail to points north is strong. Fuel costs, traffic, and parking costs of travelling to Seattle are strong incentives for Pierce County residents to share a ride. It is recommended that the County work with Sound Transit, Pierce Transit, and the local residential communities to encourage the use of Sound Transit rail and bus express service. Ideally, riders would use transit or rideshare to these heavily utilized station parking lots.
Figure 12-Q: Sumner Station License Plate Survey

Source: Pierce Transit
OTHER RECOMMENDED ACTIONS

Other actions for the County to pursue include:

- Developing and heavily marketing catchment lots in Pierce County that would help galvanize the formation of carpools and vanpools. This would be a residentially based program that may be especially considered in the Ultimate Capacity corridors.

- Strengthening existing agency and organizational connections and supporting new alliances in the TDM field. Pierce County has worked with Pierce Transit, Tacoma, and a number of other jurisdictions on TDM. These connections need to be strengthened and augmented.

- Pursuing more grant opportunities. As earlier noted the County has had good success in receiving grants that develop and maintain TDM.

- Reinforcing the land use and transportation connection. As noted above the typical housing density is so low that many areas within unincorporated urban county have difficulty providing base level ridership that would make transit viable in the communities. The question in the long term is how does Pierce County achieve the densities required to attract adequate ridership, hence become financially sustainable.

In short, TDM makes good sense in terms of its benefit to the environment, individual, operations of our roadways and transit systems. TDM makes good business sense.

IMPLEMENTING THE PLAN

SELECTED KEY MESSAGES

1. Protect the Core Functions. Assuming a stable revenue and cost scenario, the financial analysis indicates that there are likely enough resources to cover the core functions of maintaining and operating the County transportation system. Given this, the County will need to be selective in the number and magnitude of projects that focus on improving the infrastructure.

2. Consider Ultimate Capacity. In the past twenty years this County has been able to build a number of projects that significantly increased the capacity of certain roadways. In the future, there is a need to review, assess, and potentially act on the concept of limiting the expansion of capacity of certain roadways due to cost, impacts on the built and natural environment, and the need to align with state policy.

3. Transportation Demand Management. Single occupant vehicle travel is the most common travel mode. The key challenge will be to develop meaningful ways to change how we shop, do errands, and go to work. This Element proposes to focus on specific areas of need (continue the JBLM focused TDM effort) and work with other jurisdictions and agencies to form more carpooling, vanpooling, and accessing transit stations. It is
noted in this Element that TDM may have a very functional role should Ultimate Capacity be implemented in this County.

4. Nonmotorized: A More Determined Program. Most people agree that nonmotorized facilities are important to have in their community. There are many nominated projects but the costs are high and the prospects for funding are less than stellar. It is suggested that a programmatic approach be tested that would identify partners and use seed money to draw down more grant dollars. These efforts could focus on schools and activity centers that have a critical mass of usage and interaction with communities.

**Steps to Consider**

1. Understand Technology and Leverage it. The County uses Global Positioning technologies, software, and communication to conduct standard field operations and uses asset management to optimize county resources and save money. There is a need to stay cognizant of technologies that may make carpooling, vanpooling, or fixed route transit more practical.

2. Continue working on all levels with other jurisdictions and agencies. Pierce County works with many jurisdictions and agencies on transportation issues at both the policy and technical level. While much of this interaction may be agency to agency, Pierce County is active at the PSRC policy boards and their technical committees. This interaction has been of benefit both regionally and locally as there is the opportunity to align planning and program objectives. These conversations will become important as PSRC begins to prepare for the next update of Vision. Also, the County needs to work with the local and regional transit agencies to develop successful Transportation Demand Management Programs. While there are some residents who now fall outside of the Pierce Transit Benefit Area, many are still served by that agency. Pierce County should be active in the monitoring and development of services associated with Sound Transit. ST provides significant long haul service to residents on a countywide basis.

**Metrics**

It is suggested that the County periodically review a number of indicators that relate to key policy, planning, and program objectives. These may be aggregated into a report.

The following is a selected list of measurable products and services and behaviors that may be considered. It should be noted that some of measures or data are already being collected and monitored by various agencies while some information may only be periodically available.

**Transportation Demand Management**

- a. Transit Ridership- Detailed by line
- b. Transit Route Miles, Service Miles
- c. Mode Share
d. Formation of carpools/vanpools

**ROADWAYS**

a. Roadway Congestion- Reported now by County and WSDOT  
b. Accidents  
c. Condition of roadways  
d. Safety projects initiated/completed  
e. Projects completed that provide interconnectivity

**FINANCE**

a. Transit fares  
b. Parking fees in key locations  
c. Costs and Revenue trends for transportation – example : What are trends for roadway and sidewalk construction relative to factors such as inflation

**NONMOTORIZED**

a. Nonmotorized projects as part of roadway projects  
b. Nonmotorized projects that are independent of roadway projects i.e., new corridors, reconstruction of existing roads

**LAND USE**

a. Trends in residential development and employment construction. In order to develop the most efficient services, it is helpful to have a critical mass of demand, or higher density. It may be useful to monitor the short and long term densities as they relate to TDM and nonmotorized Transportation. It is fairly certain that until the residential densities increase in the County that fixed route transit serving neighborhoods will not be significantly more viable.

The above metrics are suggested as a starting point for conversation about transportation planning in the County. There are many more candidate measures or metrics that may be considered. The discussion of metrics is an appropriate ending point for this planning element. It is important to periodically look in the past to determine how to move forward.

**MEETING VEHICLE MILES TRAVELLED (VMT) POLICY**

Vehicle Miles Travelled (VMT) is a key transportation planning metric. VMT is one indicator of the magnitude or extent that a population uses the transportation system. It is acknowledged that the proposed Transportation Element does not reduce the per capita Vehicle Miles Travelled on the Pierce County roads between 2010 and 2030. This increase in VMT may not be consistent with current regional and state policy that call for overall reductions in VMT per capita.
While VMT is an important indicator of the use of the transportation system, it should not be
the only one in which Pierce County should use as a baseline for assessing the transportation
system nor for determining future policy and programs. There are a number of difficulties in
using VMT in the Pierce County transportation planning setting as a metric for the effectiveness
of County planning actions. It is suggested that the following factors make VMT a less than
ideal measure for measuring the level of effort and effectiveness of Pierce County's efforts to
reduce future VMT:

1. **The Roadway Network Is Not Entirely Our Own**

   This County's analysis of current and future roadway conditions clearly indicates that most
   of the state arterials and freeways are now congested. These levels of congestion increase
   in 2030 and will spill over onto the local (County) roadway network. While we will continue
to work with the state on our respective planning efforts, we do not have programming
and operational authority on these facilities.

2. **The Roadway Demand is Not Entirely Our Own**

   Pierce County users are the primary users of our local roadway network. However, the
   VMT for specific roadway facilities is affected also by residents in other jurisdictions who
   may find the "path of least resistance" to their destination through County roads.

3. **The Supply of Transit Services Is Not Our Own**

   One important tool in reducing VMT is through encouraging and developing alternative
   modes of transportation for residents. Transit can play an important role in reducing the
   VMT on the roadway network with adequate coverage and frequencies. However, Pierce
   Transit and Sound Transit own the primary transit systems in this area. Pierce County will
   continue to look for opportunities to coordinate usage of their services by County residents
   but does not make operational decisions for the systems.

**Meeting the Intent of Reducing VMT**

While this current Transportation Element does not reduce VMT in 2030, Pierce County
proposes the following strategies that would work toward reducing VMT:

1. **Creating Additional Employment Opportunities within the County**

   The Census data from past years indicate that there is a trend for Pierce County residents
to live further from their workplace. The increased distance between home and
employment contributes would likely contribute to increased aggregate VMT. The land
use/economic development component of this Comprehensive Plan calls for the continued realization of the Frederickson Manufacturing/Industrial Center. Bringing employment closer to Pierce County residents will decrease the latter’s VMT.

2. Both the Transportation Demand Management (TDM) and Nonmotorized Strategies Reduce VMT

Pierce County has actively worked to develop its Commute Trip Reduction in compliance with state law and regional policy. Pierce County will explore additional opportunities to reduce VMT through increased usage of transit and rideshare. Complimenting these efforts will be a greater emphasis on delivering standalone nonmotorized improvements. It is notable that the Finance Plan calls for $20 million to be targeted toward standalone pedestrian and bicycle facilities.

3. Ultimate Capacity

The proposed designation of Ultimate Capacity roadways supports the examination and possible implementation of additional TDM and nonmotorized improvements. As discussed earlier, the County will investigate and apply where appropriate, the use of TDM and the development of nonmotorized facilities in corridors designated as Ultimate Capacity roadways.

**Developing Multimodal Level of Service Standards**

It is noted that regional policy calls for level of service standards to be focused on movement of people and goods rather than just that of vehicles. There is also a call for concurrency programs to address multimodal transportation options in each jurisdiction's programs. This element does not yet offer such a multimodal level of service standard. The development of such a standard will be considered in the course of implementing Ultimate Capacity and also in revising the Traffic Impact Fee Program. Such a standard would be useful in understanding the effectiveness of implementing certain nonmotorized and TDM strategies that would respond to the address the roadway congestion of certain facilities.
APPENDIX A – TRANSPORTATION INVENTORY

BACKGROUND

Pierce County’s transportation system consists of State highways and freeways, arterials and local streets and roads, bike trails and bike lanes, bus transit systems, paratransit, commuter rail, and light rail. In addition, the County is served by a maritime port, several general aviation airports, and ferry services. Joint Base Lewis McChord (JBLM) is a major military facility with its own transportation system.

GMA requires an inventory of air, water, and ground transportation facilities and services, including transit alignments and general aviation airport facilities, to define existing capital facilities and travel levels as a basis for future planning. This inventory must include state-owned transportation facilities within the city or county’s jurisdictional boundaries. A section of the Washington Administrative Code, WAC 365-196-430(2)(c), provides recommendations on specific inventories to include in Comprehensive Plans. Many of the WAC recommendations are used in this inventory.

ROADWAY SYSTEMS

The term roadway is used generically here to encompass all roads, streets, freeways, and highways under Federal, State, and local jurisdiction. GMA requires the County to inventory State and County owned facilities.

Interstate and State freeways form the backbone of the Pierce County transportation system, including I-5, I-705, SR 16, SR 167, SR 410, SR 509, and SR 512. The freeways provide intrastate and interstate linkages to and from Pierce County. There are number State surface highways crossing County. The following Interstate and State highways that are wholly or partially within Pierce County:

- Interstates 5 and 705
- State Highways 7, 16, 99, 123, 161, 162, 163, 165, 167, 302, 410, 507, 509, 512, 702, and 706

County-maintained roadways can be classified into three primary types – arterials, local access, and primitive. Roads are further categorized by whether they are in the urban or rural area. Table 12-T lists the number of centerline miles by category.

### Local and Regional Transit and Rail

Pierce County is served by three transit agencies: Pierce Transit, Intercity Transit, and Sound Transit. Pierce Transit is the agency that provides local transit service within the County, consisting of 38 bus routes, a seasonal trolley serving Gig Harbor, specialized routes to serve events such as the Washington State Fair in Puyallup, and SHUTTLE service that provides door-to-door transportation for those who meet criteria established by the Federal Americans with Disabilities Act. Pierce Transit also operates a system of transit centers and park and ride lots. Intercity Transit has five routes that connect from Thurston County to various locations in Pierce County. Sound Transit, the regional transit agency for the Central Puget Sound, operates eight express bus routes in Pierce County, the Tacoma Link light rail, and Sounder commuter rail service.

Intercity Transit routes 603, 605, 609, 612, and 620 serve Pierce County. These are all express routes that serve Lakewood and Tacoma. All of the routes terminate in downtown Tacoma, except the 620, which ends at the Tacoma Mall. Route 620 is a weekend only route, while the other four routes are weekday only.

Sound Transit operates the Sounder commuter train, which makes ten daily weekday trips northbound and southbound to and from downtown Tacoma. Six of these trains in each direction also serve the Lakewood and South Tacoma station. The Sounder also runs on weekends on select days to serve travelers attending Seattle Seahawks and Mariners games.

The Tacoma Link light rail is operated seven days a week by Sound Transit. The termini are the Tacoma Dome station and the Theater District at South 9th and Commerce streets. The light rail frequencies are between 12 and 24 minutes, depending on the time of day and day of the week.

Sound Transit operates the following eight express bus routes within Pierce County that primarily travel to various destinations in King County.

1. **Route 574**: Lakewood – SeaTac
2. **Route 578**: Puyallup – Seattle
3. **Route 586**: Tacoma – U. District
4. **Route 590**: Tacoma – Seattle
5. **Route 592**: Olympia/Dupont – Seattle
6. **Route 594**: Lakewood – Seattle
7. **Route 595**: Gig Harbor – Seattle
8. **Route 596**: Bonney Lake – Sumner

Pierce Transit’s service area is 292 square miles, with a population base of over 557,000 (2013). There are seven transit centers located at the Tacoma Dome, Lakewood Town Center, Parkland, 72nd Street at Portland Avenue, South Hill Mall, Tacoma Mall, and Tacoma Community College. The 38 bus routes operated by Pierce Transit are shown in Table 12-U.

Map 12-4 shows the alignments of Pierce Transit routes along with locations of transit centers, rail stations, park and ride lots, and popular destinations.

Pierce Transit owns several park-and-ride lots and utilizes many others that are owned by separate entities. The list of Park and rides lots is shown in Table 12-V.

Pierce Transit also operates the SHUTTLE service that provides door-to-door transportation for those who meet criteria established by the Federal Americans with Disabilities Act, which make taking normal transit buses functionally impossible for the individual. SHUTTLE service only operates within ¾ of a mile of local bus routes, leaving much of the County without this service. There are a number of other entities that offer shuttle service outside of the Pierce Transit service area. These services included Beyond the Borders which serves Sumner, Spanaway, and South Hill and the Mustard Seed project, serving the Key Peninsula.

**Intrastate and Interstate Transit and Rail**

Pierce County is served by the Greyhound buses and Amtrak rail. Both of these companies provide service south to Portland, Oregon, north to Vancouver, Canada, and east to Spokane and points beyond. The stations for both of these services are located near the Tacoma Dome.
WATERBORNE TRANSPORTATION

Pierce County is served by two ferry routes, one operated by the County and the other by the Washington State Department of Transportation (WSDOT). The WSDOT ferry route is between Point Defiance in Tacoma and Vashon Island. The Pierce County ferry route connects Anderson and Ketron Island to the mainland in the Town of Steilacoom. Both routes accommodate both motor vehicles and passengers.

The Port of Tacoma is a one of the top 10 container ports in the country. In 2013, $48.7 billion in combined import/export commodities passed through the port. Top export commodities include food products, industrial machinery, and wood and paper products. The top import commodities are industrial machinery, vehicles and parts, electronics, and toys, games, and sporting equipment. The top trading partner is China/Hong Kong, accounting for nearly half of the combined import/export trade value. Japan accounts for nearly a third of the combined value.

AIR TRANSPORT

Pierce County is served by Seattle-Tacoma International Airport in south King County, two military base airports, and a number of smaller airports owned by the public and private sector.

The largest airports located in the County are the military air facilities on JBLM - McChord Field and Gray Field. General aviation is served by the County-owned Narrows Airport and Thun Field and several other small private airports. Characteristics of the larger Pierce County airports are shown in Table 12-W.

Active Transportation

Pierce County inventoried County-owned sidewalks in 2013/2014 as part of the Transition Plan for bringing facilities into compliance with the Americans with Disabilities Act. The inventory results are shown in Table 12-X. More information in the Transition Plan.

Table 12-X: Pedestrian Facilities on Pierce County Roadways

- 237 miles of sidewalk
- 3,256 curb ramp locations
- 844 pedestrian push buttons at crosswalks

Table 12-Y shows the number of accidents involving pedestrians on Pierce County maintained roadways from 2010-2014. As shown, there were four pedestrian fatalities during this period.

Values shown are presented as two-way annual average daily volumes for levels of service and are for the automobile/truck modes, unless specifically stated. This table does not constitute a standard and should be used only for general planning applications. The computer models from which this table is derived should be used for more specific planning applications. The table and scoring computer models should not be used for corridor or intersection design, unless more refined techniques exist. Calculations are based on the planning applications of the Highway Capacity Manual and the Transit Capacity and Quality of Service Manual.

1. Level of service for the bicycle and pedestrian modes in this table is based on the number of motorized vehicles, not number of bicyclists or pedestrians using the facility.
2. Buses per hour shown only for the peak hour in the single direction of the highest traffic flow.
3. Cannot be achieved at existing facility.
4. Not applicable for last level of service letter grade. For the automobile mode, volumes greater than level of service D become E because intersection capacity has been reached. For the bicycle mode, the level of service letter grade (including F) is not achievable because there is no maximum vehicle volume threshold using vehicle input values.

APPENDIX D – TRANSPORTATION PROJECTS FROM ADOPTED PLANS

Outside Community Plan Areas................................................................. 12-116
Alderton-McMillin.................................................................................. 12-120
Anderson – Ketron Islands................................................................. 12-122
Browns Point – Dash Point................................................................. 12-124
Frederickson......................................................................................... 12-126
Gig Harbor.......................................................................................... 12-130
Graham ............................................................................................... 12-135
Key Peninsula..................................................................................... 12-140
Mid-County ......................................................................................... 12-145
Parkland-Spanaway-Midland......................................................... 12-152
South Hill........................................................................................... 12-157

The 1992 Pierce County Transportation Plan (PCTP) included the first adopted list and map of long-range transportation projects. Many of these projects were eliminated from the Plan during the 1990s due to the incorporation of the Cities of Edgewood, Lakewood, and University Place. The adoption of the Nonmotorized Transportation Plan in 1997 and later adoption of 11 Community Plans added to the list of adopted projects envisioned for both motorized and nonmotorized travel. It is worth noting that some Community Planning Boards decided to remove a significant number of the PCTP projects, especially those that recommended new roadway alignments. The current make-up of adopted projects can be characterized as follows:

- Adopted Community Plan projects within Community Planning Area boundaries.
- Pierce County Transportation Plan projects for areas outside of the Community Planning Areas.
- Nonmotorized Transportation Plan (NMTP) projects.

Map 12-22 and Map 12-23 show a composite of projects from the Pierce County Transportation Plan and Community Plans. Projects from the ten Community Plans have been inserted into their respective areas in the two maps. Table 12-AA and Table 12-BB list the projects from the Pierce County Transportation Plan outside of Community Plan areas.

Map 12-24 through Map 12-33 and Table 12-CC through Table 12-LL are the maps and project listings that are adopted within each of the ten Community Plans. It is worth noting that there were no specific roadway projects contained in the Upper Nisqually Valley Community Plan, so there is not a map or table for that area.

The NMTP improvements are depicted in Map 12-19 and Map 12-20, in the body of the Transportation Appendix. Due to the vast number of projects, they are not listed in this document. The entire NMTP, including project listings, can be found online.

NOTE: ALL PROJECTS ARE SUBJECT TO MORE DETAILED REVIEW AND ANALYSIS PRIOR TO IMPLEMENTATION.

*Projects are not listed in specific priority order. ID numbers are intended for reference purposes only and to identify projects in the Transportation Project Recommendations map.

**Roadways are listed in alphabetical order by road name and by island with Anderson Island (AI) roadways listed first followed by Ketron Island (KI) roadways.

***Project limits are listed from west to east or from south to north depending upon the direction of the roadway.

****The following assumptions should be noted for project descriptions:

a. The reconstruction of a roadway assumes the widening of the existing traffic lanes pursuant to Pierce County’s standards (if feasible).
b. The addition of paved shoulders assumes the construction of standard-width striped shoulders on both sides of the roadway (if feasible).
c. The addition of a roadside trail assumes the construction of a 10-foot-wide paved trail on one side of the roadway only (if feasible).
d. The improvement of a roadway alignment may involve the realigning, straightening, and/or stabilizing of the roadway (if feasible).

^These roadways are currently private roads and would be maintained/improved by the owner(s) pursuant to Pierce County’s standards.

Adopted: March 17, 2009 (Ordinance No. 2009-9s)

NOTE: ALL PROJECTS ARE SUBJECT TO MORE DETAILED REVIEW AND ANALYSIS PRIOR TO IMPLEMENTATION
*Projects are not listed in a specific priority order. ID numbers are intended for reference purposes only and to identify projects in the Transportation Project Recommendations map.

**Roadways are listed in numerical order and then alphabetical order by priority groups. For intersections, the name of the east-west road is listed first.

***The following assumptions should be noted for project descriptions:

- a. The widening of existing lanes assumes the construction of 12-foot-wide travel lanes in both directions of the roadway (if feasible).
- b. The construction of a new roadway assumes the construction of a paved roadway competed to Pierce County's current standards (if feasible).
- c. The addition of paved shoulders assumes the construction of 6-foot-wide striped shoulders on both sides of the roadway (if feasible).
- d. The addition of a roadside path assumes the construction of a 6-foot-wide paved walkway on one side of the roadway only (if feasible).
- e. The addition of a roadside trail assumes the construction of a 10-foot-wide paved trail on one side of the roadway only (if feasible).

****Cost estimates are rough order of magnitude estimates for planning purposes only. These estimates are based on Year 2006 dollars and rounded to the nearest $10,000. In cases where more than one nonmotorized option is recommended for a particular roadway, the higher cost estimate was used.

(Developer): This project is dependent upon a future development proposal and would likely be implemented by a developer.

(WSDOT): The Washington State Department of Transportation (WSDOT) would be the lead agency for this project.

TBD: To be determined.

</tbody>
</table>

NOTE: ALL PROJECTS ARE SUBJECT TO MORE DETAILED REVIEW AND ANALYSIS PRIOR TO IMPLEMENTATION.

*Projects MC41 and MC60 do not appear in this table since they were removed from consideration.

**Projects are listed in numerical order and then alphabetical order by roadway name. For intersections, the name of the east-west road is listed first followed by the north-south road.

***Project limits are listed from west to east or from south to north.

****Cost estimates are "order of magnitude" estimates for planning purposes only and are rounded to the nearest $1,000.

Please note the following assumptions:
The cost estimates for sidewalks assume the construction of a 6-foot wide sidewalk with curb and gutter on both sides of the roadway.
The cost estimates for paved shoulders assume the construction of a 6-foot wide striped shoulder on both sides of the roadway.
The cost estimates for paths assume the construction of a 6-foot wide paved path on one side of the roadway only.
The cost estimates for trails assume the construction of a 12-foot wide paved trail.
For major arterials where paved shoulders or sidewalks are recommended, the higher cost estimate for sidewalks was used.
The cost estimates for turn lanes at intersections also include the installation of a traffic signal if the intersection is unsignalized.
TBD - To Be Determined
(City) - The City of Tacoma may serve as the lead agency for this project.
(New) - This project is not currently included in either the Transportation Improvement Program (TIP) or the Transportation Element of the Comprehensive Plan.
(WSDOT) - The Washington State Department of Transportation (WSDOT) would be the lead agency for this project.

INTRODUCTION

The Utilities Element addresses utility services within Pierce County over the next 20 years to identify lands useful for public purposes, such as utility corridors, landfills, sewage treatment facilities, and other public uses.

Issues:

- Provision of utility services within cities' urban areas and newly annexed portions of cities and towns
- Ability of utilities to utilize public rights-of-way
- The placement of utility lines underground
- Coordinated construction of new roads, road improvements, and road maintenance with under road infrastructure
- Identification of utility corridors
- Need for utility facilities throughout the region, which may pass through but not be used exclusively by Pierce County residents such as natural gas pipelines

To provide efficient utility and transportation service, it is important to coordinate building and maintenance of new or existing roads with the building and maintenance of utility lines. This coordination is financially beneficial and helps avoid removing parts of newly paved roads to install utilities.

GOAL U-1  Provide for the location of utility facilities.

U-1.1 Include facilities as permitted uses in appropriate land use classifications.

U-1.2 Coordinate with providers during the permitting process for new development.

U-1.3 Design new development to facilitate the provision and installation of systems for the full range of services.

U-1.4 Encourage compatibility between facilities and adjacent land uses.

U-1.5 Prioritize facilities close to areas containing existing or future commercial and industrial development.

GOAL U-2  Provide urban level facilities and services only within the designated Urban Growth Areas prior to or concurrent with development.

U-2.1 Encourage the provision of urban level services from cities or appropriate regional service providers.

U-2.2 Encourage special service districts to consolidate or dissolve with the provision from cities or regional providers.

U-2.3 Preserve the rural way of life by not providing urban level of services within rural areas.

U-2.4 Urban level services associated with tourism may be required in some rural centers to protect public health and safety.
GOAL U-3 Ensure adequate utility capacity for future growth.
  U-3.1 Use a minimum 20-year planning horizon and identify new facilities, expansions, and improvements that will be needed to support growth.

GOAL U-4 Foster predictability in processing permits and applications for utility facilities.

GOAL U-5 Encourage water and energy conservation.
  U-5.1 Encourage the use of alternative energy sources.
  U-5.2 Support technologies that encourage water and energy conservation.

GOAL U-6 Coordinate construction of new roads, improvements, and maintenance with providers.
  U-6.1 Locate utility lines underground wherever practicable, using sound engineering judgment.
  U-6.2 Coordinate with providers of underground utility lines on major commercial arterials.

GOAL U-7 Establish and amend as necessary utility service areas.
  U-7.1 Establish a process to resolve conflicts between providers.

GOAL U-8 Maintain consistency between providers’ and County plans.
  U-8.1 Retain copies of comprehensive system plans of each utility serving the County.
  U-8.2 Refer to the comprehensive system plans of utilities in amendments to the Comprehensive Plan.
  U-8.3 Provide the utility providers with the Pierce County Comprehensive Plan to use in planning future facilities.
  U-8.4 Provide utilities with annual updates of population, employment, and development projections.
  U-8.5 Seek to jointly evaluate patterns and rates of growth, and compare the results to demand forecasts.

GOAL U-9 Foster reliable and cost-effective services.
  U-9.1 Encourage the joint use of utility corridors.
  U-9.2 Site new utility facilities and provide standards to reasonably avoid or mitigate adverse environmental effects.

ENERGY

Issues:

- Use of alternative sources of power such as solar and wind power
- Capacity of electric utility facilities
- Expansion of natural gas service areas
• Inconsistencies between the Washington Utilities and Transportation Commission and the GMA
• The ability of utilities to use public rights-of-way
• Joint-trenching of utility lines
• Use of natural gas for backing up hydroelectric power

**ELECTRICITY**

Unincorporated Pierce County has 10 electric purveyors with different customer bases and diverse service areas which may overlap. There are many electric purveyors, particularly rural electric systems, because the large public and private utilities did not want the expense of extending lines and facilities into less densely populated areas. All 10 electric utilities operating in Pierce County are Bonneville Power Administration (BPA) customers and share access and use of transmission facilities. A one utility concept, fostered by BPA, is used by utility companies in facilities planning.

Puget Sound Energy and Tacoma Public Utilities own generation facilities; Tacoma Public Utilities relies on BPA for the remaining part of its energy needs while Puget Sound Energy relies on BPA for only a small percentage of its resource mix. Parkland Light and Water, Elmhurst Mutual Power and Light Company, Tanner Electric, Ohop Mutual Light Company, Alder Mutual Light Company, Lakeview Power and Light Company, Peninsula Light Company, and Lewis County PUD rely on BPA for all of their energy needs.

Electric utility facilities in Pierce County have adequate capacity to serve existing load. Individual utilities have comprehensive system plans to expand capacity as load growth occurs. Capacity ratings of individual equipment and facilities will not be sufficient to determine overall transmission

**Puget Sound Energy Profile**
• Largest energy utility in the state
• Provides electric power to more than one million customers, and serves the majority of Pierce County
• Approximately 46% of the electricity PSE customers use comes from PSE’s own power plants
• Has about 3,000 megawatts of power-generating capacity
• Conducts routine inspections and maintenance of 13,000 miles of power lines
• Maintains 354 substations, 10,000 miles of power cable, and more than 330,000 power poles

**Tacoma Public Utilities Profile**
• Serves 169,112 customers (54.7% within city limits and 45.3% outside) within 180 square miles in the western portion of Pierce County
• Owns 2,333 miles of transmission and distribution lines (1,529 overhead; 804 underground) with a system firm load of 5 billion kWh
• Power supply of 90% hydroelectric power, and of that, 45% is provided by TPU’s own hydroelectric power facilities
• Uses 4 main/transmission substations, 5 switching stations, 48 distribution substations, 12 dedicated distribution substations, 23 Bonneville Power Administration customer substations, and 8 generation switchyards
Electric system capacity relates to the ability to maintain service, not the quantitative ratings of equipment or facilities.

Pierce County needs are only one component of the regional electrical system. Therefore, the capacity analysis for the County is part of a regional analysis. The County has influence over the location of and development regulations for distribution lines, substations, and transmission lines. BPA works with its electric company customers to ensure that facilities and load are provided when needed. Detailed analyses have been and will be conducted by the individual service providers on the basis of planned land use.

No changes to the service areas of Pierce County electricity purveyors are anticipated. Planned construction of electric utility facilities serving local load areas is based on load rather than time (years). Utilities determine the need for expanded or new electric utility regional transmission network facilities on the basis of established planning standards which define required system performance under specified conditions, including load and generation levels, equipment outages, fault conditions, and equipment ratings.

**GOAL U-10** Accommodate regional electrical facilities.

**U-10.1** Ensure the availability of safe, adequate, and efficient electrical service without negatively affecting other jurisdictions.

**U-10.2** Accommodate additions and improvements that enhance the capacity and reliability of regional resources.

**U-10.3** Provide for utility corridors to supply appropriate service within and outside the County.

**GOAL U-11** Support the expansion of facilities to meet future load requirements, and conservation measures to accommodate future growth.

**U-11.1** Encourage the use of energy-conserving electrical infrastructure in new and retrofitted development.

**NATURAL GAS**

_Puget Sound Energy_ (PSE) provides natural gas service to six counties, including unincorporated Pierce County and several other providers:

- **Parkland Light and Water** serves 4,400 households with electricity (100 million kilowatt hours) in the northern portion of the Parkland area, including Pacific Lutheran University. PLW owns one substation and shares a second with Elmhurst Mutual Light. Parkland Light and Water purchases all power from Bonneville Power Administration.

- **Elmhurst Mutual Light** serves over 14,000 meters in parts of Parkland, Spanaway, Mid-County, and Frederickson.

- **Tanner Electric** serves 1,175 meters on Anderson Island.

- **Ohop Mutual Light** serves around 4,200 meters on 420 miles of line in the southern part of Graham and around Eatonville.

- **Alder Mutual Light** serves some of the western part of the Upper Nisqually Valley, below Eatonville.

- **Lakeview Power and Light** serves more than 9,023 meters in part of unincorporated Pierce County, east of Lakewood.

- **Peninsula Light** serves over 25,000 customers on 31,000 meters with 977 miles of line over 112 square miles in the Gig Harbor and Key Peninsulas, and Fox Island.

- **Lewis County PUD** provides electricity to approx 31,000 consumers through 3,370 miles of distribution line with some in Pierce County in the Upper Nisqually Valley area.
incorporated Pierce County cities and towns. All of the gas PSE acquires is transported into the service areas through large interstate pipelines owned and operated by another company. Once PSE takes possession of the gas, it is distributed to customers through more than 21,000 miles of PSE-owned gas mains and service lines over 2,900 square miles, serving over 750,000 customers. PSE controls its gas-supply costs by acquiring gas, under contract, from a variety of gas producers and suppliers across the western United States and Canada. They purchase 100% of the natural gas supplies needed to serve customers.

Natural gas is supplied through the Northwest Pipeline Corporation (NWP). NWP's natural gas transmission system within the State of Washington consists primarily of two large pipelines, one 26-inch and one 30-inch, running north to south through central Pierce County. The natural gas comes from a wide range of sources in North America—60% from Northern British Columbia and Alberta, and 40% from domestic sources including the San Juan Basin in New Mexico and Texas.

Within Pierce County, PSE owns and operates 2,491 miles of natural gas pipeline, 8 gate stations, and a liquefied natural gas storage facility in Gig Harbor, and it served around 141,666 customers as of 2010. In recent years, major maintenance and reliability projects include the $15 million installation of more than 5 miles of new 16-inch natural gas line to increase system reliability and accommodate current and future growth in south Tacoma and surrounding areas (completed 2008).

PSE operates under franchises with unincorporated Pierce County and the cities of Puyallup, Milton, Sumner, Bonney Lake, Orting, Tacoma, Fircrest, Fife, and DuPont, as well as the towns of Ruston and Steilacoom. Gas availability is limited to predominantly urban areas.

**GOAL U-12**  Encourage natural gas service within an Urban Growth Area.

**U-12.1**  Coordinate land use and facility planning to allow siting and construction of natural gas distribution lines within rights-of-way.

**TELECOMMUNICATION ISSUES:**
- Rapidly changing technology
- Evolving services and providers
- Ability of utilities to site new and expand existing antennas and towers
- Competition between providers

**PROVIDERS MAY INCLUDE:**
- U.S. Cellular
- Verizon
- AT&T
- Sprint
- T-Mobile
- Cricket Wireless
- Vonage
- CenturyLink
- Comcast
- Click! Cable TV
- Rainier Connect
- DISH Network
- DirecTV
The telecommunication industry has changed substantially in recent decades and continues to change rapidly. Services include voice, data, and video, among others on various mediums such as wire, fiber optic, or radio wave. Expanded telephone and cable availability and technology have increased competition in the industry. Services are supplied in unincorporated Pierce County by a variety of public and privately-owned and operated providers. Providers may offer a variety of services, or be subsidiaries of larger companies providing a large range of services.

Various types and levels of telecommunication facilities are located throughout the County and state to serve Pierce County residents. Due to the nature of telecommunication, facilities are not necessarily located near the served customers. Many facilities, including aerial and underground, are co-located with those of the local electric power providers. With the technology used by telecommunication facilities, capacity is a growing problem for companies providing service locally.

Where feasible, cellular facilities utilize existing tower structures, poles, and buildings where antennas can be mounted on rooftops and electronic equipment located within the building itself. Unlike other utilities, the cellular telephone industry does not plan facilities far into the future and analyzes market demand to determine expansions into new service areas.

**GOAL U-13** Permit antennas, towers, fiber optics, and new technology for service purposes.

- **U-13.1** Allow for the placement of antennas and towers required by providers.
- **U-13.2** Develop performance standards for antennas and towers in various land use classifications.
- **U-13.3** Utilize existing structures rather than constructing new wireless communication facilities.
- **U-13.4** New facilities should allow for co-location.
- **U-13.5** Providers must demonstrate that co-location on an existing site is not feasible before a new site is considered.
- **U-13.6** Encourage placing facilities in locations where impacts will be minimal.
- **U-13.7** Encourage locating facilities on sites where impacts to rural character can be mitigated.

**GOAL U-14** Encourage the design and construction of wireless communication sites to be compatible with surrounding land uses.

- **U-14.1** Develop design guidelines for wireless communication facilities.
- **U-14.2** Develop viewshed guidelines to ensure the appropriate location of wireless communications facilities.
SANITARY SEWER SERVICE AND WASTEWATER TREATMENT

Issues:

- Federal and state regulations may become more restrictive for effluent discharges to surface waters. Advanced (tertiary) treatment standards are likely for all treatment facilities. A number of questions follow:
  - What upgrades will be needed to each agency’s plants to meet standards?
  - How will future standards affect plant capacities to serve growth?
  - Is there sufficient land available for each plant for expansion needs?
  - How much will it cost?
  - What alternatives will exist?
- Provision of permanent sewer services to those areas of the Chambers Creek-Clover Creek Basin still on septic tanks and community drainfields

The *Unified Sewer Plan for the Pierce County Wastewater Utility (USP)*, 2010, is the general sewer plan for major sewerage facilities owned, operated, or maintained by the Pierce County Sewer Utility within the Chambers-Clover Creek, Puyallup, and Kitsap sewerage basins. The goal of the Unified Sewer Plan is to promote a jobs-based economy and growth management decision, in ways that utilize the lowest life cycle costs while continuing to protect water quality. As a component of the Comprehensive Plan, the USP inventories facilities, discusses the relationship of land use decisions to sewer services, and identifies the capital facilities to serve the projected growth within the basins.

The plan ensures that all portions of the Urban Growth Area (UGA), including the Urban Growth Areas of cities without wastewater treatment plants fall within an area of planned sanitary sewer service. The USP continues the centralized treatment system and maximizes the use of treatment.

Pierce County’s basic policy continues to be to provide sanitary sewer service within the urban area in support of the Comprehensive Plan.

Pierce County is served by over 18 wastewater agencies with wastewater treatment plants located throughout the County. The majority of these systems are located within the Puyallup River sewerage basin. No countywide sewerage planning document exists which addresses the coordination of sewer and wastewater treatment services within the unincorporated areas of the County in other sewerage drainage basins. Each sewerage system has an adopted sewerage general plan, which applies to that respective jurisdiction.

A complete listing of sewer service areas and providers, Pierce County facilities, infrastructure, and capacities can be found in the 2010 Unified Sewer Plan.

**RESOURCES:**

- *Unified Sewer Plan, 2010*
- *2014-2019 Sewer Improvement Program*
- *Basin Plans*
The remainder of the County relies on on-site septic systems for wastewater treatment. Within the urban area, Countywide Planning Policies require that these systems be interim until such time as sanitary sewer systems become available or the on-site septic system fails. Within unincorporated Pierce County, this represents less than 1% a year of new connections. The Tacoma-Pierce County Health Department regulations cover on-site sewage treatment systems. Connections to sanitary sewer are required by PCC 13.04.030 under certain circumstances.

The Biosolids Management Program’s goal is to handle biosolids without contaminating natural resources. It gives priority to land application of biosolids from the County’s treatment plant. Federal and state land application regulations and the Tacoma Pierce County Health Department’s (TPCHD) Sludge Utilization Policy encourage the use of biosolids as a beneficial resource. The program evaluates a complete range of utilization and disposal alternatives and recommends a program based on the beneficial use through land application.

GOAL U-15 Provide sanitary sewers within the urban area.

U-15.1 Coordinate and prioritize phased expansion of sewer interceptors with municipalities.

U-15.2 Expansion of the sewer system shall not be justified solely by sewer treatment plant capacity.

U-15.3 Development that is inconsistent with the Countywide Planning Policies, the Unified Sewer Plan, urban growth boundaries, the applicable municipal land use plan, or County Comprehensive Plan shall not be justified solely by sewer treatment capacity.

U-15.4 Sewer interceptors inside Urban Growth Areas must follow the planned phasing of capital facilities unless:

U-15.4.1 Sewer service will remedy groundwater contamination and health problems, as determined by the local health department; and

U-15.4.2 Extension/expansion is necessary to protect basic public health and safety, the environment.

U-15.5 Utilize community drainfields as an interim means to achieve urban densities within the Urban Growth Area until such time sanitary sewer service is available.

U-15.6 Recognize on-site septic systems within the Urban Growth Area are considered interim facilities.

U-15.6.1 Incorporate into interim on-site and community septic systems infrastructure that facilitates future sanitary sewer hookup; and

U-15.6.2 Acknowledges the applicant and subsequent owners will not object to participation in future Local Improvement Districts or hook up actions.

U-15.7 Sewer service cannot be provided outside the Urban Growth Areas unless:

U-15.7.1 Sewer service will remedy groundwater contamination and health problems, as determined by the local health department; and
U-15.7.2 Extension/expansion is necessary to protect basic public health and safety, the environment, is financially supportable at rural densities, and cannot be used to permit urban development; or

U-15.7.3 A formal binding agreement to service an approved planned development was made prior to the 1995 establishment of the Urban Growth Areas.

U-15.7.4 The extension of public facilities and utilities is authorized to serve a school sited in a rural area pursuant to Additional Rural Policies - Schools in Rural Areas LU-78.5.

U-15.8 Recognize that a sewer interceptor or trunk line constructed or planned to be constructed through a rural area to convey wastewater from a designated Urban Growth Area to a sewerage facility in another designated Urban Growth Area shall not constitute a change of conditions that can be used as the basis for a change in land use designation or urban/rural designation, either for adjacent or nearby properties.

U-15.9 Encourage alternative sewage disposal methods approved by the Tacoma-Pierce County Health Department in rural areas, provided that any developments served are consistent with residential densities allowed in rural areas as adopted in the Pierce County Comprehensive Plan.

U-15.10 Expand the Chambers Creek Regional Wastewater Treatment Plant to meet needed capacity and to further reduce pollutants discharged to Puget Sound.

U-15.11 Maintain emergency response plans for wastewater treatment plants.

GOAL U-16 Utilize best construction methods and practices and innovative techniques in the design and construction of sewer utilities.

U-16.1 Utilize best management practices for surface water management and erosion control during construction of sewer utilities.

U-16.2 Minimize impacts to traffic and transportation networks during the construction of sewer utilities.

U-16.3 Adjust facility locations and alignments in the event that contaminated soils, groundwater, or buried wastes are identified during construction.

U-16.4 Restore disturbed land areas after construction of sewer utilities and facilities located within the plan area.

U-16.5 Preferred routing for sewer lines is through road rights-of-way, power line rights-of-way, and other existing easements.

U-16.6 Support the pretreatment of industrial wastes.

GOAL U-17 Coordinate with the health department in the review and approval of septic permits to determine if flood-prone areas exist on the subject property.

U-17.1 Limit the installation of septic systems in areas prone to high surface water and flooding.
U-17.1.1 Require applicants to illustrate any flood-prone areas on septic permit applications.

U-17.1.2 Identify the limits of the flood-prone area of the property prior to installation of the septic system and/or issuance of building permits.

U-17.2 Septic systems should be maintained and pumped consistent with the health department's operation and maintenance program.

**SOLID WASTE AND SUSTAINABLE RESOURCES MANAGEMENT**

The Tacoma-Pierce County Solid Waste Management Plan (SWMP) provides for and supports efforts to increase recycling and diversion of waste to preserve and ensure disposal capacity, reduce emissions, and prevent pollution. The SWMP is a component of the Comprehensive Plan and more information can be found in the SWMP.

The plan established an aggressive waste reduction and recycling strategy to dramatically decrease per capita waste disposal needs from 4.5 pounds per day (2007) to 1.09 pounds per day (2032). Extending these goals and policies to 2038, with a further reduction to 1 pound per capita per day, means the Pierce County, Tacoma, and the JBLM waste management systems will require 7.7 million tons of disposal capacity over a 25-year period.

By continuing the goals and policies adopted as part of the 2000 plan and 2008 supplement, all of this capacity can be met in-county in the LRI Landfill owned and operated by Waste Connections. The LRI Landfill, a designated Essential Public Facility, located at the intersection of 304th Street and Meridian in south Pierce County, opened on December 13, 1999. The County also owns and operates transfer and composting facilities that are further outlined in the SWMP.

**GOAL U-18** Provide reliable and cost-effective service as detailed in the most recent update of the Tacoma-Pierce County Solid Waste Management Plan.

U-18.1 Design and locate facilities with proper consideration for health and environmental impacts.

U-18.2 Ensure that all residents and businesses have access to refuse disposal and recycling collection services.

U-18.2.1 Consider the need to accommodate disposal waste caused by emergencies in addition to planned, regular disposal capacity needs.

U-18.2.2 Encourage waste collection companies to maintain cost-effective recycling programs.

U-18.2.3 Provide information regarding the various authorized locations where the public can dispose of problem solid waste.

**RESOURCES:**
- 2000 Solid Waste Management Plan (SWMP)
- 2008 Supplement
- 2010 Waste Audit
- Landfill Capacity Analysis
GOAL U-19 Support efforts to reduce solid waste, and increase recycling and diversion of waste to assure disposal capacity, reduce emissions, and prevent pollution.

U-19.1 Encourage manufacturers and retailers to reduce packaging waste at the retail level.

U-19.2 Provide for the separation of waste prior to landfilling.

U-19.3 Encourage private industry to provide sufficient capacity for processing of recyclables.

U-19.4 Encourage new technologies for disposal or recycling of solid waste.

U-19.5 Promote home composting of yard and food waste.

U-19.6 Encourage a public outreach program that targets illegal dumping, improper storage of solid waste, and ways residents can report problems.

U-19.7 Encourage education on waste reduction and recycling programs.

DOMESTIC WATER SYSTEMS

The Pierce County Coordinated Water System Plan (CWSP) was established in 1988 and the current version of the plan was adopted in 2001. The CWSP includes a regional supplement which presents an assessment of water supply needs in Pierce County and a program to meet those needs.

The plan is also made up of individual water system plans prepared by the utilities for their designated service area, affecting only Group A water systems. All individual water system plans must be prepared within established guidelines and be consistent with the policies and procedures outlined in the regional supplement.

Water system plans prepared by individual water purveyors are required to contain information regarding the water system’s capacity and its ability to provide service to expected growth, both in terms of physical infrastructure and water rights. Please refer to the CWSP for further information.

GOAL U-20 Ensure adequate water supply for all uses that support growth.

U-20.1 Support detailed availability studies to determine supply.

U-20.2 Promote more efficient management of groundwater resources.

U-20.3 Suspend enforcement of exclusive future service areas until that system has an approved water system plan.

U-20.4 Review and if necessary update previously adopted plans to be consistent with the Comprehensive Plan.

GOAL U-21 Coordinate water resource planning.
U-21.1 Implement the policies of the Coordinated Water System Plan (CWSP).
U-21.2 Update the CWSP to address emergent issues.
U-21.3 Engage system providers in any process to amend Comprehensive Plan, Community Plans, and development regulations regarding public water systems and public water facilities.
U-21.4 Form an appropriate study group to review issues.
U-21.5 Require plans prepared by public water utilities to demonstrate that water resource management planning has been coordinated with adjacent Group A purveyors.

GOAL U-22 Preserve the high quality and supply of groundwater resources.
U-22.1 Support the long term monitoring of groundwater quality and quantity, for basins that provide domestic water supplies.

GOAL U-23 Encourage metering or measuring all public water withdrawals or diversions.

GOAL U-24 Protect the quality of groundwater used for domestic water supplies.
U-24.1 Protect the quality of groundwater and minimize damage from flooding by implementing an effective surface water management program.
U-24.2 Monitor and enforce wellhead protection plans.
U-24.3 Improve well construction and abandonment practices.
U-24.4 Support measures that keep water purveyors’ sources from going dry in the summer.

GOAL U-25 Prior to development, take into account the availability of potable water.

GOAL U-26 Promote reliable water service.
U-26.1 Ensure there is a balance between water supply and demand.
U-26.2 Recognize flexibility in bulk regulations for system infrastructure.
U-26.3 Provide options in cases where the designated provider cannot provide timely or reasonable service.
U-26.4 Prohibit new individual wells in designated service areas unless the provider cannot provide service in a timely and reasonable manner.
U-26.5 Limit new wells and development activities that require water withdrawals in any areas that are identified as being at risk for saltwater intrusion.

GOAL U-27 Prohibit new wells on sites that are at high risk for saltwater intrusion, unless it can be demonstrated that additional groundwater withdrawal will not worsen the problem.

GOAL U-28 Support and educate about water conservation measures.
U-28.1 Promote water conservation measures in the summer months when saltwater intrusion tends to peak.
U-28.2 Encourage conservation measures to include the use of reclaimed water.

GOAL U-29 Purveyors interested in regional supply network development should participate in the planning and construction of transmission, source, storage, and other facilities within their service area which could be jointly used by adjacent purveyors.

GOAL U-30 Implement the satellite management program for new or failing water systems.

U-30.1 Discourage the proliferation of small water systems except for cluster developments in rural areas.

U-30.2 New water systems should be permitted only when operated under a management system as approved under the Pierce County Coordinated Water System Plan.

STORM DRAINAGE AND SURFACE WATER MANAGEMENT

People depend on and enjoy water but it creates real problems when there is too much or its quality is compromised. Pierce County addresses water issues including flood risk reduction, water quality, and preservation of natural drainage systems. The County promotes the use of low impact development principles and best management practices. This helps ensure Pierce County’s rivers and streams are clean, healthy, and safe.

Issues:

- Increasing cost of managing stormwater
- Greater emphasis on eliminating future potential runoff and mitigating for past allowance of offsite runoff
- Greater emphasis on infiltration and potential groundwater quality
- Greater emphasis on biological health protection of streams and people
- Greater emphasis of the State to impose nonpoint source pollution controls
- Greater emphasis on salmonid habitat protection, preservation, and restoration
- Drainage systems both natural and constructed do not stop at jurisdictional boundaries
- Aesthetics of storm drainage facilities
- Addressing pollution in stormwater by requiring low impact development principles and best management practices, water quality treatment features in the design and construction of facilities, requiring treatment from new development, and through public education
- The need to update the Federal Emergency Management Agency (FEMA) maps that identify the floodways and other flood hazard areas
- The large public expense to repair, expand, or replace developer constructed stormwater facilities that were improperly designed or sized

Pierce County provides surface water management services to non-federal unincorporated Pierce County—approximately 900 square miles. JBLM, McNeil Island, and Mount Rainier are not within the County’s service area.

RESOURCES:
- Pierce County Stormwater Management and Site Development Manual
- Basin Plans
- Rivers Flood Hazard Management Plan
- Additional Resources
Services include the planning, permitting, design, construction, operation and maintenance of public regional storm drainage and flood risk reduction facilities, along with associated water quality and fish and wildlife habitat projects which protect and restore water quality and enhance flood risk reduction facilities. Stormwater facilities constructed for residential subdivisions with public roads and constructed to County standards can be deeded to Pierce County Surface Water Management (SWM) utility after construction. Inspection, maintenance, and operation of these stormwater facilities are a growing responsibility for the County.

Basin plans look in greater detail at the character of the geographic basin area and projected storm drainage and surface water management needs. Those are based on growth forecasts, planned land use, and environmental regulations existing at the time of the plan’s development. Pierce County has developed basin plans for nine watershed areas and the Rivers Flood Hazard Management Plan for the rivers and large streams of Pierce County. The need for additional capacity in storm drainage and flood protection facilities is analyzed in both the basin plans and the Rivers Plan. The basin plans and Rivers Plan identify capital facilities improvements and programmatic initiatives that can provide nonstructural solutions to meet demand.

The nine basin plans are:

- Clover Creek Basin Plan
- Gig Harbor Basin Plan
- Muck Creek Basin Plan
- Mid-Puyallup Basin Plan
- Clear/Clarks Creek Basin Plan
- Key Peninsula/Islands Basin Plan
- Browns-Dash Point/Hylebos Basin Plan
- Lower White River Basin Plan
- Nisqually River Basin Plan

GOAL U-31 Strive to prevent the loss of life, the creation of public health and safety problems, and loss of or damage to public and private property due to flooding.

U-31.1 Preserve undeveloped lands that provide storage for runoff during storm events.

U-31.2 Construct flood risk reduction facilities and stormwater facilities that support the protection of infrastructure and development.

U-31.3 Coordinate with the federal government to ensure accuracy of the FEMA maps.

U-31.4 Continue to reduce the potential for flood-related damage through participation in the National Flood Insurance Program (NFIP).

U-31.5 Design projects so stormwater enters stream systems gradually with lower peak flows.

U-31.6 Maintain historic year-round flow levels.
GOAL U-32  Improve surface water and groundwater quality.

U-32.1  Address water quality in stormwater facility maintenance and capital improvement projects.

U-32.2  Reduce and eventually eliminate harm to water quality from stormwater discharges. Do this through use of on-site infiltration and best management practices and source control of pollutants; control of development density and location; preservation of stream corridors, wetlands and buffers; and development, maintenance of a system of stormwater retention and detention facilities, and retrofit of existing facilities to eliminate or reduce untreated stormwater flows.

GOAL U-33  Establish and adopt ways to solve existing surface water problems and prevent future problems.

U-33.1  Balance engineering, economic, environmental, and social factors.

U-33.2  Include a range of capital and programmatic activities.

U-33.3  Pursue nonstructural measures before pursuing structural measures.

U-33.4  Use basin planning as a strategy for achieving federal and state water quality standards.

U-33.5  Use basin plans to identify modifications to land use designations and development regulations that will protect water quality and riparian habitat, and to alleviate flooding problems.

GOAL U-34  Coordinate the basin planning process with the community planning process to address surface water runoff, flooding issues, and future capital improvement projects.

GOAL U-35  Manage stormwater in consideration of the varied uses associated with natural drainage systems.

U-35.1  Preserve opportunities for other uses.

U-35.2  Structural flood risk reduction measures should not obstruct fish passage.

U-35.2.1  Preserve or enhance existing flow characteristics for fisheries and other uses of the riparian zone.

U-35.2.2  Flood management activities should not result in a net loss of fish and wildlife or damage fish and wildlife resources.

U-35.2.2.1  Protect or improve the diversity of natural habitats.

Nonstructural measures include (U-33.3):

- Public acquisition of property
- Development rights
- Regulations
- Policy guidelines
- Site design standards
- Operational policies
- Technical assistance
- Enforcement
- Public outreach
- Educational programs
U-35.2.3 Design stormwater facilities for compatibility between utility facilities and adjacent land uses.

U-35.2.4 Protect, preserve, and restore natural drainage systems in both the urban and rural areas.

U-35.2.5 Promote infiltration, bioretention, dispersion, and permeable pavement.

GOAL U-36 Coordinate with public and private sectors to ensure cost-effective stormwater management, flood risk reduction measures, and equitable distribution of costs.

U-36.1 Include opportunity for interested citizens, groups, and agencies to be involved in the planning process.

U-36.2 Work with cities and towns toward standardization of regulations.

U-36.3 Coordinate National Pollutant Discharge Elimination System stormwater permit implementation, water quality monitoring, and database management interlocally using common protocols.

U-36.4 Work with cities to restore funding for levee system maintenance that benefits incorporated areas protected by the Puyallup River/White River levee system.

GOAL U-37 Reduce or eliminate the stormwater drainage impacts from roadways onto adjacent properties and into surface waters.

GOAL U-38 Make the use of Low Impact Development (LID) techniques in public and private developments the preferred and most widely used method of land development.

U-38.1 Coordinate monitoring and evaluation of projects that utilize LID standards to determine the effectiveness of the established goals.

GOAL U-39 Ensure that negative downstream impacts will not occur from on-site runoff.

GOAL U-40 Implement programs to reduce impacts associated with stormwater runoff.

GOAL U-41 Integrate public regional stormwater detention and retention facilities into the natural environment.

U-41.1 Recognize that regional facilities can provide aesthetic value, recreation, and fish and wildlife habitats in park or open space settings.

U-41.2 Design facilities with a natural, aesthetically-pleasing appearance.

GOAL U-42 Locate new facilities where they would serve to extend identified fish and wildlife habitat areas and open spaces, parks, and greenbelts.

GOAL U-43 Design detention facilities to mimic natural systems, provide recreational opportunities, provide aquifer recharge, or function like wetlands.

GOAL U-44 Plant trees and native, non-invasive vegetation that is suitable for areas designed to retain water.

GOAL U-45 Coordinate the general flood control strategy with the federal fisheries service approved salmon recovery plan for Puget Sound.
GOAL U-46  Establish pond depth and slope requirements that serve to reduce potential safety hazards.

GOAL U-47  Minimize fencing around ponds to allow for wildlife movement and habitats where feasible.

GOAL U-48  Provide technical assistance to homeowners’ associations and commercial sites for operation and maintenance and source control of pollutants.

U-48.1  Apply fees and liens on properties where the responsible homeowners' association or commercial sites are unresponsive to maintenance of private stormwater facilities.

U-48.2  Monitor existing maintenance agreements.

GOAL U-49  Align SWM Fee Credit Program to incorporate water quality treatment as well as flow reduction as mandatory eligibility criteria.

Appendix A: Alderton-McMillin Community Plan

The Alderton-McMillin Community Plan’s narrative text and policies are in addition to the Countywide Comprehensive Plan narrative text and policies and are only applicable within the Alderton-McMillin Community Plan Boundary.

- “Current” or “Existing” conditions are in reference to conditions at time of adoption (Adopted Ord. 2007-41s2, Effective 6/1/2008).
- “Proposed” or “Desired” conditions are those which required Council action and may have also been amended over time through a Comprehensive Plan Amendment (amendments are reflected in this document).

Chapter 1: Introduction

Overview of the Alderton-McMillin Community

Alderton-McMillin is located approximately 30 miles northwest of Mount Rainier in central Pierce County, Washington, nestled among the hillsides and in the valley where the Puyallup River and the Carbon River meet. The community stretches from the edges of the mountain foothills and forest lands ten miles north to where the Puyallup River makes a notable turn to the west.

The community planning area was within the traditional lands of the Puyallup Tribe of Indians and the Muckleshoot Indian Tribe. They lived in permanent villages located along the river banks where the primary source for food was the rivers and salmon was the most important food in the diet. The people also hunted and gathered food in the surrounding hills and valleys. The Puyallup River valley was an important trading center for many tribes.

As the west was settled in the mid-1800s, homesteaders began to move into the valley. Land was cleared and farming became a way of life. Early farmers created subsistence farms which typically included fields where oats, rye, and barley, potatoes, peas, fruit trees, or vegetables were planted for the family. In the late 1800s, hops became a popular and lucrative crop. In the early 1900s, a hop disease and prohibition led to the decline of hops as a successful cash crop. Bulb and flowers soon were planted throughout many fields in the valley and some continue still today particularly in the northern plan area. During the same period, many local farmers in the valley diversified to dairy, berry, vegetables, and fruit orchards.

Because of the deposition of alluvial soils distributed by the rivers along the valley floor, the community has excellent soils for agricultural production. Today there are approximately 4,700 acres of farmland in the valley which cover about 42% of the total land area of the community.

Generally, the community has not experienced as much of the development and growth as seen elsewhere throughout Puget Sound over the past 30 years. That is not to say that the valley has not experienced change, but rather the changes have not been as rapid as seen in other areas of the County such as South Hill or the Bonney Lake area. This slower rate of change is likely due to two factors. First, the valley has numerous constraints resulting from natural geography. Flooding, high water tables, wetlands, and volcanic hazards limit the carrying capacity of the land and pose challenges to development. Secondly, many farmers
continued to hold onto their land rather than turn it into a cash crop through subdividing as happened to other areas of Pierce County such as the lower Puyallup valley.

The community is experiencing a significant amount of change due to the growth of the surrounding cities and urban areas. The position of Alderton-McMillin in Pierce County places it in the middle of some of the fastest growing areas of the County. The City of Sumner which bounds the north side of the community plan area had a population of 6,459 people in 1990 and is projected to have 12,250 people by 2020. Puyallup, located to the northwest of the community plan area had a 1990 population of 23,848 and is projected to reach 38,600 by 2020. Bonney Lake located to the east of the valley had a 1990 population of 7,494 people and is expected to be 18,830 by 2020. Orting, which is a city of 2.7 square miles, had a 1990 population of 2,106 and is expected to reach 7,900 people by 2020. In fact, Orting is in the top 10 cities with the greatest percent change in population over the last six years. Since the year 2000 Orting has added 1,629 people – a 41.4% increase. This increase has not been due to annexation but growth and infill of new subdivisions.

Growth in the community plan area can largely be attributed to ten subdivisions that were vested prior to the adoption of the 1994 Pierce County Comprehensive Plan. The population of the community has grown rapidly due to these subdivisions – roughly 38% in the past six years. However, these subdivisions and other parcels of one acre or less in size make up only 6% of the total land area of the community. Over 80% of the land within the community is held within parcels of five acres or greater, the majority of which is 10-50 acres in size.

Nonetheless, the population growth within the community and growth of the surrounding urban areas have had an enormous impact on the Alderton-McMillin community. Traffic congestion is now a common daily occurrence along SR 162 creating noise, conflicts with farm equipment, and activity throughout the day and night. The urban growth encroaches from the hillsides marching steadily toward the valley, removing trees and creating flooding and erosion problems below. Views of forested hillsides that once protected and secluded the valley now are covered with lighted homes looking into the rural community.

The citizens of Alderton-McMillin feel caught between the desire to preserve a quiet rural agricultural lifestyle and the chance to walk away from it allowing their land to be sold for the highest possible price and letting the urban population move in. The Alderton-McMillin Community Plan attempts to balance the desire for the traditional past with the needs of the future – recognizing both the importance of agriculture in our economy and the farmer in our communities with the geographical placement of the community – surrounded by urban areas. The plan attempts to grow the wealth of valley farmers by linking them more closely with the urban populations and markets while minimizing the impacts of urban traffic congestion on the community.

The community’s support for this plan rests on the County’s commitment to monitor the resulting effects of adopted policies and programs. Through close monitoring, implementation of the objectives, programs, and actions shall be measured and obstacles identified. If plan objectives, programs, and actions are not being met or are not effective, the County is committed to engaging the community in dialogue and devising alternative solutions to ensure the community visions and goals are achieved.
HISTORY OF ALDERTON-MCMILLIN

Alderton-McMillin lies within the traditional lands of the Puyallup Tribe of Indians and the Muckleshoot Indian Tribe. The original name of the Puyallup tribe was “spwiya’laphabsh” which meant people were generous or welcoming. The Puyallup people spoke Puyallup Nisqually, one of the languages spoken by the Salish people who inhabited the Puget Sound area before Europeans arrived. Both the Muckleshoot and the Puyallup people engaged in fishing, hunting, and gathering. Salmon was the most significant food and became an object held in reverence and incorporated into the traditional ceremony. The people also hunted and gathered food in the hills and valleys. Permanent villages were located along the river bank. The Puyallup River valley was an important trading center for many tribes.

EARLY SETTLEMENT BY EURO-AMERICANS STARTING IN 1850s

In 1850, the U.S. Congress passed the Donation Land Claim Act to promote homestead settlement in the Oregon territory which was comprised of the present-day states of Oregon, Washington, and Idaho. The statute granted 320 acres to a single white male and 640 acres to a married couple, if they settled before December 1, 1846. If settled after 1846, the law granted only half of the amount. The law expired in 1855. The claimants had to cultivate the land for a few years in order to own the land outright.

The Oregon Trail was the main land route for the emigrants coming west wishing to claim donated land to settle. The first emigrant wagon train that crossed the Cascades brought early settlers to Pierce County in 1853. Some of these early settlers took the Naches (Pass) trail which was a short-cut branch off the Oregon Trail. Many of these pioneers settled in the Puyallup River valley area including the Woolery and Lane families. The historical Naches Trail, which led many early emigrants to Pierce County, traveled between Alderton and McMillin in the vicinity of Military Road.

Homesteaders cleared the land and created subsistence farms which typically included fields where oats, rye, and barley, potatoes, peas, or other vegetables were planted, and pasture for livestock, and orchards with a variety of fruit trees were established. After living on and cultivating the land for the required time to own the land outright, some owners divided the land and sold parcels of land to others.

AGRICULTURE

Hops presented an unprecedented economic opportunity to the local settlers when first introduced to the valley in the latter half of the 19th century. Charles Wood, who operated a brewery in Olympia, brought in hops roots from England in 1865. He sent some roots to John Meeker who then gave some to his brother, Ezra Meeker. Ezra Meeker grew some hops on his land. By the 1870s he successfully turned his large fields to growing hops. Other settlers in the area soon followed suit and the entire valley area became full with hops farms by the 1880s. In addition to the local farmers and family members, Native American pickers were hired to help harvest the crops. For a while, Chinese workers were brought in to work in the hop fields.
Hop kilns were used to dry the harvested hops. Sulfur was used to bleach them and stop fermentation. Large barn structures were erected on many hop farms to house the kilns. In 1892, hop lice infested the fields and the farmers were unable to find ways to eradicate the blight. In the 1890s the economic depression hit the valley area hard. The adoption of the 18th Amendment to the U.S. Constitution in 1919 prohibiting manufacture, sale, or transportation of alcoholic beverages in combination with the economic depression led to the decline of the hops as a successful cash crop.

Flower bulbs replaced hops as a viable commercial crop. In the early 1920s the U.S. Department of Agriculture determined that the local climate and soils in the valley area was ideal for growing bulbs. Cultivation of bulbs such as hyacinths, tulips, narcissus (daffodils), and gladiolus began in Pierce County between 1910 and 1920. By the early 1920s, farmers in the valley area began cultivating these bulbs in small acreages. By 1920, Pierce County grew nearly 60% of the more than 40 million bulbs planted that year in the state. By 1928, approximately 150 acres of land in the Puyallup River valley was devoted to bulb cultivation and 90% were daffodil fields. Acreage devoted to bulbs in the area continued to expand. In 1930, the 120-acre Van Zonneveld farm at Orting was reported to be the largest in the state and sold 190 tons of narcissus bulbs.

Starting bulbs were imported from Europe. Many of these farmers grew hundreds of varieties of bulb flowers. For example, Karl Koehler, who earlier cultivated hops, cultivated 1,800 varieties on his farm, including those varieties he created through hybridization. The Van Lierop family began farming bulbs in 1934 and continues the farm still at a smaller scale.

Twelve bulb farmers, the majority of whom were located in the Puyallup valley area, formed the Puget Sound Bulb Exchange in 1926 to sell, pack, and transport the members’ produce. The successful cooperative continued its operation for more than seven decades.

The Puyallup Valley Daffodil Festival developed slowly beginning in the 1920s. The festival celebrating the blooming of the flowers has been held annually in the spring since 1926 except during World War II. A parade, a part of the Festival, still starts in Tacoma, passes through Puyallup and Sumner and ends in Orting. This annual festival has helped the local bulb farmers promote their products to the public.

Other flowers such as irises, roses, and lilies were also grown in the valley starting in the 1920s. In addition, local farmers in the valley diversified to dairy, berry, vegetables, and fruit orchards.

Fruits and vegetables such as strawberries, raspberries, blueberries, rhubarb, lettuce, squash, potatoes, pumpkin, corn, peas, beans, beets, carrots, cucumbers, onions, celery, and radishes have been grown in the valley in the past decades. Cultivation of fruits such as grapes, apples, pears, prunes, and cherries still continue. In recent decades, Christmas tree farms have become more numerous.

Over time agricultural activities in the valley have decreased. However, hundreds of acres of area lands are still devoted to agriculture. Agriculture and agriculture-related businesses continue to be an important economic base of the area.
Arrival of the Northern Pacific Railroad in the valley area in 1877 was an important stimulant to the area’s development. It brought immigrants to the community earlier than other isolated areas, stimulated development of towns in the vicinity, and spurred development of a variety of resource-based industries and commerce servicing the residents, workers, and industries. Logging became more active and a number of mills developed in the area. The railroad cars transported logs and coal as well as passengers. Northern Pacific Railroad established sidings at McMillin and Alderton. These two crossroad centers included a post office, store, and school. They served as a service center for miners who worked in coal mines and the sandstone quarry after the railroad connected the area with Wilkeson.

The following centers in the area experienced a major growth after the arrival of the railroad.

**McMillin**

John McMillin operated lime kilns and owned surrounding land across the Puyallup River from present-day McMillin. The post office established in 1890 in the present day McMillin location was originally named Lime Kiln but was renamed McMillin in the following year. The lime mine claim was abandoned in the 1920s when the lime deposit was exhausted. Stone Mill was another establishment which produced a variety of building materials made from the timber harvested in the area.

Hale’s Grocery and another grocery store built by Henry L. Ball across the highway were the early stores existing in the late 1890s. In the Polk Business Directory 1915-1916, McMillin is described as a village on the Northern Pacific Railroad Railway and Puyallup River, settled in 1888 with a population of 200.

The McMillin grocery store was first established by Ball. It had a post office and functioned as the community meeting place. The McMillin Grange was formed in 1927 to promote the interest and wellbeing of farmers and families in the area. The Grange is still in operation, located in the old McMillin School, built in 1927. For many decades, the building served as an eight-grade school during the day and as a Grange Hall during the evening. The school building was sold to the Grange by the Sumner School District in the 1960s. A variety of events are hosted in the Grange including history conferences, aerobic classes, and quilting groups. McMillin School (Grange) is designated on the National and Pierce County Registers of Historic Places.

**Alderton**

Orson Annis settled in the Alderton area in 1869, naming it Alderton because of the numerous alder trees growing in the area. He was a railroad agent and postmaster for about a decade. He built the first general store, a hotel, and livery stable in 1870s. By the early 1890s, he had planted an orchard with two thousand fruit trees. He later sold his land to the Hatch family in 1900, which then became a well-known bulb farm. Oro Oliver built a new Alderton Store in 1920. The store had the post office and Oro Oliver served as the postmaster for about 20 years. The Alderton Store still exists.
According to the Polk Business Directory 1915-1916, Alderton is described as a town with a population of 50, located 12 miles southeast of Tacoma and four miles southeast of Puyallup on the Northern Pacific Railway.

The first school in Alderton was a one-room log structure. A school district was split from the Elhi School District. The Alderton School served students of multiple grades from elementary to high school from about the 1910s to 1950s. It was then consolidated into the Sumner School District and is still standing. The main school building and gymnasium are designated on the National and Pierce County Register of Historic Places.

**Cities in the Area**

Due to rich fertile river valley soil, the valley area was chosen by early settlers as homesteads beginning in the 1850s. In addition to the early settlement, plentiful timber resources in the surrounding area and the arrival of railroads to the valley area in 1877 contributed to the development of Orting, Puyallup, and Sumner within the valley area. These towns became service and distribution centers for the surrounding area.

**Planning History**

**County Planning**

<table>
<thead>
<tr>
<th>1962 Pierce County Comprehensive Plan and Zoning</th>
</tr>
</thead>
<tbody>
<tr>
<td>The first Pierce County Comprehensive Land Use Plan and the Pierce County Zoning Code were adopted in 1962. Zoning districts were established that dictated the appropriate location for commercial business and residential homes. However, the 1962 plan did not offer much protection from incompatible uses nor recognize the unique individuality of communities. Under this plan, most of the plan area was zoned General, which allowed a variety of use types and higher levels of residential density than what is currently allowed in the rural and resource zones.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>1994 Pierce County Comprehensive Plan</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Growth Management Act (GMA) was passed by the Washington State Legislature in 1990. This legislation required Pierce County to engage in countywide planning with the cities and towns located within Pierce County and to update its existing comprehensive plan and development regulations in conformance with the requirements outlined in the new law. In 1991, Interim Growth Management Policies were adopted as a transition between the 1962 Comprehensive Plan and the new planning required under the GMA. The Pierce County Countywide Planning Policies were adopted in 1992, which provided the framework and process by which Pierce County and the cities and towns within the County established urban growth areas, provided infrastructure and services, and preserved agricultural and natural resource lands.</td>
</tr>
</tbody>
</table>
In 1994, per the requirements of the GMA, Pierce County adopted a new Comprehensive Plan, which replaced the 1962 Pierce County Comprehensive Plan in its entirety. This plan established population projections, urban growth areas, rural areas, and natural resource lands. The new countywide plan became effective January 1995, with its implementing development regulations becoming effective July 1995. The majority of the plan area was redesignated to Rural as a result of the 1994 Comprehensive Plan.

**COMMUNITY PLANNING**

Although the GMA does not require comprehensive plans to provide for community plans, Pierce County Ordinance No. 90-47s directed County officials to prepare a community plans element of the Comprehensive Plan. The Comprehensive Plan Community Plans Element identifies which communities will receive a community plan; provides the framework for community planning; and establishes the flexibility for communities to refine comprehensive plan land use designations and associated densities, and apply design standards to achieve a local vision, while remaining consistent with the Comprehensive Plan and the GMA.

Since 1994, several community plans have been adopted throughout unincorporated Pierce County. The majority of unincorporated County residents now live in community plan areas.

**SCOPE OF THE COMMUNITY PLAN**

**LEGISLATIVE AUTHORITY TO DEVELOP THE PLAN**

The 1994 Pierce County Comprehensive Plan Community Plans Element identifies the Puyallup River Valley as an area to receive a community plan. In 2001, the County Council authorized the initiation of a community plan for the area through Resolution No. R2001-73. Planning Staff began working with a Community Planning Board (CPB) in April, 2004.

**PURPOSE AND USE OF THE COMMUNITY PLAN**

The Alderton-McMillin Community Plan gives the residents, businesses, property owners, and the County a clear and more detailed sense of how the community should develop in the future. The purpose of the plan is to:

- Develop a long-range vision for the community;
- Evaluate the vision for the community in light of the Pierce County Comprehensive Plan and make refinements as necessary to ensure consistency between the overall countywide plan and the community plan; and
- Identify actions necessary to implement the community plan.

The policies contained in the plan are distinguished as goals, objectives, principles, and standards. Goals are a general vision statement by the community. Objectives are statements of what is desired to be achieved in the future or statements of what conditions should exist in the community. Principles set a particular course of action to accomplish objectives.
Standards, qualitative or quantitative, are specific benchmarks or targets to be accomplished in the ongoing development of the County.

All of the policy statements were developed through citizen comment and represent the will of the people translated into decision oriented statements. When applying the policy statements, each should be afforded equal weight and consideration.

**CONSISTENCY WITH THE PIERCE COUNTY COMPREHENSIVE PLAN**

The Growth Management Act requires consistency between plans and implementing development regulations. Furthermore, the Pierce County Comprehensive Plan Community Plans Element contains specific policies that require consistency between the Comprehensive Plan and community plans. The goals, objectives, principles, and standards in the Alderton-McMillin Community Plan are consistent with the provisions in the Pierce County Comprehensive Plan.

**PUBLIC INVOLVEMENT**

**COMMUNITY PLANNING BOARD**

The development of the Alderton-McMillin Community Plan could not have been accomplished without the Community Planning Board (CPB). Appointed in the winter of 2004, this board consisted of eleven members representing a variety of interests and geographic locations throughout the community plan area. Through Ordinance No. 2005-82 the boundaries of the community plan were expanded to include the area south of Orting and subsequently, Resolution No. R2005-47 expanded the CPB to a thirteen-member board.

This group was charged with the following responsibilities: 1) serving as a sounding board for the community; 2) developing a community plan that addresses community concerns while remaining consistent with the Comprehensive Plan; and 3) forwarding a recommended plan to the Pierce County Planning Commission and Pierce County Council.

The CPB conducted bi-monthly public meetings starting in April 2004 and continuing through February 2007. A total of 67 CPB meetings were held during this time period and many members of the community attended, enriching the planning process. In addition, a history committee conducted separate meetings to work on development of the historic resources section of the plan.

**OPEN HOUSES**

The CPB worked on developing an overall vision for the community and goal statements for each element throughout 2004. In July 2005, the CPB held its first open house at the McMillin Grange. This open house was used to provide information to the general public on the community planning process and receive public opinion on the draft vision and goal
statements. Many members of the community attended and offered feedback and some suggested changes to the draft documents.

A second open house was held at McMillin Grange on March 1, 2007, to present the CPB’s final recommendations. This open house gave the public an opportunity to review and comment on the draft plan prior to its transmittal to the Pierce County Planning Commission and County Council. The CPB used the open house forum to solicit important community feedback regarding their proposed recommendations.

SURVEYS, ASSESSMENTS, AND OTHER COMMUNITY INPUT

ALDERTON-MCMILLIN COMMUNITY PLAN SURVEYS

Surveys were distributed at both the 2005 and the 2007 open houses. The intent of the 2005 survey was to solicit input on a variety of issues including perceived quality of life; adequacy of facilities and services within the plan area; quality of the natural environment; and location and intensity of residential, commercial, and industrial uses. The 2007 survey was intended to gather input on the proposed community plan. Respondents were provided space at the end of each survey to add their own comments.

AGRICULTURAL STRATEGIC PLAN

During the 2004 review of the Pierce County Comprehensive Plan to ensure compliance with the state Growth Management Act, Pierce County made substantial changes to the way agricultural lands were designated. A number of questions and issues arose from the discussions regarding the future of agriculture in Pierce County. Pierce County completed two studies to assess the future of agriculture and potential strategies that were needed to address significant issues facing the agriculture industry.

The Phase I report was conducted from July-August 2004 by American Farmland Trust and was intended to initially answer questions raised during the 2004 Comprehensive Plan update and layout a description of the costs, timelines and information needed to carry out a more detailed comprehensive report. The Phase II report was contracted to Barney and Worth, Inc. and Globalwise, Inc. and carried out from August 2005 to January 2006.

The Phase I report entitled “The Suitability, Viability, Needs, and Economic Future of Pierce County Agriculture” examined agricultural issues related to the: 1) Suitability, protectability, and reclaimability of County farm soils; 2) Economic viability of County agriculture; 3) Needs and strategies to support and protect agriculture; and 4) A strategic plan for economic development for County agriculture.

The Phase II report entitled, “Preserving Farmland and Farmers – Pierce County Agriculture Strategic Plan” provides a summary report of the comprehensive research conducted to prepare the strategic plan along with the supporting technical documentation. The research included a quantitative and qualitative assessment of Pierce County agriculture; a strengths-weaknesses-opportunities-threats (SWOT) analysis; a study of the agricultural industry’s trends; a summary of the policies and regulations that impact local agriculture; an examination of entry
barriers for farmers; a review of case studies of peer communities; identification of benchmarks to be used to measure the Agriculture Sector’s viability; a summary of stakeholder interviews; and a summary report of a farm community survey. The research led to a series of policy options intended to improve the economic environment for agriculture.

**RHODES LAKE ROAD**

In response to the anticipated growth on the Orting Plateau, the County Council passed Resolution 2001-80 in 2001 directing the County Engineer to begin investigating the possibility of establishing a new roadway in the vicinity of the existing Rhodes Lake Road East. As part of the process, Pierce County Public Works and Utilities Department is conducting a programmatic level environmental impact statement (EIS) to examine the need and means by which to meet the County Council’s direction for an “adequate, efficient, and safe roadway” for public use.

The Alderton-McMillin CPB has been involved with the development of the EIS through a variety of meetings, open houses, and newsletters. Public input included open houses on May 13, 2003; October 22, 2003; October 5, 2004 (EIS Scoping Meeting); and, October 20, 2005. Five informal community forums were held between March and November 2003. The community forums were informal sessions for both gathering information on existing conditions in the corridor area and providing information on alternatives being considered. Two newsletters were produced and distributed throughout the community and multiple meetings were held with neighborhood groups and with individual property owners throughout the project life.

Several public agencies and other organizations helped guide the development of the alternatives through membership on the Project Leadership Team (PLT). The PLT met 21 times since February 2003, and has been the primary avenue for organizations with a direct stake in the project to provide input. As an advisory group, the PLT has reached consensus on almost every element of the alternatives screening process and the alternatives evaluated in this Draft EIS. PLT membership has included: Pierce County, WSDOT, City of Bonney Lake, City of Orting, City of Sumner, and the Puyallup Tribe. In the early stages of RLR discussions, Tacoma Public Utilities, Puyallup Valley Preservation Group, Cascadia Development, and Falling Water development participated on the PLT but were not included as the project moved into the EIS phase as they have no jurisdictional responsibility.

Input from the public weighed heavily in decisions on what general geographical areas should be considered for build alternatives. Based on this input, the County considered alternatives well outside the original corridor area. Some of these alternatives included widening the 214th Ave. corridor, building an SR 410/Angeline Road Interchange, and building a South Plateau Connection (SPC). Public input also shaped the criteria used to evaluate and screen alternatives.
**Summary of the Alderton-McMillin Community Plan**

The Alderton-McMillin Community Plan contains policies and implementing actions for five subject areas or elements: Land Use Element, Community Character and Design Element, Natural Environment Element, Economic Element, and the Facilities and Services Element.

**Land Use Element**

The Land Use Element addresses the location and intensity of land uses throughout the community. A complete description of land use designations and their implementing zone classifications can be found in this element.

**Community Character and Design Element**

The Community Character and Design Element addresses community character, historic and cultural resources, design (commercial, residential, signs, etc.), viewsheds and other aesthetics. This element contains policies that will guide the creation of implementing design standards and guidelines.

**Natural Environment Element**

The Natural Environment Element examines the natural resources found in the area. The policies contained within this element address environmental concerns and projects that are necessary to improve environmental health.

**Economic Element**

The Economic Element analyzes the economy and considers a myriad of opportunities to keep Pierce County farmers in business. The policies within this element identify possibilities for increasing farm profits while reducing costs.

**Facilities and Services Element**

The Facilities and Services Element addresses infrastructure and services needed to support the community. Infrastructure includes capital facilities such as roads, trails, and parks.

**Plan Monitoring**

The Plan Monitoring section provides a framework both for monitoring the various actions undertaken to implement the plan and for offering recommendations to make adjustments to the actions in order to better fulfill each of the visions in the plan. This framework provides a means for measuring the effect of each action, identifies participants and their roles in monitoring the actions, lays out time frames for monitoring, and specifies how the monitoring...
program should be documented. Information from this program will be used in the next plan update cycle to help identify what changes the communities plan may need in order to attain specified goals and meet the visions in the plan.

IMPLEMENTATION

The plan also contains proposed actions, located at the end of each element, which serve to implement various plan policies. These actions are grouped into short-term, mid-term and long-term endeavors. Short term actions should occur immediately or within one year of plan adoption. Mid-term actions should be completed within 2-5 years. Long term actions should be completed within 5-10 years of plan adoption. The party or parties responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to a lead entity or entities as the primary responsible party to complete.

VISION STATEMENT

We, the residents of the Alderton-McMillin planning area, wish to maintain our rural environment where the majority of our residents travel to neighboring urban areas for employment and to seek other services.

We envision:

- A rural environment providing rural development opportunities that sustains open space;
- A rural landscape in which our residents continue to experience tranquility though their surroundings;
- A local rural economy that is supported by economically viable farming activities and small-scale services;
- A transportation and road network that supports the rural character, emergency services, and agricultural machinery;
- A rural community not burdened by traffic congestion from the surrounding areas;
- The preservation of locally significant landmarks and community celebrations that connect residents, visitors, and future generations to the area’s pioneer heritage.
Chapter 2: Land Use Element

Introduction

The policies of the Land Use Element strive to maintain the Alderton-McMillin valley with a rural, agricultural character over the next 20 years. It is the goal of the community plan to preserve not only the rich agricultural soils of the valley farmland but to ensure economically viable farms. This would be accomplished through a variety of programs including a Transfer of Development Rights program for lands with existing farms or prime agricultural soils. Urban level residential, employment, and commercial growth are expected to occur in the surrounding urban areas and be directed away from the Alderton-McMillin community.

The purpose of the Land Use Element is to articulate a direction for future growth within the Alderton-McMillin community. The adoption of policy statements forms the basis of land use regulations for the community and provides directions to residents, businesses, the community, and investors. The Land Use Element serves as a decision-making guide for planners, Planning Commission, Hearing Examiner, and elected officials regarding both public and private development proposals.

Description of Current Conditions

The Alderton-McMillin community has been impacted by population growth over the past 30 years. While several subdivisions have been constructed, larger lots and rural farms dominate the landscape. The community has maintained the rural character, open space, and productive agricultural lands. The following information provides background on the existing land development patterns, population, and housing in the valley.

Existing Comprehensive Plan Designations and Zoning Classifications

The dominant land use pattern is and will continue to be rural and agricultural over the next 20 years. Currently, the plan area has a total of seven designations/zones – four rural zone classifications, one natural resource zone classification, and two urban zone classifications as illustrated in Table A-1 and on Map A-2: Historic Land Use Designations and Map A-3: Historic Zoning.

*Table based on Pierce County Assessor-Treasurer land use categories and parcel data including roads.

**Rural**

**RURAL NEIGHBORHOOD CENTER (RNC)**

In 1996 a Comprehensive Plan amendment recognized the intersection of 96th Street East and SR 162 as a Rural Neighborhood Center. This designation is intended for small-scale and light-intensity commercial uses. RNCs provide limited convenience shopping and services which meet the daily needs of the residents. All new development within this designation should retain a size and scale appropriate for maintaining the rural character. Commercial uses are limited and high density housing is not allowed.

**RURAL 10 (R10) AND RURAL 20 (R20)**

The predominant zoning of the Alderton-McMillin valley is Rural 10 and Rural 20. These designations are intended to maintain rural character and large tracts of land associated with a rural lifestyle. The R10 and R20 zones currently allow opportunities for resource-based industries such as agriculture, forestry, or mining, provided these uses do not require urban level services. Gas stations, retail shops, and stores are not allowed. However, smaller scale home-based and cottage industries are allowed provided they are incidental to a home. Residential densities allow a basic density of one dwelling unit per 10 acres or one unit per 20 acres, respectively. Bonus densities are not allowed due to the volcanic hazard potential of the valley. The minimum lot size for any newly created lot is one acre.
**Reserve 5 (Rsv5)**

The Reserve 5 designation and zone was established to accommodate future expansions of the UGA when the land capacity within the CUGA or satellite city’s UGA has been depleted. The Rsv5 allows for residential development at a density of one dwelling unit per five acres, with the criteria that only one of the proposed lots shall exceed 12,500 square feet (except that new lots may be increased to 21,780 square feet in the Rsv5 when residential densities are reduced to one unit per 10 acres) and shall be clustered in groups of not more than 12 lots.

The Pierce County Comprehensive Plan establishes specific criteria for expansion of a UGA including:

- Land capacity within the CUGA or UGA is evaluated and the need for additional land capacity is clearly demonstrated;
- The housing affordability and density objectives of applicable comprehensive plans have been monitored and evaluated;
- Demonstration that adequate public facilities and services can be provided to service urban development and ensure a high quality of life;
- Adequate land use regulations are in place to discourage sprawl and strip development.

**Natural Resource Lands**

**Agricultural Resource Land (ARL)**

The Agricultural Resource Land designation and zone represent lands that have been designed as having long-term commercial agricultural significance. The lands within this category meet the minimum guidelines outlined in WAC 365-190-050 and are comprised of lands that are primarily devoted to the commercial production of horticultural, viticultural, floricultural, dairy, apiary, vegetable, or animal products, or of berries, grain, hay, straw, turf, seed, Christmas trees not subject to the excise tax imposed by RCW 84.33.10-0 through 84.33.140, finfish in upland hatcheries, or livestock, and that has long-term commercial significance for agricultural production. ARL lands have both prime agricultural soils and a yield of 3.5 tons per acre per year. Alderton-McMillin has approximately 3,460 acres or 31% of the land area in ARL — some of the largest, intact agricultural lands still in existence in Pierce County.

**Mineral Resource Overlay (MRO)**

The Mineral Resource Overlay identifies lands that are intended for long-term mineral extraction activities. Typically, lands designated as MRO have an existing surface mining operation that has been permitted through the Washington Department of Natural Resources (WDNR) and a County issued conditional use permit or historic unclassified use permit, which dictates time limitations, performance standards during mining activities, and reclamation actions.

There are 302 acres of designated MRO land within the community, representing 2.7% of the total land area. Two surface mines are in operation. Woodworth and Company own and operate a sand and gravel mine to the east of McCutcheon Road that includes approximately 58
acres. Pierce County Public Works and Utilities Department owns a site that is not currently being mined south of the City of Orting and is approximately 244 acres within the plan area.

**Urban**

The urban area encompassed within the Alderton-McMillin community is part of the urban growth area (UGA) for the City of Puyallup and is located north of East Pioneer and west of 141st Avenue East.

**Moderate Density Single Family (MSF)**

The Moderate Density Single-Family designation and zone is located within the CUGA and provides areas for urban level single-family and two-family residential development at densities of four to six dwelling units per acre.

**Employment Center (EC)**

The Employment Center designation and zone is located within the CUGA and allows for industrial, manufacturing, warehousing, and related office and service jobs. Within these categories a variety of uses may occur including product assembly, fabrication, processing, heavy trucking, wholesale activities, corporate office, and office park development. Some commercial uses that are subordinate to and supportive of employment uses are also permitted.

**Existing Land Uses**

Table A-2 summarizes existing land uses within the community and Map A-4: Historic Assessed Land Uses illustrates the distribution of the uses. This land use inventory was based on Pierce County Assessor-Treasurer data for each tax parcel.

</table>
The predominant land use is resource-based which includes agriculture, forestry, fishing, and mining, accounting for approximately 37% of the community. The second predominant land use is residential, approximately 29% of the community, and accounts for large and small lot sizes as well as a variety of housing types. The category also includes residential outbuildings which are typically associated with a residential use but are currently uninhabitable. The third predominant land use currently in the valley is vacant lands at 23%. The vacant lands category accounts for unimproved parcels and includes properties which have had dwellings removed or have abandoned activities such as farming. Public or quasi-public facilities, recreation, education, and transportation, communication, and utilities only make up about 8% of the total area. The smallest percent of land occupied by a certain type of use is commercial and industrial, comprising less than 2% of the community.

### Housing

The Pierce County Assessor-Treasurer’s records identify approximately 3,150 dwelling units within the plan area. Of this total, roughly 1,950 units are on parcels with a primary use code of single-family. Mobile homes/modular homes make up a little more than 460 units. Units associated with multifamily structures, duplexes and a fourplex, only account for less than 2.5% of the housing stock. The remaining units are associated with parcels under the open space taxation programs (timber, agricultural, open space), resource lands, and other non-residential activity as the principle use.

Mobile/modular homes comprise almost 15% of the housing stock. While these types of units are distributed throughout the area, the majority are located within 10 mobile home parks. Within the parks, the age of structures vary significantly with the majority manufactured after 1980.

Residential development within the plan area has been rapid since 2000. Growth has occurred at an average rate of 170 units per year. Representing roughly a 40% increase in units, the 850

**Population**

The plan area had a population between 5,000 and 5,500 in 2000. It is difficult to pinpoint the total number of households due to the geography of the census blocks. Review of the census geography reveals an average household size of 2.73 persons. Applying a vacancy rate between three and seven percent, reflective of the 2000 census, the plan area experienced a population growth of approximately 38% between 2000 and the end of 2005.

**Parcel Size**

While approximately 87% of the total parcels are primarily residential, they account for only 26% of the total acreage within the plan area. In terms of parcel size, only 20% of the total plan area consists of parcels less than five acres while nearly 80% of the plan area consists of parcels that are five acres or greater in size. Table A-4 illustrates the breakdown of parcel sizes within Alderton-McMillin.

The Alderton-McMillin Community Plan strives to preserve farmland, improve the financial viability of farmers, and maintain the rural character of the community into the future. In order to achieve these goals, some innovative land use planning strategies are introduced. Funding for farmland preservation and programs to improve agricultural viability is a very limited resource and time is of the essence. Land prices have risen dramatically pricing new farmers out of the market and allowing retiring farmers to sell their property for large residential lots at top dollar. The community plan recognizes the importance of a Purchase of Development Rights (PDR) program but also acknowledges that only a few purchases could be made with the potential funding sources. Transferring development rights is another tool to preserve farmland. The community plan proposes to transfer development rights of farms in the valley to targeted areas beyond the community plan boundaries.

The community plan strives to allow more options for farmers to market products locally by allowing certain retail uses on the farm site and developing and promoting agriculture-tourism. Opportunities are provided to sell produce, nursery items, plants, eggs, wine, arts and crafts, dairy products, and limited accessory retail directly from the farm. This allows the market to come directly to the farm which increases profits and reduces costs to the farmer.

The base density within the ARL and RF designations is one unit per 10 acres; however, two units per 10 acres may be achieved when there is a minimum of 20 acres and the resulting lots are clustered together. When subdividing to the maximum density, new lots that are created cannot be larger than one acre in size. The remaining unclustered area must be retained as open space or agriculture with an agricultural conservation easement.

The plan recognizes historic commercial and industrial uses through the designation of two Rural Neighborhood Centers and a Rural Industrial Center. The majority of the plan area will continue to be designated Rural 10 allowing only large lots in keeping with the rural character.
The community plan proposes nine land use designations and zone classifications. Table A-5 summarizes the acreages and Map A-1: Land Use Designations provides an illustration. Two new designations/zones are introduced to the community: Rural Farm (RF) and Rural Industrial Center (RIC).

Source: Based on Pierce County Assessor-Treasurer land use categories and parcel data.

The Rural 20, Rural 5, Moderate Density Single Family, and Employment Center zones remain the same as the current designations and zones. There are no changes to these designations/zones under the community plan and they would remain the same. There are also no revisions proposed to the Mineral Resource Overlay.

The Rural Neighborhood Center would be applied to the intersection of 96th Street East and SR 162 as it currently is configured consisting of approximately 10 acres located at three of the corners of the intersection. The RNC would consist of the same types of uses as presently allowed; however, to ensure the character and function of this commercial area, any uses that may be urban in function or intensity would not be allowed. This RNC meets the LAMIRD criteria as detailed in the Draft Supplemental Environmental Impact Statement issued April 2, 2007.

The Rural Neighborhood Center would be applied to the intersection of 128th Street East and SR 162. It consists of approximately 10 acres located at three of the corners of the intersection. All new development within this RNC shall retain a size and scale appropriate of the rural area.
**Rural 10 (R10) and Rural 20 (R20)**

The Rural 10 and Rural 20 designations are intended to continue to maintain rural character and large tracts of land associated with a rural lifestyle. The R10 and R20 designations/zones will continue to be primarily residential and allow opportunities for resource-based industries such as agriculture, forestry, or mining, provided these uses do not require urban level services. Gas stations, retail shops, and stores would continue to not be allowed. Small scale home-based and cottage industries are allowed provided they are incidental to a home. Where Rural 10 and Rural 20 parcels are currently allowed some commercial agricultural sales, these would not be allowed under the community plan so as to limit competition for the agricultural zoned lands. The density would continue to be one dwelling unit per 10 acres. Bonus densities would not be allowed due to the volcanic hazard potential of the valley. The minimum lot size for any newly created lot is one acre. The Rural 10 comprises approximately 46% of the community and Rural 20 approximately 6%.

**Rural Industrial Center (RIC)**

The Rural Industrial Center designation/zone allows light industrial uses that are related to food or agriculture or intermediate manufacturing and final assembly. It would not allow heavier industrial uses that produce substantial waste byproducts or wastewater discharge or noise impacts incompatible with a rural area. The RIC meets the LAMIRD criteria. The RIC is less than one percent of the plan area.

**Rural Farm (RF)**

The Rural Farm designation/zone includes properties that are one acre or greater and are currently being used for agriculture or properties that are receiving the current use assessment tax benefit for agricultural uses. This designation is intended to recognize properties that provide agriculture uses within the community but may or may not meet the size or soil criteria for designation as ARL. Agricultural uses allowed in ARL are also allowed in the RF designations as well as the protections and incentives afforded to ARL. The base density within the RF designation is one unit per 10 acres; however, two units per 10 acres may be achieved when there is a minimum of 20 acres and the resulting lots are clustered together. When subdividing to the maximum density, new lots that are created cannot be larger than one acre in size. The remaining unclustered area must be retained as open space or agriculture. The intent of the Rural Farm designation is to recognize existing farms that do not otherwise qualify as ARL and allow these farms the same commercial opportunities, rights, and regulations as ARL. RF comprises approximately 5% of the community.

**Agricultural Resource Land (ARL)**

The Agricultural Resource Land designation/zone is intended to preserve parcels that contain prime agricultural soils for long-term agricultural activities. These properties are identified through a countywide process. The community plan corrects a 2004 mapping error and contains 3,558 acres of ARL land, a slight increase from 2004. This designation allows for a variety of agricultural uses and related activities intended to preserve the prime soils while
ensuring economically viable farms. The base density within the ARL designation is one unit per 10 acres; however, two units per 10 acres may be achieved when there is a minimum of 20 acres and the resulting lots are clustered together. When subdividing to the maximum density, new lots that are created cannot be larger than one acre in size. The remaining unclustered area must be retained as open space or agriculture. The ARL comprises approximately 32% of the community.

Our community land use patterns reflect our connections to the land. New homes and other development are well planned in order to preserve open space and privacy. Services are located in the Rural Neighborhood Center while most of our services and employment are located in surrounding urban areas. We remain committed to supporting economically viable and profitable agriculture. The area will remain primarily a rural community that serves the region with locally grown and produced products, recreational opportunities, and a chance for all to experience our open spaces.

The goal of the rural land use policies is to ensure future decisions that impact the community are consistent with and continue the preservation of the rural character of Alderton-McMillin. This includes decisions related to land development, grant funding, roads, infrastructure and services, and anything that has the potential to change or impact the character and structure of the community.

**LAND USE POLICIES**

**GOALS**

The goal of the rural land use policies is to ensure future decisions that impact the community are consistent with and continue the preservation of the rural character of Alderton-McMillin. This includes decisions related to land development, grant funding, roads, infrastructure and services, and anything that has the potential to change or impact the character and structure of the community.

**RURAL RESIDENTIAL**

**GOAL AM LU-1** Ensure the Alderton-McMillin community remains rural in character over the next 20 years.

**AM LU-1.1** The rural character of Alderton-McMillin is defined and shall be maintained as working farms, forests, open space, and low density residential homes on large lots.

**AM LU-1.2** To maintain and preserve the rural character of the Alderton-McMillin community, the following types of non-agricultural activities are considered incompatible with rural character:

**AM LU-1.2.1** Activities that generate constant, ongoing noise;

**AM LU-1.2.2** Activities that generate large amounts of traffic within a short duration;
AM LU-1.2.3 Activities that are dependent upon an urban population draw (other than farm sales and tours);
AM LU-1.2.4 Activities that operate into night hours; or
AM LU-1.2.5 Activities that require extensive lighting or lighting that spills onto neighboring properties.
AM LU-1.3 Any major amendment to approved development applications shall include a condition of approval that requires the major amendment to meet design standards.

GOAL AM LU-2 Identify lands for Rural 10 and Rural 20 designations and ensure activities on those lands meet the objective of maintaining a rural lifestyle and rural character.
AM LU-2.1 Rural lands that are not devoted to resource uses, Rural Neighborhood Center, Rural Farm, or Rural Industrial Center shall be zoned Rural 10 or Rural 20.
AM LU-2.2 Within Rural 10 and Rural 20 designations, the dominant land use should be detached single-family homes on large lots.
AM LU-2.3 Allow limited civic uses within Rural 10 and Rural 20. Civic uses shall have size restrictions compatible with the rural area.
AM LU-2.3.1 Civic uses shall be supported by rural infrastructure and not require urban facilities or urban levels of service.
AM LU-2.4 Prohibit the following uses within the Rural 10 and Rural 20 designations.
AM LU-2.4.1 Agricultural sales and services; and
AM LU-2.4.2 Commercial uses (except as an accessory).
AM LU-2.5 Allow the following uses within the Rural 10 and Rural 20 designations:
AM LU-2.5.1 Nonprofit recreational uses;
AM LU-2.5.2 Forestry, surface mines, and crop production; and
AM LU-2.5.3 Home occupations and cottage industries.
AM LU-2.6 Cottage industries should be accompanied by site design requirements to mitigate noise, lighting, and visual impacts to neighboring properties.
AM LU-2.7 Home occupations and cottage industries that grow beyond the limits of the underlying residential designation and the allowances of the code shall be relocated to an appropriate commercial or industrial zoned area.
AM LU-2.7.1 Allowances shall not be made to continue to grow home occupations and cottage industries within the Rural 10 and Rural 20 designations.
AM LU-2.7.2 Permitted home occupations and cottage industries shall be reviewed every 5 years by the Planning and Land Services Department to ensure the activities on site are maintained and carried out in accordance with the conditions of approval.
AM LU-2.7.3 Strict enforcement action shall be taken when properties are out of compliance.

AM LU-2.8 Industrial use types should not be permitted within Rural 10, Rural 20, ARL, and RF zoned lands.

AM LU-2.9 Development proposals which have significant adverse impacts to critical areas or resource lands that cannot be mitigated to less than significant levels shall be denied.

AGRICULTURAL RESOURCE LANDS AND RURAL FARM POLICIES

GOAL AM LU-3 Allow and encourage a variety of uses in the Agriculture Resource Land and Rural Farm designations that are consistent with and support the long-term viability of farming.

AM LU-3.1 Administrative use or conditional use permits shall be required for farm activities that continue for more than 60 days and generate heavy traffic, excessive noise, or other significant impacts to the community.

AM LU-3.2 Regulations shall be revised to clarify that a retail facility owned and operated by a farm shall not be required to provide locally grown products year-round.

AM LU-3.2.1 During the local off-season, these stores may be stocked with non-local products if the store is predominantly dedicated to locally grown products during the harvest season, May through November.

AM LU-3.3 The intensity and design of retail structures located on ARL or RF zoned properties should reflect the rural character and be in an open air farmers market format or incorporated into a barn-like structure.

AM LU-3.3.1 New structures shall meet the agricultural needs of the farmer and sized to be consistent with the rural character.

AM LU-3.4 Outside storage should be controlled and fenced to provide adequate screening.

AM LU-3.5 Prohibit civic uses on ARL and Rural Farm lands.

AM LU-3.6 Allow opportunities for employee housing on agricultural lands.

AM LU-3.7 Consider developing a Puyallup-Carbon River Valley farm tour.

GOAL AM LU-4 Promote a more stable environment for farm operations and reduce non-farm competition for scarce rural land and the uncertainties that can lead to a gradual disinvestment in agriculture.

AM LU-4.1 Recognize that the community plan area is a rural agricultural community and prioritize agricultural uses and activities over residential housing.

AM LU-4.2 Sound agricultural practices may generate noise and odors.

AM LU-4.2.1 Agricultural land uses are a priority for this community.
AM LU-4.2.2 Work to educate realtors on the importance and impacts of agriculture.

GOAL AM LU-5 Allow two options for residential densities in the Agricultural Resource Land and Rural Farm zones.

AM LU-5.1 Residential density shall not exceed a maximum of 1 dwelling on 10 acres.

AM LU-5.1.1 Residential density may be increased to a maximum of 1 dwelling unit per 5 acres when in a clustered residential development on properties 20 acres or more with only 1 lot larger than 1 acre.

AM LU-5.1.2 The remaining unclustered area must be dedicated to open space or agricultural use through an agriculture conservation easement.

AM LU-5.2 Clustered residential developments should be designed and located in a manner that maintains a view of continued open space from the public realm.

PURCHASE AND TRANSFER OF DEVELOPMENT RIGHTS (PDR/TDR)

GOAL AM LU-6 Create opportunities for ARL and Rural Farm property owners to receive a financial return on their land holdings while conserving prime agricultural soils and open space to continue viable farming activities.

AM LU-6.1 Establish the following sending criteria to prioritize Alderton-McMillin properties for PDR transactions. The acquisition of development rights should be prioritized as follows (most important to least):

AM LU-6.1.1 Threat of conversion (magnitude, urgency);

AM LU-6.1.2 Importance (soil types, size, contiguous);

AM LU-6.1.3 Viability (on-site production/support facilities, water availability, drainage);

AM LU-6.1.4 Environmental values (benefits to fish and wildlife); and

AM LU-6.1.5 Community values/priorities (education, viewshed, aquifer recharge, stormwater, job creation).

AM LU-6.2 Outline an effective Transfer of Development Rights (TDR) program for Alderton-McMillin that will assist farmers and farm preservation.

AM LU-6.3 The Alderton-McMillin TDR program should be a component of a countywide TDR program.

RURAL NEIGHBORHOOD CENTER

GOAL AM LU-7 Recognize and improve the commercial Rural Neighborhood Center (RNC) at 96th Street East and SR 162, at 128th Street and SR 162, and at Bowman Hilton Road and SR 162 to provide limited rural commercial services that are not appropriate on other rural lands. Uses should provide services to the rural population and maintain rural character.
| **AM LU-7.1** | The County should work with local business owners and the community to develop a master plan for the RNC that will include site and design standards as well as a traffic control plan. |
| **AM LU-7.2** | The master plan shall retain the rural character and prevent traffic conflicts with SR 162. |
| **AM LU-7.3** | Prohibit commercial activities from sprawling along SR 162 or other major arterials through the establishment of a RNC. |
| **AM LU-7.4** | Allow civic and commercial uses that can be supported by rural facilities and services and that support the rural agricultural economy. |
| **AM LU-7.5** | Allow such uses as public safety services, transit services, agricultural products and supply sales, agriculture-related amusement and recreation uses, personal services, business services, dinner theaters, gas stations, restaurants, micro-breweries, and farmers market. |
| **AM LU-7.6** | Prohibit urban intensity or types of uses within the RNC. Such uses include fast-food restaurants, malls or strip malls, and large-scale commercial buildings or large traffic generators. |
| **AM LU-7.7** | Prohibit large civic uses such as schools and churches within the limited commercial area of the RNC. |
| **AM LU-7.8** | Allow infill development within the logical outer boundary of established RNC. |

**Rural Industrial Center**

| **GOAL AM LU-8** | Recognize and designate the McMillin Park of Industry area for rural industrial uses. |
| **AM LU-8.1** | Implement low impact development design standards where feasible. |
| **AM LU-8.2** | Require significant vegetative buffering/screening between industrial and non-industrial lands. |
| **AM LU-8.3** | On-site lighting should enhance visibility and security without projecting glare on surrounding non-industrial areas. |
| **AM LU-8.4** | Outdoor lighting should be focused downward and not protrude into the night sky or beyond property boundaries. |
| **AM LU-8.5** | Screen materials stored outdoors from non-industrial properties. |
| **AM LU-8.6** | Screen refuse collection/recycling areas and loading/delivery areas from neighboring non-industrial uses. |
| **AM LU-8.7** | Industrial activities should not produce excessive noise that impacts quality of life in adjacent non-industrial properties. |
| **AM LU-8.8** | Allow industrial uses that are: |
| **AM LU-8.8.1** | Food or agriculture related; |
AM LU-8.8.2  Intermediate manufacturing;  
AM LU-8.8.3  Final assembly; and  
AM LU-8.8.4  Warehousing and distribution.  

AM LU-8.9  Prohibit the following uses:  
AM LU-8.9.1  Heavier industrial uses that produce substantial waste byproducts or wastewater discharge;  
AM LU-8.9.2  Commercial service and retail businesses;  
AM LU-8.9.3  Contractor yards;  
AM LU-8.9.4  Waste treatment and storage;  
AM LU-8.9.5  Residential uses; and  
AM LU-8.9.6  Rendering.

MINERAL RESOURCE OVERLAY

GOAL AM LU-9  Ensure new mining activities are consistent with community plan goals and policies.  
AM LU-9.1  Ensure proposed mining activities do not cause adverse environmental impacts through flooding, landslide, or soil erosion to the valley and streams.  
AM LU-9.2  Recognize the community’s desire to retain the integrity of the vegetated hillsides for visual aesthetics. Proposed mining activities shall be designed and operated in a manner that retains the vegetated integrity of the hillsides and has limited visual impact on the valley.  
AM LU-9.3  Prohibit mining activities on ARL and Rural Farm properties.

URBAN GROWTH AREA EXPANSIONS

GOAL AM LU-10  An urban growth area expansion for an adjacent city may be considered through an annual Comprehensive Plan Amendment process only if the request meets the following criteria:  
AM LU-10.1  The City files an application meeting all legal requirements for UGA amendment applications specified in the PCC Chapter 19C.10, Procedures for Amendments to the Comprehensive Plan, and Chapter 19A, Comprehensive Plan;  
AM LU-10.2  A transportation plan and funding mechanism that addresses the buildout of the expansion area are in place or are proposed;  
AM LU-10.3  Implementing regulations that address urban design standards, buffers from rural and resource lands, and protection of viewsheds are proposed;  
AM LU-10.4  The application is processed consistent with the provisions of the TDR program;
AM LU-10.5 De-designation of ARL properties must be accompanied by a commensurate designation of ARL lands from other rural designations, provided that the new ARL lands meet the Comprehensive Plan criteria, and further provided that the new ARL lands are placed in a conservation easement that limits further future expansion of the UGA. The City must demonstrate that the requirements for de-designation in the Comprehensive Plan and the Growth Management Act have been met. Parcels involved in the ARL de-designation described herein would not be subject to the provisions of the TDR program. If there are not adequate rural lands to convert to ARL, the County may consider additional conservation easements on ARL properties within the Community Plan area.

AM LU-10.6 The City provides Findings that show any proposed ARL de-designation is consistent with applicable Pierce County and Washington State criteria including SEPA and is in the public interest.

AM LU-10.7 Chapter 19C.10 of the Pierce County Code, Procedures for Amendments to the Comprehensive Plan, has been amended to allow annual amendments for this purpose.

**Implementing Actions**

The following list of actions needs to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 2-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Land Use Advisory Commission (LUAC), Pierce County Planning and Land Services (PALS), Pierce County Economic Development (ED), Pierce County Parks and Recreations (Parks), Pierce County Public Works & Utilities (PWU), Washington State University Extension (WSU), and Tacoma-Pierce County Health Department (TPCHD).

**Short Term Actions (Upon plan adoption to 1 year)**

1. Amend the Pierce County Comprehensive Plan to adjust land use designations according to plan policies and maps including:
   - Establish a Rural Industrial Center designation.
   - Revise land use designations per the adopted community plan. (PALS)
2. Amend the Pierce County Development Regulations – Zoning to:
   - Establish the allowed uses in zone classifications per the plan policies.
   - Establish densities and dimensions for the zone classifications. (PALS)
3. Amend the Pierce County Zoning Atlas to adjust the zones for the Alderton-McMillin Community Plan area. (PALS)
4. Amend the Pierce County Development Regulations – Design Standards and Guidelines to require site design requirements for home occupations and cottage industries and within the Rural Industrial Center. (PALS)

5. Amend the Pierce County Development Regulations – Signs to require sign design requirements within the Rural Industrial Center. (PALS)

6. Develop a master plan for the Rural Neighborhood Center at 96th Street East and SR 162. (PALS)

7. Inventory, identify, and place qualifying properties on a priority enforcement list. (PALS)

8. Develop a public education and outreach program to provide information to the public about the Pierce County PDR and TDR programs. (PALS, WSU Extension)

9. Work with the Pierce County Assessor-Treasurer’s Office to research possibilities of reconciling property taxation with existing zoning and allowed uses pursuant to what is allowed in the zone. (PALS, Assessor-Treasurer’s office)

10. Implement Purchase of Development Rights (PDR) and Transfer of Development Rights (TDR) programs in Pierce County. (PALS, WSU Extension Office)

**Mid-Term Actions (1-5 Years)**

1. Establish a process to review conditional use permits on a five year basis. (PALS)

2. Create an annual monitoring report regarding the effectiveness of the Pierce County TDR program in preserving prime agricultural land. (WSU Extension Office)

3. Design and implement a realtor education/communication forum to ensure new home buyers understand agriculture is a primary activity in the Alderton-McMillin community. Noise and odors may be experienced. (PALS)

**Long Term Actions (5-10 Years)**

1. Map potential mineral resource lands within the community plan area and develop Mineral Resource Overlay (MRO) standards. (PALS)

Chapter 3: Community Character and Design Element

Introduction

Various natural attributes and built infrastructure have contributed to the past and present character of the planning area. Early settlers cultivated the fertile soils abundant on the valley floor. The land use patterns and buildings constructed by earlier settlers can still be observed from the less traveled roadways. Local residents and land owners are motivated to halt the degradation of the rural community’s character it has experienced from the explosive residential development on the surrounding hillsides and conversion of farmland along SR 162.

The Community Character and Design Element emphasizes the community’s vision by setting forth goals and objectives related to the preservation of the historic and cultural characteristics of the area. Desired design standards are outlined that promote commercial development and signage that can harmonically coexist in rural settings. Strategies are identified that promote the contribution of agriculture within the community, both presently and historically.

Description of Current Conditions

Overall Character

Farm land and open/forested spaces continue to shape the overall character of the plan area. Views from the neighboring ridgelines expose the large open areas that accommodate historical farmsteads, pasture lands, small pockets of clustered homes, forest lands, and the meandering rivers. This is not to say the entire plan area resembles a picturesque rural community. Traveling along SR 162 between Sumner and Orting conveys the contrary, an area in transition. Residential subdivisions haphazardly sprouted up next to working farms. In conjunction with random commercial buildings and signage, contiguous open spaces appear to be dwindling.

Residential growth to the south and east has drastically increased commuter traffic through the area. A line of continuous cars during peak commuting hours create an illusion of a drive-through community. Residents and visitors may sense an urgency, rush and anxiety; quite a different experience from the tranquil feeling of living in a rural countryside. Neighboring
growth has also morphed vegetated hillsides and ridgelines into noticeable executive homes seeking magnificent views of the valley and Mt. Rainier.

COMMERCIAL/INDUSTRIAL CHARACTER

The Alderton RNC has not experienced the same explosive retail commercial growth occurring in neighboring urban areas. Consequently, franchised or corporate identities are absent. Two newer buildings are designed to resemble Pacific Northwest architecture with the incorporation of wood materials and details. Several commercial buildings could be updated or restored. The commercial node is void of any significant landscaping or community amenities and lacks pedestrian connections.

The industrial development within the plan area is concentrated in two general areas, the McMillin Park of Industry and the employment center associated with the City of Puyallup along Pioneer Way. The structures are representative of typical non-discreet manufacturing and warehouse buildings. Absent architectural detail and little or no landscaping, neighboring open spaces, neighborhoods, and farms provide a significant contrast in the landscape.

Older commercial businesses are dispersed throughout the community. Their character varies as much as the services and products provided. Converted single-family homes accommodate offices and home occupations. A detached garage may provide space for a small home-based fabricating operation. During the growing season, locally grown goods are sometimes sold in smaller scale farm stands or converted agricultural buildings.

SIGNAGE

Commercial signs vary in condition, size, placement, and materials. Temporary banner signs may be attached to chain link fences. Reader boards may advertise events at the Grange or available produce at local farms. Various styles of wooden signs promote/publicize local businesses, industries, and home-based occupations. While most signs advertise for businesses located on the premises, a few signs direct travelers to off-site businesses. While the inconsistent signage may detract from the rural character, it may also convey a prevalent sense of autonomy that is typically associated with a rural setting.

VIEWSHEDS

Scenic views of Mount Rainier are abundant within the community. Older structures, such as bridges and agricultural buildings, are located throughout the area and reflect the historic rural and agricultural character. Unfortunately, in some instances these valued community
amenities are overshadowed by discarded material on properties and the disappearing vegetation along hillsides and ridgelines.

Cultural

Historical events and settlement patterns contribute to the cultural and built landscape of today. The Puyallup and Orting valleys played significant roles in the early agricultural economies of Pierce County. The farming families through the 1900s were a close knit community through social gatherings and agricultural activities. As converted agricultural properties have spurred increased residential growth, families are increasingly disengaged with surrounding neighbors and community affairs. This is evident through the decline in the membership of the McMillin Grange.

Local schools may provide the strongest link for residents in the community. Various school programs encourage local support through booster clubs for sports teams or attendance at school functions. Many residents may feel a stronger connection to the school district they reside within rather than the larger community.

HarvestFest is an annual countywide event that promotes Pierce County’s agricultural resources. With various Alderton-McMillin farms participating, the general public becomes connected to the people and land that produces locally grown food. The day concludes with a better understanding and greater appreciation of local farmers by HarvestFest participants.

Historic Resources

Preservation and enhancement of special and unique features and places that relate to a community’s heritage can bring economic benefits to the community through stimulating internal and external investment, increased visitors and promoting tourism in general, and by increasing pride among the community members. A variety of historic preservation activities throughout a community can support the efforts for resource conservation and also help improve quality of life. Examples include restoration of an old farm house, re-use of a historic schoolhouse or grange, rehabilitation of an old store and retaining its commercial use through compatible commercial additions, and incorporation of historic resources and landmarks into new recreational resources and facilities, including trails or scenic bike or auto routes.

There are a number of federal, state and local laws and programs that apply to historic and cultural resource preservation. Locally the Pierce County Cultural Resource Inventory provides an indication of those properties or structures that may hold historical or cultural significance. Table A-6 and Map A-5: Historic Resources identify historic and cultural resources within the
plan area. These resources include one room schools, stores, post offices, homes of notable persons, and granges.

| McMillin Store; northeast corner of Pioneer Way (SR 162) and 128th Street East               |

It should be noted that this inventory of historic and cultural resources is intended to be a preliminary list of resources of potential historic significance. Additional detailed individual property-based research is necessary to determine eligibility for listing in a historic register. Further, other resources may be added to this list in the future based on additional research.
DESCRIPTION OF DESIRED CONDITIONS

OVERALL CHARACTER

Residential and commercial growth should complement or restore the rural character within the community. Future development should create a land use pattern that depicts open spaces through agricultural and pastoral lands. Homes located on the neighboring hills and ridgelines should be integrated along with trees and vegetation. Future infrastructure improvements should incorporate context sensitive design to be conducive with a rural and agricultural character.

COMMERCIAL/INDUSTRIAL CHARACTER

Commercial development within the Alderton Rural Neighborhood Center should be designed as a compact node that complements the surrounding open spaces and residential development. Access from SR 162 should be limited, requiring shared access for future development. The architectural integrity of existing older structures should be preserved if substantial improvements occur to the exterior of the building. New buildings should be designed in a manner that is indicative of a historic rural commercial area. This would include architectural features such as sloped or stepped roof, porches integrated into storefronts, and the use of wooden or natural construction materials. Businesses that incorporate a franchise or corporate identity would not be present.

Commercial establishments beyond the Alderton commercial area should be designed to blend in with the surrounding agricultural and/or residential character. The placement of new structures should consider the proximity of surrounding homes. Service bays should be screened through the natural attributes of the site or additional landscaping. Structures should replicate historical agricultural building styles, including barns, through the application of architectural features such as a sloped or stepped roof, porches, and use of natural construction materials.

Additional industrial development at the McMillin Rural Industrial Center should be designed to create a perception of smaller scale. This may be accomplished through site design and architectural details. Perimeter landscaping should be required to screen parking lots and outdoor service/storage areas. The exterior walls should be modulated in a manner to decrease the building mass. Additional architectural detail should be applied to the primary building(s) entrances.

SIGNAGE

The continuous signage along various segments of SR 162 creates a perception of unattractive clutter, detracting from the surrounding natural and agricultural landscape. The streetscape of advertisements is a result of both legally and illegally erected signs. Existing illegal signs should be identified and removed. Damaged signage should be repaired or replaced. New signage
should be designed and erected in a manner that advertises the presence of the on-site business while maintaining a low profile along the streetscape. This could be accomplished through the use of natural materials and limiting the number and size of signs.

Signage should support the current and historical agricultural character of the area. Agricultural-themed murals should be encouraged on the sides of commercial buildings. Farms that include an on-site retail operation or other area businesses should be provided additional flexibility in advertising locally grown products. The flexibility may include, but is not limited to, additional temporary signage devoted solely to the availability of local produce or additional permanent signage for a restaurant indicating locally grown products are included on their menu.

**VIEWSHEDS**

The valley provides open spaces, farm lands, and meandering rivers as a desirable view to homeowners overlooking the valley. These overlooking views result in a premium land price. The degradation of these views may slow down the increase in property value or make the view undesirable. It would be expected for homeowners overlooking the valley to protect their views. Valley residents desire a mutual respect from neighboring communities for the protection of views from the valley bottom. Trees and other vegetation on the surrounding hillsides, ridgelines, and transportation corridors should be preserved or replanted in a manner that continues to provide great views of the valley to individual homeowners while concealing the evolving urban residential development from residents living below.

**HISTORIC RESOURCES**

The identification and preservation of historic places augments an adult’s and child’s sense of place within the plan area. It provides a link to the community’s rural and natural resource-oriented past. The current inventory of historic structures and sites should be further researched to identify their current condition and historical significance. Structures and sites should be prioritized as a precursor to a preservation strategy. Historic resources should receive special attention and review during the permitting process on any proposals for alterations, additions, or demolition. Signage should be installed along SR 162 and the Foothills Trail that educates residents and visitors on the area’s current and historical connection to agriculture.
Cultural Resources Policies

Cultural Development

Goal AM CR-1 Ensure that the agricultural heritage of the Alderton-McMillin community is preserved and perpetuated.

AM CR-1.1 Look for opportunities to educate the residents of the community’s agricultural heritage.

AM CR-1.2 Organize agricultural heritage tours to promote and market the community-based agriculture.

AM CR-1.2.1 Work with the local farmers, granges, agriculture-related organizations, and business to organize on-going tours of local farms and other agriculture-related businesses.

AM CR-1.2.2 Work with local schools and colleges to involve young people in the local agriculture.

Historic Preservation

Goal AM CR-2 Emphasize the importance of history in providing a sense of place in the plan area and preserve and prioritize historic structures, places, and traditions.

AM CR-2.1 Ensure the history of the Alderton-McMillin Community Plan area is conveyed to residents and visitors.

AM CR-2.2 The community should be afforded an opportunity to provide input into the review process when a nomination application to the Pierce County Register of Historic Places for a property located in the Alderton-McMillin Community Plan area is filed with the Pierce County Landmarks Commission.

AM CR-2.3 Promote the knowledge and presence of history in the community to provide a sense of belonging and tradition for those who live in or visit the community.

AM CR-2.3.1 Explore educational opportunities in conjunction with activities at the McMillin Grange.

AM CR-2.3.2 Work with the local school districts to integrate the community’s history into the curriculum.

AM CR-2.3.3 Disseminate historical information through kiosks or landmarks.

AM CR-2.4 Develop a historic tour of important places and structures in the community.

AM CR-2.4.1 Develop standardized identification signs for historic tour properties.

AM CR-2.4.2 Encourage property owners of historic properties and structures to be involved with the development of a tour.
**DESIGN AND CHARACTER POLICIES**

**GOALS**

The goal of the community character policies is to ensure future decisions that impact the community are consistent with and continue the preservation of the rural character of Alderton-McMillin.

**COMMUNITY DESIGN**

**GOAL AM D-1** Promote commercial and industrial development that is visually attractive, and compatible with the residential character and agricultural identity of the community while being respectful to the natural environment.

**AM D-1.1** Implement low impact development design standards where feasible.

**AM D-1.2** Locate required vegetation in a manner that provides buffering/screening between industrial and non-industrial lands.

**AM D-1.3** Outdoor lighting should enhance visibility and security without projecting excessive glare on surrounding property or into the night sky.

**AM D-1.4** Sustained noise that is generated by commercial activity should not negatively impact neighboring property owners.

**AM D-1.5** New commercial buildings within a Rural Neighborhood Center that are visible from public areas should convey a traditional rural or agricultural character.

**AM D-1.5.1** New commercial development within the Rural Neighborhood Center should be designed to complement adjacent businesses.

**AM D-1.5.2** Encourage connections between neighboring commercial properties.

**AM D-1.5.3** Promote harmonious commercial building architecture through the use of materials and textures.

**AM D-1.5.4** Prohibit the use of typical franchise/corporate architecture.

**AM D-1.6** Develop and adopt a preferred master plan design for the location of buildings, open space, access, and amenities within the Rural Neighborhood Center.

**AM D-1.6.1** Developments should be linked with walkways, common access points, and outdoor areas providing an atmosphere and identity that is unique to the area.

**AM D-1.6.2** Provide incentives for landowners within a Rural Neighborhood Center to conform to the appropriate adopted master plan design.

**AM D-1.7** Design standards for commercial activities on agricultural properties should be flexible.
AM D-1.7.1 At a minimum, setbacks between residential uses and commercial activities on Agricultural Resource Land and Rural Farm properties should equal or exceed setbacks from neighboring residential property.

AM D-1.8 Promote residential site design that establishes and connects open spaces.

AM D-1.8.1 Provide incentives for innovative site designs that cluster residential uses to preserve larger contiguous open areas.

GOAL AM D-2 Building and freestanding signs shall be designed and located in a manner that is not overly intruding

AM D-2.1 Pole signs shall be prohibited.

AM D-2.2 Decrease the amount of non-agricultural commercial signage in the community plan area.

AM D-2.3 Building and freestanding signs should be lighted indirectly.

AM D-2.4 The size of building and freestanding sign faces shall be limited.

AM D-2.5 The exterior base structure for freestanding signs shall be made of or faced with natural materials such as stone, brick, or wood.

AM D-2.6 Prohibit the use of flashing or rotating signs, video signs, internally lit signs, and roof signs.

AM D-2.7 The Rural Industrial Center shall be identified with one monument sign located along SR 162.

AM D-2.8 Limit the use of off-premise signs to temporary applications such as directional signage or community events.

GOAL AM D-3 Promote local seasonal agricultural products through the allowance of temporary signage.

AM D-3.1 Provide sufficient regulatory flexibility to allow local farmers to advertise available produce using temporary signage.

AM D-3.2 Implement temporary sign standards that allow a local farmer to acquire a temporary sign permit that may extend beyond 30 days to accommodate a product’s availability for marketing.

GOAL AM D-4 Locate required vegetation in a manner that protects and enhances the views of the ridgelines and hillsides from the valley floor.

AM D-4.1 Preserve the natural attributes along the hills and ridgelines above the valley.

AM D-4.2 Development on hillsides or along ridgelines shall be required to locate natural vegetation areas and tree preservation credits along the perimeter of the project to maintain vegetated views from the valley floor.

AM D-4.3 Minimize tree removal to accommodate view creation; encourage selective tree-liming as necessary.
AM D-4.4 Encourage neighboring communities to adopt policies and regulations that
naturally screen urban development on the hillsides and ridgelines from valley
residents.

IMPLEMENTING ACTIONS

The following list of actions needs to be completed in order to implement the policies
contained within this plan. They are arranged according to the timeframe within which each
should be completed: short, medium, or long term. Short-term actions should occur within one
year of plan adoption. Mid-term actions should be completed within 2-5 years. Long-term
actions should be completed within 5-10 years of plan adoption. The entity or entities
responsible for leading the effort to complete the action item is listed in parenthesis following
the action. Actions are assigned to the Land Use Advisory Commission (LUAC), Pierce County
Planning and Land Services (PALS), Pierce County Economic Development (ED), Pierce County
Parks and Recreations (Parks), Pierce County Public Works & Utilities (PWU), and Tacoma-Pierce
County Health Department (TPCHD).

SHORT TERM ACTIONS (UPON PLAN ADOPTION TO 1 YEAR)

1. Amend Title 18J, Design Standards and Guidelines to:
   • Establish site design standards and guidelines and a site plan review and approval
     process for all proposed commercial, civic and industrial development.
   • Establish site design standards and guidelines and a site plan review and approval
     process for all clustered residential development.
   • Establish architectural standards and guidelines and an architectural plan review and
     approval process for all proposed commercial, civic and industrial development.
   • Establish simple, facilitated standards for commercial related to agriculture. (PALS)

2. Amend Title 18B, Signs to establish sign standards and a sign review and approval
   process including:
   • Type and placement of signs.
   • Design details.
   • Sign maintenance.
   • Conveyance of information.
   • Flexibility for establishments selling locally grown products.
   • Nonconforming signs. (PALS)

3. Adopt an inventory of cultural and historic resources within the plan area that are
   significant for preservation, protection, or restoration efforts. These resources may
   include buildings, roads, sites, or districts within communities. (PALS)

4. Review Pierce County land use applications to determine if historic and cultural
   resources are listed for consideration. Amend as necessary to include this as a review
   item. (PALS)

5. Initiate a video documentary of the history of the community including interviews with
   long time residents and farmers. (PALS)
6. Update existing inventory of historic and cultural resources by field verification. (PALS)

**Mid-Term Actions (1-5 years)**

1. Establish a Land Use Advisory Commission for the community plan area. In addition to the normal development and design review responsibilities of the LUAC consider:
   - Initiate special events to promote the history within the plan area.
   - Engage in restoration actions for historic or cultural resources.
   - Work with individual property owners of historic or cultural resources to encourage preservation or restoration actions.
   - Establish a standard design for signage that identifies historic or cultural resources. (PALS, LUAC)
2. Amend Title 18A, Zoning cottage industry standards to provide adequate screening between cottage industries and neighboring properties. (PALS)
3. Amend Title 18J, Design Standards and Guidelines to:
   - Establish viewshed guidelines.
   - Develop context sensitive design guidelines for transportation and utility infrastructure. (PALS, PW-T, PWU)
4. Conduct an inventory of commercial signage within the plan area. The inventory should identify the total number of signs on each parcel, the type of sign, and year the sign was permitted. (PALS)
5. Work toward the placement of community profiles, including the current and historical role of agriculture in the plan area, at trailhead kiosks and along the Foothills trail. (PALS, Parks, LUAC)
6. Organize regular community events by working and coordinating with agriculture-related organizations located within the community. (LUAC)
7. Work with locally-based community development organizations, both public and non-profit, to provide for space and resources for public events and provide market mechanisms to promote agricultural heritage. (LUAC)

**Long Term Actions (5-10 years)**

1. Work with the local school districts to integrate the history of the valley into school curriculum. (LUAC)
2. Develop and distribute material that emphasizes the area’s current and historical connection with agriculture to local homeowner associations to provide community awareness and identity to residents. (PALS, LUAC)
**Map A-5: Historic Resources**

Chapter 4: Natural Environment Element

INTRODUCTION

The Natural Environment Element addresses the protection and conservation of natural resources. The Alderton-McMillin community is steeped in traditions dependent upon the land and its resources. The community plan policies and action steps strive to ensure these resources are not only available and enjoyed by future generations but that over time where degradation has occurred, restoration will occur also.

DESCRIPTION OF CURRENT CONDITIONS

The Alderton-McMillin community has experienced a tremendous amount of change over the past thirty years. Rural resource industries within the plan area, such as agriculture, forestry, and mineral extraction, have affected natural systems. Some of the main problems within the plan area include flooding caused by surface water or groundwater, surface water impairment, stream degradation, and riparian habitat degradation due to stormwater runoff. However, much of the plan area still remains as agricultural and rural residential and, as a result, has incurred fewer negative impacts to the natural environment than other more urbanized portions of the County.

AIR RESOURCES

CLIMATE

The Puget Sound region has a marine climate largely influenced by moist air from the Pacific Ocean traveling inland and releasing precipitation as the air masses rise over the Cascade Mountains. Climate conditions in the plan area are typical of the moderate marine climate with the average annual temperature of 50 degrees Fahrenheit and average annual precipitation of 35 to 50 inches.

PUGET SOUND AIRSHE W CHARACTERISTICS

An airshed is a geographic area where air pollutants from sources “upstream” or within the area flow and are present in the air. Most of the air pollution within the Puget Sound airshed
comes from urban development, emissions from motor vehicles, wood burning, and industrial activities. The region’s air quality is highly influenced by the Pacific Ocean and westerly wind patterns. Wind-driven mixing regularly occurs which effectively disperses air pollutants; however, temperature inversions can happen, resulting in stagnation and increased pollution levels. Air inversions are a relatively common occurrence in the Puget Sound area. During times of air inversions, air pollution will continue to accumulate until the weather pattern changes, with the amount of air quality degradation depending on actions such as the amount of vehicle use, mowing of lawns, and burning of wood stoves. The Olympic Mountains to the west and the Cascade mountain range to the east form the sides of a bowl that traps air pollution within the urban basin.

**AIR QUALITY**

Air quality affects the health of people and the environment. Air pollution has been linked to several human lung and heart related diseases, including asthma and cancer, and has been shown to decrease lung function in children. Air pollution affects the environment by harming soil, water, crops, forests, wildlife, decreasing visibility, and impacting global and local climate. Increases in global temperature (referred to as global warming) has resulted from an accumulation of greenhouse gases such as carbon dioxide, methane, and chlorofluorocarbons in the atmosphere. Greenhouse gases trap the sun’s heat as it is radiated from the earth, preventing this heat from escaping back into space, thus warming the earth’s temperature. One of the main contributors to greenhouse gases is discharge from motor vehicles. In Washington State, the effects of global warming results in reduced snow pack, low summer stream flows, more winter flooding, increased coastal erosion, reduced water supplies for people and agriculture, and further loss of salmon habitat. In addition to these impacts, air pollutants also damage the economy. The Washington State Department of Ecology estimates that the annual cost to Washington’s economy from air pollution-related death and illness is at least $500 million. The main sources of air pollution in Washington State come from motor vehicles (over 50%) and smoke from outdoor burning and wood stoves.

The Puget Sound Clean Air Agency (PSCAA), in cooperation with the Washington State Department of Ecology (DOE), monitors air quality in a four-county region (Snohomish, King, Pierce, and Kitsap) for compliance with federally established standards. PSCAA monitors six criteria air pollutants (CAPs) for which the U.S. Environmental Protection Agency (EPA) has established national ambient air quality standards (NAAQS). These criteria air pollutants are:

- Particulate Matter (10 micrometers and 2.5 micrometers)
- Ozone
- Nitrogen Dioxide
- Carbon Monoxide
- Sulfur Dioxide
- Lead

In 2004 PSCAA added information on air toxics (over 400 air pollutants beyond the six CAPs) which don’t have federally set standards but have been associated with a broad range of adverse health effects, including cancer. In 2005, PSCAA also added fine particulate matter
monitoring information. According to the PSCAA 2005 Air Quality Data Summary Report, air quality within Pierce County in 2005 was classified as meeting federal standards and, as described in the PSCAA’s Air Quality Index (AQI), generally ranged between good to moderate with a few brief periods of time classified as unhealthy for sensitive groups.

While the region has never violated the PM$_{2.5}$ federal standard, fine particulate matter is a main pollutant of concern in the Puget Sound area. Because of its adverse health effects, PSCAA has established a health goal for fine particulate matter. Monitoring sites in three of four counties (Snohomish, King, and Pierce) continue to exceed this goal. If proposed federal standards are enacted for fine particulate matter then PSCAA will need to increase efforts to reduce fine particulate matter including wood smoke emission reductions. PSCAA has the authority to issue burn bans to protect human health during high particulate matter events and in February and December 2005 two such burn bans, totaling 16 days, were issued.

In addition to fine particulate matter, ozone levels remain a concern in the Puget Sound region because concentrations have not reduced as significantly as precursor pollutants have. Air toxics are also present in the Puget Sound airshed at levels that pose adverse health effects. These health effects include but are not limited to increased cancer risk and respiratory, cardiovascular, and neurological effects.

Air quality within the plan area is generally consistent with that of Pierce County and the greater Puget Sound region.

**Earth Resources**

Topography within the plan area is characterized by a wide, flat valley bottom bisected by the meandering Puyallup River and abrupt valley walls on either side. Valley walls climb an average of 500 feet before leveling to hilly terraces. Volcanic processes and glaciations formed the Puyallup River Valley. Scouring from the Vashon glaciations formed the deep, northerly trending Puyallup Valley. The topography in the Puyallup and Carbon River valleys was also affected by historic lahar events originating from Mount Rainier.

**Soils**

Soil types determine the ability of the ground to absorb rainfall and dictate appropriate levels and types of development. The main soils types in the valley floor include Orting loam, Puyallup fine sand loam, Pilchuck (loamy) fine sand, and Sultan silt loam. The predominant soil types in the ridge areas above the valley are Everett gravelly sandy loam and Kitsap silt loam. The Puyallup-Sultan Association along the Puyallup River was formed in alluvium deposited by flood waters. Puyallup soils are well-drained, whereas Sultan soils are moderately well-drained. Septic systems in Puyallup soils are moderately prone to failures from wetness. In Sultan soils, septic systems also are prone to failure during the rainy season because of the high-water table. Everett soils are somewhat excessively drained. Septic systems in Everett soils can endanger groundwater supplies because this soil is highly permeable.

Pierce County Surface Water Management classifies soil types into hydrologic soil groups A through D, which range from low runoff potential with high infiltration capacity (group A) to
high runoff potential with low infiltration capacity (group D). Group A and B soils typically include sandy loam soil types such as Spanaway gravelly sandy loam, while Kapowsin gravelly loam is an example of a group D soil. These soil groups become indicators of which areas are more susceptible to surface water runoff, flooding, and groundwater recharge problems. For example, soils with high infiltration capacity can result in insufficient filtration of runoff pollutants, which results in inadequate protection of groundwater quality. The poor draining soil types may contribute to septic failure and quick surface runoff that creates flooding even during smaller storm events.

The majority of soils within the valley portion of the plan area range from Group B to Group D soils. These soil groups have moderate to very slow infiltration rates and slow rate of water transmission. The soils around Canyon Falls Creek area are classified as Group A which has a high infiltration rate and high rate of water transmission.

**LANDSLIDE AND EROSION HAZARD AREAS**

Landslide hazard areas are areas potentially subject to mass movement due to a combination of geologic, seismic, topographic, hydrologic, or manmade factors. Landslide hazard areas can be identified by the presence of indicators such as steep slopes, areas with active bluff retreat or that exhibit sloughing or calving of bluff sediments, areas with skewed trees or that have tension cracks or other types of erosion and/or ground rupture, and areas of historic failures.

A large portion of the plan area is located in the Puyallup River Valley. This valley has steep ridges on either side that quickly have a gain of about 500 feet in elevation. These two ridge areas are classified as potential landslide hazard areas. The areas around Fennel Creek are also classified as potential landslide hazard areas. (See Map A-6: Potential Landslide Hazard Areas)

Potential erosion hazard areas are those areas subject to erosion through either loss of soil, slope instability, or land regression. There are three types of erosion hazards including:

- **Shoreline Erosion Hazard Areas** - areas within 200 feet of a freshwater (lake or pond) or marine (Puget Sound, tidal marshes, and estuaries) shoreline, as measured landward perpendicularly from the edge of the ordinary high water mark.
- **Riverine Erosion Hazard Areas** – areas located within the lateral extent of likely watercourse channel movement due to bank destabilization and erosion, rapid incision, and shifts in location of watercourse channels. These areas are referred to as channel migration zones and regulated as flood hazard areas.
- **Soil Erosion Hazard Areas** - areas identified as having slopes of 20 percent or greater and that are classified as having severe, or very severe erosion potential by the Soil Conservation Service, United States Department of Agriculture (USDA).

The Puyallup and Carbon Rivers have a history of large-scale channel movement. Those portions of the plan area within the designated channel migration zones for the Puyallup and Carbon Rivers are classified as riverine erosion hazard areas. The ridgeline areas and Fennel Creek gulch are classified as potential soil erosion hazard areas and there are also small pockets of areas classified as potential freshwater shoreline erosion hazard areas. (See Map A-7: Potential Erosion Hazard Areas)
**Seismic Hazard Areas**

Seismic hazard areas are areas subject to severe risk of damage as a result of earthquake-induced landsliding, seismic ground shaking, dynamic settlement, fault rupture, soil liquefaction, or flooding caused by tsunamis and seiches. The river valley portions of the plan area are identified as potential seismic hazard areas. These areas have the greatest chance for liquefaction and/or dynamic settlement during a seismic (earthquake) event. Liquefaction hazard areas are areas capable of liquefying in response to earthquake shaking. Dynamic settlement hazard areas are underlain by loose or soft soil that could result in vertical settlement of the ground surface in response to earthquake shaking. (See Map A-8: Potential Seismic Hazard Areas)

**Volcanic Hazard Areas**

At over 14,411 feet high, Mount Rainier is a visible landmark within the southern Puget Sound region and dominates the skyline of the plan area. This glacier-clad, potentially active volcano is capable of spewing ash from pyroclastic eruptions, and generating large volumes of lahars and floods. Such hazard events have in the recent geologic past, inundated various watersheds, river valleys, and even reached the shores of Puget Sound.

Volcanic hazard areas are those land areas subject to pyroclastic flows, pyroclastic surges, or ballistic projectiles, lava flows, and inundation by lahars, debris flows, or related flooding resulting from geologic and volcanic events on Mount Rainier. Volcanic hazard areas also include areas that have not been affected recently, but could be affected by future such events. Volcanic hazard areas are classified into the following categories:

- **Case I Lahar Inundation Zones** – are massive in scale, can occur with or without eruptive activity, and the average reoccurrence rate is about 500 to 1,000 years.
- **Case II Lahar Inundation Zones** – are commonly caused by the melting of snow and glacier ice by hot rock fragments during an eruption, but which can also have a non-eruptive origin and the average reoccurrence rate is near the lower end of the 100 to 500 year range, making these flows analogous to the so-called “100-year flood” commonly considered in engineering practice.
- **Case III Lahar Inundation Zones** – can occur from events such as moderately large debris avalanches or small non-cohesive lahars, glacial outburst floods, or other types of debris flow, all of non-eruptive origin and the average reoccurrence rate is about 1 to 100 years. While occurring more frequently, these events are typically small and have generally not gone beyond the Mount Rainier National Park boundaries.
- **Pyroclastic-Flow Hazard Areas** – are subject to pyroclastic flows, pyroclastic surges, lava flows, and ballistic projectiles during future eruptions and the average time interval between eruptions of Mount Rainier is about 100 to 1,000 years.

The river valley portions of the plan area are identified as designated volcanic hazard areas for Case I and Case II Lahar Inundation Zones. While the time intervals between these types of events may range from 100 to 1,000 years the magnitude of the damage that is caused is extreme. During one of the biggest Case I lahar inundation events, known as the Osceola
Mudflow, which occurred almost 5,000 years ago, it is estimated that a wall of mud, with a consistency of viscous cement, 60 feet in height roared down the White and Green River Valleys and spilled across the Buckley Plain destroying and covering everything in its path. It appears that the lahar in this event traveled as far as Commencement Bay in Tacoma and Elliott Bay in Seattle. The much smaller Electron Mudflow event that occurred about 500 years ago, moved about 35 miles down the Puyallup River Valley as far as McMillin. (See Map A-9: Volcanic Hazard Areas)

**Vegetation**

The historic plant communities within the majority of the plan area were mixed woodlands (hardwoods and conifers ranging from early to late seral stage). At this time, the plan area contains a mixture of pasture grasses, agricultural crops, wetlands, and a mixture of lowland conifer forests and hardwood/shrubs. (See Map A-10: Tree Canopy Coverage (2002)) The eastern slope containing Canyon Falls Creek and Fennel Creek contains high tree cover. These trees help to stabilize the slope, uptake and cleanse excess water, and provide an aesthetic value to the Alderton-McMillin community.

**Water Resources**

Water resources are one of the defining natural features of the Puyallup Valley. The valley is abundant with two main rivers, numerous streams, floodplains, wetlands, and a high groundwater table. Resources need to be protected for fish and wildlife habitat, drinking water, and flood storage.

**Water Resource Inventory Areas (WRIAs) and Watershed Basins**

Water Resource Inventory Areas (WRIAs) are watershed planning units established by Washington State. Pierce County has further divided these WRIAs into 26 watershed basins. The entire Alderton-McMillin Community Plan area is located within the Puyallup watershed (WRIA #15). There are three watershed sub-basins within the plan area including the Lower White River Basin, the Lower Carbon River Basin and the Mid-Puyallup River Basin, which encompasses the majority of the plan area.

The Pierce County Public Works and Utilities Department-Water Programs Division is in the process of developing detailed basin plans for each of the 26 watershed basins in Pierce County. These basin plans will be considered an update of the Pierce County Storm Drainage and Surface Water Management Plan, adopted in 1991. The 1991 Plan established policies for how to manage stormwater runoff in unincorporated Pierce County. It identified capital improvement projects for urban drainage basins to reduce flooding and control the adverse effects of stormwater on water quality and other aspects of aquatic habitat, such as the accumulation of fine sediment in stream bottoms. Basin plans analyze the existing hydrologic and habitat systems and address the impacts of current and proposed land use development on surface water runoff, capital improvement projects, and habitat degradation. Information from basin plans provides some scientific analysis, which can be used to help develop preferred land use designations.
In 2005, Pierce County Water Programs Division completed a basin plan for the Mid-Puyallup River Basin. The Mid-Puyallup drainage basin is approximately 58 square miles of land and streams tributary to the Puyallup River from approximately River Mile 7 west of the City of Puyallup to the High Bridge at River Mile 26.5 south of Orting. The study area does not include the Puyallup River, the Carbon River, or the White River because these rivers are addressed in separate existing plans. Within the Mid-Puyallup River Basin, multiple streams comprise the natural drainage system and contribute flow to the main stem of the Puyallup River. Major tributaries include Alderton Creek, Van Ogles Creek, Ball Creek, Fennel Creek, Canyon Falls Creek, and Horsehaven Creek. Drainage in the basin has been significantly modified over time through farming and the progression of development. Much of the system today is controlled through manmade systems of conveyance pipelines, ditches, and other stormwater facilities.

Also in 2005, Pierce County Water Programs Division began characterizing storm drainage and surface water management problems in the Carbon River and Upper Puyallup River drainage basins to be addressed in the Carbon River and Upper Puyallup Basin Plan. Completion is forecast in winter 2008. The Carbon River/Upper Puyallup River Basin Plan will concentrate on areas draining to the tributaries of the rivers, not the mainstem Carbon River and Upper Puyallup River. Mainstem flooding is covered in a separate plan called the Puyallup River Basin Comprehensive Flood Control Management Plan. The effects of mainstem flooding on tributaries will be described in the basin characterization. Recommended solutions emerging from analysis of these conditions will be forwarded to the update of the Flood Control Management Plan.

To date, no basin planning process has been initiated for the Lower White River.

## Flooding and Surface Water Runoff

The County’s Critical Area regulations identify land areas that are most prone to flooding. These areas typically include lands adjacent to rivers and streams and pothole areas. In addition, as forested and natural vegetative cover is replaced with development, surface water runoff (stormwater) tends to increase both in volume and rate of runoff. Historically, rainfall would be utilized in forest evapotranspiration processes or stay on a site trapped in numerous small depressions, saturating the top several feet of soil. Flooding would only occur during larger storm events when the vegetation and soil was completely saturated. As development has occurred, vegetation has been removed and many of the small depressions were graded smooth, with the top several feet of soil removed or compacted. This type of development removed the ability of the land to contain the smaller storm events and subsequently flooding started to become a problem at even the smaller events, particularly in areas underlain by Type C or D soils which have a low infiltration capability. Increases in the number and capacity of connected drainage systems, in the form of ditches and pipes intended to drain properties and remove water quickly, also increase stormwater problems downstream.

Stormwater, that has not been properly addressed, can also result in water quality and habitat degradation, negative impacts to fisheries, and erosion. Stormwater related problems can be correlated to the amount of impervious surface within a watershed or basin. Recently published research indicates that water quality problems and habitat degradation start
occurring when a watershed reaches approximately 10% effective impervious surface. This percentage can be reached with a density of as little as one home per acre because of the network of roads needed to support this type of development.

**Potential Flood Hazard Areas**

Over 50% of the lands within the plan area are classified as potential flood hazard areas. These areas are mainly located adjacent to the rivers and creeks within the plan area. Lands located within potential flood hazard areas require a special review process for proposed development or building activities. (See Map A-11: Potential Flood Hazard Areas)

**Flooding Problems in the Mid-Puyallup Basin**

The Mid-Puyallup Basin Plan identified some specific flooding problems within the plan area including:

- Ponding water along the side of the road along Pioneer Way from 142nd Avenue Court East to the BNSF railroad crossing that does not extend over the roadway.
- Roadway flooding at the culvert under 106th Street East on Ball Creek and sedimentation in the creek has reduced capacity and fish passage. Also, erosion is occurring at a bend in the stream just upstream from the culvert.
- Flooding and a fish passage barrier at the culvert where Ball Creek crosses under the railroad on the west side of Pioneer Way.
- McCutcheon Road floods where it crosses Fennel Creek.
- Flooding at the Kelly Lake Road Bridge (206th Avenue East) that crosses Fennel Creek.
- Overtopping of the stormwater pond at the intersection between 108th Street Court East and 206th Avenue Court East that serves the Fir Ridge development (formerly Wembley Park).
- Road flooding at the 114th Street cul-de-sac that extends off of 205th Avenue East.
- Roadway flooding where Horsehaven Creek crosses at 150th Avenue East.
- Roadway flooding at 188th Street East where it crosses over Horsehaven Creek.
- Roadway flooding along Jansky Road near the 15200 block and severe erosion on Horsehaven Creek just upstream of twin 24-inch driveway culverts that sends sediment to downstream spawning reaches.
- Flooded properties at 224th Street East near 149th Avenue East.
- Roadway flooding at Jansky Road near the 21400 block.
- Several other areas have been placed on a monitoring list to pay close attention for any future flooding events.

Conceptual solutions for these issues are addressed in the basin plan as proposed capital improvement projects (CIPs). These conceptual solutions include actions such as:

- Replacing existing culverts with larger, habitat friendly box culverts.
- Creating new swales to existing ponds or developing new detention ponds where necessary.
- Completing channel and stream bank restoration activities.
• Reconstructing roadways and bridges.

**GROUNDWATER**

The unique topography of this plan area introduces issues of water interaction between the plateaus and the flat river valley. Multiple springs emerge from the hillside between the plateau and the valley. The springs serve as water sources for the homes below. These springs are fed by infiltration up on the plateau. An increase in impervious surfaces on the plateau could affect both the quantity and quality of water from these springs and reduce the amount of infiltration feeding these springs. In addition, the western portion of the plan area is underlain by a designated sole source aquifer. The depth of groundwater in the plan area ranges from one to more than 100 feet.

Aquifer recharge and wellhead protection areas are regulated areas that have a critical recharging effect on groundwater used for potable water supplies and/or that demonstrate a high level of susceptibility or vulnerability to groundwater contamination from land use activities. Regulated aquifer recharge areas include the potentially vulnerable aquifers as identified in map of Groundwater Pollution Potential, Pierce County, Washington, National Water Well Association, U.S. Environmental Protection Agency and the entire Clover/Chambers Creek Aquifer Basin boundary as identified in the Clover/Chambers Creek Basin Groundwater Management Program. Regulated wellhead protection areas are lands within the ten-year time-of-travel zone boundary of a Group A public water system well. The majority of the plan area is located within designated aquifer recharge and wellhead protection areas. (See Map A-12: Aquifer Recharge and Wellhead Protection Areas)

**WATER QUALITY**

Threats to water quality come from a variety of everyday sources such as agriculture, forest practices, septic systems, stormwater, construction activities, recreation, road runoff, and residential activities. These sources are often referred to as “nonpoint” sources of pollution. Point sources of pollution would include businesses and sewage treatment plants, which directly discharge into salt or freshwater. Given the rural character of the plan area, it is probable that the majority of water quality problems are attributable to nonpoint sources of pollution.

Section 303(d) of the federal Clean Water Act requires Washington State Department of Ecology (DOE) to prepare a list of water bodies that are not meeting, or will not meet water quality standards. The mainstem Puyallup River is on the 1998 303(d) list for biochemical oxygen demand (BOD), ammonia, and residual chlorine.

**WATER QUALITY PROBLEMS IN THE MID-PUYALLUP BASIN**

None of the Puyallup River tributaries located within the Mid-Puyallup Basin planning area are on the 1998 303(d) list. Waterbodies in the Basin included on the Candidate 2002/04 303d List (Category 4/Fish Habitat) are: Ball Creek, Fennel Creek, Canyon Falls Creek, and Horsehaven Creek. Although the Mid-Puyallup Basin does not contain streams with reaches on the 1998 303(d) list, care should be exercised to avoid contributing any additional BOD and ammonia to...
the Puyallup River. Various methods of reducing pollutants against water quality standards should be examined given the level of development planned for areas draining to the creeks and draining directly to the Puyallup River.

Land use impacts to water quality in the Mid-Puyallup Basin are primarily a result of historical agriculture use. Much of the Puyallup River Valley has been used for agriculture since the early 1900s and continues to be used this way today. Impacts to Mid-Puyallup tributary streams resulting from agriculture include elevated stream temperatures from lack of vegetated stream corridors; high fecal coliform levels from herd animals; and herbicides and insecticides in the water. In addition, the water quality of stormwater runoff from urban areas is an increasing concern in the Mid-Puyallup Basin as urban and suburban growth increases. Urban stormwater runoff typically has elevated levels of nutrients, metals, and fine sediment among others.

Another contributor to water quality (and quantity) problems in the community is from development on the hillsides. Construction on the hillsides flanking the Puyallup Valley greatly increases soil erosion and deposition in the valley. Trees and shrubs are cut so rainfall strikes the ground without being slowed by leaves, needles, and branches. Rain hits the ground with much greater energy with the potential to dislodge and move large soil particles. Groundcover and leaf detritus is removed with a similar effect, exposing soil to the direct force of raindrops. Soil, gravel, and debris are conveyed in concentrated rivulets and scour adjacent areas. Soil suspended in runoff is conveyed to streams and precipitates out where stream grades are low. Low gradient stream reaches occur in the valley. The precipitate (sediment and gravel) fill stream channels sometimes forcing flows to leave the original channel, flooding adjacent areas, and changing the extent of the floodplain.

The Mid-Puyallup Basin Plan identified some specific water quality problems within the Alderton-McMillin Community Plan area including:

- Iron bacteria in Alderton Creek proliferate in the open channel portion of the creek near the corner of Pioneer Way East and 88th Street East. Although the presence of iron bacteria is unsightly in Alderton Creek, it is neither toxic nor hazardous to public health.
- The groundwater table is shallow in the Puyallup River Valley and flooding has caused some on-site sewer systems to fail.
- Bank erosion along stream channels caused by unrestricted access by livestock and increased urban type development contributes to elevated turbidity levels, sediment accumulations, degraded habitat, and can cause other property damage. Alderton Creek, Ball Creek, and Horsehaven Creek all have segments of unprotected, low-gradient stream banks through agricultural areas which make it difficult for sediments from bank erosion to be flushed downstream. Each of these creeks has thick layers of fine material covering their gravel beds and smothering spawning gravel. This fine sediment reduces the flow of oxygen rich water to developing eggs and fills cobble spaces where insects live that provide food for developing fingerlings.
- Elevated temperatures have been recorded in Ball Creek, Fennel Creek, and Horsehaven Creek. During 2002, Ball Creek was proposed to be listed on the State’s 303(d) list of impaired waters for exceeding temperature standards.
• Fecal coliform bacteria enter streams and other waters from the feces of animals. Allowing cattle to have free access to streams elevates fecal coliform levels and can pose health risks to both humans and fish. Elevated fecal coliform levels have been recorded in several of the Mid-Puyallup tributaries. In 2002, Ball Creek was proposed to be listed on the State’s 303(d) list for exceeding fecal coliform standards. Grab samples collected by the Puyallup Tribe indicated fecal coliform levels exceeding State standards six times during the years 1999 to 2001 in Fennel Creek and Canyon Falls Creek.

Conceptual solutions for these issues include actions such as:

• Restricting livestock from free access to watercourses and waterbodies to eliminate defecation and erosion.
• Planting native vegetation and tree cover along watercourses for shading and filtration of pollutants and sediments.
• Installation of stormwater control projects to redirect stormwater runoff away from watercourses.
• Work with the Tacoma-Pierce County Health Department to correct on-site septic system failures.
• Increase monitoring and sampling areas.

**Shorelines**

The Washington State Shoreline Management Act (SMA) provides for the management of water bodies or watercourses identified as “shorelines of the state.” Areas under jurisdiction of the SMA include the water body/course, all lands within 200 feet of the ordinary high water mark, and associated wetlands and floodplains. In the Alderton-McMillin Community Plan area this classification is applied to the Carbon and Puyallup Rivers and Voights Creek.

Shorelines of the state are designated into five types of environments including Urban, Residential Rural, Rural, Conservancy, and Natural. These environments are similar to zoning classifications allowing different land uses, densities and activities ranging from the most intensive uses (Urban) to very limited uses (Natural). A majority of the Puyallup River is designated Rural Environment, which allows low density residential and intensive recreational and agricultural uses. A few small segments of the Puyallup River are designated as Conservancy Environment, which allows for outdoor recreation and low intensity agricultural and forestry uses. The Carbon River is designated Rural Environment downstream of the City of Orting and changes to Conservancy Environment from the northern city limits upstream. The portion of Voights Creek located within the plan area is designated as Rural Environment.

**Wetlands**

Wetlands are legally protected under the Federal Clean Water Act, the State Growth Management Act, and Pierce County Codes. Wetlands are those areas identified by the presence of water during the growing season, hydric soils, and the presence of a plant community that is able to tolerate prolonged soil saturation. These special land areas provide many important environmental functions including: reducing the impact or frequency of flooding, providing habitat, recharging aquifers, providing clean water for fish and other aquatic
species, and preventing shoreline erosion. Wetlands also provide visual buffers in the built landscape.

The plan area contains wetlands that are mainly located adjacent to the rivers and creeks and small pockets of scattered, isolated wetlands. There is a strong correlation between designated flood hazard areas and wetlands. (See Map A-13: County Wetland Inventory)

**Fish and Wildlife Resources**

**Fish Species and Habitat**

Eight anadromous fish species (Coho salmon, steelhead trout, Chinook salmon, chum salmon, pink salmon, sockeye salmon, cutthroat trout, and bull trout/Dolly Varden) are identified on the revised Washington State Department of Fish and Wildlife (WDFW) StreamNet maps as known and/or predicted to occur within the plan area (see Map A-14: Fish and Wildlife Resources). The location, status, origin and type, spawning and Endangered Species Act (ESA) listing information for each anadromous fish species within the plan area is depicted in Table A-7.

**Table A-7: Anadromous Fish Species in the Plan Area**

*Information from the 2002 draft Washington State Salmon & Steelhead Stock Inventory (SaSI), WDFW and from interviews with WDFW staff.

** Chinook Salmon, Bull Trout/Dolly Varden, and Steelhead Trout are listed as Threatened under the Endangered Species Act.

*** Bull Trout/Dolly Varden (WDFW has not done enough genetic analysis to determine if the basins contain one species of native char or both, and they’re difficult to distinguish, except by genetic analysis). Both have anadromous life history forms. Cutthroats were rated in 2000, and Bull Trout/Dolly Varden in 1998.

**** These fish are part of a coast-wide riverine population not yet characterized in WA.

Healthy stream habitats include cool, clean water, vegetated riparian corridors, clean bed material, a high degree of channel complexity, and a stable channel. A vegetated riparian corridor is land adjacent to the creek that has mature trees and shrubs for a distance from the creek of at least one tree height. The Mid-Puyallup Basin Plan includes a detailed discussion of the streams and creeks located within the plan area that provide fish habitat as follows:

- About half the length of Alderton Creek now flows underground through pipes, including the first 300-feet at the mouth of the creek. These pipes are barriers to fish passage. The open-channel sections that lie upstream of the pipe are mostly roadside ditches. Flow is intermittent.
- Van Ogles Creek is considerably degraded in many areas with sparse riparian corridors, high fine sediment content, low channel complexity, and at least three fish blocking culverts in the lower reaches. Despite its degraded condition, the Puyallup Tribe reports that Coho, chum, and, cutthroat use this stream for spawning and rearing.
- Ball Creek flows from the west across the flat valley bottom and is known to support Coho salmon and cutthroat trout even though the creek is listed as degraded. The habitat value in this stream is moderate but could be greatly improved by removing barriers to fish passage and working with property owners to restore riparian corridors.
- Fennel Creek drains most of the upland plateau in the northeast part of the Mid-Puyallup Basin. Chinook and Coho salmon use the lower reaches up to Victor Falls, which acts as a natural fish barrier restricting anadromous fish from the upper reaches. Fennel Creek has experienced a loss of riparian vegetation and channel complexity. Much of Fennel Creek’s upper reaches, from the headwaters of Fennel Creek down to Rhodes Lake Road near Victor Falls, has sparse or absent riparian vegetation. Beyond this location, the riparian corridors are fully forested to the creek’s mouth. Most areas adjacent to the creek are agricultural and rural-residential areas; however, the Fennel Creek Basin is currently undergoing rapid residential development.
- Canyon Falls Creek flows from springs on the east valley wall south of Fennel Creek. The creek supports small runs of Coho, chum, and pink salmon and winter steelhead as far
as McCutcheon Road. There is a culvert under McCutcheon Road that is creating a fish passage barrier. There is approximately 0.25 mile of spawning habitat above this culvert. The upstream reaches are good habitat with clean gravel, fully forested riparian corridors, and adequate water quality. At the end of the 0.25-mile stream reach is a commercial fish hatchery. Migrating fish are unable to go beyond the hatchery.

- Horsehaven Creek has its headwaters on the plateau above the Puyallup River Valley wall. The creek flows down into the valley and then across the flat valley bottom to the Puyallup River. The creek supports Coho and chum salmon and cutthroat trout despite the fact it has lost much riparian habitat, contains fine sediments and fish passage barriers, and has lost much of its channel complexity. Aerial photographs show sparse or absent riparian corridors along Horsehaven Creek in a number of places. There is also a fine sediment build up in several areas of the creek including one area in the lower reaches of Horsehaven Creek near the confluence with the Puyallup River that buries spawning gravels to a depth of several feet. This section of creek provides valuable refuge for spawning fish and rearing area for fingerlings. Much of the sediment is assumed to come from local hobby farms and other agricultural practices upstream. At several locations along Horsehaven Creek, stream banks have been damaged or continue to be damaged by livestock. These places are highly susceptible to erosion and contribute fine sediment and fecal coliform bacteria to the stream. Complex features such as large woody debris, pool riffle intervals, sinuosity, gravel bars, and bank vegetation have been removed from the stream greatly reducing habitat value.

<table>
<thead>
<tr>
<th>Wildlife Species and Habitat</th>
</tr>
</thead>
</table>

Wildlife species depend on a variety of habitat types to support their life cycles, including wetlands, riparian areas, and coniferous forests. Priority wildlife habitat and species locations have been mapped by the Washington State Department of Fish and Wildlife (WDFW) and are identified in WDFW’s Priority Habitat and Species Database. The plan area provides habitat for bald eagles, which are a listed species under the Endangered Species Act. Nesting habitat for bald eagles consists of upland woodlands and lowland riparian stands with a mature conifer or hardwood component. A variety of tree species, both alive and dead, are used for perching. Communal roost stands are generally uneven-aged with a multi-layered canopy, often on leeward-facing hillsides or in valleys. In addition, the WDFW Priority Habitats and Species (PHS) data indicates urban natural open space and wetland habitats within the plan area. (See Map A-14: Fish and Wildlife Resources)

Pierce County, in conjunction with WDFW and the University of Washington, has completed a wildlife biodiversity plan for Pierce County. This plan identifies areas within Pierce County that provide for the greatest diversity of wildlife species, based on existing land cover (vegetation zones) and the concepts of species richness and representation. The areas with the highest diversity and representation were designated as Biodiversity Management Areas (BMAs). Connecting corridors between the BMAs have also been established to facilitate wildlife movement between BMAs. The Puyallup River is designated as a biodiversity corridor. (See Map A-14: Fish and Wildlife Resources)
The Pierce County Comprehensive Plan contains policies that address open space. These policies specify open space criteria that include areas where natural processes (e.g., wetlands and tidal actions) occur or which contain unusual landscape features (e.g., cliffs and bluffs), wooded areas, environmentally unique areas, and parcels which provide connectivity in the open space network. The Map 2-5: Open Space Corridors identifies the designated open space corridor throughout Pierce County, which is based upon high priority open space categories (fish and wildlife habitat, wetlands, rivers, streams, creeks, marine waters, and wooded areas). Several County programs and development regulations provide for preservation of open space. These include Conservation Futures Program, Current Use Assessment Program-Open Space taxation, and Development Regulation bonus densities and design standards. Almost the entire plan area is located within a designated open space corridor.

**Description of Desired Conditions**

The community plan envisions a greater integration of the built or human environment with the natural environment. In the past 30 years, the greatest changes to the Alderton-McMillin community result from alterations in the areas surrounding the community rather than the community itself. A significant amount of development has occurred in Orting, Sumner, and the hillsides containing Puyallup, South Hill, and Bonney Lake. The community plan policies and action steps focus on three main areas: improving hillside development; flooding, and stream restoration.

Under the plan, it is hoped that development along the hillsides would no longer exacerbate erosion, sedimentation, and flooding problems on the valley floor and the aesthetics of the valley walls would be preserved through greater tree retention. The plan strives to address the impacts of hillside development through establishment of a task force to address the problems resulting from continual development of the hillsides surrounding the valley. The task force would consist of members of the community, the cities, and the County. Plan policies outline potential measures that could be taken in order to ensure hillside development does not increase erosion, sedimentation, and flooding on the valley floor. The plan also seeks to identify and correct existing problems resulting in excessive stormwater or sedimentation through best environmental practices such as limiting footprints, tree retention, and low impact
development techniques that reduce impervious surfaces and infiltrate stormwater rather than route it off site.

The community plan strives to alleviate flooding and restore stream corridor and bank functions for the Puyallup and Carbon rivers thus improving both water quality and quantity issues for fish, wildlife, and people (see Map A-15: Flood Restoration Projects). The plan builds upon the Mid-Puyallup Basin Plan and the Puyallup Tribe Restoration Site Catalogue by identifying restoration projects or community priorities for purchasing properties with public funds.

The valley community clearly demonstrates the high value we place on a healthy ecosystem. Our clean air and water, abundance of habitat for fish and wildlife, forested hillsides and open spaces help us retain our historic connection to the land. We integrate our building and development activities with the natural environment and the spectacular views.

It is the goal of this community plan to sustain the health, beauty, and function of the unique natural ecosystems of the valley for future generations. The valley’s abundant rivers and wetlands, fertile soils, clean air, forested hillsides, and open spaces provide numerous recreational opportunities, homes and habitat for fish and wildlife, and a healthy local food supply for the urban areas. The valley’s natural resources should be protected and where degraded, should be restored.

**ENVIRONMENT POLICIES**

**GOALS**

It is the goal of this community plan to sustain the health, beauty, and function of the unique natural ecosystems of the valley for future generations. The valley’s abundant rivers and wetlands, fertile soils, clean air, forested hillsides, and open spaces provide numerous recreational opportunities, habitat for fish and wildlife, and a healthy local food supply for the urban areas. The valley’s natural resources should be protected, and where degraded, should be restored.

The goal of the natural hazard policies is to ensure damage to property or people is minimized; evacuation routes, procedures, and actions are in place; and the public is educated about what to do and where to go in the event of a flood, earthquake, volcano, or landslide.

**WATER RESOURCES**

**SURFACE WATER RUNOFF, FLOODING, AND HABITAT**

**GOAL AM ENV-1**

Plant or retain trees and employ other natural methods to stop excess stormwater runoff, flooding, and erosion resulting from construction on hillsides.

**AM ENV-1.1**

Require new hillside developments to mimic pre-development hydrologic conditions.
AM ENV-1.2 Require development on hillsides to eliminate stormwater runoff consistent with the most recent stormwater manual.

AM ENV-1.2.1 Hillside developments shall be designed to absorb and slow the water through mechanisms such as:

AM ENV-1.2.1.1 Reducing the building and road footprint by increasing allowable roof-height, clustering the buildings, reducing densities, and shortening the roads;

AM ENV-1.2.1.2 Revising emergency vehicle access standards to reduce road width, length, and pavement material while ensuring safety;

AM ENV-1.2.1.3 Designing the sites with terraces to increase the flow length and treatment capacity in heavily vegetated swales connecting bioretention systems;

AM ENV-1.2.1.4 Locating buildings on the uphill side of the parcel to allow greater area of infiltration below the building;

AM ENV-1.2.1.5 Using permeable sidewalks, patios, driveways, and roadways; and

AM ENV-1.2.1.6 Using low impact development (LID) techniques when feasible.

AM ENV-1.3 Require maximum tree retention to ensure slope stability and assist with the uptake of water. Allow limbing or pruning of trees for views while not compromising tree viability or slope stability.

AM ENV-1.3.1 Developments on hillsides should be allowed to remove vegetation only in the area necessary for roads, buildings, and yards. Overall vegetation removal should not exceed 30% of the parcel.

AM ENV-1.3.2 Explore the establishment of a greenbelt/open space corridor along the ridgelines and hillsides bordering the valley.

AM ENV-1.4 Ensure the allowable hillside density is compatible with the carrying capacity of the land.

AM ENV-1.4.1 Consider adoption of performance standards for developments on slopes or hillsides.

AM ENV-1.4.2 Consider reducing allowable densities on hillsides.

AM ENV-1.5 Investigate and correct flooding and sedimentation conflicts resulting from existing hillside development.

AM ENV-1.5.1 Undertake a study of existing developments on the ridgelines and hillsides to determine the source of excessive stormwater or sedimentation.

AM ENV-1.5.2 Funding for studies and corrective actions should come from multiple sources including stormwater utility management fees, grants, and developers.
AM ENV-1.5.3 Update the Mid-Puyallup Basin Plan to include any capital projects or programs that address sedimentation and flooding resulting from hillside development.

AM ENV-1.6 Work with homeowner associations located on hillsides to understand and address the issues and correct existing problems.

GOAL AM ENV-2 In determining properties for purchase with public funds, use the following community preferences:

AM ENV-2.1 Priority 1: Headwaters of streams and creeks;

AM ENV-2.2 Priority 2: Mouths of creeks into the Puyallup River;

AM ENV-2.3 Priority 3: Wetlands that mediate stream flow and provide flood storage capacity; and

AM ENV-2.4 Priority 4: Wetlands that mainly provide habitat for wildlife.

GOAL AM ENV-3 Prioritize Mid-Puyallup Basin Plan capital improvement projects in the Alderton-McMillin community in the following order:

AM ENV-3.1 Priority 1: Projects that alleviate flooding;

AM ENV-3.2 Priority 2: Projects to reduce erosion and sedimentation;

AM ENV-3.3 Priority 3: Projects that provide greater conveyance efficiency; and

AM ENV-3.4 Priority 4: Projects that improve water quality and aquatic habitat.

GOAL AM ENV-4 Stream corridor restoration and removal of invasive plant species protects the carrying capacity of stream channels, reduces sediment deposition, protects or restores fish habitat, improves water quality, and reduces property damage and flooding. Restoration and invasive vegetation removal projects in Alderton-McMillin should reflect the following community priorities:

AM ENV-4.1 Priority 1: Projects that alleviate flooding or reduce property damage;

AM ENV-4.2 Priority 2: Projects that include both bank restoration and invasive species removal;

AM ENV-4.3 Priority 3: Invasive species removal; and

AM ENV-4.4 Priority 4: Bank restoration.

NATURAL HAZARDS

GOAL AM ENV-5 Recognize that the Puyallup-Carbon River Valley has the potential for several naturally occurring, catastrophic events.

AM ENV-5.1 Allow clustering of homes or businesses only when safe, available evacuation routes can be identified or constructed.
GOAL AM ENV-6  Pierce County should develop plans that protect and prepare community residents in the event of a hazardous incident.

AM ENV-6.1  Pierce County should invest financial and staff resources into future capacity improvements that protect local community residents.

AM ENV-6.1.1  The County shall include seismic retrofitting for the McMillin Bridge in the next Transportation Improvement Program (TIP) cycle.

AM ENV-6.1.2  The County should facilitate opportunities to implement the Bridge for Kids.

AM ENV-6.1.3  The County and community should engage in conversations with Tehaleh to investigate the possibility of an escape footpath from the valley to a staging area on the plateau.

AM ENV-6.2  Pursue opportunities to augment the local emergency siren system.

AM ENV-6.2.1  The County shall require all new public gathering places to be hardwired with NOAA weather radios.

AM ENV-6.2.2  Home builders should be encouraged to hardwire emergency weather radios into new construction.

AM ENV-6.2.3  Pierce County should distribute emergency weather radios to residents.

AM ENV-6.3  All evacuation routes out of the valley shall be clearly identified with signage within one year of plan adoption.

AM ENV-6.4  Pierce County neighborhood emergency teams should be widely established within the plan area.

AM ENV-6.4.1  Identify groups of people and individuals, particularly the elderly or young children, which may need assistance during an event.

AM ENV-6.4.2  Establish and distribute procedures and contacts through coordination with PC-NET.

AM ENV-6.5  Establish and implement a public outreach program to familiarize citizens with the County Hazards Mitigation Plan.

AM ENV-6.5.1  The public outreach program should include meetings with community groups, neighborhood associations, the grange, school groups, and business associations.

AM ENV-6.5.2  Prepare and distribute brochures describing the evacuation routes and general procedures at public and private locations throughout the valley.

AM ENV-6.6  Coordinate with the County Parks and Recreation Department to prepare educational information for incorporation into the Foothills Trail (review the UPS interpretive plan).
Educate local residents and business owners about the notification benefits of emergency weather radios.

**IMPLEMENTING ACTIONS**

The following list of actions needs to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 2-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Land Use Advisory Commission (LUAC), Pierce County Planning and Land Services (PALS), Pierce County Economic Development (ED), Pierce County Parks and Recreations (Parks), Pierce County Public Works & Utilities (PWU), and Tacoma-Pierce County Health Department (TPCHD).

**SHORT TERM ACTIONS (UPON PLAN ADOPTION TO 1 YEAR)**

1. Amend the Pierce County Development Regulations to include design criteria (such as clustering and building construction) and site development standards (such as Low Impact Development, maximum impervious surface coverage, minimum vegetation retention, tree retention) for hillside areas to reduce the negative impacts of stormwater runoff into the valley areas. (PALS)

**MID-TERM ACTIONS (1-5 YEARS)**

1. Establish a task force to address stormwater runoff problems coming from hillsides onto the valley areas. The task force process shall include:
   - Initiate a study to analyze hillside development and determine the source of stormwater runoff into the valley areas and identify recommendations to correct this problem.
   - Companion update within affected Basin plans to address necessary capital improvement projects to mitigate stormwater runoff problems from hillside areas.
2. (PALS, PWU, City of Bonney Lake, City of Puyallup, City of Sumner, South Hill LUAC, Graham LUAC, local landowners)
3. Work with the Public Works and Utilities Department – Water Programs Division to prioritize property acquisition within flood hazard areas. (PALS, PWU, LUAC)

**LONG TERM ACTIONS (5-10 YEARS)**

1. Implement basin plan recommendations to correct flooding problems in the plan area. (PWU)
2. Implement Puyallup Tribes recommended restoration opportunities on the Puyallup River. (PWU, Puyallup Tribe)
Map A-6: Potential Landslide Hazard Areas

Potential Landslide Hazard Areas

Adopted October 19, 2004 - Ord.#2004-56s
Effective March 1, 2005

Pierce County Code Title 8E regulates activities within Landslide Hazard Areas.

The boundaries of landslide hazard areas are approximate and are intended only to provide an indication of the presence of landslides. Additional landslide hazard areas that have not been mapped may be present.

Potential Seismic Hazard Areas

Moderate to High Potential Liquefaction Hazard Area

Moderate to High Potential Dynamic Settlement Areas

Adopted October 19, 2004 - Ord.#2004-56
Effective March 1, 2005

Pierce County Comprehensive Plan
Alderton-McMillin Community Plan

Map Disclaimer: The map features are approximate and are intended only to provide an indication of said feature. Additional areas that have not been mapped may be present. This is not a survey. The County assumes no liability for variations ascertained by actual survey. ALL DATA IS EXPRESSLY PROVIDED "AS IS" AND "WITH ALL FAULTS." The County makes no warranty of fitness for a particular purpose.

Sources:
1) Digital data: Washington Department of Natural Resources (2004), Division of Geology and Earth Resources 1:190,000 (Kadys). This is the report the map is based on.

Note: Liquefaction hazard areas are areas underlain by unconsolidated sandy or silty soils and a shallow groundwater table capable of liquefying as response to earthquake shaking. Dynamic settlement hazard areas are areas underlain by a significant thickness of loose or soft and not susceptible to liquefaction, but that could result in vertical settlement of the ground surface in response earthquake shaking.

Chapter 5: Economic Element

INTRODUCTION

Today there are approximately 4,700 acres in the Alderton-McMillin valley where the soils are rich with the sedimentary deposits from the Puyallup and Carbon Rivers. Agricultural practices were established in the valley as early as the mid-1800s. By 2006 valley farmers faced numerous challenges that inhibit their ability to continue farming while recovering a reasonable rate of return. Challenges presented to farmers are resulting from international trade practices, changes in market forces, corporate agricultural practices, land development pressures and values, traffic conflicts, and local and state regulations. Farms in Pierce County and all across the country are in a state of transition.

The Economic Element of the community plan builds upon the historical practices and natural attributes of the community by strengthening the agricultural industry through a myriad of policies, programs, and actions aimed at raising the income of the farmer while reducing the costs and barriers to farming. The community plan minimizes corporate agricultural practices and changes in market forces by directly linking local farms to local urban markets. Land development pressures and values are put onto a more level playing field through transfer and purchase of development rights programs and subdivision practices that keep farms intact. It is also recognizing the importance of allowing farmers the flexibility to sell farm goods and related uses throughout the year. Traffic conflicts are reduced by designing roads and road expansions to accommodate farm equipment. Local and state regulations are reduced and streamlined for farm operations. And finally, the community plan calls for lobbying at state and federal levels of government to raise awareness of and reduce barriers to trade practices that are hobbling American farmers.

To accomplish this task of ensuring the viability of current and future farms in the Alderton-McMillin valley, coordinated and committed leadership at both the County and state levels of government is required. The community plan calls for commitment to policy direction, establishment and funding of programs and action items, and monitoring of accomplishments. Every five years the community plan should be reviewed against the desired goals and, where the goals are not being met, adjustments should be made accordingly.
Description of Current Conditions

Pierce County has lost many acres of farmland to development in the past 50 years. While the number of acreage lost is unknown, it is anticipated that as the population of Puget Sound continues to grow, more farm acreage will be converted to housing or urban commercial developments. Puget Sound’s population is projected to increase by approximately 1.6 million over just the next 25 years. This urbanization places tough limitations on many farmers. New residents resist odors, dust/smoke, nighttime noise, crop spraying, and other activities of farm operations. Urban traffic congestion conflicts with farm vehicles that need to travel along County or state roads to access various growing plots. Further, as growth pressures increase, so does the cost of land. The price of land in Pierce County has escalated to a range that now extends from a low of $50,000 (in some rural areas) to as high as $1 million per acre (in more urban settings) – well beyond the economic value of land for agricultural use. The high price of land presents an attractive alternative to farming for many farmers. Land costs also pose the single greatest entry barrier to beginning farmers; the price of the land is simply too high.

Factors other than urbanization and development pressure are making it difficult for local farmers to stay in business and prosper. The rising costs for labor, production, processing, and shipping have driven up operating expenses and reduced profits for many farmers. The difficulty finding a steady farm labor force present challenges. Federal, state, and local regulatory requirements can be cumbersome, expensive, and time consuming. The local agriculture infrastructure (equipment dealers, farm lenders, etc.) is in decline and there are fewer local processors for agricultural crops. The concentration in grocery retailing has left fewer large buyers for Pierce County’s products. The bottom line is that changing market conditions and increased competition have forced many farmers out of business.

Data sources confirm the negative effects on Pierce County agriculture. The figures show the number and size of Pierce County farms are declining, along with farm incomes. By several standards, Pierce County is faring less well than its peers in the Puget Sound region (King, Skagit, Snohomish, and Thurston). “Covered employment” in local agriculture fell from 1,500 jobs in 1990 to 1,000 jobs in 2004, and Pierce County’s share of the regional total slid from 22% to 15%. Likewise, the number of farm enterprises providing covered employment declined from 152 to 91, leaving Pierce County with 16% of the regional total in 2004 versus 20% in 1990. Pierce County’s net farm income dropped even more precipitously to less than half its 1990 level.
Today, many farmers in the valley have a source of income other than the farm in order to maintain their household. The Pierce County Agriculture Strategic Plan, Phases I and II, presented opportunities to change the current agriculture outlook. Pierce County agriculture is in transition – moving away from the traditional industrial, wholesale model of agricultural business and toward a more intensive, value-added, direct market urban edge model. The public is more educated about the health benefits of fresh, organic foods. Farmers following a new business model are making a profit.

There is a growing trend toward community supported agriculture (CSA), which lowers the operation costs and reduces financial risks for farmers while providing a source of fresh locally grown foods for consumers. The USDA defines a CSA as “a community of individuals who pledge support to a farm operation so that the farmland becomes, either legally or spiritually, the community’s farm, with the growers and consumers providing mutual support and sharing the risks and benefits of food production. Typically, members or “share-holders” of the farm or garden pledge in advance to cover the anticipated costs of the farm operation and farmer’s salary. In return, they receive shares in the farm’s bounty throughout the growing season, as well as satisfaction gained from reconnecting to the land and participating directly in food production. Members also share in the risks of farming, including poor harvests due to unfavorable weather or pests. By direct sales to community members, who have provided the farmer with working capital in advance, growers receive better prices for their crops, gain some financial security, and are relieved of much of the burden of marketing.”

ECONOMIC INFORMATION FOR ALDERTON MCMILLIN

The Alderton-McMillin Community Plan area does not neatly fit any boundaries which are helpful for economic analysis. This section draws heavily on census data which is only available at the Block Group level, and therefore does not match exactly the boundaries of the community plan. However, most of the demographic characteristics are discussed in terms of percentages and Block Groups chosen for analysis sufficiently described the plan to make generalization to the plan area valid.

EDUCATIONAL ATTAINMENT

Table A-8 shows that the Alderton-McMillin area has a higher percentage of people who have completed high school, have some college without obtaining a degree, or have an associate’s degree than do the populations of Pierce County, Washington State, or the United States. There are lower percentages of people with bachelor’s and master’s degrees.

### Household Income

As illustrated in Table A-9, the Alderton-McMillin area has higher average, median, and per-capita income than the comparison areas, as well as a higher percentage with incomes over $50,000 per year.

### Laborforce Participation

Laborforce participation among residents of the Alderton-McMillin plan area is similar to Washington and the United States as illustrated in Table A-10. Pierce County as a whole has a slightly lower employed percentage, but higher rate of employment in the armed forces.

### Industry Employment

People who live in the plan area, regardless of where they work, have the highest concentrations of employment in the manufacturing, retail trade and construction industries as illustrated in Table A-11. These concentrations are also above the average employment for Pierce County, Washington and the United States. Other sectors with above-average employment concentration include wholesale trade and agriculture, forestry, fishing and hunting, although the number of people in those sectors is not high.

## Occupation Employment

Aside from examining in what industries people are employed, it also helpful to understand what types of work people are engaged in. Occupational Employment differs from Industry Employment because it looks at what people do at work rather than the primary output of their employer. For example, a person working in the Manufacturing sector may perform a clerical or sales function. Table A-12 shows that farmers and farm managers, personal care and service providers, production, material moving and construction trades workers, and legal workers, are all represented to a higher degree in the Alderton-McMillin area than they are on average in the comparison areas.

**JOURNEY TO WORK**

Workers in the plan area have a median commute time nearly 10 minutes longer than the average worker in Washington or the U.S., and a much higher percentage of people who commute 45 minutes or more as illustrated in Table A-13. Over 78% of the laborforce works in Puyallup, Tacoma, or outside of Pierce County, with 50% working in King County and fully 20% traveling to Seattle or further north into Snohomish County as illustrated in Table A-14.

LOCAL EMPLOYERS

Despite the number of people who travel outside of the plan area, there are 112 employer firms within the plan area, who employ over 1,500 workers as illustrated on Table A-15. The
highest employment is in the agriculture, forestry, fishing and hunting, construction and manufacturing sectors. Manufacturing has the highest average employment per firm.

* “Covered Employment” means people covered by Unemployment Insurance, and does not generally include self-employed, managerial or contract workers. The employees may be full-time, part-time, or seasonal.

### Description of Desired Conditions

Opportunities exist to strengthen and expand agriculture in Pierce County. The Agriculture Strategic Plan demonstrated opportunities exist for a healthy, strong agricultural economy. Among Pierce County’s strengths are: excellent growing conditions and proximity to the large, affluent Puget Sound market; the rising consumer demand for locally grown and organic products; key market infrastructure such as farmers’ markets, community supported agriculture (CSA) subscription farming, and restaurant buying are in place; and a remarkable diversity in goods produced. The wide range of producers include vegetable farmers; dairies, beef and other livestock producers; horse farms; specialty fruit growers with such crops as raspberries and rhubarb; open field ornamental plant nurseries; greenhouse operators; flower and bulb growers; Christmas tree growers; and landscape nurseries. In fact, Pierce County’s agriculture sector employs 1,900 workers and produces $115 million annually.

Finally, Pierce County is fortunate to have both Washington State University (WSU) and the Pierce Conservation District (PCD) engaged and active in assisting with the changing market, business strategies, and production challenges. WSU Pierce County Extension offers a full-time Agriculture faculty person responsible for assisting Pierce County landowners with technical assistance and research-based information related to agriculture. Extension is a resource to producers, processors, direct marketers, agri-entrepreneurs, and consumers and offers programs and workshops that benefit the different facets of the agriculture industry. Beginning
in 2007, Extension will house the Farming Assistance, Revitalization, and Marketing (FARM) program, which will provide support for area farmers. This program will be a single point-of-contact for farmers and the public and will provide technical, regulatory and marketing assistance to farmers, promote the benefits of consuming locally grown produce, and act as a coordinating office connecting farmers with other local farming support agencies and organizations. The Pierce Conservation District also provides free technical assistance and site specific recommendations based on property goals. Together with the landowner, the PCD develops a working and functional conservation plan that identifies current conditions and outlines reasonable and economically viable alternatives and best management practices (BMPs) that can help improve productivity while protecting soil and water quality. These practices may include composting, roof runoff management, pasture planting, sacrifice areas, filter strips, or other BMPs that allow the property owner to protect natural resources while also making the most efficient use of their land. The District works with the U.S. Fish & Wildlife Service, Washington State Department of Fish & Wildlife, WSU Extension, Washington State Department of Ecology, Washington State Department of Natural Resources, and Pierce County government to maximize benefits for Pierce County residents. Landowners can request help in a variety of areas, including: animal waste management, streambank fencing, replanting streambank areas, pasture management, improving fish and wildlife habitat, and support fish passage by designing and implementing fish ladders or road culvert replacement.

The community plan aims to strengthen and expand the agricultural sector to increase profitability in three key ways. The first strategy is to bring the market to the farms in Alderton-McMillin by allowing farmers to sell a variety of agriculture based goods on their properties. The second strategy is to connect the farm to the local urban market and create demand for local agricultural products. And the final strategy consists of a number of programs and policies to support and ensure the long term stability of agriculture.

**THE ALDERTON-MCMILLIN VALLEY MARKET**

Opportunities exist to bring the urban market to the Alderton-McMillin valley by allowing farmers to sell produce, nursery items, plants, eggs, wine, arts and crafts, dairy products and limited accessory retail directly from the farm. This allows the market to come directly to the farm which increases profits and reduces costs to the farmer. The community plan strives to achieve this by allowing the farmer certain agricultural retail uses on the farm site and developing and promoting agriculture-tourism through route identification, marketing, and education. This first strategy supports and strengthens the agriculture-based economy and lifestyle while retaining the rural atmosphere.
Agricultural tourism for Alderton-McMillin is likely to increase when the Foothills Trail is connected to the Puyallup River Trail thus directly connecting the urban populations of Puyallup and Tacoma with the valley. (See Map A-16: Park, Recreation, and Trail Facilities).

**THE PUGET SOUND URBAN MARKET**

Perhaps the greatest opportunity for increasing agricultural operations and profits exists through increasing awareness and actually creating greater demand in the urban areas for locally grown products. There are several action steps put forth in the community plan to accomplish this. Connections and formal programs are to be developed with urban institutions to purchase local food supplies including schools, universities, military bases, hospitals, prisons, major employers, and convention events. Assistance with marketing and professional advertising is requested in order to raise awareness and assist with creating the demand for local food products. Educating urban populations about food security, health, importance and benefits of buying fresh and local foods is another step in the strategy to develop a strong connection with Puget Sound markets. Local television features, bus signs, logos, and commercials should all be part of the effort to get the word out. Finally, the plan calls for increasing the community supported agriculture (CSA) market through coordinating produce and deliveries to the urban areas.

**POLICIES AND PROGRAMS**

The community plan calls for a number of policies and ongoing actions be established in order to truly create demand for local farm goods and reduce barriers to farming. The community plan requests the County establish an agricultural policy that provides commitment to courses of action that support local farms, raise awareness, promote coordination among agencies and farms, and recognize the importance of the economic sector of agriculture. The community plan also requests redundant regulatory restrictions be streamlined or removed and direct assistance be provided to farm businesses through such possible actions as establishing a Farm Emergency Fund or a Revolving Loan Fund for business improvement. Finally, the plan recognizes the need for expert assistance in both technical and financial realms to help farmers switch to new markets and new business plans. All of the actions should be closely monitored for effectiveness and adjusted accordingly when necessary.

**ECONOMIC DEVELOPMENT POLICIES**

**GOALS**

The goal of the policies is to preserve and protect productive agricultural lands and to identify and implement actions to improve the viability of agriculture by ensuring family wage incomes and profitability for local farmers and their families for generations to come. To make this goal a reality, the County must make a commitment, fund, and act upon policies and recommended actions that will allow for increased incomes and will decrease barriers for local farmers.
AGRICULTURAL ECONOMY

GOAL AM EC-1 Create permanent ongoing demand for Alderton-McMillin plan area farm products—create the market.

AM EC-1.1 Support a farmers market in a commercial center in Alderton-McMillin and/or a commercial center in South Hill.

AM EC-1.2 Assist with development of a farm cooperative where many farms operate as one for purposes of getting goods to market, buying materials in bulk, marketing products, and regulatory purposes.

AM EC-1.3 Grow a community supported agriculture (CSA) market through coordinating produce and deliveries.

AM EC-1.4 Develop an agriculture tourism program and route for Alderton-McMillin.

AM EC-1.5 Explore and encourage opportunities for agricultural recreation such as agritourism and U-Pick farms.

AM EC-1.6 Provide technical assistance to farmers to adjust to the changing market.

AM EC-1.7 Assess the type of assistance most needed by the farming community.

AM EC-1.8 Hire or connect with experts to provide knowledge and direct assistance in:

AM EC-1.8.1 Economic decisions, e.g., where there are needs in the local market not being filled thus providing opportunities;

AM EC-1.8.2 Business improvement, e.g., marketing products locally or how to increase value-added production opportunities; and

AM EC-1.8.3 Technical assistance, e.g., how to cost effectively convert to another product, become an organic farm, or comply with environmental and other regulations.

AM EC-1.9 Assign a farmbudsman as a single point of contact on agriculture permits, zoning, and environmental regulation to assist local farmers through the regulatory process.

AM EC-1.10 Establish a single place of contact for coordination and promotion of agricultural issues.

AM EC-1.11 Pierce County shall develop a monitoring program to evaluate the effectiveness of agricultural policies and programs.

GOAL AM EC-2 Provide tax relief to commercial Pierce County farms or those non-profit farms that are a commercial equivalent providing products to food banks or other non-profit organizations.

AM EC-2.1 Update and enhance tax incentives.

AM EC-2.2 Work to revise tax assessments to value productive agricultural lands at agricultural value rather than ‘highest and best use.’
AM EC-2.3  Consider reducing or eliminating surface water management fees.

IMPLEMENTING ACTIONS

The following list of actions needs to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 2-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Land Use Advisory Commission (LUAC), Pierce County Planning and Land Services (PALS), Pierce County Economic Development (ED), Pierce County Parks and Recreation (Parks), Pierce County Public Works & Utilities (PWU), and Tacoma-Pierce County Health Department (TPCHD), WSU Extension, Pierce Conservation District (PCD), Farm Assistance Revitalization & Marketing Program (FARM).

SHORT TERM ACTIONS (UPON PLAN ADOPTION TO 1 YEAR)

1. Amend Title 18A, Zoning to allow farm-related sales and uses in the ARL and Rural Farm zones. (PALS, FARM, LUAC)
2. Adopt an agriculture policy that coordinates various agencies and activities for sustaining Pierce County farmers. (PALS, FARM, WSU Extension, PCD, Pierce County Council)
3. Work with the Pierce County “Farmbudsman” to promote cooperative marketing and purchasing of agricultural products, subscription farms, public education and outreach on locally produced agricultural products, and provide technical assistance to farmers. (PALS, WSU Extension Office, PCD, FARM)
4. Initiate a study to compile a comprehensive regulatory review of federal, state, and local requirements for farming related activities including identification of regulatory barriers to farming practices. The study results should suggest proposed regulatory amendments at the local level to streamline the approval process for farming activities. (PALS, WSU Extension Office, FARM, PCD)

MID-TERM ACTIONS (1-5 YEARS)

1. Continue work with the Pierce County “Farmbudsman” to promote cooperative marketing and purchasing of agricultural products, subscription farms, public education and outreach on locally produced agricultural products, and provide technical assistance to farmers. (PALS, WSU Extension Office, PCD, FARM)
2. Provide technical business and financial assistance to farms adjusting to the changing market. (PALS, WSU Extension Office)
3. Provide technical assistance to farmers in addressing critical area issues related to farming activities. (PALS, WSU Extension Office, PCD)
4. Work with local agencies and groups to promote the Current Use Assessment Program for productive farm and agricultural lands. (PALS, A/T Office, WSU Extension Office, FARM)

5. Work with the Assessor/Treasurer’s Office to research possible changes to tax structure so properties are assessed at current use rather than “highest and best use.” (PALS, A/T Office, WSU Extension Office)

6. Develop a set of pre-approved base plans for common farm facilities. (PALS, WSU Extension Office, FARM, PCD)

**LONG TERM ACTIONS (5-10 YEARS)**

1. Work with local agencies and groups to develop a farmers’ market within a nearby commercial center. (PALS, ED, Graham Business Association, FARM, and WSU Extension Office, LUAC)

2. Develop a farm cooperative and enhance the community supported agriculture (CSA) market. (PALS, WSU Extension Office, ED, FARM)

3. Develop an agricultural tourism program and route for the Alderton-McMillin plan area. (PALS, WSU Extension Office, ED, FARM)
Chapter 6: Facilities and Services Element

Introduction

The Facilities and Services Element articulates the need for facilities and services that will implement the visions and goals of the community plan. Facilities and services are collectively considered ‘infrastructure’ and may include public or privately funded projects. The adoption of policy statements regarding infrastructure provide direction to investors and decision-makers about what investments are desired and needed by the community.

Alderton-McMillin is a rural community and hopes to remain rural into the future. As a rural community, urban infrastructure and services such as sewer facilities are not available within the plan area. The element focuses on the three main items important to this rural community: emergency services, transportation, and parks.

Description of Current Conditions

Parks and Recreation

There is one County park facility within the plan area in addition to the Foothills Trail. Riverside Park is approximately 40 acres and is located in the 7900 block of Riverside Drive. The western boundary of the park abuts the Puyallup River although no boating, fishing, or swimming access is available. The park contains a Frisbee golf course and a small BMX track that is not operated or maintained by the County.

The Foothills Trail was established in the early 1990s with the McMillin to Orting section constructed first. The trail is available to all nonmotorized vehicle users, such as in-line skaters, bicyclists, joggers, walkers, and strollers. Currently, the trail extends from the East Puyallup Trail Head to the City of South Prairie, approximately 13.9 miles. When complete, the Foothills Trail will span approximately 34 miles and connect the City of Puyallup to Orting, South Prairie, Buckley, Wilkeson, and Carbonado. About 45% of the overall trail is complete with the remaining 11 miles to be finished by 2009.

The Meeker to McMillin section of the Foothills Trail is a “Rail with Trail” wherein the trail parallels and is next to a short-haul operating rail. The trail was constructed in 2004-2005 and is 4.3 miles, paved with porous asphalt to a width of 12 feet and includes a five-foot-wide equestrian trail that adjoins the paved area. To access the trail a trail-head with parking and
restroom is located on 8th Street (the East Puyallup Trail Head), just south and east of the City of Puyallup.

Eventually, a link from the City of Tacoma Ruston Way/Schuster Trail to the City of Puyallup (Puyallup River Trail) and to the East Puyallup Trail Head is planned. The Tacoma link will be constructed when improvements are made to Levee Road along the Puyallup River. The Puyallup River Trail to the East Puyallup Trail Head is under acquisition and construction could start as early as 2007 (See Map A-16: Park, Recreation, and Trail Facilities).

**Transportation**

**The Roadway Network**

**State Highway Network**

The Alderton-McMillin Community Plan area is served by a network of state and County jurisdiction roadways. The Washington State Department of Transportation has designated SR 410 as Other Freeway/Limited Access and SR 162 as a Minor Arterial roadway. These two state highways frame a “T” of high capacity roads and provide access to and within the Alderton-McMillin Community Plan area. SR 410 serves the area with two interchanges, one at SR 162, the other lesser used facility at 166th Ave E. SR 162 carries both through traffic between major destinations as well as provides a measure of local access for the community residents and business. While most of this roadway is two lanes, there are dedicated turn lanes at certain intersections.

SR 162 has a posted speed limit of 50 miles per hour but the operating speeds vary by location and time of day. Two-way annual average daily traffic (AADT) is approximately 23,000 vehicles near SR 410. This roadway experiences significant congestion near its interchange with SR 410 especially during the pm peak hour, northbound in the morning hours, and southbound in the evening.

SR 410 as it passes through the Alderton-McMillin area is a four-lane limited access highway carrying as many as 52,000 vehicles per day. There are delays in the pm peak period of “homebound” Orting and Sumner residents as they take the ramps off SR 410 and access SR 162 via signal controlled intersections.

**County Roadways**

While the above state roadways offer higher capacity and speeds to motor vehicle traffic, the following County roadways are generally characterized by lower operating speeds, volumes,
and capacity. Pierce County classifies its roadways by (from highest to lowest) major, secondary, collector and local arterials. These roadway functional classification designations are found in Table A-16 below. The table also provides the local roadway volumes at select locations of the roadways.

**Table A-16: County Road Classifications and Volumes**

</tbody>
</table>

**Roadway Operations**

While much of the Alderton-McMillin Community Plan area falls within the rural area, it experiences varying degrees of traffic congestion often associated with urban areas. Much of the current traffic congestion that the community now experiences relates to movement oriented to the traffic destined to and from the City of Orting. As noted earlier, SR 162 traffic near the SR 410 traffic experiences delays at nearby intersections. The Orting-Kapowsin Highway has and will continue to experience increased traffic volumes as development in unincorporated Pierce County and Orting increases. Military Road East pm period traffic has experienced greater volumes along its length and increased queues at its intersection with SR 162. Map A-20: 2006 Roadway Operating Conditions shows the local roadway network’s AADT and their respective operating conditions as defined by the levels of congestion (from poor to good). Map A-21: County Roadway Functional Classifications illustrates the functional class for County roads in the area.

**Current Transportation Plan Recommendations**

Table A-21 shows the current Pierce County Comprehensive Plan transportation recommendations for state and County roadways in the community plan area. Map A-22: Existing Comprehensive Transportation Plan illustrates these projects. The Washington State Highway Systems plan currently calls for four lanes on SR 162 from SR 410 south to the City of Orting. It also recommends that HOV lanes be added to SR 410 from the SR 167 interchange to Church Lake Road. It should be noted that as of this draft document that it is likely that the
The proposed state systems plan will be developed as a “financially constrained” document. Based on the limited amounts of revenues available for the larger maintenance and operational needs of the state highway system, there is a strong possibility that only the most critical roadway improvements would be considered for state funding in the 20-year time frame. To date, there is an indication that the above noted improvements to SR 162 and SR 410 would be considered within the funded portion of this plan.

Pierce County’s Transportation Element recommends a number of improvements to key roadways in the community plan area. Table A-21 lists the planned improvements to key roadways in the community plan area including a new connection from the South Hill area through the extension of 176th Street East to the City of Orting. This would provide important connectivity to the south end of the community plan area with the Frederickson industrial area and the future Cross Base Highway that will connect to I-5.

The current Transportation Element also calls for less capacity expansion projects such as geometric improvements on Rhodes Lake Road, rehabilitation/reconstruction on Angeline Road East, and the addition of shoulders on Orville Road.

The Alderton-McMillin Community Plan examined a wide range of transportation related issues as it developed the transportation related recommendations and policies. This plan reviewed the operating conditions of the roadways, the planned levels of development affecting the study area, and the planned roadway improvements. There are two other significant transportation planning efforts led by the County that should be discussed here: Rhodes Lake Road Corridor Study and Traffic Impact Fees.

---

**The Rhodes Lake Road Corridor Study**

Pierce County initiated the Rhodes Lake Road Corridor Study (RLRCS) to address the mobility needs of future development in employment and population especially south of Bonney Lake. In looking at the future travel demand patterns, it has been discerned that the demand for east-west travel such as between the plateau and the South Hill area will significantly increase. This study recognizes that the current roadway network cannot adequately handle the future travel demands. In the context of the above issues, the RLRCS transportation recommendations will attempt to do the following:

1. Meet travel demand between land uses;
2. Strengthen the transportation network;
3. Minimize the impacts to the natural and built environment; and
4. Optimize the financial investment in transportation infrastructure.

The Rhodes Lake Road Corridor Study is being conducted within the framework of an environmental impact statement (EIS). The EIS will provide a recommendation for a preferred alternative for meeting the project objectives.
The Traffic Impact Fee Program

The Transportation Element provides that Military Road East from the South Hill area to SR 162 be widened from two to four lanes. Since the adoption of this plan recommendation that was endorsed by the South Hill Community Planning Board, the recently adopted Pierce County Traffic Impact Fee (TIF) Program has proposed that this facility be widened from two to three lanes. The TIF program also would fund a portion of the widening for the Shaw Rd/Military Rd/122nd Ave E Corridor widening from two to three lanes with sidewalks and shoulders. While this improvement is largely in the South Hill area, the planned Shaw Road Extension project is in the community plan area. This extension of Shaw Road would connect Main Avenue East and Pioneer Way East in the City of Puyallup. This project is in the urban growth area of City of Puyallup and is being supported and implemented by the city.

Transit Services

Alderton-McMillin is currently served by Pierce Transit through the Dial-A-Ride service which connects Orting to South Hill Mall, the Puyallup YMCA, and the rest of the Pierce Transit system. Dial-A-Ride is a type of ‘on demand’ service via a shuttle van that may be requested one to five days in advance. It runs between several locations in the City of Orting, along SR 162, and two locations in South Hill, including the South Hill Mall Transit Center and the YMCA on 43rd Avenue. The service currently operates on Tuesday, Thursday, and Saturday, running every two hours from 8:00 AM to 8:00 PM.

Pierce Transit is currently updating the Strategic Plan and improvements to service for the valley and Orting is part of the discussion. The Pierce Transit Board is anticipated to have a retreat in the spring of 2007 to discuss a strategic plan framework, and service and capital prioritization guidelines.

A Sounder Commuter Rail station is located in Sumner and carries commuters from Tacoma through Sumner and the Kent valley into Seattle. In the next phase of implementation of Sound Transit (ST 2), the parking lots in Sumner and Puyallup will be expanded. ST 2 requires an affirmative vote by the voters in November 2007 for the funding. Train service will be expanded in 2007 from the four current trains each way per day to nine trains each way per day.

Rail Services

The Meeker Southern (MSN) is a shortline railroad that connects Meeker Junction in Puyallup with the McMillin Park of Industry. The line is approximately five miles long and junctions with the Burlington Northern Santa Fe (BNSF) in Puyallup. Operations began in November, 2000, on BNSF’s former Meeker-McMillin Line. The rail line is owned and operated by the Ballard Terminal Railroad.

Currently there may be as few as none and up to as many as three trains a week moving along the track at a speed not to exceed 10 miles an hour, due to the condition of the track. The rail currently provides service to two businesses in the McMillin Park of Industry with service twice a week.
Pierce County Sheriff's Department (PCSD) is the primary law enforcement agency for Alderton-McMillin. There are five patrol districts that provide police services although no police stations are located in the community (see Map A-17: Patrol Districts). The majority of the community is served by the Foothills Detachment, Pierce County District 12, which is headquartered in Bonney Lake. The Foothills Detachment consist of two sergeants, 21 deputies, and an office assistant, which provides police services to Alderton-McMillin and the areas around Orting, Buckley, and Bonney Lake. The Detachment is located in office space located at 11107 214th Ave. E. in Bonney Lake.

The patrol headquarters for districts PC01 through PC07 is the South Hill Precinct located at the intersection of 160th St E and Meridian Av. E. This area is covered by the main patrol force of the Pierce County Sheriff's Department. In addition to providing command level supervision of theDetachments there is a Patrol Commander (with the rank of major), three lieutenants, ten sergeants, and 93 deputies serving in the patrol, neighborhood patrol, community support, traffic, and K9 duties. The South Hill Precinct also directs six detectives who are supervised by a detective sergeant. This investigative arm handles property crimes such as burglary, auto theft, identity theft, and fraud.

PC10, otherwise known as the Mountain Detachment, consists of two sergeants, 20 deputies, and an office assistant, which provides police services to the areas around Eatonville, South Spanaway, East Graham, and Roy, in addition to a small part of the plan area. The Detachment is located in office space located near the intersection of SR 161 and the Eatonville Cut-off Road. Less than 100 acres of the plan area are within the jurisdiction of PC10.

The County-City Building is the location of most of the rest of the PCSD services, including Administration, Civil, Major Crimes Detectives, Forensics, Special Investigations Unit, and the Recruiting and Training sections. In addition to the patrol districts discussed above, 22 detectives and deputies work from the County-City Building in the Criminal Investigations Division. Those people are assigned to a variety of tasks from investigating major crimes (homicide, special assault, arson, etc.) to investigating domestic violence related incidents to crimes involving juvenile suspects to executing felony arrest warrants. The area of responsibility for these resources is the entire unincorporated County (including the plan area), as well as providing contracted services to various cities in Pierce County. A growing group of undercover investigators is dedicated to drug enforcement issues in Pierce County.

In addition to the above-described services, the plan area benefits from the ability of the PCSD to provide additional special services to its citizens. These special services are made possible by training personnel to perform more than their primary (patrol, investigations) function. These personnel respond to situations on an as-needed basis. These functions include: Air Operations, Clandestine Lab Team, Dive Team, Hazardous Devices Squad, Marine Services Unit, Bicycle Unit, Search and Rescue, SWAT, and Swiftwater Rescue.
WASHINGTON STATE PATROL

The Washington State Patrol’s office is located at 2502 112th Street, Tacoma, outside the plan area. This office dispatches four detachments to eastern Pierce County covering state highways in the plan area. They respond to a variety of calls for service ranging from standard traffic stops to vehicular accident investigation. The number of troopers in the plan area varies from two to three depending on the calls for service in other areas of Pierce County.

FIRE PROTECTION

The community plan area is serviced by three fire districts (see Map A-18: Fire Districts). The majority of the community is served by Fire District No. 18, Orting, encompassing 6,189 acres of the plan area. The Sumner Fire District is the second largest and encompasses most of the northern portion of the plan area with 3,213 acres. Approximately 182 acres of the plan area are not within a fire district.

PIERCE COUNTY FIRE PROTECTION DISTRICT #18

The headquarters of Fire District No. 18 is located at 19502 Orting-Kapowsin Highway East. The equipment assigned to this station are one engine, one water tender, one medic unit, and two utility vehicles. The station has a full daytime staff of 2-4 people, including one fulltime medic. There are various classes performed at the station including CPR and AED. Additionally, the station issues burn permits to residents in the area.

EAST PIERCE COUNTY FIRE PROTECTION DISTRICT #22 AND DISTRICT # 1, SUMNER

Fire District #1, Sumner, is currently contracting with East Pierce District #22 for services. The combined districts have six full time staff stations and four volunteer stations. The district has over 70 career employees that work in conjunction with 50 volunteers. The districts provide a full range of emergency response services including fire, and emergency medical and rescue. The district faces difficulties moving emergency vehicle equipment and personal on congested roadways.

PUBLIC SCHOOLS

OVERVIEW OF SCHOOL RELATED PLANS, POLICIES AND REGULATIONS

The Pierce County Code (PCC), Chapter 4A.30 School Impact Fees requires that any school district seeking imposition by the County of an impact fee shall submit a Capital Facilities Plan adopted by the District’s Board of Directors. These plans must be updated regularly to maintain at least a six-year forecast of needs and a six-year plan for funding and include the minimum information required by State law and outlined in PCC, 4A.30.010.

The impact fees are intended to help provide school districts with an appropriate proportionate share of the costs of public school capital facilities needed to serve new growth and development. The impact fees are imposed on new single-family and multifamily dwelling units.
as part of the County’s building and land use approval process. The impact fees are determined using a fee calculation by each school district, which may not exceed the Maximum Fee Obligation. The impact fee schedule is adjusted annually through an ordinance that is reviewed concurrently with the County’s Capital Facility Plan. PCC, 4A.30.030 includes a School Impact Fee schedule that outlines the fee calculations and Maximum Fee Obligation for each school district in Pierce County for the years 2005 and 2006.

**School District Facilities Serving the Plan Area**

The plan area is served by Puyallup School District #3, Sumner School District #320, and Orting School District #344. (See Map A-19: Public Education)

**Orting School District #344**

The Orting School District includes two elementary schools, one middle school, one high school, and one K-8 partnership school. Table A-17 provides a breakdown of the student capacity and the student enrollment for the Orting School District. The capacity for each grade was calculated using the OSPI formula for determining the students per square foot allowance.

In February 2006, the district passed a $29.5 million dollar bond issue to construct and equip a new (replacement) middle school, as well as make capital improvements to existing facilities, including additional high school classrooms, music and performing arts facilities, student commons, physical education facilities, an athletic stadium and other related upgrades as necessary.

**Sumner School District #320**

The Sumner School District includes eight elementary schools, three middle schools, and two high schools. Only McAlder Elementary is located within the community plan area at 15502 96th Street East. Current capacity and enrollment are listed in Table A-18 below.

Sumner School District residents will vote in 2007 on a bond issue for school modernization. If the bond passes it will include construction of a new Lakeridge Middle School, acquisition of sites for future schools, and modernization of: Bonney Lake Elementary, Maple Lawn Elementary, Victor Falls Elementary, Sumner Middle School, and Sumner High School.

Several of the projects included on the bond issue are for school modernization. Generally this work includes: replacing major mechanical systems, updating wiring and technology infrastructure to support computers in the classroom, and bringing buildings up to all current energy, earthquake, fire, and life safety building codes. Upgraded classroom lighting, new
energy-efficient windows, interior and exterior painting, and new floor coverings are also included.

**PUYALLUP SCHOOL DISTRICT #3**

The Puyallup School District includes 21 elementary schools, six junior high schools and four high schools. The table below provides a breakdown of the student capacity and the student enrollment for the District. The benchmark capacity for each level is described in detail in the District Capital Facilities Plan. Table A-19 shows capacity and enrollment. The enrollments are October 2006 actual enrollments.

The District passed a 198.5 million dollar bond in 2004. That bond funded three new schools. Two new elementary schools will open in September 2007. Each school will have a capacity of 750 students. A new junior high school will open in September 2008 with a capacity of 800 students.

The District expects continued growth and needs to address a number of aging facilities. A 259.5 million dollar bond has been placed on the February 6, 2007 ballot. A new elementary and expansion of several existing schools are included in this bond package.
The Alderton area is in the Shaw Road Elementary, Kalles Junior High, and Puyallup High School service areas of the Puyallup School District.

**Pierce County Library System**

The Pierce County Library System serves the Alderton-McMillin Community Plan area with the Sumner, Bonney Lake, and Orting Pierce County Library branches which are located to the immediate north, north/east, and south respectively. Residents of the area may also use the library system’s web site to access the online library catalog, use e-sources, place holds, renew items that they have checked out, etc. By requesting books and other materials either online or at their chosen Pierce County Library branch, residents have access to the collection of over 1,000,000 items housed in the system’s 17 branches throughout the County.

**Sewer and Wastewater Treatment**

The City of Orting, City of Sumner, and the City of Puyallup have wastewater treatment plants that convey the waste from within city boundaries. Sewer service is not available within the rural area of Alderton-McMillin. Developments within the community plan area are on individual or community septic systems. The City of Bonney Lake effluent is sent to the Sumner treatment plant via a sewer line that is located along SR 410 and running west along 78th Avenue and Riverside Drive. The sewer line is not within a sewer service area.

**Domestic Water Systems**

Currently within the plan area, there are 10 Group A water systems that have either 15 or more connections or serve 25 or more people per day for 60 or more days per year regardless of the number of connections. Ten separate water purveyors are responsible for operating these systems. The majority of the plan area is covered through four purveyors: Valley Water Systems, Tacoma Water System, Orting Water System, and Sumner Water System.

Domestic water within the plan area is provided by individual on-site wells and ten community water systems. The community water systems are City of Puyallup, Valley Water District, City of Sumner (future) – Webstone Water District, Tacoma Water, City of Bonney Lake, City of Orting, Horsehaven MHP Water System, Orting 15 Water System, Washington Water Service Company, and Crocker Creek Water Works.
The Department of Ecology issues water rights in Washington State. A water right is a legal authorization to use a certain amount of public water for specific beneficial purposes. State law requires every user of streams, lakes, springs, and other surface waters to obtain a water right permit unless they use 5,000 gallons or fewer each day. A water right will be issued only if it is determined that water withdrawal will not have a detrimental effect on other nearby wells. Water rights are based on anticipated average daily flows from the proposed use and are approved for a specified number of wells.

As required by state law, water service areas are exclusive service areas, which means only the designated system is to provide public water service to properties within the individual service areas. The community plan area also includes a multitude of individual wells and Group B systems, which are systems serving 2-14 connections. There is not a complete inventory of individual wells or Group B systems available at this time.

**Electricity and Natural Gas**

Puget Sound Energy (PSE) is an investor-owned utility providing electrical service to approximately 1,000,000 residential, commercial, and industrial customers in a nine county, 4,500 square mile service territory in western Washington. To provide reliable service, PSE builds, operates, and maintains an extensive electrical system consisting of generating plants, transmission lines, substations, and distribution systems. PSE is regulated by the Washington Utilities and Transportation Commission (WUTC) and is obligated to serve its customers subject to WUTC rates and tariffs.

**Electricity**

There are two main access points for receiving power in Pierce County: White River 230/115 kiloVolt (kV) Transmission Station located north of Orting; and at PSE’s Frederickson Generation station located in Frederickson Employment Center of Pierce County. A third access point from St. Clair switching station near the Thurston/Pierce County line provides a major tie between Pierce and Thurston Counties.

The Alderton-McMillin plan area is located directly between four municipalities: Puyallup, Sumner, Bonney Lake, and Orting. The existing electrical system serving or supporting the Alderton-McMillin plan area consists of the following:

Transmission Substations:

- The White River Transmission Station (immediately east of Sumner, north of Orting)
- Alderton Transmission Station (in Alderton)
- Electron Heights Switching Station
- Frederickson Generation Station
Distribution Substations:
- Gardella
- Rhodes Lake
- Knobler
- Hemlock
- Sumner
- Orting
- Kapowsin
- Sunrise
- Shaw
- Bonney Lake

Transmission Lines (115kV):
- White River – Electron Heights
- White River – Alderton # 2
- Electron Heights – Blumaer
- Frederickson – Electron Heights

**EXISTING ELECTRICAL CAPACITY TO SERVE ALDERTON-MCMILLIN**

The power utilization factor of all distribution substations directly serving any portion of the Alderton-McMillin area is at 81.5%. The utilization factor is a comparison of current peak system load (during the winter heating season), divided by the absolute maximum design capacity of the substations in the area. Table A-20 illustrates the capacity versus peak winter loads for the plan area distribution substations.

**Table A-20: Existing Capacity: Electrical Utilities**

</tr>
</tbody>
</table>

The electrical system can be expanded as the area load develops. The timing of future construction is largely dependent on the development growth of an area, and the associated increase in electric demand (load), as well as facility maintenance requirements, reliability related improvements, or system replacement needs.

**NATURAL GAS**

Puget Sound Energy (PSE) is the natural gas provider within the Alderton-McMillin community. There are gas system improvement projects under review in the Alderton-McMillin area. PSE’s 10-year plan includes the projects listed below. The timing of these projects is dependent on load and/or customer growth within the affected service area. Plans will be reviewed with the County early in the planning stages of each project.
1) A combination of new and replacement of the existing Intermediate Pressure (IP) facilities along the Orting-Sumner Highway (SR 162) the entire length of the plan area.

2) A new IP line from the intersection of Pioneer Way and the Orting-Sumner Highway (SR 162) and continuing west through the plan area.

3) A new IP line along SR 162 entering into the plan area to the east of Voights Creek. This line continues to the southwest to Orville Rd. It then continues south past the plan boundary.

4) A new High Pressure (HP) line coming into the plan area at the intersection of 150th Avenue East and the Orting-Kapowsin Highway. This continues east along the Orting-Kapowsin Highway to the Orting city limits.

DESCRIPTION OF DESIRED CONDITIONS

PARKS AND RECREATION

The community plan envisions redevelopment of Riverside Park to include passive recreation, educational opportunities, and river-related activities including public access to fishing and boating. The park would include picnic areas, green space, and educational kiosks and walks informing users about the river system as well as local history such as the nearby ‘poor house.’ The park would be designed and redeveloped through a master planning process that includes hands-on involvement with local citizens and businesses. It is the interest of the community to scale the park for local citizens, not a regional facility.

The community also envisions new parks within the area and identifies three possible sites for parks. Two of the proposed parks are located north of the City of Orting and one is located to the south. Plan policies require parks to be compatible with the rural area and designed with environmental constraints in mind. The community plan prohibits park facilities better suited to the urban area, (i.e., sports complexes, amusement parks, miniature golf courses), and policies discourage recreational uses that generate large amounts of traffic, create significant amounts of impervious surface, or operate late into the night. It is the vision of the community to keep new and improved parks compatible with the rural way of life.

The people of Alderton-McMillin value the Foothills Trail and would like to see educational displays informing the public about the local history, agriculture, and natural hazards incorporated into the trail system. The community is open to exploring opportunities to link the trail with the proposed Bonney Lake trail system. New links to the trail system should strive to connect to public river access areas.

Finally, the Parks and Recreation policies call for an increase for public access to the rivers for fishing or other passive recreation. Public access sites and new parks should evaluate and minimize impacts to surrounding agricultural activities, habitat, and the neighboring community.
TRANSPORTATION

PRESCRIBING THE COMMUNITY CHARACTER

At present, the Rhodes Lake Road EIS has narrowed the remaining alternatives to three candidate roadways connecting the plateau with SR 162. Two of these alternatives extend westward and connect to 116th St E and 128th Street respectively. The third alternative connects the plateau with the City of Orting.

The extension roadway south, also termed as the South Plateau Connection, would have a significant impact on a small neighborhood in Orting where the new roadway would touch down. It would also bring significant volumes of traffic into the downtown core of this city. The City of Orting supports the construction of a road further south of the city.

The two alternatives north of Orting would have significant impacts upon the community character of this area. Aside from SR 162, the roads in the valley carry small volumes of traffic. A new roadway (likely to have four lanes) as provided in the candidate alternatives will certainly change the natural environment of this area and would be designed in the local rural context.

PROPOSED PROJECT RECOMMENDATIONS

This plan supports all of the transportation projects found in the current transportation element. It is recognized that the demands of additional roadway have and will continue to increase over the next 20 years. The needs for improving certain roads have become more apparent and to this end the following roadway improvements are perceived to be of the highest priority:

1. Build 4/5 lanes on SR 162
2. Improve the SR 162/SR 410 interchange
3. Widen Military Road E to three lanes
4. Build the 176th St E Extension

NEW CORRIDORS

It is also recommended that Pierce County further investigate two concepts discussed in the Rhodes Lake Road Corridor study, the development of 214th/218th Street East as a north-south corridor to Lake Tapps Parkway and the South Plateau Connection. Both these corridors would require inter-jurisdictional cooperation.

If one of the “build” Rhodes Lake Road Corridor Study alternatives is selected, this plan recommends Alternative D as found in the DEIS for the Corridor Study. This alignment would connect to SR 162 using the 128th Street East crossing location.

*State Highway- Our County Recommendations must be “consistent” with State Plans*
**NATURAL HAZARDS**

The Alderton-McMillin community is faced with several potential natural hazards. These hazards, described in the Natural Environment Element, pose challenges for people and planning in the Puyallup Valley. The community plan policies and actions strive to ensure damage to property or people is minimized; evacuation routes, procedures, and actions are in place; and, the public is educated about what to do and where to go in the event of a flood, earthquake, volcano, or landslide.

Flood hazards, seismic hazards, volcanic hazards, and landslides all exist within the community plan area. These hazards pose risks for people and property that must be considered when planning for future growth. The valley is limited by these natural constraints which is part of the reason the area has remained rural while surrounding areas have intensified. Flooding is the most common of the natural occurrences. A major flooding event in November 2006 shut down SR 410, portions of McCutcheon Road, and portions of SR 162. The event has been declared a federal disaster.

The community would like to minimize loss of life and property through proper planning to reduce vulnerability. Increasing the awareness of evacuation routes and procedures is another major component of the plan. Raising awareness would increase preparedness and ensure a greater number of people are knowledgeable about what to do and where to go in a major catastrophic event. The plan calls for a public outreach program that educates a large portion of the population and puts emergency information at the citizen’s fingertips.

**ELECTRICAL AND NATURAL GAS**

**PROJECTED NEEDED CAPACITY**

Projections are based on Countywide data. These projections are combined with specific known details for each smaller development area. PSE’s 2013 Electrical Facilities Plan for all of Pierce County predicts a projected load level in Mega Volt Amperes (MVAs) of 592 MW. This represents a growth of about 100 MVA from the current 2004 peak load levels for the entire County. This projected load will be revised (most likely upwards) in the near future. PSE’s long-range plans for the Alderton-McMillin plan area and surrounding areas are based on electrical growth projections anticipated in future years. Projected load is calculated as the existing load, minus conservation reductions, minus demand side management, plus the forecast of new load.

The population and employment forecasts are based on a regional economic and demographic model and then allocated into each of the counties within the service territory. The regional forecasts account for the latest assumption about the national economy and reflect the historical structure of employment and population within each county as well as their recent growth patterns. The historical population data by county is based on the State’s Office of Financial Planning reports, while the employment data is based on the State’s Employment Security Department’s monthly reports. The projection of these inputs together with the
company’s projections of conservation, retail rates and any known short term large load additions or deletions form the company’s forecast of energy and peak loads.

**PROPOSED SYSTEM**

Puget Sound Energy has identified system and transmission improvements required to serve the forecasted load growth in and around the Alderton-McMillin plan area. Many improvements are in progress or planned for the future; others have been identified as future improvements to meet the growth demand. These improvements are intended to meet the growth and reliability demands for the Alderton-McMillin area and the surrounding area, as well as other portions of Pierce County.

**SYSTEM IMPROVEMENTS IN PROGRESS**

*White River – Electron Heights transmission loop into Alderton* – These improvements will provide a transmission route from the Bonney Lake area into the Alderton Transmission Station and from the Rhodes Lake area also into Alderton Transmission Station.

*Knoble Substation* – This project added new substation capacity to serve the continuing growth in Orting valley.

**FUTURE TRANSMISSION IMPROVEMENTS**

PSE has identified the need for a new bulk power delivery point for Pierce County at the Alderton Transmission Station, located approximately five miles north of Orting city limits. Existing transmission lines are planned to be upgraded to provide a 230 kV tie between the White River Transmission Station and the Alderton Transmission Station. The timing for this 230 kV upgrade project is largely driven by future generation addition in Frederickson area. Future improvements are as follows:

*Alderton 230 kV Development* -- Pierce County will need a major upgrade of bulk power delivery system in the near future. The Alderton Transmission Station has been identified as future 230 kV transformation station. The project will involve upgrade of existing transmission lines north of Orting and installation of a 230 – 115 kV transformer at the Alderton Station.

*Woodland – St. Clair Phase II* – This project will involve upgrade of Woodland substation (in southwest Puyallup) to a switching station and rebuilding of existing lines. When completed, the project will increase transmission capacity and improve reliability to Orting, Puyallup, and surrounding areas.

*Electron Heights – Orting - Blumaer Re-conductor* – This project will involve rebuilding of existing transmission lines. When completed, the project will increase transmission capacity and improve reliability to Orting, Puyallup, and surrounding areas.

**FUTURE DISTRIBUTION SUBSTATIONS**

*Alderton Distribution Substation*  The Alderton distribution substation would serve new developments directly within the Alderton-McMillin plan area as well as provide load support for nearby developments including Cascadia. Construction of a loop-through of the existing or future transmission will be included as part of this project.
PARKS AND RECREATION POLICIES

GOAL AM PR-1 Expand recreational opportunities through existing resources and facilities.

AM PR-1.1 Recreational improvements and opportunities are prioritized as follows:

AM PR-1.1.1 Redevelopment of Riverside Park;
AM PR-1.1.2 Public access to the Puyallup and Carbon rivers; and
AM PR-1.1.3 Other recreational activities including the Reise site, Ford site, and Renaissance site.

AM PR-1.2 Pierce County should gauge community support for additional trail segments.

AM PR-1.3 The scale and design of future parks should meet the community’s needs rather than the region’s needs.

AM PR-1.4 When possible, seek appropriate recreation mitigation from large transportation or essential public facilities projects when such projects create impacts on the plan area.

AM PR-1.5 Establish location criteria for new recreational facilities.

AM PR-1.5.1 New recreational facilities shall be located away from critical areas or the site must be designed to mitigate all potential impacts.

AM PR-1.5.2 New recreational facilities shall be located away from existing agricultural lands or the developer must work with local farmers to design the project to mitigate potential impacts.

AM PR-1.5.3 The location of new recreational facilities shall not adversely increase traffic congestion.

AM PR-1.5.4 Recreational facilities shall be compatible with the rural area and lifestyle.

AM PR-1.5.4.1 Compatibility with the rural area does not include noise, traffic, lights, activities, impervious surfaces, and hours of operation that are similar to those in an urban area.

AM PR-1.6 Pierce County Parks should evaluate the feasibility of connecting the Foothills Trail with the Bonney Lake trail system.

AM PR-1.7 A community trail system should strive to connect public river access areas along the Carbon and Puyallup rivers.

AM PR-1.8 Educational kiosks should be located along the Foothills Trail informing the public about the local history and agriculture.

AM PR-1.9 Increase public access along the Carbon and Puyallup rivers.

GOAL AM PR-2 Redevelop Riverside Park as a community park.

AM PR-2.1 Pierce County should develop a park master plan for Riverside Park.
AM PR-2.2 The park master plan should be developed with the local community through a public hearing and permit process.

AM PR-2.3 Improvements constructed in Riverside Park should focus on passive recreation, educational opportunities, and river-related activities.

AM PR-2.3.1 River access for boating should be a priority.

AM PR-2.4 Educational kiosks and/or markers that describe the river ecosystem and present fish and wildlife should be incorporated into the parks master plan.

AM PR-2.5 The historical significance of the Riverside site as a County poorhouse should be portrayed through educational materials.

AM PR-2.6 Signage that provides environmental education and awareness should be placed in appropriate locations.

AM PR-2.7 Ensure green space for playing and picnicking.

AM PR-2.7.1 Sport fields and play courts are not an appropriate use of the park area.

AM PR-2.8 Pierce County should approach the City of Sumner to discuss a possible partnership in the development and/or maintenance of the facility.

AM PR-2.9 Explore the possibility of obtaining support from the Puyallup Tribe for public river access at the park.

GOAL AM PR-3 Evaluate opportunities to provide public access to the Carbon and Puyallup rivers through Pierce County-owned properties.

AM PR-3.1 Public river access sites are intended to be used for fishing and passive shoreline recreation activities.

AM PR-3.2 A small number of public access sites should be provided throughout the Alderton-McMillin Community Plan area.

AM PR-3.2.1 These sites are intended to allow fishing access to the rivers, but are not intended to include boat access or occupy private properties.

AM PR-3.2.2 Impacts to private properties for recreational river access shall be minimized.

AM PR-3.3 Criteria should be developed as a means to evaluate sites on the appropriateness of public access.

AM PR-3.3.1 The criteria should evaluate potential impacts to surrounding agricultural lands, habitat, and community.

AM PR-3.3.2 Significant impacts should be avoided.

AM PR-3.4 Public river access sites should be minimally developed with amenities such as parking areas, trails, and educational kiosks.

GOAL AM PR-4 Provide community education through local recreational facilities.

AM PR-4.1 Create opportunities for community education within the public river access areas and along the Foothills Trail.
AM PR-4.1.1 Community education should focus on the community agricultural history and unique environmental characteristics.

AM PR-4.1.2 Support activities within the community that integrate environmental education with recreational activities.

AM PR-4.1.3 Educational kiosks should be constructed at appropriate locations within Riverside Park, public river access sites, and trail heads.

AM PR-4.1.4 Signage that provides historical education (farming history) should be provided along the Foothills Trail.

GOAL AM PR-5 Protect private property from trespassing.

AM PR-5.1 Opening public properties to river access should reduce trespassing on private properties.

AM PR-5.2 Place signs along property boundaries where trails, parks, or public river access properties abut private property.

AM PR-5.2.1 Signs should educate or remind users to stay on public access and public properties.

AM PR-5.3 Fund a park ranger or security officer through a funding partnership by the County and cities.

TRANSPORTATION POLICIES

GOALS

Provide for the mobility and access needs of the residents while maintaining the valley’s unique rural character.

SR 162

GOAL AM T-1 Improve SR 162 to meet the future safety and mobility needs of the valley residents.

AM T-1.1 Support the State’s roadway improvements on SR 162 as specified in the Washington State Department of Transportation’s (WSDOT) Highway Systems Plan.

AM T-1.1.1 Lobby the state legislature and the Pierce County Council to secure the funding for this project.

AM T-1.1.2 Support the concept of the development community to provide some or all of the funding for this project.

AM T-1.2 Request that the state investigate the alternatives for increasing the capacity at the SR 410 and SR 162 interchange.

AM T-1.2.1 This improvement should precede the construction of additional lanes south of the SR 410 interchange.
AM T-1.3 Encourage the state to pursue the improvement of nearby interchanges that would direct traffic away from the Alderton-McMillin Community Plan area and other areas that are affected by through-traffic that doesn’t meet their community character.

AM T-1.4 Work with the state in implementing access management strategies along SR 162 to maintain its primary function as a thoroughfare.

AM T-1.4.1 These strategies should move toward minimizing the access points along the highway.

AM T-1.5 Construct no new roadways connecting to SR 162 until the state has assured additional and adequate capacity of the highway to serve mobility needs.

AM T-1.6 Work with the state in synchronizing current and future traffic signal installations on SR 162.

AM T-1.7 Work with the state in requiring the private sector to mitigate their impacts on SR 162 traffic congestion by providing funding toward the additional two lanes needed for this road.

AM T-1.8 Prior to the improvements to SR 162, it is recommended that the state’s Highway System Plan include provisions to accommodate agricultural machinery.

AM T-1.9 Work with the state to develop more innovative methods to limit access on SR 162.

**Accommodating Future Traffic**

**GOAL AM T-2** Fully investigate the use of other roadways that may alleviate the demand for traveling through the valley.

AM T-2.1 There are a number of future roadway connections and improvements that should be closely examined in this context including the construction of the South Plateau connection, the extension of 176th Street E. to the City of Orting, the widening of Shaw Road E./Military Road E./122nd Avenue E., and the improvement of 214th Ave. E.

**Nonmotorized Travel**

**GOAL AM T-3** Provide nonmotorized facilities in areas of highest potential usage for residents and visitors.

AM T-3.1 Develop nonmotorized facilities that will link the Alderton-McMillin community with the Foothills Rails to Trails trailhead in McMillin.

AM T-3.2 Include paved shoulders to accommodate bicyclists and pedestrians in new or reconstructed roadways that are anticipated to have higher nonmotorized usage.

AM T-3.3 Coordinate with the City of Bonney Lake to develop a link between one of their trails to the Foothills Trail.
AM T-3.4  Nonmotorized trails should avoid farmland that would be subject to pesticide/herbicidal treatment.

**Character**

**Goal AM T-4**  Retain existing County and private roads in their rural state.

**AM T-4.1**  Paved shoulders are generally preferred to sidewalks along rural roadways.

**AM T-4.1.1**  Sidewalks are not consistent with the rural character of the community and should be discouraged.

**AM T-4.2**  Consider the use of paths adjacent to roadways for nonmotorized purposes.

**AM T-4.2.1**  These paths should connect existing or proposed trails, schools, parks, or other destinations that generate higher levels of nonmotorized demand.

**AM T-4.3**  Unless deemed necessary, roadway construction projects should minimize the removal of trees along the roadways in the rural areas.

**AM T-4.3.1**  Relocate when feasible or replace any trees as part of any roadway projects outside of the right-of-way.

**AM T-4.4**  Light fixtures along state highways and arterials should be direct and should not cast light in multiple directions.

**AM T-4.4.1**  Transportation corridors shall utilize the minimum amount of lighting necessary for safety and function.

**Transit Service and Transportation Demand Management**

**Goal AM T-5**  Work with Pierce Transit and Sound Transit in developing strategies for increasing fixed-route and demand-responsive transit service in the area.

**AM T-5.1**  Coordinate with Pierce Transit to provide better marketing and promotion of existing paratransit service within the community.

**AM T-5.2**  Explore opportunities with Pierce Transit to provide additional paratransit service within the community.

**AM T-5.3**  Coordinate with WSDOT, Pierce Transit, and the city of Orting in siting, planning, and developing a park-and-ride facility.

**AM T-5.4**  Investigate the feasibility of commuter rail.

**Mobility and Safety**

**Goal AM T-6**  Consider the role of roads in facilitating faster evacuation out of the valley in the event of a lahar flow.
AM T-6.1 New or improved roadways must provide for expedited emergency vehicle access into and through the valley.

AM T-6.2 Planned road improvements should support the connectivity of the roadway network through the plan area.

AM T-6.3 Construct the extension of 176th Street East.

**RHODES LAKE ROAD CORRIDOR**

**GOAL AM T-7** Mitigate the impacts of any new alignment built as a result of the Rhodes Lake Road Corridor Study.

AM T-7.1 Develop and implement specific measures to mitigate the impacts of the Rhodes Lake Road corridor.

AM T-7.2 Provide for full mitigation/replacement of any farmland that would be used in the construction of a new corridor.

AM T-7.3 When feasible, design the roadway to minimize the impact on the view corridors within the valley. Consider such strategies as:

AM T-7.3.1 Buffering the roadway with trees and other vegetation; and

AM T-7.3.2 Design a less visible roadway by taking advantage of the area’s topography.

AM T-7.4 Create and implement new roadway standards for the Rhodes Lake Road corridor that would preserve the rural character of the community through access control management.

AM T-7.5 Avoid illumination of the roadway unless there are clear safety standards that would require it.

**IMPLEMENTING ACTIONS**

The following list of actions needs to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 2-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Land Use Advisory Commission (LUAC), Pierce County Planning and Land Services (PALS), Pierce County Economic Development (ED), Pierce County Parks and Recreation (Parks), Pierce County Public Works & Utilities (PWU), and Tacoma-Pierce County Health Department (TPCHD).
SHORT TERM ACTIONS (UPON PLAN ADOPTION TO 1 YEAR)

1. Work with the developers for Cascadia regarding inclusion of an emergency evacuation path from the valley floor to the plateau. (PWU-Transportation, PALS)
2. Install signage that clearly identifies emergency evacuation routes out of the valley. (DEM)

Transportation

3. Amend the Pierce County Capital Facilities Element and Pierce County Transportation Improvement Plan (TIP) to include:
   - Transportation improvement projects identified in the plan.
   - Seismic retrofitting for the McMillin Bridge.
   - “Bridge for Kids” evacuation route project. (PWU-Transportation)
4. Amend the Pierce County Nonmotorized Transportation Plan to update with Proposed Trail System map recommendations. (PWU-Transportation)
5. Incorporate the plan’s transportation project priorities into Six-Year Transportation Improvement Program project selection process. (PWU-Transportation)

MID-TERM ACTIONS (1-5 YEARS)

1. Develop programs and actions to enhance the local emergency siren system for the valley area. (PALS, DEM)
2. Establish a Neighborhood Emergency Teams program within the plan area and provide educational programs on emergency preparedness and what to do in an emergency event. (DEM)
3. Establish and implement a public outreach program on natural hazards in the valley area. (DEM)

Parks and Recreation

4. Develop a Park Master Plan for Riverside Park. (Parks)
5. Provide educational materials at the Foothills Trail regarding natural hazards, history, and agriculture. (Parks, PALS)
6. Evaluate the feasibility of connecting the Foothills Trail to the City of Bonney Lake trail system. (Parks)
7. Evaluate opportunities for public access on Pierce County owned properties to the Carbon and Puyallup River. (Parks)
8. Invite Bonney Lake Trail proponents to Alderton-McMillin to explain trail proposal and listen to public response. (Parks)

LONG TERM ACTIONS (5-10 YEARS)

Parks and Recreation

1. Acquire additional parcels of land for future park and trail development. (Parks)
2. Develop public access sites along the Carbon and Puyallup Rivers. (Parks)
Map Disclaimer: The map features are approximate and are intended only to provide an indication of said features. Additional areas that have not been mapped may be present. This is not a survey. The County assumes no liability for variations accounted by actual survey. ALL DATA IS EXPRESSLY PROVIDED "AS IS" AND "WITH ALL FAULTS". The County makes no warranty of fitness for a particular purpose.

Chapter 7: Plan Monitoring

The 1990 State Growth Management Act (GMA) requires jurisdictions to report on progress made in implementing the Act, and to subject their comprehensive plans to continuing evaluation and review. As a component of the County’s Comprehensive Plan, the Alderton-McMillin Community Plan is subject to this requirement. Generally, community plans are updated every five years and monitored yearly. The monitoring process includes evaluating the development standards, regulations, actions, and other programs called for in the plan for the purpose of determining their effectiveness in fulfilling the vision of each of the five elements of the plan.

Monitoring actions steps includes the development and implementation of regulations and design standards, coordinating the provision of facilities and services, developing educational programs and handouts, acquiring parks, preserving open space, and other actions. Information obtained from the monitoring program can be used to offer recommendations to decision makers as to what changes to the community plan may be needed in order to attain specified goals and meet the visions in the plan.
Chapter 8: Appendix – PDR/TDR

Members of the Alderton-McMillin Community Planning Board had the opportunity to discuss and learn about purchase and transfer of development rights programs during the development of the community plan. They strongly support both purchase and transfer of development rights for the preservation of agriculture. The Alderton-McMillin Community Planning Board recommends the following policies for consideration in the development of a Countywide Purchase and Transfer of Development Rights Program.

**PURCHASE AND TRANSFER OF DEVELOPMENT RIGHTS**

**Intent:** Create opportunities for ARL and Rural Farm property owners to receive a financial return on their land holdings while conserving prime agricultural soils and open space to continue viable farming activities.

**Objective** Support the long term preservation of prime agricultural lands most susceptible to development conversion.

**Principle** The Alderton-McMillin Community Plan area and the Riverside area shall be the County priority for PDR and TDR sending sites due to the large amount of contiguous agricultural lands and threats to conversion.

**Principle** Implement a Purchase of Development Rights (PDR) program in Pierce County.

**Standards**

- All ARL and Rural Farm zoned properties should be eligible to participate in a PDR program.
- Participation in a PDR program shall be voluntary.
- A PDR program should work in concert with a Transfer of Development Rights (TDR) program.

**Principle** Adequate funding should be available to support a PDR program.

**Standards**

- Pierce County should evaluate a variety of strategies to fund a PDR program, including but not limited to:
  - Identify advantages/disadvantages of asking county property owners to tax themselves for farm land preservation (bond issue).
- Local funding should be structured to leverage state and federal funding opportunities.
- Multi-interest partnerships should be pursued to increase funding opportunities.

**Principle** Ensure a smooth, impartial purchase process.

**Standards**
The purchase price of the development rights should be determined by an independent appraiser.

A property owner shall have the opportunity to “opt-out” of the transaction process, prior to the signing of the final contract, without penalty.

**Principle**

Establish criteria that prioritize properties to be included in a PDR program.

**Standards**

Properties in an adopted TDR receiving area shall not be considered for a sending transaction.

Establish criteria that strengthen opportunities to receive funding from state and federal grant programs.

A County PDR program shall prioritize Agricultural Resource Lands (ARL) as top priority followed by Rural Farm.

The acquisition of development rights should be prioritized as follows (most important to least):

a. Threat of conversion (magnitude, urgency);

b. Importance (soil types, size, contiguous);

c. Viability (on-site production/support facilities, water availability, drainage)

d. Environmental Values (benefits to fish and wildlife); Community Values/Priorities (education, viewshed, aquifer recharge, stormwater, job creation).

**Objective**

Establish a long-term strategy that creates a demand for development rights of ARL and RF lands while preserving the prime agricultural soils and open space necessary to continue viable farming activities.

**Principle**

Pierce County should develop and adopt a countywide Transfer of Development Rights (TDR) program.

**Standards**

Participation in a TDR program shall be voluntary.

The Countywide TDR program should identify the total number development rights that are available per community plan to ensure there is sufficient supply to meet the potential demand.

The TDR program should be designed to provide a financial incentive to both the development right purchaser and seller.

a. Identify a transfer density/intensity ratio that would be beneficial to both the seller and buyer and adjustable by the County through an annual review process.
Purchased development rights may be transferred to a receiving area as either a commercial credit, residential credit or mixed use credit consistent with the zoning of the receiving area.

Agricultural Resource Lands should be the top priority sending areas for transfer of development rights at the Countywide level.

Pierce County shall convene at least one public meeting in the Alderton-McMillin community while developing the Countywide TDR program.

**Principle**

Establish an efficient and predictable process to transfer development rights among properties.

**Principle**

Examine opportunities to pursue transfer development rights between other jurisdictions.

**Standards**

The process to transfer development rights should be easy for both the seller and purchaser.

Pierce County should identify a development right “broker” to facilitate each transaction.

a. Interested development right purchasers shall contact the “broker.”

b. When contacted to facilitate a TDR transaction, the “broker” shall be the individual to contact potential sellers to assess their interest in selling development rights.

c. The “broker” shall identify the potential development right sellers based upon County priorities.

A transfer density/intensity ratio table may be adopted to clearly identify how development rights in a sending area translate into the number of development rights within a receiving area.

**Principle**

Property owners should be fairly compensated through TDR transactions.

**Standards**

The purchase price of the development rights should be mutually agreed upon.

If desired, a mutually agreed upon appraiser can be hired to determine the fair market value of the development right credits.

**Principle**

Pierce County should actively educate the community on the TDR program and its potential benefits.

**Standards**

Pierce County should publicize the TDR program through local community events and the County’s website.
Pierce County should update the local land use advisory commissions on TDR activity within their respective area.

Pierce County should work with the development community to encourage participation in the TDR program.

**Principle**

Evaluate the effectiveness of the TDR program in preserving prime agricultural land.

**Standards**

Annually report the total number of development rights transferred from sending areas within the plan area.

a. Identify the areas that received the development right credits.

b. Identify the price paid per development right credit.

c. Identify the total development right credits per transaction.

d. Describe the current farming activity on sending area properties from which development right credits were transferred.

Annually report the total number of development rights transferred to receiving areas within the plan area.

a. Identify the areas where the development right credits where derived.

b. Identify the price paid per development right credit.

c. Identify the total development right credits per transaction.
Appendix B: Anderson - Ketron Islands Community Plan

The Anderson - Ketron Islands Community Plan’s narrative text and policies are in addition to the Countywide Comprehensive Plan narrative text and policies and are only applicable within the Anderson-Ketron Islands Community Plan Boundary.

- “Current” or “Existing” conditions are in reference to conditions at time of adoption (Adopted Ord. 2009-9s, Effective 6/1/2009).
- “Proposed” or “Desired” conditions are those which required Council action and may have also been amended over time through a Comprehensive Plan Amendment (amendments are reflected in this document).

Chapter 6: Plan Monitoring ................................................................. B-86
Chapter 1: Introduction

Overview of the Plan Area

Anderson Island and Ketron Island are located in Puget Sound in southwestern Pierce County, northeast of the Nisqually Reach. Land areas near to Anderson Island include Key Peninsula one mile to the northwest, McNeil Island one-half mile to the north, the main land mass of Pierce County from two to three miles to the east and southeast, and Thurston County two miles to the southwest. Ketron Island is two miles east of Anderson Island, about one-half mile from the main land mass of Pierce County. Steilacoom is the closest municipality to the islands, three miles east of Anderson Island, and one-half mile east of Ketron Island.

Anderson Island has an area of approximately 8.1 square miles, extending 4.3 miles from north to south, with 17 miles of shoreline. Ketron Island has an area of approximately 230 acres, extending 1.4 miles from north to south, with 3 miles of shoreline. They are designated for rural and resource based land uses under the Pierce County Comprehensive Plan. The community plan does not contain an urban area as defined by the Washington State Growth Management Act (GMA).

While the islands share an orientation toward the surrounding marine waters, each has its own distinct character. Anderson Island is characterized by a variety of rural land uses on large lots, with a small portion of the island divided into small residential lots. Residential home sites, agricultural lands, and forest lands dominate the land use pattern, which is interspersed with limited commercial and business development. Anderson Island has a number of community oriented facilities including public parks, community center, museum, and other civic and public facilities.

Ketron Island is primarily forested and undeveloped, with a few homes toward the north end of the island. The central and northern portions of the island are for the most part subdivided into small residential lots, while the southern third of the island consists of a single parcel of over 50 acres. No community or public facilities are situated on the island.

The plan area encompasses portions of Township 19 North, Ranges 1W and 1E, and Township 20 N, Range 1E, and is in Pierce County Council District #6. Anderson Island is located in Census Tract 726 together with Key Peninsula, while Ketron Island is located in Census Tract 721 with other nearby communities in Pierce County, as defined in the year 2000 census. The total population on Anderson Island is approximately 900 people and approximately 20 people on Ketron Island.
THE ENVIRONMENT

Anderson and Ketron Islands are rural communities with a strong connection to the surrounding shoreline. Views of Puget Sound throughout the area and the quiet, private island character attract people to visit and live on the islands. Substantial stretches of shoreline on both islands are characterized by steep slopes that limit access to the marine shorelines; however, public parks on Anderson Island provide access to both Puget Sound and the lakes on the island. Developed areas predominantly fall into the medium to low density residential uses, agricultural uses, and small scale commercial uses.

HISTORY OF ANDERSON ISLAND

The following synopsis of Anderson Island history is liberally borrowed, summarized, and rewritten from “Images of America – Anderson Island” written by Elizabeth Galentine and the Anderson Island Historical Society, published by Arcadia Publishing, 2006.

EARLY HISTORY

The Nisqually Tribe of Indians used the shoreline of Anderson Island to fish for salmon and inland areas for harvesting berries. They called the island Kloh-chks. The earliest recorded history referring to the island was documented in 1792, when Peter Puget mapped the island during a trip through south Puget Sound as part of Capt. George Vancouver’s 1791-1794 exploration of the Pacific coast. Charles Wilkes with the U.S. Exploring Expedition named the island in 1841 for Alexander Anderson of the Hudson’s Bay Company. Other names given for the Island between 1846 and 1889 included Fisgard Island and Wallace Island. The name Anderson Island was restored when Washington joined the Union in 1889.

Three brothers from Denmark, John, Andrew, and Christian Christiansen, were the first permanent settlers on Anderson Island. Arriving in the early 1870s, they established a logging operation on the island, and a wharf and wood yard on Amsterdam Bay to service steamships. By 1890 island population had grown to 22.

EARLY 20TH CENTURY

Life on Anderson Island flourished in the early 1900s. Logging, brickyards, steamship activities at Johnson’s Landing, farms, and growing families all contributed to the prosperity. Settlement first occurred along the shoreline and at two inland communities, Yoman and Vega. Initially, travel from place to place on the island was either by trail or boat. The first main road, Eckenstam-Johnson Road, allowed farmers to bring their produce to Johnson’s Landing to be loaded onto steamships.
Transportation in the Puget Sound region into the early 20\textsuperscript{th} century was dominated by steamships, used both for passenger travel and commerce. By the 1930s competition from railroads and highways ended the dominance of the “mosquito fleet” of steamships. Diesel-electric automobile ferries came to Puget Sound in the 1930s, however the first auto ferry began operations from Steilacoom to Anderson Island, McNeil Island, and Longbranch in 1922. By 1921 the population of Anderson Island reached 141, followed by a downward trend resulting from the end of the steamship era, which left the population at 106 in 1950.

\textbf{Industry, Commerce, and Services}

As services from the mosquito fleet diminished, local stores opened on Anderson Island. The Ehricke Store at the north part of the island and the Carlson Store at the south provided supplies from the mainland as well as produce grown on the island. Mail delivery served post offices in Yoman and Vega. Telephone service began in 1917, with full service arriving in the 1950s. Electricity arrived in 1961, and the fire district was established in 1979. A range of small businesses began to appear in the 1960s; however, a central business district never became established on the island.

The first community project of the early Scandinavian settlers on Anderson Island was to use ten acres donated by Peter Christiansen to build a school, opened in 1881, and designate a site for a cemetery. When school enrollment dwindled to seven in 1968, the Anderson Island School District became part of the Steilacoom Historic School District. The school building is now part of the Anderson Island Park and Recreation District, together with six parks on 300 acres.

The Utopian Social Club of McNeil and Anderson Islands, formed in 1904, was instrumental in fostering the culture and traditions that exist on the Island. A clubhouse was built in 1930 and remains in use today as the Anderson Island Community Club, a gathering place for island residents.

In the early 1960s a 32-lot vacation home development known as Surf and Sands Estates was established on Lake Josephine. During the 1960s other nearby tracts were developed, and in 1966, following further sales and development of land in the area, the Riviera Community Club, consisting of 3,100 lots and 800 homes, was established. Today, Anderson Island continues on as a community that supports residences, agriculture, recreational activities, and a rural island way of life.

\textbf{History of Ketron Island}

Much of the following synopsis of Ketron Island history is excerpted and rewritten from information in an unpublished pamphlet titled “The Romance of Ketron” with reference to J.C. Morris and Don Morris.

Prior to European settlement Indians are said to have found Ketron to be a popular location for fishing, clamming, and ceremonial dances and celebrations. The Island was unnamed until the Wilkes expedition of 1841, when the expedition party named the Island after William Kittson, a
recently deceased resident of nearby Fort Nisqually. The Island was given a variety of spellings on maps and documents over several years until the name Ketron eventually took hold. The first known resident of Ketron Island was Captain Warren Gove, who lived there in the 1850s. Ownership and activity on Ketron Island was sporadic until well into the 1900s. In 1946, J.C. Morris of Anchorage purchased the island, which at the time was undeveloped except for an unopened resort consisting of 60 cabins, a lodge, and a guest house. After a three year period of operation the resort was closed, and preparations were made to develop a residential community. The first residences were built in the early 1960s. Since that time a small number of homes have been built on the island, and a marina on the east side of the island has at various times provided commerce and recreation opportunities to residents and visitors.

**PLANNING HISTORY**

**COUNTY PLANNING**

**1962 PIERCE COUNTY COMPREHENSIVE PLAN AND ZONING**

The first Pierce County Comprehensive Land Use Plan was adopted on April 2, 1962. The Pierce County Zoning Code, which implemented the Comprehensive Plan, was adopted on October 8, 1962. The 1962 Pierce County Comprehensive Plan designated Anderson and Ketron Islands as “Rural Residential.” These rules followed very basic planning principles. Zoning districts were established that dictated the appropriate location for commercial business and residential homes. However, the Plan did not offer much protection from incompatible uses and did not recognize the unique individuality of communities.

**1994 PIERCE COUNTY COMPREHENSIVE PLAN**

In April 1990, the Growth Management Act (GMA) was passed by the Washington State Legislature. It required Pierce County to update its existing Comprehensive Plan and Zoning Regulations, including community plans. The GMA required Pierce County to develop and adopt a comprehensive plan which would control residential, commercial, and industrial growth. Thirteen goals are listed in GMA to guide policy development in six required elements. The required elements include land use, housing, capital facilities, utilities, rural, and transportation. Pierce County also elected to include four additional elements: environment and critical areas, economic development, community plans, and essential public facilities. Each of the six GMA required elements must conform to specific standards set in the legislation. GMA required cities and counties to plan for growth based on population forecasts. Where growth is allowed, facilities and services must be planned and provided.

In April 1991, interim Growth Management Policies were adopted as a transition between the 1962 Comprehensive Plan and the more complex plan developed under the Growth Management Act. In June 1992, the Pierce County Countywide Planning Policies were adopted. The policies provided the framework and process by which Pierce County and the cities and towns within the County would establish urban growth areas, provide infrastructure and

**COMMUNITY PLANNING**

Pierce County Comprehensive Plan policies located in the Community Plans Element address community autonomy, community character, new community plans, consistency with the Comprehensive Plan, consistency with the Development Regulations-Zoning, transition strategies, and joint planning agreements.

The Community Plans Element of the 1994 Pierce County Comprehensive Plan envisions a local voice in how the Comprehensive Plan and its Development Regulations will be carried out in communities. Community plans exemplify how the objectives and policies of the Comprehensive Plan play out when applied to detailed and specific conditions. They indicate specific land use designations, appropriate densities, and the design standards that should apply in community planning areas. Preserving and building community character while ensuring an efficient and predictable development approval process is a central theme. Community plans help citizens decide what they want to retain and what they want to change at the local level.

Although the Growth Management Act (GMA) does not require comprehensive plans to provide for community plans, Pierce County Ordinance 90-47s directs County officials to prepare a Community Plans Element of the Comprehensive Plan. The majority of the unincorporated County population resides in community plan areas. The Community Plans Element spells out how to coordinate consistency between community plans and the Comprehensive Plan. Community plans must be consistent with the Comprehensive Plan and the GMA.

**SCOPE OF THE COMMUNITY PLAN**

**LEGISLATIVE AUTHORITY TO DEVELOP THE PLAN**

The Pierce County Executive and the County Council District #6 Representative coordinated to select a Community Planning Board to develop an update to the 1992 Anderson and Ketron Islands Community Plan. The selection of thirteen Board members, ten from Anderson Island and three from Ketron Island, was executed in a May 2006 letter signed by Executive John Ladenburg and Councilmember Dick Muri.

**PURPOSE AND USE OF THE COMMUNITY PLAN**

The Anderson and Ketron Islands Community Plan gives details on how the community wants to develop in the future and what standards could be utilized to create and maintain the look and
feel identified in the community plan. In some circumstances, the plan refines the Pierce County Comprehensive Plan to more closely reflect the needs, concerns, and desires of the residents. The plan also identifies actions necessary to implement the community plan, including adopting or revising land use regulations; identifying priorities for use of public funds to develop physical improvements such as roads, ferries, and utilities, sidewalks and street lighting, and residential and commercial development.

**CONSISTENCY WITH THE PIERCE COUNTY COMPREHENSIVE PLAN**

The Growth Management Act requires consistency between plans and implementing development regulations. Furthermore, the Pierce County Comprehensive Plan Community Plans Element contains specific policies that require consistency between the Comprehensive Plan and community plans. The goals, objectives, principles, and standards in the Anderson and Ketron Islands Community Plan are consistent with the provisions in the Pierce County Comprehensive Plan.

**COMPONENTS OF THE COMMUNITY PLAN**

**VISIONS**

Visioning is the process of defining the expectation of what the community could be in the future. Visioning is typically completed through a series of public meetings or workshops structured to allow the community to articulate hopes for the future. Statements, thoughts, and ideas brought forth in the visioning process become the basis for the visions, goals, objectives, and principles of the community plan.

Vision statements can be either: 1) broad - painting a picture of what the community should strive to be like, physically and socially; or 2) focused - to express how the concerns, values, and hopes of the community should be reflected in various topics.

Goals, objectives, and policies (principles and standards) are used to provide measurable statements to fulfill the vision statements and are an integral part of the visioning process.

**GOALS**

Goals describe a desirable future for the community: identifying who, what, why, and how the broad values and hopes set forth in the vision statement will be accomplished. Goals provide the framework from which objectives, policies (principles and standards), and implementation actions and recommendations will be developed.

**OBJECTIVES**

Objectives are statements which specifically define goal actions.
POLICIES (PRINCIPLES AND STANDARDS)

Principles set a particular course of action to accomplish objectives. Standards, quantitative or qualitative, are specific benchmarks or targets to be accomplished in the ongoing development of the community.

IMPLEMENTATION ACTIONS AND RECOMMENDATIONS

Implementation actions and recommendations are statements that provide changes to policy documents, regulations, capital facility plans, and statements directing agencies and community groups to revise or develop plans, regulations, and non-regulatory measures.

The vision and all of the goals, objectives, policies, and implementation actions and recommendations are developed through citizen comment and represent the will of the people translated into decision-oriented statements. When applying the policy statements, each should be afforded equal weight and consideration.

PUBLIC INVOLVEMENT

COMMUNITY PLANNING BOARD

The development of the Anderson and Ketron Islands Community Plan could not have been accomplished without the Anderson and Ketron Island Community Planning Board (AIKI CPB). The AIKI CPB consisted of a 13-member group, with ten members representing Anderson Island and three representing Ketron Island. Members represented a variety of interests and geographic locations on the islands. Members’ interests included: community boards and commissions, local emergency services, business and real estate representatives, historic preservation interests, environmental interests, property owners, and long time residents.

The AIKI CPB was charged with five main responsibilities: 1) serving as a sounding board for the community; 2) developing a vision statement and community-wide goals for the community plan area; 3) developing policies and implementing actions related to various topics; 4) guiding the development of policies and map changes that address community concerns while remaining consistent with the Comprehensive Plan; and 5) forwarding a draft updated Anderson and Ketron Islands Community Plan to the Pierce County Planning Commission and Pierce County Council.

In early 2006, public outreach on the community plan process began with recruitment of members to serve on the Community Planning Board (CPB). The first CPB meeting was held in August 2006. The CPB first developed a draft vision statement and goal statements for each of the four elements of the plan. An open house was held in November 2006 to give the community an opportunity to review and comment on the vision and goals. Meetings of the CPB were held monthly and occasionally twice monthly through November of 2008. The CPB worked on developing an overall vision for the community, and goal statements and policies for each element of the community plan. Open houses were held on November 5 and 6, 2008. These open houses gave the public an opportunity to review and comment on the draft plan.
prior to its transmittal to the Pierce County Planning Commission and County Council. The CPB used the open house forum to solicit important community feedback regarding their proposed recommendations for final AIKI CPB consideration.

**Survey**

**Background**

In August 2006, Pierce County Planning and Land Services (PALS) mailed 2,500 questionnaires to households and property owners within the Anderson and Ketron Islands Community Plan area. The survey was developed by PALS staff and based on a format used in various communities throughout Pierce County in previous land use planning efforts. The survey was intended to help PALS staff and community planning board members assess the community’s views regarding a variety of topics including quality of life, natural environment, land use, the economy, community character, and public facilities and services.

**Methodology**

Mailings were sent to all property owners on both islands as identified in Pierce County Assessor-Treasurer’s records. At the time of cut-off for tabulation, 474 questionnaires were returned completed for a return rate of 19%, which is a higher return rate than for surveys for most other community plans in Pierce County. The results were produced in a cross-tabulation format showing how results break out by place of residence: Anderson Island, Ketron Island, or off-island. Of the 474 completed surveys, 212 respondents lived on Anderson Island, 10 lived on Ketron Island, 190 lived off-island in other locations but own property on one of the islands, and 62 did not indicate place of residence.

The results of the survey were used by the PALS staff and the Anderson and Ketron Islands Community Planning Board to assess community views regarding a variety of issues and were used as an aid in the development of the community plan.

**Survey Summary**

The survey asked questions regarding quality of life; condition of the built and natural environment; economic development; land use planning and related controls; community character; and levels of support for a variety of public facilities and services. The survey results reflected a general satisfaction with the state of the community. The questions attempted to identify and anticipate certain issues such as ferry services, home occupations, and groundwater quality in order to gauge community sentiment.

For quality of life questions addressing current conditions on the islands, presence of woodlands, open spaces, streams, wetlands, shorelines, and other natural features received the highest rating, followed by land use patterns, and then parks, while the lowest ratings were given to jobs, architectural design, and housing.

For questions regarding the natural environment, the highest rates of agreement related to balancing growth with environment, preventing groundwater contamination, maintaining tree
cover, and protecting natural resources. There was less agreement that current stormwater facilities are adequate, and that wetlands need better protection.

On economic issues, there was a high level of agreement that the intersection of Lake Josephine Boulevard and Eckenstam-Johnson Road should continue to be the focal point of business on Anderson Island. There was the greatest level of disagreement to the idea that contractor’s yards and outside storage yards should be considered home-based industries.

On community character issues, the statement that new developments should be designed to maintain and promote the rural character of the area received the highest level of agreement, while the least agreement was given to the statement that there should be more residential growth in the area.

On transportation issues, no statements received 50% or more agreement, however the highest level of agreement was with the statement that ferry trips should be increased. There was very little agreement on whether roads should be widened to accommodate more cars, or if new roads should be constructed.

Regarding the provision of public facilities, the highest priority was given to fire protection, ferry services, paramedic staff, and enforcement of illegal junkyards, while the lowest priority was given to a senior center, transit services, and maintaining stormwater facilities.

The survey results were used by the Community Planning Board as an aid in the development of the community plan.

**SUMMARY OF THE ANDERSON AND KETRON ISLANDS COMMUNITY PLAN**

The Anderson and Ketron Islands Community Plan contains policies and implementing actions for four major subject areas or elements: Land Use and Economic, Community Character and Design, Natural Environment, and the Facilities and Services.

**LAND USE AND ECONOMIC ELEMENT**

The Land Use and Economic Element addresses issues such as what land uses should be allowed in the various designations and the appropriate intensity of land use in various areas in the community. Rural residential land use designations should maintain a low density rural land use pattern, preserve the rural character, protect environmentally sensitive features, and encourage agricultural and forestry activities within the plan area. On Ketron Island, tourism facilities such as bed and breakfast houses should be allowed, and where new lodging facilities are developed on shoreline locations, provisions for public access to the shoreline should be encouraged. On Anderson Island, priority should be given for developing a community museum or library. Also on Anderson Island, appropriately sited and designed storage facilities should be allowed. Direct marketing of agricultural products should be encouraged on Anderson Island. On both islands aquaculture activities should be mitigated to reduce visual and noise impacts and best management practices should be applied. Processing of aquacultural goods should not be allowed. Forestry is recognized as a historical and desirable land use within the plan area. A Rural Neighborhood Center designation in the vicinity of the marina on the east
shore of Ketron Island should be established, and the existing Rural Neighborhood Center on Anderson Island at the intersection of Eckenstam-Johnson Road, Camus Road, and Lake Josephine Boulevard should continue. Open space corridors should include Anderson Island Parks and Recreation properties and County-owned properties.

**COMMUNITY CHARACTER AND DESIGN ELEMENT**

The Community Character and Design Element focuses on guidelines for residential and commercial development in the area. Existing places and structures of historic and cultural significance should be preserved, thereby strengthening the area’s character and sense of place. Residential design should respond to the existing character and conditions of the site and evoke a rural character. Where territorial views exist, developments should minimize obstruction of views from nearby properties through appropriate landscape design, building placement, height, and setbacks. Site designs should be encouraged which contribute to the aesthetic value of the area, by retaining resources such as clusters of trees and historic features. All of Ketron Island may be considered prone to wildfire, so new developments on the island should enact measures to minimize danger of wildfire to the development and surrounding properties. The visual qualities and resources on Ketron Island are identified as a vital component of that which comprises the area’s special character and identity and should be protected and enhanced. Requirements for building facades and lighting for residential and commercial development, and building design for commercial development are intended to support this intended character and identity for Ketron Island.

**NATURAL ENVIRONMENT ELEMENT**

The natural environment includes consideration of the natural resources found on Anderson and Ketron Islands. Natural resources such as wildlife, clean water, parks, and open spaces are an integral and valued part of the community. The policies contained within the Natural Environment Element promote protection of critical areas, encourage preservation of natural vegetation, and address special topics such as the marine shorelines, wetlands, and fish and wildlife habitat.

**FACILITIES AND SERVICES ELEMENT**

The Facilities and Services Element addresses services such as public safety services (emergency and stormwater), and facilities such as roads, parks and schools. Transportation policies emphasize ferries and road improvements. Police services should be enhanced through effective law enforcement that addresses community concerns for life safety, vandalism, and personal property protection. Effective fire protection and emergency services to the islands should include reliable access to the islands to help to ensure prompt emergency and police response when services are needed. Services and programs to Ketron Island residents and property owners to discourage illegal dumping, storage of junk, and burning need to be addressed. Management of groundwater withdrawal rates should be done so as to not exceed
recharge rates in order to preserve the high quality and supply of groundwater resources. Measures should be enacted to improve water conservation.

On transportation issues, an appropriate level of ferry services should be provided to both islands. Opportunities include coordination with other agencies, civic groups, and the public to address ferry issues and concerns, and preparing a feasibility study to identify parking areas in or near Steilacoom for Island residents. The rural character of the Anderson Island roadway system should be preserved, while at the same time the roadway system enhances safety and facilitates access to community facilities. The roadway system on Anderson Island should be made safer and more convenient to pedestrians and other nonmotorized users. The roadway system on Ketron Island should accommodate existing and future residents, and there should be a primary emphasis placed on funding the improvement of existing roadways on the Island.

**PLAN MONITORING**

The Plan Monitoring Section addresses how to measure the effectiveness and impacts of the plan over time.

**IMPLEMENTATION**

The plan also contains proposed actions, located at the end of each element, which serve to implement various plan policies. These actions are grouped into short-term, mid-term and long-term endeavors. Short term actions should occur immediately or within one year of plan adoption. Mid-term actions should be completed within 1-5 years. Long term actions should be completed within 5-10 years of plan adoption. The party or parties responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to a lead entity or entities as the primary responsible party to complete.

**VISION STATEMENTS**

**ANDERSON ISLAND**

- Anderson Island is a historic and rural residential community with an attractive and compact central commercial node.
- Growth on the Island is managed to retain the Island’s historic and caring character, foster a sense of community and diversity, and preserve the natural forested and marine environment and ecosystems.
- Residential and commercial development is designed to be visually pleasing and integrated into the natural surroundings.
- The Island contains well planned public infrastructure and services to support a diversity of residents’ needs including safe walking areas, recreational opportunities, parks and open space, schools and a transportation system coordinated between the local ferry and regional mass transit.
Ketron Island reflects a unique rural island character that promotes growth opportunities within the carrying capacity of the Island, while maintaining the integrity of the natural environment.

- Unique natural features such as sandy beaches, lagoons, wetlands, and ravine areas are preserved.
- Environmentally sound solutions are applied to provide facilities and services.
- A functional transportation system, including an enhanced marina facility and ferry service, supports all ages and accommodates future growth.
- And limited commercial services are available to meet the needs of tourists and Island residents.
Chapter 2: Land Use and Economic Element

**INTRODUCTION**

The Land Use and Economic Element of the Anderson and Ketron Island Community Plan provides policies regarding the location of preferred land uses (residential, commercial, resource lands, etc.) and the density of intensity related to those uses (i.e., how many dwelling units are permitted, how big structures can be, etc.).

This element serves to refine the policies contained in the Pierce County Comprehensive Plan, specifically the Land Use Element 19A.30 and Economic Development Element 19A.50. The community plan provides more specific guidance and criteria regarding land uses than is provided in the generalized Pierce County Comprehensive Plan. In cases where this plan does not provide specific guidance, the policies in the Pierce County Comprehensive Plan shall be used to determine land use objectives and standards. The policies contained in this element provide the foundation for changes to Pierce County’s Development Regulations including the zoning maps and land use regulations.

The main issues related to economic development in the area focus on home occupation and cottage based industry and tourism. Most of the goals and policies reflect land use related efforts to achieve this. As such, what would normally be two elements in other community plans have been combined into one element.

**DESCRIPTION OF CURRENT CONDITIONS**

Anderson Island is primarily characterized by a variety of rural land uses on large lots. Residential home sites, agricultural lands, and forest lands dominate the land use pattern. One small commercial area is located along the main arterial, Eckenstam-Johnson Road.

Ketron Island is primarily undeveloped. There are 16 housing units built on Ketron Island. Of these homes, 13 are within the plats of Ketron Sunrise, Ketron Sunset, and Ketron Island Estates. There are 259 vacant residential parcels on Ketron Island. Over 90% of the platted parcels on the Island are vacant, but cannot be built on until an adequate method of sewage disposal system is installed.

**EXISTING LAND USES**

The Pierce County Assessor-Treasurer’s Office classifies how parcels are used for purposes of calculating assessed value for taxation. The Pierce County Planning and Land Services Department routinely uses this information to determine the distribution of land uses within specific areas. The Assessor’s information is known to periodically contain errors, but is
considered accurate for planning purposes. The Assessor’s information reflects only how land
is currently being used and does not reflect zoning. The following table summarizes the current
uses of land on the Anderson and Ketron Islands based upon Assessor-Treasurer’s information:

Table B-1: Existing Land Uses

**CURRENT COMPREHENSIVE PLAN DESIGNATIONS AND ZONING CLASSIFICATIONS**

The Pierce County Comprehensive Plan established three land use designations within the
community plan area.

The following table summarizes the land use designations and zoning classifications prior to
adoption of the community plan in terms of acreage and percent of plan area.

Table B-2: Existing Land Use Designations And Acreage

<table>
<thead>
<tr>
<th>Land Use Designation</th>
<th>Acreage</th>

<td>22.11%</td>
</tr>
<tr>
<td><strong>TOTAL</strong></td>
<td><strong>5,218.56</strong></td>
<td><strong>100%</strong></td>
</tr>
</tbody>
</table>
**Rural Ten (R10)**

The Rural Ten (R10) designation provides for a range of low density residential uses. The intent is to accomplish a rural land use pattern that promotes rural uses, while not requiring urban level services. Cluster development is encouraged within rural residential designations and zones and density bonuses are provided within developments for the dedication of permanent open space. One accessory dwelling unit is also allowed on a residential lot where an existing single-family dwelling exists. The designation and zone number (e.g., 10) represents the base number of acres required for each primary dwelling unit. The R10 designation accounts for 4,054.31 acres of land, totaling approximately 77.69% of the plan area.

**Agriculture Resource Land (ARL)**

Lands designated as Agricultural Resource Land (ARL) are distinct from rural lands and include agricultural lands that have been designated as having long-term commercial significance. The Comprehensive Plan identifies criteria and guidance for protection, management, and future development of lands designated ARL. The key criterion for defining ARL is the presence of the County’s most productive agricultural soil types and their associated production yield. The ARL designation accounts for 1,153.94 acres of land, totaling approximately 22.11% of the plan area.

**Rural Neighborhood Center (RNC)**

The Rural Neighborhood Center (RNC) designation serves the everyday needs of local rural residents. The RNC provides limited convenience shopping and services, is limited in size, and retains a scale and intensity that is appropriate for maintaining the rural character. The RNC designation accounts for approximately 10.31 acres of land, totaling less than one percent of the plan area.

**Dwelling Unit Capacity**

Under current plan zoning, it is estimated that a maximum total of 2,723 acres of vacant and underdeveloped land is currently available for residential use on Anderson Island. These lands have the capacity to accommodate approximately 3,989 dwelling units based upon the housing densities allowed in each zone. It is estimated that 10,670 persons would be accommodated within this housing (based on an average of 2.675 persons per household). In addition, each residential lot may accommodate an accessory dwelling unit. Accessory dwelling units are not included in residential capacity calculations. Dwelling unit capacity numbers for Ketron Island are not currently available.

**Commercial Area Capacity**

There is one rural commercial center within the plan area and will be retained as a result of the community plan. The Rural Neighborhood Center is located on Anderson Island at the intersection of Eckenstam-Johnson Road and Lake Josephine Boulevard.
The following table provides information on the size and basic land use activity in the Rural Neighborhood Center based on the Pierce County Assessor-Treasurer’s records from December, 2007. This table shows the amount of commercial development, underdeveloped land and vacant land in each center.

**Table B-3: Existing Commercial Center Land Area Statistics**

**DESCRIPTION OF DESIRED CONDITIONS**

One of the most significant issues addressed within the community plan is land use. How land is utilized within a community directly affects the community’s character and quality of life perceived by its residents. The land uses within the plan area should reflect a rural character while providing for growth and development that maintains a single-family, recreation, agricultural, and forestry land use pattern. The following section describes in greater detail the proposed land use designations and zoning classifications as recommended in this plan.

**PROPOSED LAND USE DESIGNATIONS AND ZONING CLASSIFICATIONS**

The Anderson and Ketron Islands Community Planning Board (CPB) analyzed a variety of information to recommend plan designations and zoning classifications on the Islands. First, limited areas of more intense rural development (LAMIRD) criteria were utilized to designate commercial areas (based on the Growth Management Act and Central Puget Sound Growth Management Hearings Board decisions). Second, the Pierce County Comprehensive Plan policies for rural commercial areas and resource lands were evaluated. Finally, individual landowner requests for rezones were considered at a series of community planning board meetings.

The following text, tables, and maps illustrate the proposed changes in land use designations and zone classifications contained within the community plan and correlating acreage changes for each.

**PROPOSED COMPREHENSIVE PLAN DESIGNATIONS AND ZONING CLASSIFICATIONS**

The following table summarizes the proposed land use designations and zoning classifications in terms of acreage and percent of plan area.
**Table B-4: Proposed Land Use Designations And Acreage**

<table>
<thead>
<tr>
<th>Land Use Designation</th>
<th>Acreage</th>
<th>Percent of Plan Area</th>
</tr>
</thead>
<tbody>
<tr>

<td>100%</td>
</tr>
</tbody>
</table>

**Rural Ten Designation and Zone**

The Rural Ten (R10) designation primarily accommodates low-density single-family residential, agricultural, forestry, and recreational uses. Some types of civic uses and recreational uses, such as parks and trails, are also permitted in this designation. Home occupations are encouraged as an accessory use to a single-family dwelling unit. The residential densities within the R10 are one dwelling unit per 10 acres. Bonus densities are allowed only on Ketron Island. Existing parcels that are less than 10 acres and are zoned R10 can be built upon as long as other development criteria such as septic, water, critical areas, and other County requirements are met. Approximately 4,051.50 acres of the plan area have been designated R10. This represents 77.64% of the total plan area. The Rural 10 zoning classification implements this plan designation.

**Agricultural Resource Land Designation and Zone**

The Agricultural Resource Land (ARL) designation is intended to preserve parcels that contain prime agricultural soils for long-term agricultural activities. These properties are identified through a Countywide process. The criteria that are evaluated to implement this designation will stay the same as is currently established through the Pierce County Comprehensive Plan. This designation allows for a variety of agricultural uses. Approximately 287.68 acres of the plan area have been designated ARL, all on Anderson Island. This represents 5.51% of the total plan area. The Agricultural Resource Lands zone implements this plan designation.

**Rural Farm Designation and Zone**

Approximately 866.19 acres of the plan area have been designated Rural Farm. This represents 16.60% of the total plan area. The Rural Farm zone implements this plan designation.

**Rural Neighborhood Center**

The Rural Neighborhood Center (RNC) designation serves the everyday needs of Island residents. The RNC provides limited convenience shopping and services, is limited in size, and retains a scale and intensity that is appropriate for maintaining the rural character. One Rural Neighborhood Center is located on Anderson Island at the intersection of Eckenstam-Johnson Road and Lake Josephine Boulevard. An analysis of this RNC area was conducted as part of the community planning process. The logical outer boundary of the area was inventoried based on
the built environment as of July 1, 1990. Similarly, the type of uses existing in each commercial area on July 1, 1990 was identified. Based on this information, the boundaries of the commercial areas and types of uses permitted within the RNC have been refined. The RNC designation accounts for approximately 13.19 acres of land, totaling less than one percent of the community. A second RNC is located at the site of the marina on the east shore of Ketron Island. This RNC is approximately four acres in size. The Rural Neighborhood Center zone implements this plan designation.

**Community Plan Development Potential**

The potential number of dwelling units allowed on Anderson Island will decrease under the community plan proposed zoning. In the Rural 10 zone classification, residential densities will be limited to one dwelling unit per ten acres, compared to the current zoning which allows for increasing residential density to two dwelling units per ten acres when open space is provided. Residential development potential in the Agricultural Resource Land and Rural Farm zone classifications will remain unchanged at one dwelling unit per ten acres. Residential development potential on Ketron Island will remain unchanged.

**Other Land Use Considerations**

**Aquaculture**

Anderson and Ketron Islands have extensive marine shorelines containing high bluffs, bays and lagoons, sand spits, mud flats, sandy beaches, and many other features. These shoreline areas have historically offered locations for aquaculture, primarily conducted for residential purposes. Recently geoduck farmers have discovered that certain tidelands provide prime habitat for the cultivation of their product. This new aquaculture industry has the potential to create land use conflicts with upland home owners as the beaches used for geoduck farming alter the visual appearance of the shoreline and create a new use that have the potential to be incompatible with traditional uses on the shoreline.

The land use pattern on Anderson and Ketron Islands is intended to provide a rural ambiance highlighted by the natural attributes of the area, including the extensive marine shorelines, native forests, and large areas of open space. New land uses will reflect this rural environment emphasizing residential home sites on large lots, resource uses including working farms, and forestry practices. Commercial services for local residents will remain at a level conducive to the needs of Island residents. Encourage economic development that is responsive to the needs of the community.
LAND USE POLICIES

GOALS

The land use pattern on Anderson and Ketron Islands is intended to provide a rural ambiance highlighted by the natural attributes of the area, including the extensive marine shorelines, native forests, and large areas of open space. New land uses will reflect this rural environment emphasizing residential home sites on large lots, resource uses including working farms, and forestry practices. Commercial services for local residents will remain at a level conducive to the needs of Island residents. Encourage economic development that is responsive to the needs of the community.

RURAL RESIDENTIAL

GOAL AK LU-1 Low density housing, open space, and resource land uses will be the prominent development pattern in the area.

GOAL AK LU-2 Establish rural residential land use designations that maintain a low density rural land use pattern, preserve the rural character, protect environmentally sensitive features, and encourage agricultural and forestry activities within the plan area.

GOAL AK LU-3 The majority of the plan area should be designated Rural Residential.

AK LU-3.1 The Rural 10 (R10) zone should provide for a variety of rural residential lot sizes.

AK LU-3.1.1 Residential densities in the R10 zone shall be 1 dwelling unit on 10 acres.

AK LU-3.1.2 On Ketron Island, residential density may be increased in the R10 zone to 2 dwelling units on 10 acres when 50% of the parcel is designated as open space.

AK LU-3.1.3 On Anderson Island, increased densities associated with designating a portion of a parcel as open space shall not be allowed.

AK LU-3.1.4 The minimum lot size in the R10 zone shall be 10 acres except:

AK LU-3.1.4.1 On Ketron Island, the minimum lot size may be reduced to 1 acre when 50% of the parcel is designated as open space and residential densities are increased as described in policy 3.1.2; and

AK LU-3.1.4.2 On Anderson Island the minimum lot size shall be 2 acres.

AK LU-3.2 Allow a variety of rural residential land uses in the R10 zone that are consistent with a rural lifestyle.

AK LU-3.2.1 The dominant land use shall be detached single-family residential.

AK LU-3.2.2 Permit civic uses such as churches, educational facilities, and public safety services that can be supported by rural infrastructure.
AK LU-3.2.3  On Ketron Island, allow tourism facilities such as bed and breakfast houses with up to 5 guest rooms in locations throughout the Island. Where new lodging facilities are developed on shoreline locations, provisions for public access to the shoreline should be encouraged. Such public access should be limited to the lodging facilities’ property.

AK LU-3.2.4  Recognize that community and cultural services that serve the neighborhood in which they are located and are open to the general public shall include facilities such as an Anderson Island historical museum or a library serving the island community.

Resource Lands

GOAL AK LU-4  Agricultural, forest, and mineral resource lands are an asset for island residents. These lands provide many benefits including employment opportunities, wildlife habitat, and a scenic landscape enjoyed by all. Utilize resource lands at sustainable levels to provide raw materials, value-added products, and jobs necessary for future generations.

GOAL AK LU-5  Designate properties with the potential for long-term commercial agricultural significance as Agriculture Resource Lands (ARL), and other agricultural lands as Rural Farm (RF).

AK LU-5.1  Lands that have been designated ARL, but do not meet the ARL criteria shall be designated RF; however, landowners may request their property be removed from the RF designation during a subsequent Comprehensive Plan amendment cycle.

AK LU-5.2  Permitted uses in the ARL and RF zones include all agricultural uses and the buildings necessary to conduct the farm uses. These uses may include orchards, processing and sales of products produced on the farm, and wineries. Farm uses shall be permitted outright and are not subject to special use permit requirements.

AK LU-5.3  Direct marketing of agricultural products shall be encouraged from ARL and RF properties.

AK LU-5.4  Allow custom milling and forest products sales, accessory to a single-family home, provided these activities are consistent with criteria for home occupations.

AK LU-5.5  Residential density shall not exceed a maximum of 1 dwelling on 10 acres. Clustering of lots is permitted provided that the parent parcel is 20 acres or larger, the clustering results in no more than 10 lots per cluster, and no individual lot is smaller than 2 acres.

GOAL AK LU-6  Allow a variety of aquaculture activities including shellfish farming and fish hatcheries in appropriate locations throughout the community.

AK LU-6.1  Aquaculture activities should be mitigated to reduce visual and noise impacts to nearby residences.

AK LU-6.2  Implement best management practices for all aquaculture activities.
AK LU-6.3 Do not allow commercial processing of aquacultural goods, either associated with an aquacultural farming operation or as a use not directly associated with an aquacultural farming operation.

GOAL AK LU-7 Recognize forestry uses as a historical and desirable land use within the plan area.

AK LU-7.1 Encourage a variety of uses in the Rural Residential designations that are consistent with and support the long-term viability of timber management.

AK LU-7.2 Ensure that forestry use activities are conducted in a manner that is compatible with the rural residential character of the islands.

RURAL CENTERS

GOAL AK LU-8 Compact and attractive Rural Neighborhood Centers serve as focal points for business and community activities. Plan these commercial centers in defined locations or in areas that have historically provided commercial services to the community. Encourage pedestrian features that present opportunities for citizens to walk between businesses. Commercial activities in rural centers should provide the basic goods, services, and employment needed by local residents.

GOAL AK LU-9 Designate rural commercial centers as limited areas of more intense rural development (LAMIRDs).

GOAL AK LU-10 Recognize sites that are appropriate to designate as LAMIRDs.

AK LU-10.1 Prohibit rural commercial areas from sprawling along Eckenstam-Johnson Road.

AK LU-10.2 Encourage infill development within the logical outer boundary of Rural Neighborhood Centers.

AK LU-10.3 Establish a Rural Neighborhood Center designation in the vicinity of the marina on the east shore of Ketron Island.

AK LU-10.4 Recognize the existing Rural Neighborhood Center on Anderson Island at the intersection of Eckenstam-Johnson Road, Camus Road, and Lake Josephine Boulevard.

OVERLAYS

GOAL AK LU-11 Utilize the Comprehensive Plan Open Space Corridors Map as the basis for establishing open space overlay corridors within the plan area.

AK LU-11.1 Expand the open space corridors to include the following areas as noted on the revised Open Space Corridors Map:

AK LU-11.1.1 Anderson Island Park and Recreation District properties; and

AK LU-11.1.2 County-owned properties.
Open space corridors should be used to connect wetlands and areas with hydric soils that serve to recharge streams and groundwater.

Limit densities within the open space corridor to minimize impacts and enhance high priority resources.

Prohibit bonus densities in open space corridors.

Economic Development Policies

Goals

Encourage economic development that is responsive to the needs of the community.

General

Goal AK EC-1

Encourage commercial development that will protect the islands’ rural character and environmental values.

AK EC-1.1

Encourage designs in commercial development that reflect the islands’ rural character and environmental values in its architecture, site design, landscaping, buffers, open space, tree cover, and similar features.

AK EC-1.2

Evaluate historically industrial areas as limited areas of more intense rural development (LAMIRDs).

Home Occupations and Cottage Industries

Goal AK EC-2

Review current development standards for home occupations/cottage industries and reconcile contradictions (such as parking requirements that make a property assume a commercial character as opposed to a residential character).

Goal AK EC-3

Address illegal contractor’s yards by pursuing opportunities to support limited contractor activities.

Goal AK EC-4

Educate residents on the opportunities, resources, and requirements for carrying out a home occupation or cottage industry business.

Natural Resource Industries

Goal AK EC-5

Encourage agricultural and forestry industries within the community.

Goal AK EC-6

Encourage retention of properties of sufficient size to make agriculture/forestry economically feasible.

Goal AK EC-7

Ensure agricultural uses are allowed broadly within the plan area.
IMPLEMENTING ACTIONS

The following actions need to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 1-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Pierce County Planning and Land Services (PALS) and Tacoma-Pierce County Health Department (TPCHD), where appropriate.

SHORT TERM ACTIONS (UPON PLAN ADOPTION TO 1 YEAR)

1. Amend the Pierce County Development Regulations – Zoning (Title 18A) to:
   - Establish allowed uses in the various residential zone classifications consistent with community plan policies.
   - Add new levels to use types consistent with community plan policies.
   - Establish allowed residential densities throughout the plan area.
   - Establish structural setbacks and height limitations. (PALS)

2. Amend the Pierce County Zoning Atlas to reflect changes between Agricultural Resource Land and Rural Farm, and to add a new Rural Neighborhood Center. (PALS)

3. Amend Title 18J, Development Regulations-Design Standards and Guidelines to adopt design standards and guidelines for residential and commercial uses within the plan area. (PALS)

4. Provide the Shoreline Citizens Advisory Committee with recommendations for the Shoreline Master Program Update regarding storage facilities and aquaculture. (PALS)

5. Ensure wood chipping activities are consistent with the applicable Pierce County Code Noise Pollution Control regulations. (TPCHD)

6. Amend the County’s current, officially adopted Open Space/Greenbelt map to better reflect on-the-ground physical conditions and community characteristics and values. (PALS)

7. Review current development standards for home-based/cottage industries and reconcile contradictions (such as parking requirements that make a property assume a commercial character as opposed to a residential character). (PALS)

MID-TERM ACTIONS (1-5 YEARS)

1. Establish outreach actions to island residents on the opportunities, resources, and requirements for carrying out a home-based or cottage industry business. (PALS)

2. Provide outreach to island residents and property owners on uses and limitations of the County’s Current Use Assessment (tax incentive) program. (PALS)
This map is a general illustration of Pierce County’s land use policies and provides guidance for the development of future land use classification that implements the Comprehensive Plan.

Refer to the official zoning orders or GIS data when determining zoning for a specific parcel.

*Note: The legend shows only the land use designations within the Anderson and Ketron Islands Community Plan Area. The areas outside this plan area are masked within the map display.

Chapter 3: Community Character and Design Element

INTRODUCTION

The Community Character and Design Element describes the physical environment that comprises the character of a community: the streets, parks, buildings, neighborhoods, and open space that determine the way the community looks and feels. It is a blending of land use planning, architecture, landscaping, and environmental protection. This element addresses the way buildings, streets, public places, signs, natural features, and other development relate to one another and the people who use them. Improvements such as street construction, park development, commercial, residential, and civic development can be effectively coordinated to promote a unified community image. The Community Character and Design policies are intended to reinforce aesthetic characteristics that the community wants to retain and build upon.

The residents of Anderson and Ketron Islands are interested in preserving the rural character of their community. Historic development has created two island communities with distinct land use issues and local features. Residents have determined that high priority should be given to preserving the sense of privacy that exists on the Islands. The Community Character and Design Element emphasizes Anderson Island’s historic and caring character and sense of community and diversity, and preserving the Island’s natural forested and marine environment and ecosystems. For Ketron Island, this element emphasizes a unique rural island character that promotes growth opportunities within the carrying capacity of the Island, while maintaining the integrity of the natural environment.

DESCRIPTION OF CURRENT CONDITIONS

The Anderson Island and Ketron Island communities, with year-round populations of about 900 residents and 20 residents respectively, are characterized by the privacy and isolation afforded by island living. Prominent on the Islands are scenic views of Puget Sound and its shorelines and the mountains that surround the region. A number of bays and inlets on Puget Sound and two lakes accent the landscape on Anderson Island. Both Islands have extensive wooded areas. Residential uses at a rural scale are predominant, with Pierce County providing ferry access to the Islands. Both Islands have very limited commercial areas.

Retail uses within the community plan area are primarily limited to the general store and adjacent uses on Anderson Island, and facilities associated with the golf course at the Riviera Community Club. There are also a small number of home-based agricultural operations and associated uses on Anderson Island. Less than 1% of the community plan area is currently zoned for commercial retail and service use and there is very little undeveloped commercially zoned land available for new development.
RURAL RESIDENTIAL AREAS

The predominant development pattern on both Anderson Island and Ketron Island consists of a mix of residences and vacant land on large parcels. In addition, the Riviera community on Anderson Island and portions of Ketron Island have been divided into residential lots typically smaller than one-quarter acre and one-half acre respectively. A relatively small number of these lots have been developed with residences.

RURAL COMMERCIAL CENTER

A commercial area is located in the center of Anderson Island at the intersection of two County arterial roads. It consists of a general store, coffee shop, and other businesses. The entire commercial area is zoned Rural Neighborhood Center (RNC), covering ten acres including a vacant parcel to the south of the existing businesses. While outside the RNC, the fire station for Fire District No. 27 is adjacent to and west of the commercial businesses. Ketron Island does not have a zoned commercial area, however there is a marina adjacent to the Pierce County ferry landing.

HISTORIC AND CULTURAL RESOURCES

There is a strong tradition of community activities and citizen involvement in the community. Anderson Island has active improvement and social clubs that serve as places for community events and information.

The preservation and enhancement of special places that relate to a community’s heritage can bring economic benefit to the community by stimulating investment and increasing community awareness and involvement in its history. This can occur through the restoration of an old residence, reuse of a historic schoolhouse or wharf, rehabilitation of an old store or restaurant, and retaining its commercial use through compatible commercial additions. Additionally, the incorporation of historic resources and landmarks into recreational facilities such as trails or scenic bike routes can help achieve this goal.

There are many federal, state, and local laws and programs that apply to historic and cultural resource preservation. Locally, the Pierce County Cultural Resource Inventory provides an indication of those properties or structures that may hold historical or cultural significance. The Cultural Resource Inventory does not necessarily list all of the important historic structures in the area. Additional sites may be added to this list in the future based on additional research.
DESCRIPTION OF DESIRED CONDITIONS

Policies contained in the Community Character and Design Element should provide for the privacy associated with the rural character of the Islands. Development on Ketron Island should be well designed so as to harmonize with the rural character. Development on Anderson Island should be well designed so that commercial and civic uses are compatible with the surrounding residential areas, while the cultural, artistic, and scenic resources of the Island are protected and enhanced.

HISTORIC AND CULTURAL RESOURCES

Preserving and enhancing the historical and cultural resources on the Islands will be a priority. This will occur through protecting the historic rural feel by protecting sacred sites to preserve cultural roots and connections to the past. On Ketron Island, discouraging themed communities will also protect the historic character. Specified sites, buildings, and places will be recognized, protected, and preserved so that they will be integrated into developments that occur on the Islands.

DESIGN

New developments on the Islands will be designed so as to be compatible with the existing rural character of the uses and conditions in the surrounding area. Mobile homes and manufactured homes will not be allowed to be placed on Ketron Island. Low impact design will be applied as developments occur in order to preserve the existing natural character, functions, and values. Home occupations and cottage industries will utilize landscaping and screening to blend these uses into the existing residential surroundings.

New residential developments on the Islands will be responsive to the existing character and conditions on the Islands. This will occur through minimizing obstructions to territorial views, retaining resources such as clusters of trees and historic features, and, on Ketron Island, establishing architectural guidelines that encourage using architectural features typical of a rural setting, such as porches and verandas.

Residential developments will be situated to avoid wildfire-prone areas. This will occur as homes are sited and landscaping is arranged to maximize protection from wildfire. Because all of Ketron Island is prone to wildfire, such measures will occur throughout that Island.

VIEWSHEDS AND AESTHETICS

Recognizing that the visual qualities and resources on Ketron Island provide a vital component to the Island’s character and identity, existing and new developments will protect these qualities and resources. Development on the Island will occur so that it maintains existing views of mountain ranges and other scenic vistas. Selective tree limbing rather than tree removal will be prevalent in accommodating view creation. Tree removal will typically occur to...
address blow-down or fire hazards. Enhanced viewing platforms and similar amenities will be established at public gathering spaces to preserve significant views.

Other methods will also be used to enhance the visual landscape on Ketron Island, including screening visual nuisances from view, shielding and limiting lighting to preserve the dark rural night sky, placing utilities underground, and including features that harvest and conserve water into site design.

### Cultural Resources Policies

#### Historic and Cultural Resources

**Goal AK CR-1** Recognize and preserve existing places and structures of historic and cultural significance within the plan area, thereby strengthening the area’s character and sense of place.

**AK CR-1.1** Preserve and enhance existing historical and cultural resources, maintaining the rural identity of the plan area.

**AK CR-1.2** Discourage themed communities on Ketron Island.

**AK CR-1.3** Promote the enhancement and maintenance of the historical resources on Anderson Island, including:

- **AK CR-1.3.1** Old school house;
- **AK CR-1.3.2** Museum;
- **AK CR-1.3.3** Historic farms and associated farming events including Johnson Farm;
- **AK CR-1.3.4** Community clubhouse;
- **AK CR-1.3.5** Cemetery;
- **AK CR-1.3.6** Carlson store; and
- **AK CR-1.3.7** Community church.

#### Design and Character Policies

**Goals**

Maintain and preserve the privacy associated with the rural character of Anderson Island and protect and enhance Anderson Island’s cultural, artistic, and scenic resources. Commercial and civic uses shall be well designed and compatible with surrounding residential areas.

Maintain and preserve the privacy associated with the rural character of Ketron Island. Provide for commercial and residential development that is well designed in a harmonious relationship and in keeping with a rural character.
### Design

<table>
<thead>
<tr>
<th>Goal AK D-1</th>
<th>Design of proposed development should be compatible within the visual context of the surrounding area and be sensitive to existing uses and site conditions.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Goal AK D-2</td>
<td>Design and site buildings and other structures to fit with the rural island character.</td>
</tr>
<tr>
<td>Goal AK D-3</td>
<td>For Ketron Island, establish bulk standards and guidelines that respond to the existing conditions and rural character of the island.</td>
</tr>
</tbody>
</table>

**AK D-3.1** In addition to the maximum height limitation, further limit building heights on specified properties to minimize view obstructions on other properties.

**Goal AK D-4** For Ketron Island, establish design requirements for residential construction.

<table>
<thead>
<tr>
<th>AK D-4.1</th>
<th>Prohibit mobile homes on Ketron Island.</th>
</tr>
</thead>
<tbody>
<tr>
<td>AK D-4.2</td>
<td>Encourage dwelling units that utilize architectural features typical of a rural setting, including porches and verandas which contribute to the country feeling of the plan area.</td>
</tr>
<tr>
<td>AK D-4.3</td>
<td>Avoid development in wildfire-prone areas.</td>
</tr>
</tbody>
</table>

**AK D-4.3.1** Site homes and arrange landscaping to maximize protection from wildfire.

**AK D-4.3.2** Recognizing that all of Ketron Island may be considered prone to wildfire, all new developments on Ketron Island should enact measures to minimize danger of wildfire to the development and surrounding properties.

### Viewsheets and Aesthetics

**Goal AK D-5** Protect the visual qualities and resources on Ketron Island as a vital component of the area’s special character and identity.

| AK D-5.1 | Protect and enhance the character and visual aesthetics on Ketron Island. |

### Implementing Actions

The following actions need to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 1-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Pierce County Planning and Land Services (PALS), Affected Indian Tribes (Tribes), local island historical societies (historical societies), and Washington Department of Archaeology and Historic Preservation (WDAHP).
## Short Term Actions (Upon Plan Adoption to 1 Year)

1. Amend Title 18A, Zoning to address building height standards to address commercial and residential buildings. (PALS)
2. Amend Title 18J, Design Standards and Guidelines to:
   - Establish design standards and guidelines for commercial development on both islands and for residential development on Ketron Island.
   - Address low impact development standards.
   - Minimize outdoor light pollution to ensure light does not impact neighboring properties. (PALS)

## Mid-Term Actions (1-5 Years)

1. Apply existing protocols and explore additional methods to protect sacred sites to preserve people’s cultural roots and connections to the past. (Tribes, Historical Societies, WDAHP)
2. Develop an inventory of cultural and historic resources, in order to protect and integrate these resources within the development of the plan area. (WDAHP, Historical Societies)
3. Promote the enhancement and maintenance of the historical resources on Anderson Island. (Historical Societies)
4. For Ketron Island, review established bulk standards and guidelines that respond to the existing conditions and rural character of the island, addressing minimizing view obstructions and impacts from lighting. (PALS)
5. Develop guidelines, and standards as appropriate, to site homes and arrange landscaping to maximize protection from wildfire. (PALS)
6. For Ketron Island, enact measures to minimize danger of wildfire to developments and surrounding properties. (PALS)
7. Review and as necessary update standards for home occupations to ensure the rural residential character is adequately protected. (PALS)

## Long-Term Actions (5–10 Years)

1. Designate sites, buildings, and places that the community values and considers unique to the community or are significant and worthy of preservation or protection through the community planning process. (WADAHP, Historical Societies)

Anderson - Ketron Islands
Community Plan

Chapter 4: Natural Environment Element

Introduction

The Anderson and Ketron Islands Community Plan area could be characterized as one of Pierce County's well kept secrets. While much of Pierce County has burgeoned with growth in population and development, Anderson and Ketron Islands have largely enjoyed a steady, rural island atmosphere while welcoming some new residents. This slow growth has allowed the Islands to retain many natural resources and habitats.

The Natural Environment Element addresses the protection and conservation of the natural resources such as water, air, forests, vegetation, fish and wildlife, and other critical areas. The residents of the Islands value the surrounding natural environment and intact ecosystems as an integral part of island living. Protection and preservation of these natural resources are key components of the community's vision.

The Natural Environment policies are proactive in retaining the existing resources. Policies include education, community actions, and regulations, as well as some County funding and actions. The policies focus on sustainable growth and protection of resources that would result in a continued livable environment.

Description of Current Conditions

Presently Anderson and Ketron Island residents enjoy a rural, low density atmosphere. Anderson Island has rolling hills with a varied landscape of wooded areas, open space, wetlands, marshes, and some small agricultural lands. It has several coves, inlets, or bays that offer excellent habitat for marine species including a large variety of shorebirds. Anderson Island has a number of wetland complexes, the largest of which is associated with Schoolhouse Creek. The ecosystems of the Island are in relatively good health. The largest threat to the natural environment would be unchecked development.

Earth Resources

Landslide and Erosion Hazard Areas

On both islands the areas most susceptible to landslide and erosion are associated with the shoreline. Wind and water movement contribute to soil erosion. The degree of stability is a function of soils, slope, groundwater, and geology. The steepest slopes on Anderson Island are located along the eastern, southeastern, and western edges of the Island and one steep plateau.
in the southeastern portion of the Island where there is a canyon. These areas are classified as potential landslide hazard areas. The slopes around the majority of the perimeter of Ketron Island are also classified as potential landslide hazard areas. The entire marine shoreline of both Anderson and Ketron Islands are classified as marine shoreline erosion hazard areas. There are several freshwater erosion hazard areas identified on Anderson Island and one on Ketron Island.

**Seismic Hazard Areas**

Only one small area on Anderson Island contains soils that have the potential for liquefaction and/or dynamic settlement during a seismic (earthquake) event. This area is located in the vicinity of the intersection of Sandberg Road and Eckenstam-Johnson Road.

**Vegetation**

The plan area contains a mixture of lowland conifer forests and hardwood/shrubs. A large majority of each Island has more than 50% tree canopy coverage.

**Soils**

Pierce County groups soil types into hydrologic soil groups that represent varying degrees of water runoff potential:

- Group A – Low runoff potential
- Group B – Low to moderate runoff potential
- Group C – Moderate to high runoff potential
- Group D – High runoff potential

Soils affect infiltration rates, the potential for erosion, and slope stability. Soil types determine the ability of the ground to absorb rainfall. The majority of both Anderson and Ketron Islands are classified as Group C soil type with the marine cliff areas designated as Group C-D soil type. These soil types have moderate to high runoff potential.

Anderson Island contains soils that are slow to percolate and have limitations for septic drainfield suitability. The three main soil types are Harstine Association, Bow Association and Kitsap Association. Ketron Island contains several different soil types. The most dominant are the Neilton, Kitsap, and Xerochrepts. The Neilton soils comprise nearly one half of the southern end of the Island. The Kitsap soils have slow permeability and septic drainfield limitations. The Xerochrept soils are on steep slopes and may be subject to landslide and erosion hazards.

**Water Resources**

The Islands are located within the Kitsap Water Resource Inventory Area (WRIA# 15) and within the Islands watershed basin. The Key Peninsula – Islands Basin Plan analyzes water quality and quantity to identify and prioritize surface water management problems and capital facility needs.
Streams and Lakes

Anderson Island has a number of streams and lakes. The two largest lakes on Anderson Island are Lake Josephine and Lake Florence, while Ketron Island does not have any bodies of water that classify as a lake. Anderson Island contains Schoolhouse Creek and many unnamed creeks. There is one unnamed creek on Ketron Island.

Schoolhouse Creek, located on Anderson Island, is less than a mile long. The stream enters Oro Bay on the southeast side of the Island. Its gradient is shallow. Schoolhouse Creek is the only stream on Anderson Island known to support anadromous salmonids. Schoolhouse Creek bisects the Island in a north/south direction and originates northwest of Lake Florence and has a large catchment area. Several wetlands, flood areas, and other small tributaries, wetlands, and flood areas are associated with the creek. The Key Peninsula-Island Basin Plan identifies the existing conditions, problems, and projects or actions necessary to improve the health of the creek.

In the Basin Plan, Schoolhouse Creek was rated with more than 70% of riparian corridor in good condition and with more than 70% of the aquatic habitat in good condition. The creek sub-basin currently has an estimated average impermeable surface area of 6%. Based on current zoning and development patterns this estimate is likely to increase to 13% over the next 20 years.

Schoolhouse Creek is home to Coho, chum, and cutthroat. Three culverts have been identified as fish passage barriers along Schoolhouse Creek. The most downstream culvert is located on Eckenstam-Johnson Road at the mouth of Schoolhouse Creek. This culvert requires further evaluation. The structure is submerged at high tides, but is thought to be passable otherwise.

In the past, portions of Schoolhouse Creek were channelized producing a downcutting of the stream channel. Artificial weirs have been placed in some areas which may impede fish passage. The Basin Plan addresses several projects along the creek to correct existing problems. Refer to the Facilities and Services Element for more information on stream restoration projects.

Wetlands

Wetlands are areas inundated or saturated by water for a time period in an amount that is able to support wetland vegetation and saturated soil conditions. Wetland buffers are areas meant to establish a protection zone between development and the critical functioning area of the wetland (wetland buffers are considered a part of the wetland system). Wetlands provide many critical functions including: water cleansing by filtering surface water runoff and groundwater; flood and storm water storage (i.e., one pound of moss will hold 25 pounds of water); critical habitat for fish and wildlife; and, open space/natural areas. Wetlands naturally may change over time but are often affected by hydrologic or terrestrial changes resulting from development.
The Pierce County wetland maps are general inventories and do not include all wetlands; however, they do provide a source of information. Anderson Island has numerous identified wetlands, many of which are in conjunction with streams and the entire marine shoreline of both Anderson and Ketron Island is designated as a wetland. Schoolhouse Creek is part of a larger hydrologic system that encompasses many wetlands. No wetlands are mapped on Ketron Island.

**WATER QUALITY**

There are several factors that affect water quality. Older, poorly maintained neighborhoods generally have higher levels of pollutants due to more traffic, greater impervious surface, accumulation of debris, failing waste disposal systems, and deteriorating housing stock. Pollutants accumulate on impervious surfaces and enter conveyance systems during rainfall/storm events. Agricultural activities may affect water quality from livestock waste and application of pesticides. Denser population can contribute to increased pollution from sources such as pet waste, vegetative matter, litter, plant fertilizers and pesticides, and automobile and small machine petroleum products. Typical contaminants affecting water quality include: suspended sediments, nutrients, bacteria, oxygen demand, oil and grease, and trace metals.

Water quality on Anderson and Ketron Islands is considered relatively good; however, this determination is provisional because it is based on limited water quality sampling data. On Anderson Island, pollution from residential development, especially nutrients and pesticides from the many small home lots on the lakeshores, the golf course, and parks, is likely. Also, failing septic tanks and construction impacts are probable causes of degraded water quality. Impacts due to local logging operations are also a potential source of pollution. Seawater intrusion is a known concern for the whole southwestern portion of Anderson Island.

**AQUIFER RECHARGE AND WELLHEAD PROTECTION AREAS**

Gravelly, well-drained soils (Group A&B) facilitate a high percentage of groundwater recharge. Wellhead protection areas include the area within the 10-year time-of-travel zone boundary of a Group A public water system well. The 10-year time-of-travel zone boundary is the maximum distance around a pumping well from which a contaminant, hypothetically present in groundwater, could travel to the well within a 10-year time period. There are three wellhead protection areas on Anderson Island and one wellhead protection area on Ketron Island.

Seawater intrusion is always a consideration for communities along marine shorelines. A study of the issue on Anderson Island was prepared by the Department of Ecology in 2001. The study showed that seawater intrusion is not a widespread problem on the Island, although there are three areas near the shoreline where it appears to be occurring in the sea level aquifer.¹

**SHORELINES**

The shorelines are varied on Anderson Island and include high and low bank, bay and lagoons, and salt marshes. Shorelines are designated by the Washington State Department of Ecology and are classified as watercourses with a mean annual flow greater than 20 cubic feet per second (cfs) and lakes greater than 20 acres. Designated shorelines on Anderson Island are
along the Puget Sound marine shorelines and Florence and Josephine Lakes. Most of the marine shoreline is designated as Conservancy Environment with a portion designated Rural Environment. Lake Florence is designated as Conservancy Environment and Lake Josephine is designated as Rural Residential Environment. The entire marine shoreline of Ketron Island is designated as Conservancy Environment.

Approximately 14% of the Anderson Island shoreline planning area is mapped as wetland. Several small wetland areas are mapped along the northern and eastern shoreline of Anderson Island. A large wetland complex extends from Oro Bay to the north across the center of the Island; this wetland is associated with the marine shoreline. Substantial wetland areas are also present near Otso Point. Several small wetland areas are mapped along the northern and eastern shoreline of the Island. Wetland habitat types in the shoreline planning area on the Island include palustrine forested, scrub-shrub, emergent, and estuarine.

Eelgrass is found in a few limited locations along the Anderson Island shoreline, primarily on the north at Otso Point, in the south at Thompson Cove, around Oro Bay and Cole Point, and on the east from Sandy Point north to Yoman Point. With the exception of beds at Otso Point, much of the eelgrass is patchy in distribution here and does not form extensive contiguous beds.

Documented forage fish spawning for surf smelt and sand lance is limited to a few locations on Anderson Island, along the western and southern shorelines. Waterfowl concentration areas occur near Thompson’s Cove on Anderson Island.

Geoduck habitat is mapped along the northwestern side of Anderson Island and near Oro Bay. Hardshell clams occur near Otso Point and in Amsterdam Bay on Anderson Island. In addition to geoduck and clams, Dungeness crab areas are mapped in Oro Bay, and Pandalid shrimp areas occur along the Nisqually reach and between Anderson and Ketron Islands.

On the bays and protected shorelines such as Oro Bay and Amsterdam Bay, shoreline development has resulted in removal or alteration of riparian vegetation. The exception within sheltered bays includes relatively intact riparian occurring at the head of Oro Bay and at Carlson Bay. The open shorelines of Anderson Island tend to have relatively intact riparian vegetation and support active feeder bluffs and large woody debris recruitment. Areas of intact riparian vegetation occur along Drayton Passage from Otso Point to Amsterdam Bay, from Treble Point to east of Carlson Bay, along Thompson Cove, and from Cole Point north to Yoman Point.

Water quality is generally good and most of the area is categorized as approved shellfish growing area although Oro Bay is categorized as prohibited shellfish growing areas. Marine Shoreline Critical Salmon Habitat was designated by Pierce County for portions of the Islands shoreline planning area and is defined as having a high quality habitat for marine salmonid species. Carlson and Oro Bay are designated Marine Shoreline Critical Salmon
Habitat. This marine critical area is subject to a 100 foot vegetative buffer from the ordinary high water mark.

**AIR RESOURCES**

Puget Sound has a marine climate influenced by moist air from the Pacific Ocean traveling inland and releasing precipitation as the air masses rise over the Cascade Mountains. The Puget Sound airshed is influenced by the dual set of mountain ranges (Cascades and Olympics), the Pacific Ocean, and the weather. In general, air flows enter the central Puget Sound region via the Strait of Juan de Fuca to the north and the Chehalis Gap to the south. Onshore winds can effectively serve to mix and disperse air pollutants. When onshore air flow is interrupted air can become inverted and stagnate which traps air pollutants between the set of mountain ranges.

The Puget Sound Clean Air Agency (PSCAA) and Washington Department of Ecology (DOE-Air Quality Program) monitor air quality for Snohomish, King, Pierce, and Kitsap Counties. Air quality elements that are monitored include: Particulate matter (PM2.5 and 10), Carbon monoxide (Co), and Ozone (O3). Areas classified as non-attainment areas (experienced persistent air quality problems) and maintenance areas (areas redesignated to attainment areas which have met air quality standards and have a 10-year maintenance plan). Pierce County is currently classified as maintenance for ozone and carbon monoxide categories, however, is likely to go out of attainment by the end of 2008 for PM2.5.

Clean air is affected by emissions caused by industry, transportation, and wood smoke from outdoor burning, slash burns, fireplaces, and wood stoves. On the Islands the greatest threat to air quality results from indoor or outdoor burning. Smoke from fireplaces and woodstoves and from backyard burning and land-clearing piles is composed of fine particles and a toxic mix of carcinogens hazardous to human health. Fine particles are associated with serious health effects, as the tiny size of these pollutants allows them to be easily inhaled, bypassing the immune system and proceeding deep into lungs, where they can cause respiratory and cardiovascular problems, including premature death.  

**OPEN SPACE**

The Pierce County Comprehensive Plan contains policies addressing open space. Map 2-5: Open Space Corridors identifies the designated open space corridors throughout Pierce County, which is based upon high priority open space categories (fish and wildlife habitat, wetlands, rivers, streams, creeks, marine waters, and wooded areas). These designated open space areas serve as an overlay in which more detailed land use regulations can be applied to accomplish the preservation of open space corridors. For example, special requirements and standards contained within Title 18A, Zoning and Title 18J, Design Standards and Guidelines can be utilized within open space corridor overlay areas. In addition, several County programs address open space preservation, including the Conservation Futures Program (fair market value acquisition of properties and conservation easements for open space purposes) and the
Current Use Assessment Program-Open Space (tax reductions given to retain property in an open space condition).

Open space corridors are based upon five high priority categories including: fish and wildlife habitat; wetlands; rivers, streams, creeks; marine waters; and wooded areas. All of Ketron Island is designated within the open space corridor. Open space corridor areas on Anderson Island are located along marine shorelines, creeks, and in identified fish and wildlife habitat areas. Other community plans have typically developed policies related to special development standards within open space areas and connectivity of open space areas with parks and trail systems.

**Fish and Wildlife Resources**

Pierce County regulates critical fish and wildlife species and their associated habitats. Critical fish and wildlife species are either federally or state-listed as endangered, threatened, sensitive, candidate, or monitored. Associated habitats may be identified by either point locations (such as a nest or den) or by broader habitats that support some stage of the species life-cycle (such as oak woodlands or river systems). All anadromous fish species are considered critical because of the recent listing of the Chinook salmon and bull trout under the Federal Endangered Species Act (ESA) and the importance of these species to the various indigenous Native American Tribes throughout the region.

Schoolhouse Creek on Anderson Island is identified as supporting salmonids (Coho, chum, and cutthroat trout). Anderson Island also contains several areas identified Priority Habitat areas for wildlife and locations for bald eagles and osprey. Biodiversity Management Areas and corridors reflect those areas in Pierce County that support species richness and representation. All Ketron Island is identified as a Biodiversity Management Area with the marine shorelines of both Anderson and Ketron Island identified as biodiversity corridors.

**Description of Desired Conditions**

The residents of the Islands would like to focus on preserving the existing natural features and precious shoreline ecosystems for future generations. The community plan policy direction is to recognize the natural constraints such as unstable slopes, soil constraints, flooding, wetlands, shorelines, and poor drainage and to ensure new growth and development is constructed around those constraints. New growth should be directed toward those areas least environmentally constrained.

The community would also like to see improvements to the existing environment. Improving air quality through education about indoor and outdoor burning, retaining soil function and reducing erosion through low impact development techniques, addressing failing septic
systems, and restoring portions of Schoolhouse Creek are a few examples improvements residents would like to achieve in the future.

Many of the actions the community would like to implement to ensure development occurs in a more harmonious pattern with the natural environment is to be accomplished through community outreach and education as well as partnerships with universities and not-for-profit organizations.

**Earth Resources**

The community plan strives to utilize low impact development techniques to retain soils and to reduce the impacts of impervious surfaces on water quality and quantity. Vegetation retention is also a priority action within the community plan promoting native vegetation and removing invasive species while working with landowners to plant fire resistant species at appropriate distances from homes and other structures.

**Water Resources**

The communities would like to maintain the quality and quantity of surface water bodies within the plan area by supporting non-chemical methods to control milfoil, noxious weeds, or other types of algae blooms in the lakes; providing public education and outreach information on stewardship particularly regarding fertilizer and pesticide usage in and around water bodies; and, controlling leaking septic systems around the lakes. The plan also promotes low impact development techniques and vegetation plantings to improve water quality.

The community plan asks the community and County to be proactive in protecting the marine environment and calls for establishing "shellfish protection districts" in areas that are affected by a shellfish downgrade. The plan policies support enhancing hazardous spill response coordination in environmentally sensitive areas and wellhead protection areas.

The community plan policies also seek to further protect the shoreline environment through appropriate shoreline designations in the update of the Shoreline Master Program and requests consideration of options to restrict shellfish (e.g., geoduck, oysters, etc.) farming in the marine shoreline areas of Anderson and Ketron Islands. The community would also like to restore the natural shoreline process where degradation has occurred and to work to identify shoreline restoration projects and obtain potential funding to complete these projects.

**Air Resources**

The Island communities would like to improve localized air quality by reducing burning activities that may negatively impact air quality including the burning of garbage, woodstoves, or stumps and debris as the result of land clearing.
**Fish and Wildlife**

Policies and actions within the Anderson and Ketron Islands Community Plan strive to preserve aquatic and fish species and their habitats and requests the restorations project identified in the Key Peninsula, Gig Harbor, and Islands Watershed Nearshore Salmon Habitat Assessment, Final Report, July 2003 be implemented. The plan carries specific recommendations for restoration projects for Oro Bay estuary.

The community plan policies also strive to preserve wildlife species and their habitats and promote the possibility of establishing wildlife sanctuaries on Anderson and Ketron Islands. Finally, it is important to the residents of Ketron Island to develop and implement management recommendations that control nuisance animals such as raccoons and coyotes.

**Open Space**

The Island communities encourage public and private organizations and private property owners to conserve, maintain, and restore open space areas. The acquisition and retention of open space is to be accomplished through a variety of strategies including partnering with local land trusts and public agencies to promote acquisition of high priority parcels on Anderson Island. County-owned properties, which serve as good fish and wildlife habitat, should be protected from conversion to other uses and integrated into the open space system. The plan calls for an inventory of properties on Anderson Island which may be utilized as open space and incorporated into a greenbelt park trail system.

The plan policies encourage public education and outreach efforts on the conservation and restoration of open space areas.

**Environment Policies**

**Goals**

Ensure conservation, enhancement, and proper management of natural resources, while balancing development and the needs of residents and property owners.
AIR

GOAL AK ENV-1 Provide notification to property owners using backyard burn barrels is an illegal activity, and enforce burning regulations.

EARTH

GOAL AK ENV-2 Maintain soil resources and minimize impacts of soil disturbance on natural systems.

GOAL AK ENV-3 Retain natural and native vegetation on Anderson and Ketron Islands to support the functions of ecosystem processes and consider the safety of people and structures.

AK ENV-3.1 Consider requiring native vegetation buffers along Puget Sound marine shorelines that include a minimum percentage of tree retention with exceptions for limbing for view preservation and for removal of trees that impose a safety hazard.

AK ENV-3.2 Encourage and support cooperation between citizens of the plan area and the State Department of Natural Resources or Pierce County in the review process of Forest Practice Applications to use best management forestry practices and require mitigation of impacts and enforcement of the replanting of logged areas.

GOAL AK ENV-4 Encourage the establishment of greenbelts throughout the plan area.

GOAL AK ENV-5 Manage stands of trees to prevent hazardous situations.

AK ENV-5.1 Provide education to property owners with guidance for best management practices for forested areas and standards for tree removal.

AK ENV-5.2 Develop a list of native vegetation types that are fire and pest-resistant for planting around structures. Provide these lists to project applicants and make available online.

AK ENV-5.3 Native plants should be locally grown, acclimated to local growing conditions, and appropriate to underlying soils.

AK ENV-5.4 Identify locations in development proposals where installation of native plants is appropriate or required.

GOAL AK ENV-6 Encourage a mixture of forested areas and open fields and meadows.

GOAL AK ENV-7 Remove invasive, exotic plant species (e.g., Scot’s broom, tansy ragwort, and reed canary grass) and when possible, restore to the historic, indigenous plant community type.

AK ENV-7.1 Educate homeowners about plants that are considered invasive plant species and best management practices for removal.

AK ENV-7.2 Create a welcome handbook for new property owners and include this information.

GOAL AK ENV-8 Ensure that replanting efforts are successful.
AK ENV-8.1 Develop planting and maintenance standards for development activities.

AK ENV-8.1.1 Monitor new vegetation for at least a three-year time period and replace any vegetation that is unhealthy or dies during this time period.

AK ENV-8.1.2 Submit monitoring and maintenance plans for any required revegetation areas.

AK ENV-8.2 Assemble and distribute educational materials and resources on best management practices for effective site revegetation.

**Water**

**GOAL AK ENV-9** Support non-chemical methods to control milfoil, noxious weeds, or other types of algae blooms in the lakes.

AK ENV-9.1 Provide public education and outreach information on stewardship of surface water bodies including elimination of nutrient loading as caused by the use of nitrogen fertilizer; removal of noxious, non-native, or invasive plant species (e.g., collect yellow flag iris seed pods); and maintenance of appropriate lakefront vegetation that serves to filter pollutants.

**GOAL AK ENV-10** Retain water quantity within the lakes on Anderson Island.

AK ENV-10.1 Restrict the additional pumping of water from the lakes, while recognizing any existing water rights granted by the state to draw water from the lakes.

AK ENV-10.2 Protect the springs around the lakes that recharge the lake levels.

AK ENV-10.3 Establish a free program to accept and dispose of banned pesticides/fertilizers.

AK ENV-10.4 Provide public education and outreach on the appropriate maintenance and operation of septic systems.

AK ENV-10.5 Provide public education on controlling pet wastes near watercourses and water bodies such as lakes, streams, and wetlands.

AK ENV-10.6 Encourage public and private golf courses to maintain their facilities in an environmentally sensitive manner. Chemicals, such as pesticides, herbicides, and fertilizers, etc., should be applied so that they do not adversely impact the biological functioning of adjacent lakes and streams.

**GOAL AK ENV-11** Conduct agricultural uses on Anderson Island in a manner that maintains and protects water resources.

AK ENV-11.1 Promote organic farming practices that do not use toxic chemicals.

**GOAL AK ENV-12** Instigate a water quality study of the watercourses within the plan area utilizing benthic invertebrates as a monitoring tool.

AK ENV-12.1 Establish one source location, such as the Tacoma Pierce County Health Department, to serve as a repository for all water quality monitoring data that is collected.
AK ENV-12.2 Develop and maintain lake management plans that address water quality and quantity issues for Lake Florence and Lake Josephine on Anderson Island.

GOAL AK ENV-13 Establish shellfish protection districts in areas that are affected by a shellfish downgrade. The establishment of such a district indicates a commitment to restore shellfish harvesting within the area.

GOAL AK ENV-14 Support and enhance hazardous spill response coordination in environmentally sensitive areas and wellhead protection areas.

AK ENV-14.1 Review wells on Anderson Island for designation as a wellhead protection area (e.g., Riviera).

AK ENV-14.2 Review the main well on Ketron Island for designation as a wellhead protection area.

GOAL AK ENV-15 Utilize low impact development (LID) techniques to facilitate water recharge into aquifers, streams, and wetlands.

AK ENV-15.1 Reduce the conversion of ditches to culverts, which can cause negative impacts on aquifer recharge and subsurface flow/base stream flows.

GOAL AK ENV-16 Work with appropriate agencies to develop methods that reduce the potential for saltwater intrusion in local aquifers and well water.

AK ENV-16.1 Provide property owners with information regarding saltwater intrusion and techniques for prevention.

AK ENV-16.2 Encourage low impact development techniques along marine shorelines.

AK ENV-16.3 Maximize on-site infiltration of stormwater in areas that are susceptible to saltwater intrusion unless such infiltration could result in the reduction of slope stability along marine bluffs.

AK ENV-16.4 Encourage voluntary water quality monitoring along marine shorelines to detect changes in chloride levels which may indicate saltwater intrusion.

AK ENV-16.5 Promote the use and re-use of reclaimed water for non-drinking purposes.

**SHORELINES**

GOAL AK ENV-17 Provide for the protection and enjoyment of shorelines within the plan area.

AK ENV-17.1 Consider changing the shoreline environment along the north side of Lake Florence on Anderson Island that is currently in a larger lot pattern to a shoreline environment that is more conservative such as Conservancy.

AK ENV-17.2 Consider changing the shoreline environment along the undeveloped portions of Jacobs Point, Oro Bay, and East Oro Bay on Anderson Island to a Conservancy or Natural shoreline environment.
AK ENV-17.3 Identify especially sensitive or unique shoreline areas for application of the Natural shoreline environment. These may include such features as feeder bluffs, pocket estuaries, pigeon guillemot habitat, Schoolhouse Creek, eelgrass beds, and sugar kelp.

GOAL AK ENV-18 Encourage replacement of bulkheads constructed with hard materials, such as a concrete sea wall, with more environmentally sound, soft armoring shoreline protection methods.

AK ENV-18.1 Seek funding opportunities to replace the failing bulkhead at the Ketron Island marina with a soft armoring system, as feasible, to maintain the marina facility.

AK ENV-18.2 Work with the South Puget Sound Salmon Enhancement group to identify bulkhead restoration projects and obtain potential funding to complete these projects.

GOAL AK ENV-19 During the next comprehensive update of the Shoreline Master Program, identify options to restrict shellfish (e.g., geoduck, oysters, etc.) farming in the marine shoreline areas of Anderson and Ketron Islands.

AK ENV-19.1 Prohibit the use of netting and tubes to cover the shellfish areas as they may cause injury or mortality to other marine wildlife.

AK ENV-19.2 Separate shellfish harvesting uses from shellfish farming uses and prohibiting shellfish farming in the more environmentally sensitive shoreline environments.

AK ENV-19.3 Restrict shellfish farming to private tidelands and do not allow these activities on state-owned or other public tidelands.

AK ENV-19.4 Limit shellfish farming in areas adjacent to tribal treaty lands where shellfish harvesting has occurred in the past.

AK ENV-19.5 Limit shellfish farming to lots larger than a specified acreage or frontage length, and require a portion of all lots to be excluded from shellfish farming activities.

AK ENV-19.6 Prohibit shellfish farming in the Natural environment shoreline designation.

AK ENV-19.7 Provide notification of all proposed commercial aquacultural permit applications on Anderson Island to the members of the Anderson Island Citizens Advisory Board (AICAB). The application notification is intended to give the AICAB membership an adequate opportunity to provide comments to the planning department and Hearing Examiner early in the permit process.

GOAL AK ENV-20 Develop and apply standards for marine shoreline areas to ensure the nearshore habitat is protected.

AK ENV-20.1 Allow hard shoreline armoring structures only when it is demonstrated that beach nourishment or other soft armoring techniques would likely be ineffective.

AK ENV-20.2 Construction of non-water-dependent structures along the shoreline shall be placed at a sufficient distance from the ordinary high water mark to ensure that bulkheads are not necessary for the lifetime of the structure.
AK ENV-20.3 Discourage construction of overwater structures such as docks and piers, and encourage overwater structure designs that utilize grated surfaces which allow light to pass though the structure instead of traditional construction methods.

AK ENV-20.4 Prohibit dredging, damming, and diking activities.

AK ENV-20.5 Consider adoption of shoreline native vegetation requirements such as:

AK ENV-20.5.1 Require a minimum amount of native vegetation retention along marine shorelines.

AK ENV-20.5.2 Allow tree and brush thinning for view enhancement and trails within the shoreline area of waterfront properties. Tree branch pruning should be utilized in preference to removing the entire tree. Tree stumps should not be removed from shoreline areas subject to erosion.

AK ENV-20.5.3 Retain large, woody debris that has fallen in and along marine shorelines to provide for fish and wildlife habitat.

GOAL AK ENV-21 Restore the natural shoreline process where degradation has occurred.

AK ENV-21.1 Provide public education and outreach to shoreline property owners on the benefits of natural shoreline processes including:

AK ENV-21.1.1 Beneficial shoreline habitat features;

AK ENV-21.1.2 Human activities and construction that are stressful for the shoreline habitat; and

AK ENV-21.1.3 Alternative design options for shoreline armoring systems rather than the traditional concrete, rock, or timber bulkheads that cause negative impacts to natural shoreline processes.

AK ENV-21.2 Establish an incentive-based process to encourage the removal of bulkheads and other hard armoring along marine waters.

GOAL AK ENV-22 Promote the voluntary retention and replanting of native vegetation along marine shorelines.

GOAL AK ENV-23 Encourage the maintenance of beach areas on both Anderson and Ketron Islands.

GOAL AK ENV-24 Encourage public access points along marine shoreline areas on Anderson Island.

GOAL AK ENV-25 Do not promote public access on Ketron Island shorelines due to potential hazards from abandoned campfires and vandalism.

FISH AND WILDLIFE

GOAL AK ENV-26 Work with the South Puget Sound Salmon Enhancement group to identify shoreline and habitat restoration projects and obtain potential funding to complete these projects.
GOAL AK ENV-27  Work with local residents on Ketron Island to identify possible projects or fish habitat areas.

GOAL AK ENV-28  Explore special habitat restoration projects for Oro Bay estuary including:

   AK ENV-28.1  Eliminating input of excessive sediments in eelgrass areas within Oro Bay estuary;
   AK ENV-28.2  Evaluating the potential to place large, woody debris in the Oro Bay estuary;
   AK ENV-28.3  Promoting herring and smelt habitat within the Oro Bay estuary;
   AK ENV-28.4  Pursuing the removal of the dam that blocks the East Oro Bay estuary; and
   AK ENV-28.5  Pursuing reintroduction of silver salmon in Schoolhouse Creek on Anderson Island.

GOAL AK ENV-29  Encourage wildlife sanctuaries on Anderson and Ketron Islands.

   AK ENV-29.1  Review open space and other wildlife habitat areas on both islands to determine suitability as a wildlife sanctuary, and prioritize these areas in terms of acquisition or application of conservation easements.
   AK ENV-29.2  Install appropriate signage (informational and interpretative) around designated wildlife sanctuary areas. Signage should also recognize that Ketron Island is a designated biodiversity area.
   AK ENV-29.3  The pigeon guillemot colony areas with nesting cavities in the bluffs on the south end of Ketron Island should be protected as a wildlife sanctuary. This may be accomplished through a conservation easement or purchase for permanent open space.
   AK ENV-29.4  Establish standards for the limits of human activity within wildlife sanctuary areas on Ketron Island such as:

      AK ENV-29.4.1  Limiting the times of human presence so as not to impact special life-cycle functions (e.g., nesting, birthing, and rearing times); and
      AK ENV-29.4.2  Setting aside defined limits (such as walking trails where humans may go, but other areas that remain wild).
   AK ENV-29.5  Promote backyard wildlife sanctuary programs.

      AK ENV-29.5.1  Provide public education and outreach on the WDFW Backyard Wildlife Sanctuary Program and the National Wildlife Federation Community Habitat Program.

GOAL AK ENV-30  Work with the Washington State Department of Fish and Wildlife (WDFW) to manage wildlife populations on Ketron Island to avoid overpopulation and to minimize damage to property.

   AK ENV-30.1  Conduct a detailed study of the deer populations on Ketron Island to determine if deer levels are above an acceptable ratio for the land area.
   AK ENV-30.1.1  Coordinate a study with a WDFW staff biologist.
AK ENV-30.1.2 Explore opportunities to utilize one of the universities for graduate or doctorate level students to conduct a study.

AK ENV-30.1.3 If there is a verified deer overpopulation problem, work with a WDFW biologist to develop strategies to correct this problem. Such actions may include fertility treatments and trap and release.

AK ENV-30.2 Work with WDFW to develop management recommendations that control nuisance animals such as raccoons and coyotes.

AK ENV-30.3 Ensure that non-native wild animals are not brought onto the islands.

GOAL AK ENV-31 Control wildlife hunting within the plan area.

AK ENV-31.1 Work with WDFW enforcement staff to establish strategies to deal with illegal hunting on Anderson and Ketron Islands and off the shorelines (e.g., seals and sea lions).

AK ENV-31.2 Explore the possibility of designating Anderson and Ketron Islands as no shooting areas.

GOAL AK ENV-32 Work with WDFW to officially designate known wildlife habitat areas within the plan area.

AK ENV-32.1 Contact the WDFW staff biologist with potential wildlife habitat areas (e.g., nesting and breeding areas, caves, etc.) so that these areas may be confirmed and added to the official Priority Habitats and Species and/or Wildlife Heritage Maps.

AK ENV-32.2 Special areas of interest include:

AK ENV-32.2.1 A pigeon guillemot colony with nesting cavities in the bluffs on the south end of Ketron Island, and a possible nesting site on the west side of Ketron Island; and

AK ENV-32.2.2 Heron rookery(ies) on Anderson Island.

AK ENV-32.3 Participate in NatureMapping Program training to collect wildlife data for long-term monitoring.

AK ENV-32.4 Request WDFW to conduct a rapid species inventory bioblitz within the Ketron Island Biodiversity Management Area.

AK ENV-32.5 Support the implementation of the management recommendations from the Ketron Island Biodiversity Management Area as described in the Pierce County Biodiversity Network Assessment (August 2004).

OPEN SPACE

GOAL AK ENV-33 Encourage public education and outreach efforts on the conservation and restoration of open space areas.

AK ENV-33.1 Conduct an inventory of all public properties on Anderson Island, which may be utilized as open space and incorporated into a greenbelt park trail system.
AK ENV-33.2 Concentrate outreach efforts to those properties located within open space areas depicted in the County’s adopted Open Space Corridor Map.

AK ENV-33.3 Encourage participation within the program by conducting workshops within the plan area.

**IMPLEMENTING ACTIONS**

The following actions need to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 1-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Pierce County Planning and Land Services (PALS), Pierce County Public Works & Utilities (PWU), Tacoma-Pierce County Health Department (TPCHD), Washington State University Cooperative Extension (WSU Extension).

**SHORT TERM ACTIONS (UPON PLAN ADOPTION TO 1 YEAR)**

1. During the next substantive update of the County’s Shoreline Master Program, Shoreline Management Regulations and Critical Area Regulations, recommend provisions be considered in the update that reflect principles and standards in the community plan. (PALS)
2. Work with the Pierce County Firearms Commission to explore the possibility of designating Anderson and Ketron Islands as “no shooting” areas. (PALS)

**MID-TERM ACTIONS (1-5 YEARS)**

1. Provide education and alternatives to burning garbage through notification, exploring garbage disposal options, and cost effective means to eliminate tree debris. (PWU)
2. Provide an education and outreach programs on cleaner heating alternatives such as use of seasoned wood and conversion from uncertified wood stoves to certified stoves, masonry heaters, or gas alternatives. (PWU)
3. Impose conditions on new development activities to limit burn and slash activities and encourage alternative methods. (PWU)
4. Develop incentive programs for use of innovative design techniques that reduce impacts from impervious surface areas associated with specific development projects. (PALS, WSU Extension)
5. Provide guidance to property owners on best management practices for forested areas and standards for tree removal.
6. Develop incentives that encourage the retention of large, mature stands of trees that will resist wind throw from high wind events, provided hazards to people, buildings, and utilities are considered. (PALS)
7. Develop a list of native vegetation types that are fire and pest resistant for planting around structures. Provide these lists to project applicants and make available online. (WSU Extension)
8. Develop incentives for project applicants to encourage restoration of historic plant communities. (PALS)
9. Work with the South Puget Sound Salmon Enhancement group and residents to identify shoreline and habitat restoration projects and obtain potential funding to complete these projects.
10. Develop management recommendations that control nuisance animals such as raccoons and coyotes.
11. Conduct a rapid species inventory “bioblitz” within the Ketron Island Biodiversity Management Area.
12. Develop and make available a brochure on the techniques and strategies available for maintaining open space.

LONG-TERM ACTIONS (5-10 YEARS)

1. Promote efforts to remove invasive, exotic plant species and when possible, restore to the historic, indigenous plant community type. (WSU Extension)
2. Distribute educational materials and resources on best management practices for effective site revegetation. (WSU Extension)
3. Provide information on stewardship of surface water bodies including elimination of nutrient loading as caused by the use of nitrogen fertilizer; removal of noxious, non-native or invasive plant species; and maintenance of appropriate lakefront vegetation that serves to filter pollutants. (WSU Extension)
4. Provide public education and programs on appropriate use and disposal of pesticides. (PWU, WSU Extension)
5. Provide public education and outreach on the appropriate maintenance and operation of septic systems. (TPCHD)
6. Provide public education on controlling pet wastes near water courses and water bodies such as lakes, streams, and wetlands. (WSU Extension)
7. Implement the use of non-toxic chemicals or other alternative practices for road maintenance and brush and noxious weed removal, and provide education on alternatives to spraying chemicals to control the spread of noxious weeds. (PWU)
8. Provide educational opportunities on a range of agricultural practices, through the development of farm management plans that will minimize impacts on natural systems, functions, and processes. (WSU Extension)
9. Initiate and coordinate water quality studies, monitoring, and data collection for water courses and lakes, including enlisting/using trained volunteer groups. (TPCHD, PWU)
10. Conduct education and outreach efforts geared to households and property owners for:
   - reducing impacts to water quality;
   - appropriate pesticide/fertilizer application methods; and
   - farm management techniques. (WSU Extension)
11. Establish "shellfish protection districts" in areas that are affected by a shellfish downgrade.
12. Review wells on Anderson Island and the main well on Ketron Island for designation as a wellhead protection area. (TPCHD)
13. Pursue opportunities to conduct a detailed hydrogeologic study that evaluates the long-term availability of groundwater resources to serve existing residents and future population growth. (TPCHD)
14. Coordinate between Pierce County, TPCHD and State agencies to limit new wells in areas that have been identified as being at risk for seawater intrusion. (PALS, TPCHD)
15. Review open space and other wildlife habitat areas on both islands to determine suitability as a wildlife sanctuary and prioritize these areas in terms of acquisition or application of conservation easements.
16. Conduct a detailed study of the deer populations on Ketron Island to determine if deer levels are above an acceptable ratio for the land area and develop an appropriate response strategy.
17. Work with WDFW to develop management recommendations that control nuisance animals such as raccoons and coyotes.
18. Conduct an inventory of public properties on Anderson Island which may be utilized as open space and incorporated into a greenbelt park trail system.
19. Promote the Current Use Assessment (CUA) Program Public Benefit Rating System (PBRS) within the plan area. (PALS)
Map B-5: Potential Erosion/Landslide Hazard Areas

Sources for Potential Erosion:
1. Pierce County Water Programs Hydrography Surface Boundaries Database, Elevation, Rivers, Lakes, and Reservoirs greater than 500 square feet with a 200 Potential Review Trigger Distance per Title HI.110.
2. Photogrammetric Skills developed from Pierce County LiDAR Database, with a 200 Potential Review Trigger Distance per Title HI.110.
3. Coastal Erosion Zone Database developed by Pierce County Water Programs, defined per Title HI.110.
4. Shoreline Data derived from Pierce County Digital Orthophotography, 2001, data developed for urban areas only.

Sources for Potential Landslide:
2. Slope slope data developed for urban areas only. Includes a 65% slopes greater than 50% and a 300 Potential review Trigger Distance as per Title HI.80.

Chapter 5: Facilities and Services Element

INTRODUCTION

The Facilities and Services Element articulates the need for facilities and services that will implement the visions and goals of the community plan. Facilities and services are collectively considered ‘infrastructure’ and may include public or privately funded projects. The adoption of policy statements regarding infrastructure provide direction to investors and decision-makers about what investments are desired and needed by the community.

Anderson and Ketron Islands are rural communities. Limited availability of infrastructure and services, such as sanitary sewer, will maintain the Islands as rural communities. The element focuses on the two main items important to this rural community: the ferry system and emergency services.

DESCRIPTION OF CURRENT CONDITIONS

PARKS AND RECREATION

Anderson Island has a mixture of public and private park and recreation facilities. The public facilities are provided by the Anderson Island Park and Recreation District and the State of Washington. Private facilities are provided through the Lake Josephine Riviera Country Club. Ketron Island does not have any available land for public recreation.

Anderson Island Park and Recreation District maintains a swimming beach, walking and bicycle trails, picnic facilities, athletic fields, playgrounds and an outdoor tennis court at Lowell Johnson, Andy’s, Andrew Anderson Marine, Russ Cammon Park, Wide Awake Hollow, and St. Anne’s Park. The district also maintains facilities at Carson Bay, Oro Bay, and Barber Trail.

The State of Washington through the Department of Ecology has identified the eastern side of Anderson Island just north of Yoman Point as Public Beach 8. Access to the beach is only by boat. The upper beach is composed of gravel with very little sand. At low tide, the lower area has sand flats. Only the tidelands of this area are public. Eagle Island State Park is located in Balch Passage between Anderson and McNeil Islands. This park is intended to preserve the natural features of the Island and permits only primitive outdoor recreation.

Anderson Island has several private parks and recreation facilities associated with the Lake Josephine Riviera Country Club. These include a nine hole golf course open to members and their guests, a mooring facility on the Sound with a twelve slip dock and two buoys (the dock is taken down in the winter), tennis courts, and a boat launch on Lake Josephine. There are also two boat clubs and a marina in Oro Bay.
**LAW ENFORCEMENT**

**Pierce County Sheriff**

The Pierce County Sheriff’s Department (PCSD) is the primary law enforcement agency for Anderson and Ketron Islands. The PCSD does not actively patrol either Anderson or Ketron Island. A deputy does patrol the Islands two or three times a month for routine checks. Officers from the South Hill Precinct will respond in an emergency situation. The precinct is located at 271 John Bananola Way East, South Hill.

**Fire Protection**

Anderson Island is served by Fire District No. 27, Anderson Island Fire and Rescue. The station is located at 10111 Lake Josephine Boulevard. The department provides structural fire protection, Basic Life Support (BLS), and Emergency Medical Services (EMS) using a staff of 20 volunteers, with a full time Chief and part time administrative and support staff. The district also provides forest fire protection to the Island under contract with the State of Washington’s Department of Natural Resources (DNR). The district currently operates two engines, two tankers, two BLS aid units, a lighting/air support unit, a 4x4 brush/command unit, and a command vehicle. The equipment is partially housed in a two bay fire station centrally located on the Island.

Ketron Island is unprotected and does not belong to a fire district.

**Public Schools**

The plan area is served by Steilacoom Historical School District No. 1. There are seven school facilities within the district; they include Anderson Island Elementary, Cherrydale Primary, Chloe Clark Elementary, Harriet Taylor Elementary, McNeil Elementary, Saltar’s Point Elementary, Pioneer Middle School and Steilacoom High School. Anderson Island Elementary provides K-5th grade, students attend Pioneer Middle School and Steilacoom High School on mainland for 6th through 12th grade. The Anderson Island Elementary School had an approximate enrollment of 28 students for the 2007 – 2008 school year.

**Pierce County Library System**

The Pierce County Library System serves all the residents of unincorporated Pierce County. The closest branch library is located in the City of DuPont. Islands’ residents may also use the library system’s web site to access the online library catalog, use e-sources, place holds, renew...
items that they have checked out, etc. By requesting books and other materials either online or at their chosen Pierce County Library branch, residents have access to the collection of over 1,000,000 items housed in the system’s 17 branches throughout the County.

Anderson Island is one of 50 separate stops that the Pierce County Library System Bookmobile visits at least twice a month. Residents may checkout one of the 3,000 books plus talking books, and films carried on the Bookmobile. Bookmobile staff can also facilitate requests for any item available through the library district.

**SEWER AND WASTEWATER TREATMENT**

Sanitary sewer service is not available on Anderson or Ketron Island. Developments within the community plan area are on individual or community septic systems. The primary method of disposal is by individual septic systems.

On-site sewage disposal systems are regulated at the state level by the Department of Social and Health Services and locally regulated by the Tacoma-Pierce County Health Department. These agencies assure that on-site disposal systems do not create a nuisance nor present any potential hazard to public health or environmental quality by regulating the location and type of sewage disposal system.

There are several factors that determine the location and type of a sewage system. These include:

1. Absorption quality of the soil
2. Depth to the maximal seasonal groundwater
3. Lot size and soil
4. Distance to water supply systems
5. Distance to surface waters
6. Area of ground needed
7. Future replacement and expansion of the system
8. Discharge drainage from roof or other curtain drains

New building permits on Anderson Island need to be reviewed for suitability of on-site sewage disposal and have a TPCHD approved design. Most of the lots in the Lake Josephine development have suitable soils. Many of the waterfront lots have soil issues and have more complex systems or are not allowed to build.

Ketron Island originally had a sanitary sewer system. This sewer system was never completed and the Washington State Department of Ecology did not certify the system. Consequently, the homes that were on the system were allowed to install individual septic systems. Any existing vacant lots are allowed to utilize a septic system if the minimum lot size is met and suitable soils are present for disposal. There are areas on the Island with very poor soils that may not be approved. A review of each individual lot is the only avenue to determine septic suitability.
SOLID WASTE DISPOSAL

The County does not regulate the collection of garbage. The Washington Utilities and Transportation Commission (WUTC) regulates residential and non-residential garbage collection in unincorporated Pierce County area. The State has not granted either County governments nor the residents of unincorporated areas with the right to choose who provides garbage service.

Pierce County is required by State law to develop a comprehensive solid waste management plan that covers not just garbage collection, but also waste prevention, recycling, and transfer and disposal programs. The State-regulated haulers must comply with this locally-adopted plan. The County is allowed by State law to develop ‘minimum levels of service’ that the private, state-regulated companies must comply with. For example, Pierce County requires the state-regulated haulers to provide curbside recycling service to all subscribing households on an every-other-week basis. Pierce County is also authorized to mandate the collection of garbage in unincorporated areas, although it has not exercised that authority. Currently residents may sign up for garbage service with the state-regulated provider, or self-haul waste to a transfer station. Pierce County is allowed to contract with companies to operate transfer stations and landfill disposal services.

Curbside garbage and recycling service is available on Anderson Island. The regular pickup service is provided by LeMay Enterprises. Residents who do not enroll in the service have the opportunity to dispose of their waste and recyclables at a solid waste transfer drop box located on the Island. The facility located at 9607 Steffensen Road accepts household trash, recyclables and yard waste. Items that are not accepted for disposal include mattresses/box springs, appliances, commercial and hazardous waste. The drop box station operates on a winter and summer schedule. From the beginning of October to the end of March the facilities is accessible on Sundays from 10 a.m. to 2 p.m. and Monday from 1 p.m. to 5 p.m. The remainder of the year operation hours is extended on Sundays and Mondays from 10 a.m. to 6 p.m. to serve residents and summer tourists. The filled waste containers are transported via roll-off truck to the Hidden Valley Transfer Station 30 miles away. Pierce County is currently pursuing language in the solid waste disposal contract that would allow flexibility to change the hours of operation without waiting until the next contract is negotiated. This flexibility is intended to better meet the needs of local residents.

Garbage and recycling facilities are not available on Ketron Island. Residents may transport their waste off the Island in their private vehicle to any County solid waste disposal facility.

DOMESTIC WATER SYSTEMS

Domestic water within the community plan is provided by individual on-site wells and three community water systems on Anderson Island and one on Ketron Island. On Anderson Island the water systems are Lake Josephine Riviera, Anderson Island Water System, and Cole Point Heights. On Ketron Island it is the Ketron Island Water System.
The Department of Ecology issues water rights in Washington State. A water right is a legal authorization to use a certain amount of public water for specific beneficial purposes. State law requires every user of streams, lakes, springs, and other surface waters to obtain a water right permit unless they use 5,000 gallons or fewer each day. A water right will be issued only if it is determined that water withdrawal will not have a detrimental effect on other nearby wells. Water rights are based on anticipated average daily flows from the proposed use and are approved for a specified number of wells.

As required by state law, water service areas are exclusive service areas, which means only the designated system is to provide public water service to properties within the individual service areas. The community plan area also includes a multitude of individual wells and Group B systems, which are systems serving 2-14 connections. There is not a complete inventory of individual wells or Group B systems available at this time.

**Electricity**

Tanner Electric is a cooperatively owned electric system which has a nine member board elected by members of the co-op. In addition to their North Bend main office there is also a dispatch/shop located on Anderson Island.

**Surface Water Flooding**

Surface water management is the responsibility of Pierce County within the community plan area. The County builds and maintains facilities to alleviate flood events and improve water quality and habitat. Property owners are charged a fee for these services. To ensure that the limited resources for surface water management are properly managed, the County has been assessing the existing conditions and future needs for capital facilities and program within ten drainage basins in the County. Anderson Island and Ketron Island are located within the Key Peninsula – Islands Basin Plan.

The Key Peninsula – Islands Basin Plan was adopted by Pierce County in December 2006. The plan, which encompasses the Key Peninsula, Burley-Minter and Fox Island basins, will be used to set priorities within each basin and revise or supplement existing storm drainage programs outlined in the Countywide Storm Drainage Plan, prepared in 1991.

For purpose of analysis, the KI basin was divided into a number of hydrologic sub-basins. Four sub-basins were identified within the community plan area; Anderson Island East, Anderson Island West, Schoolhouse (AI), and Ketron Island.

Most stormwater runoff in the Basin is routed to streams that flow to Puget Sound. Natural drainage patterns remain largely unaltered, although culverts have been built to carry stream flow under roadways and driveways. Stormwater runoff in rural communities is typically routed to roadside ditches and then in natural streams; there are few curbs, gutters, and underground storm drainage systems.

The flooding problems in the Key Peninsula – Islands Basin are localized and relatively minor. Few have involved floodwater on public roads. In general, the existing drainage system appears
to have sufficient capacity to carry stormwater away from structures at the current level of urban development. There have been some reported problems as a result of debris accumulating in culverts and ditches; a few may be the result of design deficiencies in engineered drainage systems. Table B-5 identifies the existing areas which are subject to flooding within the Schoolhouse (AI) sub-basin.

Source: Key Peninsula – Island Basin Plan

The Schoolhouse (AI) sub-basin is one of six sub-basins which were determined to have the greatest potential for future development and flooding. This sub-basin was the only one within the plan area to have been analyzed through a modeling exercise to predict future road flooding. The culverts identified below are those which may cause road flooding predicted by the model in 2, 25, and 100 –year return frequency storms.

- Two 18-inch diameter culverts that carry Schoolhouse Creek, Anderson Island, under Eckenstam-Johnson Road, near Oro Bay Rd. (Node SC-00) (CIP AI-CR02)
- Two 18-inch diameter culverts that carry Schoolhouse Creek, Anderson Island, under Oro Bay Rd. (Node SC-01) (CIP AI-CR03)
- 36 x 57-inch diameter culverts that carry Schoolhouse Creek, Anderson Island, under Sandberg Rd. (Node SC-02) (CIP AI-CR08)

Source: Key Peninsula – Islands Basin Plan

A field visit was made to several culverts where a drainage deficiency had been predicted to confirm that the physical characteristics of the culverts and their surroundings were accurately simulated in the model. Several culverts identified as deficient above, did not become capital improvement projects (CIPs) for a variety of reasons. For Schoolhouse Creek on Anderson Island, the culvert at node SC-02 fails at the 100-year existing condition, but this culvert is also a fish passage barrier and it is therefore included in the CIP list for improvement.

The Key Peninsula – Island Basin Plan contains 83 capital improvement projects to solve the flooding, storm drainage, water quality, and related habitat problems. Seven of the projects recommended are within the community plan area. Table B-6 identifies the projects and estimated costs.

Source: Key Peninsula – Island Basin Plan
**Cable Television**

Cascade Cablevision provides cable television to some Anderson Island residents. This service is not available to Ketron Island residents. Cascade Cablevision’s service office is located in Vaughn, Washington.

**Transportation**

**Ferry Service**

While some island residents have their own private watercrafts, the primary transportation access to and from both islands is provided by the Pierce County ferry system. Pierce County began its ferry service between the Town of Steilacoom and Anderson Island in 1938. Ferry service to Ketron Island was added in 1961. Up until 2004, ferry service to both islands was provided by separate direct runs (trips) to each island. In 2004, the direct runs to Ketron Island were replaced with triangular runs to both islands. Based on the normal schedule, there are currently 12 ferry runs to Anderson Island (including three triangular runs to Ketron Island) during the weekdays with additional evening runs provided during the weekends.

Ferry ridership consists of both walk-on passenger and vehicle fares. Island residents can leave their vehicles at either the park-and-ride lot on Anderson Island or at pay parking lots in Steilacoom for up to twelve hours; however, neither of these lots allow overnight parking. In general, ferry ridership (based on total ticket sales) has steadily increased as the population on Anderson Island has grown with ridership increasing by 153% from 1986 to 2006. The use of the ferry is substantially higher during the summer with ridership increasing by more than 50% in the peak month of August compared to the average winter month such as November.

Pierce County uses two ferry vessels (MV Christine Anderson and MV Steilacoom II) to serve the islands. The MV Christine Anderson was put into service in 1994 and can carry up to 54 vehicles (“equivalent automobile units”) and 250 passengers. The MV Steilacoom II was placed into service in 2007 and has a capacity of 54 vehicles and 299 passengers. Under normal operations, the MV Christine Anderson and the MV Steilacoom II are run on alternating two-week schedules when both vessels are available for service. In January 2008, Pierce County entered into a vessel charter agreement with the Washington State Department of Transportation (WSDOT) to loan out one of the County ferries for temporary Washington State Ferries (WSF) service, during which time the State will provide one of its smaller ferries to the County to serve as a back-up vessel.

In compliance with the concurrency requirements of the Growth Management Act (GMA), the County has adopted a level of service (LOS) policy for the ferry system to maintain capacity at 100% of the peak winter weekday vehicle demand (i.e. to meet the total vehicle demand on the ferry during each weekday between mid-September and mid-May). With 12 runs per weekday and 54 vehicles per run, the vehicle capacity of the ferry during winter weekdays is 648 vehicles. Based on ridership data collected by Pierce County, the average number of vehicles using the ferry during winter weekdays in 2007 was 444 vehicles, which is significantly below.
the vehicle capacity (648) of the ferry. However, vehicle overloads (i.e. vehicles “left behind” on the dock and having to wait for the next ferry run) sometimes occur during the morning or evening peak periods and during the summer, holidays, weekends, and other occasions (e.g. school events).

Further information about the County ferry vessels and other ferry facilities (e.g. waiting facilities, ferry loading/holding lanes, Anderson Island park-and-ride lot, etc.) is included in the Pierce County Fourteen-Year Ferry Program, which is updated on a yearly basis as part of the annual adoption of the Six-Year Transportation Improvement Program (TIP). Ferry operational issues (scheduling, fares, regulations, interagency agreements, etc.) are not covered in this long-range community plan since they are addressed by Pierce County on a case-by-case basis through other existing processes (e.g., annual budget, separate Council hearings, Pierce County Code).

Public input from island residents on ferry improvements and operational issues is obtained primarily from a quarterly ferry advisory committee, which includes representation from the Anderson Island Citizens’ Advisory Board (AICAB), residents from Ketron Island, and other interested parties such as the school district.

It should be noted that the Washington State Department of Corrections (DOC) operates its own ferry service between Steilacoom ferry landing and the McNeil Island Corrections Center. The DOC has its own dock at the Steilacoom ferry landing for its passenger-only ferry boats but utilizes the County dock to load and unload vehicles to and from its barge.

**Transit Service**

Although there is no public transit service on the islands (except for the two school buses for Anderson Island Elementary School), Pierce Transit provides local transit service to the Town of Steilacoom. It operates a fixed bus route (Route 212) that runs between the Lakewood Transit Center, Western State Hospital, Pierce College, and the Steilacoom ferry landing. The closest bus stop to the ferry landing is located near the intersection of Union Avenue and Commercial Street, approximately one block from the ferry landing.

In response to input received from the AICAB, the CPBs, and other island residents, Pierce Transit initiated a new schedule for Route 212 that went into effect on June 1, 2008 that offers more frequent service at the ferry landing and is better coordinated with the ferry schedule. Instead of pick-ups only once every hour, this new schedule provides 30-minute bus service at the ferry landing during the morning and evening commute periods. Pierce Transit also delayed the Route 212 departures from the ferry landing in the morning so that the bus does not leave the dock before the ferry arrives. In the early evening, the bus schedule was also adjusted so that bus arrivals at the ferry dock are 10 to 20 minutes before the ferry departures.

**Roadway Network**

The roadway network on Anderson Island consists exclusively of two-lane roadways without shoulders. Many of the roadways, especially those outside of the Riviera development, are very narrow and overgrown with vegetation. Eckenstam-Johnson Road Al is the main north-
south thoroughfare that runs almost the entire length of the island. Yoman Road Al is a key east-west arterial that provides access to the ferry landing. Residents also utilize Guthrie Road Al and Villa Beach Road Al to travel to the ferry landing. Lake Josephine Road Al serves as the primary roadway into the Riviera development, although some motorists also use Country Club Drive Al to access this development. The traffic volumes on Anderson Island are relatively low compared to other parts of Pierce County and fall far below the County’s level of service thresholds.

Nonmotorized travel is very common on Anderson Island. Although the island roadways lack shoulders, they are used heavily by pedestrians. Many residents regularly walk or bike to the general store, the community clubhouse, and the ferry landing. There are sidewalks on Yoman Road Al near the ferry landing. Bicycle travel has become more common on weekends and during the summer while equestrian travel occurs primarily in the southern part of the island. The Anderson Island CPB has raised concerns about these nonmotorized users sharing the road with vehicles, which sometimes travel at high speeds.

As part of its discussions on transportation, the Anderson Island CPB also identified several traffic operational and safety concerns (e.g., requests for traffic signs, crosswalks, traffic counts, roadway reclassifications, etc.). However, it should be noted that these safety related issues are not usually included in the long-range community plans since they are typically addressed by Pierce County on a case-by-case basis as they arise.

On Ketron Island, all of the roadways are currently privately owned. Similar to the roadways on Anderson Island, these private roads do not have shoulders to accommodate pedestrians and other nonmotorized users. The main roadway on Ketron Island is Morris Boulevard, which runs in a north-south direction along the eastern portion of Ketron Island and serves as a connection between the other private roads and the ferry landing. Although a portion of it was previously paved in the late 1960s, Morris Boulevard is currently an unimproved roadway that is owned by the Ketron Island Water District.

**Description of Desired Conditions**

The community plan focuses on improving parks and trails; the transportation system, particularly the road network; and emergency management. The community hopes to improve park facilities; ensure roads and traffic are in keeping with the rural and agricultural lifestyle; and educate the public about evacuation routes and procedures.

**Law Enforcement, Fire Protection, and Emergency Management**

The community plan envisions improving the emergency services available on Anderson and Ketron Islands. This includes increasing the Sheriff Department’s presence on the Islands and
pursuing opportunities to establish a public dock on Anderson Island which facilitates an effective transportation service in the case of emergency situations. The plan also focuses on educating residents on strategies to minimize potential fire hazards on the Islands. There is also a desire to be more prepared to respond to potential disaster events such as earthquakes and tsunamis that may occur in the future.

**DOMESTIC WATER SUPPLY**

The community plan envisions the implementation of best management practices for the preservation of a high quality and supply of groundwater resources. Water purveyors should pursue actions to monitor the amount of water being withdrawn from water sources. Residents should be proactive in conserving water through identifying existing water leaks in the water system and using existing vegetation or drought tolerant native vegetation in landscaping plans.

The community plan addresses the potential threats of saltwater intrusion to the Islands’ water supply. Water conservation measures are encouraged in the summer at the time water supplies are most susceptible due to high pumping rates and low aquifer recharge rates. The location of new wells is encouraged in areas that are not likely to have saltwater intrusion occur.

**SURFACE WATER FLOODING**

The community plan envisions a minimization of impacts to residents from stormwater flooding events. Existing stormwater culverts and ditches should be upgraded for flow capacity. New culverts should be sized to ensure future surface flooding events do not occur due to inadequate infrastructure. Upgrading stormwater culverts and ditches financed through the locally collected stormwater management fees should be pursued.

**SOLID WASTE DISPOSAL**

The community plan envisions residents on Anderson and Ketron Islands utilizing regular garbage and recycling pickup services. The expansion of services augmented with a referral service for large equipment removal is aimed at curtailing the amount of waste illegally dumped and/or burned.

**CABLE TELEVISION**

The community plan envisions a television cable service that allows residents to view public stations broadcasting local government meetings, activities, and forums.
Ferry Service

To address future ferry needs through the year 2025, Pierce County prepared the Waterborne Transportation Study in 2003 as an update to a previous study completed in 1989. This study predicted that the increasing number of occupied households and the increasing number of working families on Anderson Island will intensify vehicle demand on the ferry and will eventually increase the number of vehicles “left behind” at the ferry landings during the morning and evening commute periods. To accommodate this anticipated vehicle demand, Pierce County implemented key service changes recommended in this study, including replacing the previous direct ferry runs to Ketron Island with triangle runs to both islands, adding evening runs to Anderson Island, and replacing the smaller MV Steilacoom ferry with the larger MV Steilacoom II ferry, which can carry 149 additional passengers and 20 more vehicles than its predecessor.

Pierce County is currently in the process of updating its long-range Transportation Plan to address its transportation needs over the next twenty years. As part of this update, the County will reevaluate the level of service (LOS) policy for the ferry system to take into account the ferry service throughout the year. There was community support from both islands to include a policy in this community plan to request that the County consider changes to the ferry LOS policy to focus on the peak commuting periods (e.g., summer, holiday weekends) when vehicle overloads are more commonly occurring. Additional public input will be sought on the proposed changes to this LOS policy as part of the Transportation Plan Update (TPU) process.

Notwithstanding any potential changes to the ferry LOS policy, vehicle overloads on the ferry are projected to regularly occur during the morning and evening commute periods by the year 2030. Since the population on Anderson Island is expected to increase by over 60% by the year 2030, it is assumed that the vehicle demand on the ferry will also increase at a rate comparable to the population increase on Anderson Island. In order to increase ferry service to meet this future vehicle demand, the construction of a second landing ramp (slip) at the Steilacoom dock would likely be required since the current landing ramp cannot accommodate both the existing Department of Corrections (DOC) barge runs to McNeil Island and any additional County ferry runs. In addition to serving additional County ferry runs or the dual use of the two County ferries during high demand periods (e.g., holiday weekends), a second landing ramp would serve as a back-up slip in the event of an emergency (e.g., boat repairs) at the existing landing ramp. It would also help avoid any scheduling conflicts with the DOC barge service and would reduce the need for other improvements such as extending the ferry loading lanes. The construction of a second landing ramp at the Steilacoom dock has been identified as a major
capital improvement project in the Pierce County Fourteen-Year Ferry Program subject to future funding availability.

The ferry policies in this community plan encourage Pierce County to implement ferry improvements and strategies to encourage walk-on passenger ridership in order to reduce vehicle demand on the ferry. It is recommended that the County prepare a study to identify overnight parking areas in or near Steilacoom for island residents so that they do not need to bring their vehicles on the ferry when returning home. Other policies recommend that access and driveway improvements be considered at the Anderson Island park-and-ride lot and that the County explore the feasibility of a dock for emergency service vessels at the Anderson Island ferry landing. Several policies emphasize the importance of continued coordination with island organizations (e.g., AICAB, Ketron Island Homeowners Association) and regular consultation with other agencies (Town of Steilacoom, DOC, Washington State Ferries).

**TRANSIT SERVICE**

The new schedule changes for Bus Route 212 implemented in June 2008 are intended to address longstanding community requests for better passenger connections between the Pierce County ferry system and the local transit service provided by Pierce Transit. The new 30-minute bus service at the ferry landing in Steilacoom during the morning and evening commute periods will increase opportunities for island residents to use the bus to travel to destinations such as Pierce College, Western State Hospital, and the Lakewood Transit Center, where passengers can transfer onto other bus routes to Tacoma and Fort Lewis and can also take the express bus service to the Seattle-Tacom (Sea-Tac) International Airport. This service change is also consistent with the ferry policies in the community plan to enhance or encourage walk-on passenger ridership in order to relieve vehicle demand on the ferry. Other transportation policies in this community plan call for continued coordination with Pierce Transit and request that Pierce County explore opportunities for sharing bus service and parking areas with the Town of Steilacoom and the Department of Corrections (DOC).

**ROADWAY NETWORK**

The transportation policies for the Anderson and Ketron Islands Community Plan emphasize the desires of both island residents to preserve the rural character of the roadway system while enhancing safety and facilitating access to community facilities. In general, there is support for improving the existing roadway system but not necessarily widening (i.e., adding lanes) the roadways or constructing new roadways. Making the roadway system safer and more convenient for pedestrians and other nonmotorized users is considered a high priority. Roadway improvements to the ferry landings are also emphasized by both island residents.

On Anderson Island, nonmotorized improvements (e.g., paved shoulders or roadside trails) are highly recommended along Eckenstam-Johnson Road AI and Yoman Road AI to improve safety and to facilitate nonmotorized travel to the general store, the community clubhouse, and the ferry landing. Traffic flow and safety improvements are also supported on Yoman Road AI and Villa Beach Road AI since residents use these local roadways to access the ferry landing. The transportation policies for Anderson Island in this community plan emphasize the need for
continued and closer coordination with other island agencies (e.g., the school, park, and fire districts) and local civic groups.

On Ketron Island, there is support for upgrading Morris Boulevard and other connecting roads as paved roadways to support future development and to facilitate access to the ferry landing. In addition, paved or soft (gravel) shoulders are recommended for any new roadway construction. The Ketron Island CPB also inquired about whether private roads on the island could be converted into County-maintained public roads. However, pursuant to Pierce County Code Section 17B.30.030, it should be noted that Pierce County only considers accepting private roads into the County road system after the roads have been brought up to the County's current standards. Even if a private road was brought up to standards, Pierce County would still need to weigh the benefits and costs of operating and maintaining any new public roads.

A listing of the transportation project recommendations for both islands is included in Appendix A. Implementation of these projects is contingent upon funding availability and more detailed analysis.

**CAPITAL FACILITIES POLICIES**

**GOALS**

Anderson Island will contain well-planned public infrastructure and services to support a diversity of residents' needs including safe walking areas, recreational opportunities, parks and open space, schools, and a transportation system coordinated between the local reliable ferry and regional mass transit.

Environmentally sound solutions will be applied to provide facilities and services to Ketron Island. A functional transportation system, including an enhanced marina facility and ferry service, will support all ages and accommodate future growth. Limited commercial services will be available to meet the needs of tourists and Island residents.

**LAW ENFORCEMENT, FIRE PROTECTION, AND EMERGENCY MANAGEMENT**

**GOAL AK CF-1** 
Provide reliable access to the islands to ensure prompt emergency and police response when services are needed.

**AK CF-1.1** 
Pursue opportunities to establish a dock to provide prompt emergency and law enforcement access to Anderson Island.

**AK CF-1.2** 
Coordinate with the Pierce County Sheriff to add patrols and improve response times to the islands.

**GOAL AK CF-2** 
Provide effective fire protection and emergency services to the islands.
AK CF-2.1 Coordinate with Fire District #27 on Anderson Island to provide effective fire and emergency services to the island. Pursue opportunities to improve fire and emergency services to Ketron Island.

GOAL AK CF-3 Negotiate fees for emergency services to Ketron Island.

**TRANSPORTATION POLICIES**

**GOALS**

Ensure that the transportation system is safe and efficient and serves all segments of the population.

**FERRY SERVICE**

**GOAL AK T-1** Provide an appropriate level of ferry services to both Anderson Island and Ketron Island residents and property owners.

**GOAL AK T-2** Coordinate with other agencies, civic groups, and the public to address ferry issues and concerns.

- **AK T-2.1** Consult with the town of Steilacoom, the State Department of Corrections (DOC), and Pierce Transit on ferry operations, transit service, parking availability, and other land use matters that may affect the ferry landing in Steilacoom.

- **AK T-2.2** Improve coordination efforts with the adjoining ferry service providers (Washington State Ferries, DOC, etc.) to minimize any adverse impacts to the County ferry service.

- **AK T-2.3** The Pierce County Public Works and Utilities Department must continue to coordinate with the Anderson Island Citizens’ Advisory Board (AICAB) on ferry improvements and ferry operational issues (schedule, fares, interagency agreements, etc.).

- **AK T-2.4** Work with Ketron Island residents to identify a process (e.g., participation in the AICAB Ferry Committee, participation in the County Ferry Advisory Committee, etc.) for ensuring their input on ferry improvements and ferry operational issues.

- **AK T-2.5** Conduct or participate in community outreach efforts to gather input on ferry needs and concerns.

**GOAL AK T-3** Consider changes to the County’s ferry level of service (LOS) policies to focus on ferry peak commuting periods.

**GOAL AK T-4** Explore the feasibility of a dock at the Anderson Island ferry landing to accommodate moorings for the Sheriff’s Department and Fire District emergency vessels.

**GOAL AK T-5** Investigate the feasibility of consolidating ferry service with the DOC.
GOAL AK T-6  Coordinate with the Burlington Northern Santa Fe (BNSF) Railway on potential impacts of future freight services and capital improvements upon the ferry landing.

AK T-6.1  Ensure that the design for the second ramp at the ferry landing anticipates delays associated with future increases of rail freight traffic. Consider other modifications at the ferry landing (e.g., redesign of the ferry queuing lanes) to improve the efficiency of the ferry loading and unloading operations.

AK T-6.2  Investigate the need for a grade separation at the railroad line adjacent to the ferry dock in Steilacoom.

GOAL AK T-7  Focus the ferry service on moving people and not vehicles.

AK T-7.1  Implement ferry improvements and operations to enhance or encourage walk-on passenger ridership.

AK T-7.1.1  Consider fare discounts to carpoolers and vanpoolers to reduce the number of vehicles taking the ferry.

AK T-7.1.2  Reconstruct the Anderson Island park-and-ride lot and Villa Beach Road AI to accommodate passenger drop-offs and pick-ups. Include a second (upper) driveway access to the park-and-ride lot.

GOAL AK T-8  Support the establishment of inexpensive parking in Steilacoom reserved for island residents.

AK T-8.1  Prepare a feasibility study in consultation with the town of Steilacoom, the Department of Corrections, and Pierce Transit to identify parking areas in or near Steilacoom for island residents.

TRANSIT SERVICE

GOAL AK T-9  Support transit services that meet the travel needs of island residents.

GOAL AK T-10  Coordinate with Pierce Transit to improve passenger connections between the County ferry system and the local transit service provided by Pierce Transit.

GOAL AK T-11  Coordinate with the town of Steilacoom, the DOC, and Pierce Transit to explore opportunities for sharing bus service and parking areas for passengers and visitors traveling to Anderson, Ketron, and McNeil Islands.

GOAL AK T-12  Promote increased transit service for commuters traveling between the islands and destinations within and outside of Pierce County.

AK T-12.1  Request that Pierce Transit provide more frequent bus service at the ferry landing in Steilacoom.

AK T-12.2  Work with Pierce Transit and Sound Transit to facilitate timely connections from the ferry landing in Steilacoom to Pierce College and the Lakewood transit center, where passengers can access bus service to Tacoma, Fort Lewis, and the Seattle-Tacoma International Airport.
GOAL AK T-13  Investigate the feasibility of providing dial-a-ride transit service (e.g., Bus PLUS service) on Anderson Island in the future as population demand warrants.

ROADWAY IMPROVEMENTS

GOAL AK T-14  Preserve the rural character of the Anderson Island roadway system.

AK T-14.1  Minimize the construction of new roads to maintain the rural atmosphere of Anderson Island.

AK T-14.2  Minimize the widening of roadways to reduce traffic volumes and vehicle speeds.

AK T-14.3  Consider the use of paved shoulders and off-road paths and trails instead of sidewalks to preserve the rural character of the community.

AK T-14.4  Maintain the visual corridors along roadways through the retention of trees which are safe and sound, appropriate greenery, and native vegetation on adjacent properties.

AK T-14.5  Design and construct roadway improvements to minimize changes to existing topography and minimize impacts to Critical Areas.

GOAL AK T-15  Develop a roadway system on Anderson Island that enhances safety and facilitates access to community facilities.

AK T-15.1  Pursue strategies to maximize the safety of the roadway system.

AK T-15.1.1  Provide continuous, paved shoulders or roadside trails along Eckenstam-Johnson Road AI and Yoman Road AI between the general store and the ferry landing to improve vehicle and pedestrian safety.

AK T-15.1.2  Consider the use of roadside paths and trails throughout the Riviera development and in areas leading to community facilities to provide physical and visual separation between automobile traffic, pedestrians, and bicyclists.

AK T-15.1.3  Reconstruct the sharp curves and tight turns on Yoman Road AI between the community clubhouse and the ferry landing to reduce the potential for accidents.

AK T-15.1.4  Consider traffic flow and safety improvements on Villa Beach Road AI and Yoman Road AI since residents use these local roads to access the ferry landing.

AK T-15.1.5  Consider traffic flow and safety improvements on Country Club Drive AI and Matthews Way AI since residents use these local roads to cut through the Riviera development and to access the Rural Neighborhood Center.

GOAL AK T-16  Implement roadway improvements leading to places where residents frequently drive.

AK T-16.1  Give priority to roadway improvements that facilitate safe access to the ferry landing.
AK T-16.2 Pursue traffic improvements that improve vehicular access to the general store and the other businesses in the Rural Neighborhood Center.

AK T-16.3 Encourage the use of shared driveways on Eckenstam-Johnson Road AI and Yoman Road AI between Guthrie Road AI and the ferry landing, where appropriate, to improve traffic flow and to minimize the number of intersections and ingress/egress points.

GOAL AK T-17 Coordinate with other agencies, civic groups, and the public on the planning, design, and construction of roadways.

AK T-17.1 Consult with the Steilacoom School District, the local park district, the local fire district, the Sheriff’s Department, and the Anderson Island Citizens’ Advisory Board on roadway improvements which have the potential to affect schools, parks, and other community facilities.

AK T-17.2 Collaborate with the Steilacoom School District to identify, prioritize, and implement safety-related improvements near the elementary school. Improvements may include signage, crosswalks, and traffic calming measures.

AK T-17.3 Conduct or participate in community outreach efforts for the purpose of discussing local transportation issues and the study of related programs and projects.

GOAL AK T-18 Consider nonmotorized connections to the fitness center, the lakes, and other recreational sites.

AK T-18.1 Consider the provision of roadside paths or trails, which are physically separated from the roadway, throughout the Riviera development and in areas leading to community facilities.

GOAL AK T-19 Coordinate with other agencies, civic groups, and the public to identify and implement nonmotorized improvements.

AK T-19.1 Consult with the Steilacoom School District to identify, prioritize, and implement nonmotorized improvements near schools and bus stops.

AK T-19.2 Work with the local park district to identify, prioritize, and implement nonmotorized connections with existing and proposed off-road trails.

AK T-19.3 Conduct or participate in community outreach efforts to gather input on local nonmotorized needs and concerns.

GOAL AK T-20 Develop a roadway system on Ketron Island that accommodates existing and future residents.

AK T-20.1 Place primary emphasis on funding the improvement of existing roadways on Ketron Island rather than the construction of new roadways.

AK T-20.2 Work with the Ketron Island Water District and other affected property owners in improving Morris Boulevard to facilitate access to the Ketron Island ferry landing.

AK T-20.3 Consider upgrading Morris Boulevard and other connecting roadways as paved roads over the next 20 years to support future development on Ketron Island.
GOAL AK T-21  Include paved or soft shoulders in any new roadway construction on Ketron Island.

**UTILITIES POLICIES**

**TELECOMMUNICATION**

GOAL AK U-1  Provide access to public cable channels to all residents.

AK U-1.1  Work with appropriate public cable providers to provide access to cable channels that air Pierce County government, other local government, and other public agency meetings and other activities.

**SOLID WASTE**

GOAL AK U-2  Provide adequate solid waste facilities, services, and programs to Ketron Island residents and property owners to discourage illegal dumping, storage of junk, and burning.

GOAL AK U-3  Coordinate with the Solid Waste Division of Pierce County Public Works and Utilities to identify and develop viable opportunities for on-island solid waste disposal services.

AK U-3.1  Investigate options for providing regular garbage and recycling pick-up service on Ketron Island and a drop-off location for island residents to bring household and hazardous waste.

AK U-3.2  Implement on-island solid waste pick-up and drop-off services when viable options for providing such services become available.

AK U-3.3  Investigate options for a drop-off facility on Ketron Island for lawn waste and other organic waste that provides transfer to an organic matter waste recycling facility.

AK U-3.4  Establish an on-island lawn waste and other organic waste drop-off facility when viable options for providing such a facility become available.

**SURFACE WATER FLOODING**

GOAL AK U-4  Utilize collected stormwater management fees to complete projects that improve surface water flooding problems in the plan area.

AK U-4.1  Improve surface water flood control improvements that are damaging roads.

GOAL AK U-5  Upgrade stormwater facilities (e.g., culverts and ditches) within the plan area that are undersized and causing flooding problems.

GOAL AK U-6  Adequately size new culverts so that flooding problems don't result from installation of undersized culverts.
DOMESTIC WATER SUPPLY

GOAL AK U-7  Encourage water purveyors and homeowners to trace and repair water leaks in existing water systems.

GOAL AK U-8  Encourage the application and implementation of water-conserving landscaping plans. Promote the retention of existing vegetation and the use of drought-tolerant native vegetation in landscaping areas.

IMPLEMENTING ACTIONS

The following actions need to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 1-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Pierce County Planning and Land Services (PALS), Pierce County Public Works and Utilities (PWU), Tacoma-Pierce County Health Department (TPCHD), Pierce County Department of Emergency Management (DEM), Pierce County Sheriff (Sheriff), Pierce County Fire District #27 (PCDF#27), and Pierce County Fire Prevention Bureau (FPB).

SHORT TERM ACTIONS (UPON PLAN ADOPTION TO 1 YEAR)

1. Amend the Pierce County Manual on Accommodating Utilities to include provisions for the undergrounding of overhead utility lines within the County right-of-way. (PWU)
2. Consider amending the annual updates to the Six-Year Transportation Improvement Program (TIP), the Fourteen-Year Ferry Program, and the Capital Facilities Plan (CFP) to include the ferry improvements recommended in the Anderson and Ketron Islands Community Plan. (PWU)
3. Continue to coordinate on a regular basis with the Anderson Island Citizens’ Advisory Board (AICAB) and the residents of both islands on ferry improvements and operational issues (scheduling, fares, interagency agreements, ferry information and documents). (PWU)
4. Prepare a parking study in consultation with the Town of Steilacoom, the Department of Corrections, and Pierce Transit to identify parking areas for island residents. (PWU)
5. Coordinate with Pierce Transit to improve passenger connections between the County ferry system and Bus Route 212 that serves the Steilacoom ferry landing. (PWU)
6. Work with Pierce Transit to provide more frequent bus service at the ferry landing in Steilacoom in order to facilitate bus ridership to Pierce College and the Lakewood Transit Center. (PWU)
7. Consider amending the annual updates to the Six-Year Transportation Improvement Program (TIP) and the Capital Facilities Plan (CFP) to include the roadway projects recommended in the Anderson and Ketron Islands Community Plan. (PWU)
8. Coordinate with the Steilacoom School District, the local park district, the local fire district, the Anderson Island Citizens’ Advisory Board (AICAB), and the residents of both islands on transportation issues and roadway safety concerns. (PWU, Sheriff)

**Mid-Term Actions (1-5 years)**

1. Pursue opportunities to establish a dock to provide prompt emergency and law enforcement access to Anderson Island. (DEM, Sheriff)
2. Investigate adding patrols and improve response times to the islands. (Sheriff)
3. Coordinate with Fire District #27 on Anderson Island to provide effective fire and emergency services to the Island. Pursue opportunities to improve fire and emergency services to Ketron Island. (DEM, PCFD#27)
4. Disseminate information to residents and property owners that addresses forestry stewardship to minimize forest fire hazards, proper maintenance of chimneys, and other ways to minimize fire hazards. (FPB)
5. Pursue grant funding to develop emergency plans and provide information to the public to prepare for earthquakes, tsunamis, storms, and other disaster events that could affect the Islands. (DEM)
6. Provide information, training, and programs on managing solid waste through reduction, recycling, composting, and other methods. (PWU)
7. Limit new wells and development activities that require water withdrawals in any areas that are identified as being at risk for saltwater intrusion. (PALS, TPCHD)

**Long-Term Actions (5-10 Years)**

1. Upgrade existing stormwater facilities within the plan area that are undersized and causing flooding problems. (PWU)
2. Develop programs and provide information to enhance domestic water conservation. (TPCHD)
Chapter 6: Plan Monitoring

The 1990 State Growth Management Act (GMA) requires jurisdictions to report on progress made in implementing the Act, and to subject their comprehensive plans to continuing evaluation and review. As a component of the County’s Comprehensive Plan, the Anderson and Ketron Islands Community Plan is subject to this requirement. Generally, community plans are updated every five years and monitored yearly. The monitoring process includes evaluating the development standards, regulations, actions, and other programs called for in the plan for the purpose of determining their effectiveness in fulfilling the vision of each of the five elements of the plan.

Monitoring actions steps includes the development and implementation of regulations and design standards, coordinating the provision of facilities and services, developing educational programs and handouts, acquiring parks, preserving open space, and other actions. Information obtained from the monitoring program can be used to offer recommendations to decision makers as to what changes to the community plan may be needed in order to attain specified goals and meet the visions in the plan.
Appendix C: Browns Point - Dash Point Community Plan

The Browns Point - Dash Point Community Plan’s narrative text and policies are in addition to the Countywide Comprehensive Plan narrative text and policies and are only applicable within the Browns Point - Dash Point Community Plan Boundary.

- “Current” or “Existing” conditions are in reference to conditions at time of adoption (Adopted Ord. 2008-50s, Effective 10/1/2008).
- “Proposed” or “Desired” conditions are those which required Council action and may have also been amended over time through a Comprehensive Plan Amendment (amendments are reflected in this document).

Chapter 6: Plan Monitoring ........................................................................................... C-84
Chapter 1: Introduction

Overview of the Plan Area

The Browns Point/Dash Point area is located in northeastern Pierce County and surrounded by Puget Sound marine waters on almost three sides. The City of Tacoma is located to the south and the City of Federal Way (and King County) is located to the east. Commencement Bay and Port of Tacoma are located to the southwest. Vashon and Maury Islands are located across Puget Sound to the north.

The plan area is approximately 615 acres and is designated for urban land uses under the Pierce County Comprehensive Plan. The community plan does not contain a rural area as defined by the Washington State Growth Management Act (GMA). While the two communities of Browns Point and Dash Point are somewhat distinct geographically, there is a strong combined community identity in the area.

The Browns Point/Dash Point area is characterized by a variety of residential uses on small to medium sized lots. Residential homes dominate the landscape, with a significant commercial center in the heart of Browns Point. Dash Point State Park is located to the east, straddling the Pierce/King County line. The area’s dominant marine views and active recreational shoreline contribute to the community identity. State Route 509 (SR 509) crosses both communities, providing a connection to the City of Tacoma and the City of Federal Way.

The plan area encompasses portions of Township 21 North, Range 3E, Sections 9, 10, 15, 16, 17, 20, and 21, and is in Pierce County Council District #2. The entire area is located in Census Tract 708, as defined in the year 2000 census.

The total population in year 2000 was 2,086 people. From US Census data, residents of Browns Point/Dash Point have a median household income of about $68,315. That income is 151.1% of the Pierce County median household income of $45,204 with 73% of the population employed. The communities are dependent on commuting to Tacoma, Federal Way, and other parts of King and Pierce Counties for employment.

The Environment

The Browns Point/Dash Point Community Plan area is an urban area with a strong connection to its shoreline. Views of Puget Sound throughout the area attract people to visit and live in the area. Public shoreline access through the existing waterfront parks is highly utilized and protected by the community. Water access is cherished, and includes many activities, such as windsurfing, kite boarding, jet skiing, and boating. Shoreline activities draw large numbers of
people to the points, with barely enough room to cast a line along the shoreline when the salmon are running. There are pockets of natural areas associated with steep slopes and other critical areas. Dash Point State Park is the largest forested area in the near vicinity. Developed areas predominantly fall into the medium to low density residential uses.

EARLY HISTORY OF BROWNS POINT/DASH POINT AREA

The following synopsis of Browns Point/Dash Point history is liberally borrowed, summarized, and rewritten from the Points Northeast Historical Society and its website at www.pointsnortheast.org. The paragraphs and highlights are much less colorful than the well written account by Mavis Stears in Two Points of View, the text that is used to provide content on the website. As the account reveals, the geographic prominence of the two points has resulted in an interesting history that is carefully recorded by these communities.

THE 18TH AND 19TH CENTURIES

The two main tribes which lived in the area around Commencement Bay were the Puyallup Tribe and the Nisqually Tribe. They were friendly tribes and shared each other’s berry picking and hunting grounds during the summer and fished together in the Nisqually and Puyallup Rivers in the winter.

In the spring of 1792, Captain George Vancouver and his men, who were exploring in the name of King George III of England, became the first white men to view the twin points. On May 8, 1792, Capt. Vancouver sighted the huge mountain which he named Mount Rainier for Rear Admiral Peter Rainier, an old friend. While exploring south Puget Sound on May 20th, 1792, Capt. Vancouver and his men rowed around the point into “an extensive, circular, compact bay,” Commencement Bay. He had been hoping that this would be the easterly waterway that would link the west to the east.

The area was surveyed by both U.S. Naval ships and British Navy frigates and brigs and both points received their names between 1841 and 1877. Browns Point was known as Point Brown until about the 1920s. During the 19th century Dash Point was used as a geodetic survey point. On December 12, 1887 a fixed white light lens lantern was placed on a white post on Point Brown.

In 1854, Issac I. Stevens, Governor and Superintendent of Indian Affairs of Washington Territory and the chiefs and delegates of the Nisqually, Puyallup, Steilacoom, and other tribes of the lower Puget Sound region, signed the Medicine Creek Treaty. The President issued an Executive Order in January 1857 creating specific Indian reservations, including the Puyallup Indian Reservation.

The Browns Point and Dash Point areas were a part of the Puyallup Reservation. Disputes over the surveys of boundaries and tidelands were common between the government and the
tribes. A survey of the Puyallup reservation was made in 1872 assigning plots of land to individual tribal members and 167 patent deeds were signed by President Grover Cleveland and issued to the individual Puyallup tribe members in March 1886, with each given approximately 160 acres of land. Ten Puyallup tribe members were patent deeded property on Browns Point and Dash Point.

**THE 1900s**

In 1901 the first lighthouse at Browns Point and a house for the lighthouse keeper were built. The lighthouse was a wood frame structure on wood pilings off shore. The first lighthouse keepers were Oscar Brown and his wife Annie, who arrived by government boat in October of 1903. For the next 30 years Oscar Brown tended the battery operated lighthouse.

In 1898, Captain Mathew McDowell, a Scotsman born in the mid 1800s in Northern Ireland, began the McDowell Transportation Company. McDowell carried passengers and hauled freight on his seven steamers. The fleet was originally based in Tacoma near the smelter. In 1905 he purchased 80 acres on Browns Point from the original tribal owners and heirs.

McDowell built a house and dock in the cove not very far from the lighthouse and called his new home Caledonia. His daily runs serviced areas such as Dumas Bay, Lakota, Adelaide, Redondo, Des Moines, Zenith, Maury, Portage, Chautaugua, Vashon, Tacoma, and Seattle. As the permanent population and summer vacationers increased, his business thrived. His clientele increased even more when he built a dance hall next to his dock and his D-fleet brought fun-loving dancers from across the bay.

**HYADA PARK IS PLATTED**

Between 1901 and 1907 Jerry Meeker and his business partners George Taylor, J.M. Campbell, Fremont Campbell, and Frank Ross acquired and platted most of the property west of today’s Eastside Drive which they called Hyada Park. Mr. Meeker chose tribal names for the streets including La-Hal-Da, his own tribal name. In 1906 he built his home on Browns Point. Next to it he built Browns Point Dock in 1907, for $5,500. By 1941 it was deemed unsafe and was torn down by the Works Progress Administration.

As far back as 1912 Jerry Meeker’s clambakes were enjoyed by his friends and neighbors. They were held on the beach, but later were held next to the schoolhouse on Tok-A-Lou. By 1918 there were enough children on Browns Point to warrant a school. It was built on the east side of Tok-A-Lou and the first year had about 12 students.
**Dash Point Grows**

Dash Point began its gradual growth as a community not long after the turn of the century. Over the first couple of decades land was purchased from the tribes by settlers who then developed their respective areas of land into a small community that grew over the century. Most of the activity of the first decade on Dash Point involved the amusement and sports of picnickers from Tacoma.

There were no roads to Dash Point unless one traveled across country on foot or by horse to the dirt roads that went through Julia’s Gulch to the top of Dash Point hill. This is most likely the road now known as Browns Point Boulevard. It was, however, a dirt road and dirt roads in the Pacific Northwest at that time were usually impassable especially in the fall and winter months.

After many years of rowing boats to catch launches going in and out of Dash Point, the community club contracted Pete Manson, who owned the best pile driving company in the area, to build a new dock for $7,777. The community furnished the labor and on a cold and very rainy December night in 1917, with the lowest tide of the year, the community poured the concrete pilings. In about 1918 the bulk of the property, which is now the part adjoining the dock, was donated for the purpose of a park, by R.P. Milne and Louis Eberhardt. Also in 1918 Harry Johnston deeded to the County the property in front of the present Lobster Shop and tennis court, for the park. Due to the generosity of Milne, Eberhardt, and Johnston, Dash Point had property for a park. On April 10, 1923 residents voted to put the property under the jurisdiction of the Metropolitan Park District.

**Eastside Drive/Marine View Drive**

From the beginning of building on the two points, the developers had promised their clients a road into the area. Browns Pointers could come up Julia’s Gulch to what is now Browns Point Boulevard to today’s Slayden Road. Dash Pointers came the same way through Northeast Tacoma but just to the top of Dash Point hill. All of these roads were narrow dirt roads, usually impassable in rainy weather.

Finally, in about 1918 three men formed the Pacific Boulevard Association and obtained the release of properties necessary for a scenic road called Marine View Drive (Eastside Drive) between Tacoma and Dash Point via Hyada Park. With the road came bus service to Tacoma provided by Joe Lyon from 1925-1937. Roy Harrison took over the bus service from 1937-1942. He made four round trips to Tacoma every day, plus a run just for the school children.

The population of Dash Point and Browns Point grew at a steady rate well into the war years. On Dash Point houses were spread fairly evenly on the north-facing hillside. On Browns Point most of the homes were located close to the beach, with very few on the hill. During 1941 to
1943 the two communities cooperated in operating the Crestview Observation Post located on
the highest point above the two points. Fifty to 75 people were listed and allotted periods for
plane watching. They reported any sightings and the descriptions of the aircraft to the Civil
Defense headquarters. The tower was manned 24 hours a day. The code name for Crestview
was “Charlie Nine One.” The beginning of World War II brought some physical changes to the
points. Ship building and an all out war effort became paramount in the industrial tidelands.
With the buildup came workers and their families. The need for housing was answered on the
points with both developers and individuals building homes for workers.

A new clubhouse at Browns Point was completed and dedicated on February 20, 1955. The
majority of the Browns Point/Dash Point Community Plan meetings were held in this clubhouse.

By 1959 the majority of Browns Point and Dash Point Hills was annexed to Tacoma. These
areas automatically qualified for all the Tacoma utilities and services. The lower parts of
Browns Point and Dash Point; however, remained under the jurisdiction of Pierce County.

The “Hotfooters” of Browns Point and Dash Point began their fire protection duties in 1967
under the tutelage of Fire Chief Howard K. Jones. The “Hotfooters” were 18 ladies who were
dedicated volunteers for Fire District No. 13. They were ready and on call during the day when
their male counterparts were at their daily jobs.

In 1967 SW 320th Street was built from Pacific Highway to Hoyt Road in Federal Way, which
opened the points to King County. Through the 1970s more and more people who worked in
King County began moving to the points.

Commercial Landmarks

In 1977, Ron and Gary Hall purchased the shopping center property from Gordon Dowling. At
that time the store fronts received a new rustic wooden facade and a new name was chosen,
North Bay Village. It served the three communities of Browns Point, Dash Point, and Northeast
Tacoma which bordered the north shore of Commencement Bay.

In 1986, the new owner completed an upgrade to the shopping center when a new multi-shop
complex housed Sav-On Drugs, Art’s Grocery, North Bay Dry Cleaners, Marvelous Movies, a
barber shop, an art gallery, an auto parts store, and a few years later, Archie’s Diner. The
professional center adjacent to the site also was constructed at this time.

The Lobster Shop started as a grocery/café. It was originally built on stilts which kept it high
above the high tide level, but as time passed the land was filled in. It also had a porch on two
sides which was enclosed to become part of the main store. When Denny Driscoll purchased
the building, he opened it as a restaurant in June of 1977.

Though just south of the County line, the Cliff House has been a popular landmark restaurant
for Tacoma and the surrounding areas. It was remodeled in 1977, and presents an interesting
view of Commencement Bay, the Tacoma skyline, and the tideflats with the Puyallup River
flowing into the bay.

**Planning History**

**County Planning**

**1962 Pierce County Comprehensive Plan and Zoning**

The first Pierce County Comprehensive Land Use Plan was adopted on April 2, 1962. The Pierce County Zoning Code, which implemented the Comprehensive Plan, was adopted on October 8, 1962. The 1962 Pierce County Comprehensive Plan designated the Browns Point/Dash Point area as “Suburban Residential.” These rules followed very basic planning principles. Zoning districts were established that dictated the appropriate location for commercial business and residential homes. However, the Plan did not offer much protection from incompatible uses and did not recognize the unique individuality of communities.

**1994 Pierce County Comprehensive Plan**

In April 1990, the Growth Management Act (GMA) was passed by the Washington State Legislature. It required Pierce County to update its existing Comprehensive Plan and Zoning Regulations, including community plans. The GMA required Pierce County to develop and
adopt a comprehensive plan which would control residential, commercial, and industrial growth. Thirteen goals are listed in GMA to guide policy development in six required elements. The required elements include land use, housing, capital facilities, utilities, rural, and transportation. Pierce County also elected to include four additional elements: environment and critical areas, economic development, community plans, and essential public facilities. Each of the six GMA required elements must conform to specific standards set in the legislation. GMA required cities and counties to plan for growth based on population forecasts. Where growth is allowed, facilities and services must be planned and provided.

In April 1991, interim Growth Management Policies were adopted as a transition between the 1962 Comprehensive Plan and the more complex plan developed under the Growth Management Act. In June 1992, the Pierce County Countywide Planning Policies were adopted. The policies provided the framework and process by which Pierce County and the cities and towns within the County would establish urban growth areas, provide infrastructure and services, and preserve agricultural and natural resource lands. In November 1994, Pierce County adopted a new Comprehensive Plan. The 1994 Pierce County Comprehensive Plan replaced the 1962 Pierce County Comprehensive Plan in its entirety. The plan established population projections, urban growth areas, and rural areas. The 1994 Comprehensive Plan identified Browns Point and Dash Point as an urban area, with predominantly an Urban Residential land use designation.

**COMMUNITY PLANNING**

Pierce County Comprehensive Plan policies located in the Community Plans Element address community autonomy, community character, new community plans, consistency with the Comprehensive Plan, consistency with the Development Regulations-Zoning, transition strategies, and joint planning agreements.

The Community Plans Element of the 1994 Pierce County Comprehensive Plan envisions a local voice in how the Comprehensive Plan and its Development Regulations will be carried out in communities. Community plans exemplify how the objectives and policies of the Comprehensive Plan play out when applied to detailed and specific conditions. They indicate specific land use designations, appropriate densities, and the design standards that should apply in community planning areas. Preserving and building community character while ensuring an efficient and predictable development approval process is a central theme. Community plans help citizens decide what they want to retain and what they want to change at the local level.

Although the Growth Management Act (GMA) does not require comprehensive plans to provide for community plans, Pierce County Ordinance 90-47S directs County officials to prepare a Community Plans Element of the Comprehensive Plan. The majority of the unincorporated County population resides in community plan areas. The Community Plans Element spells out how to coordinate consistency between community plans and the Comprehensive Plan. Community plans must be consistent with the Comprehensive Plan and the GMA.
LEGISLATIVE AUTHORITY TO DEVELOP THE PLAN

The Pierce County Council passed Resolution No. R2004-72 on April 20, 2004, requesting the Department of Planning and Land Services begin the development of a community plan for the Browns Point/Dash Point Area.

PURPOSE AND USE OF THE COMMUNITY PLAN

The Browns Point/Dash Point Community Plan gives details on how the community wants to develop in the future and what standards could be utilized to create and maintain the look and feel identified in the community plan. In some circumstances, the plan refines the Pierce County Comprehensive Plan to more closely reflect the needs, concerns, and desires of the residents. The plan also identifies actions necessary to implement the community plan, including adopting or revising land use regulations; identifying priorities for use of public funds to develop physical improvements such as roads and utilities, sidewalks and street lighting, and residential and commercial development.

CONSISTENCY WITH THE PIERCE COUNTY COMPREHENSIVE PLAN

The Growth Management Act requires consistency between plans and implementing development regulations. Furthermore, the Pierce County Comprehensive Plan Community Plans Element contains specific policies that require consistency between the Comprehensive Plan and community plans. The goals, objectives, principles, and standards in the Browns Point/Dash Point Community Plan are consistent with the provisions in the Pierce County Comprehensive Plan.

COMPONENTS OF THE COMMUNITY PLAN

VISIONS

Visioning is the process of defining the expectation of what the community could be in the future. Visioning is typically completed through a series of public meetings or workshops structured to allow the community to articulate hopes for the future. Statements, thoughts, and ideas brought forth in the visioning process become the basis for the visions, goals, objectives, and principles of the community plan.

Vision statements can be either: 1) broad - painting a picture of what the community should strive to be like, physically and socially; or 2) focused - to express how the concerns, values, and hopes of the community should be reflected in various topics.

Goals, objectives, and policies (principles and standards) are used to provide measurable statements to fulfill the vision statements and are an integral part of the visioning process.
GOALS

Goals describe a desirable future for the community: identifying who, what, why, and how the broad values and hopes set forth in the vision statement will be accomplished. Goals provide the framework from which objectives, policies (principles and standards), and implementation actions and recommendations will be developed.

OBJECTIVES

Objectives are statements which specifically define goal actions.

POLICIES (PRINCIPLES AND STANDARDS)

Principles set a particular course of action to accomplish objectives. Standards, quantitative or qualitative, are specific benchmarks or targets to be accomplished in the ongoing development of the community.

IMPLEMENTATION ACTIONS AND RECOMMENDATIONS

Implementation actions and recommendations are statements that provide changes to policy documents, regulations, capital facility plans, and statements directing agencies and community groups to revise or develop plans, regulations, and non-regulatory measures.

The vision and all of the goals, objectives, policies, and implementation actions and recommendations are developed through citizen comment and represent the will of the people translated into decision-oriented statements. When applying the policy statements, each should be afforded equal weight and consideration.

PUBLIC INVOLVEMENT

COMMUNITY PLANNING BOARD

The development of the Browns Point/Dash Point Community Plan could not have been accomplished without the Browns Point/Dash Point Community Planning Board (BP/DP CPB). The BP/DP CPB consisted of a 12-member group representing a variety of interests and geographic locations in the community. Members included representatives from: the Browns Point and Dash Point Improvement Clubs, local emergency services, business and real estate representatives, historic preservation interests, and long time residents.

The BP/DP CPB was charged with five main responsibilities: 1) serving as a sounding board for the community; 2) developing a vision statement and community-wide goals for the community plan area; 3) developing policies and implementing actions related to various topics; 4) guiding the development of policies and map changes that address community concerns while remaining consistent with the Comprehensive Plan; and 5) forwarding a draft updated Browns
In the fall of 2005, public outreach on the community plan process began with a community meeting at the Browns Point Improvement Club and the recruitment of members to serve on the Community Planning Board (CPB). The first CPB meeting was held in March, 2006 and meetings were held twice monthly through April of 2008. The CPB worked on developing an overall vision for the community, and goal statements and policies for each element of the community plan. An open house was held April 16, 2008. This open house gave the public an opportunity to review and comment on the draft plan prior to its transmittal to the Pierce County Planning Commission and County Council. The CPB used the open house forum to solicit important community feedback regarding their proposed recommendations for final BP/DP CPB consideration.

**Survey**

**Background**

In March 2006, Pierce County Planning and Land Services (PALS) mailed 1,395 questionnaires to households and businesses within the Browns Point/Dash Point Community Plan area. The survey was developed by PALS staff and based on a format used in various communities throughout Pierce County in previous land use planning efforts. The survey was intended to help PALS staff and community planning board members assess the community’s views regarding a variety of topics including quality of life, land use, the economy, and public facilities and services.

**Methodology**

Mailings were sent to “postal customers” on three mail routes in the 98422 ZIP code as well as specific addresses. Included in the 1,395 were 160 questionnaires sent to property owners with addresses in other places.

At the time of cut-off for tabulation, 386 questionnaires were returned completed for a return rate of 28%. This represents an acceptable response rate and sample size for statistical tabulation purposes. For statistical purposes, a sample of 386 has a maximum margin of error of +/- 5.0% at the 95% confidence level. This means the results from the survey would not vary by more than +/-5% had all residents in the survey area completed and returned a questionnaire and that this result would occur 95 times out of 100. The results were produced in a cross-tabulation format showing how results break out by geographic area and length of residence. It is interesting to note that 47% of respondents had lived in the area for 20 or more years.

**Survey Summary**

The survey asked questions regarding quality of life; condition of the built and natural environment; economic development; land use planning and related controls; and levels of
support for a variety of public facilities and services. The survey results reflected a general satisfaction with the state of the community. The questions attempted to identify and anticipate certain issues such as view protection and redevelopment in order to gauge community sentiment. It should be noted that the geographic area tally did not show that neighborhood attitudes were particularly different between Dash Point and Browns Point. Length of residence was also considered. The results were provided in three groups, by length of time as a resident: 10 years or less, 11 to 20 years, and 20+ years.

In quality of life questions, environment, schools, parks, and land use received relatively high scores, with only a 0.72 difference between the lowest and highest means. Other quality of life issues scored lower; but the scores did not indicate a high level of dissatisfaction, just areas that may need improvement, particularly housing, transportation, and emergency services.

When longevity (length of time living in the area) is considered newer resident’s scores were higher for housing and transportation and lower for schools. Long time residents (20+ years) scores were higher for emergency services and schools. The only area where Browns Point was different than Dash Point was land use, with a Browns Point mean of 3.36 and a Dash Point mean of 3.74 (out of five possible points), reflecting more satisfaction among Dash Point residents. In reviewing the entire survey for the Browns Point and Dash Point neighborhoods, this was the only issue that had a noticeable difference.

The survey showed that stormwater facilities in certain areas may need attention. Shoreline access appears to be acceptable at this time. There appears to be sympathy for environmental protection.

The perceived need for business retention and home based business was mixed. Most people shop outside their neighborhoods. Most people feel commercial uses in the area are adequate. Many of the comments from the survey indicated existing commercial uses are struggling to survive. When combined with proposing industrial growth, 78% were against expansion to more intense uses. Expansion of nonconforming uses or commercial uses is not supported. The existing commercial center was given more support by the community as its commercial focal point.

The answers regarding Community Character indicated commercial uses with design standards would benefit the community. This was not as clearly demonstrated with residential uses, with 50% in favor of design standards for redevelopment. The community would not like to see more residential or commercial growth. There was strong support for view protections that was slightly less enthusiastic when restrictions on redevelopment and remodeling are considered. Multifamily residential was not supported.

The following themes were identified in the survey comments.

- Community identity and quality should be preserved
- The annexation into a nearby city (some for/some against)
- Police presence/crime
- Residential redevelopment (large new homes)
- Transportation/Streetscapes (sidewalks, streetlights, paving, bike lanes, traffic calming, bus service, road widening)
- Views: underground utilities, residential redevelopment
- Property taxes too high
- Sewers in Dash Point area
- Commercial development: generally not for new commercial, encouragement of certain types of businesses, such as a grocery store and restaurants
- Preserve existing open spaces, wild areas

The survey results were used by the Community Planning Board as an aid in the development of the Browns Point/Dash Point Community Plan.

**Summary of the Browns Point/Dash Point Community Plan**

The Browns Point/Dash Point Community Plan contains policies and implementing actions for four major subject areas or elements: Land Use and Economic, Community Character and Design, Natural Environment, and the Facilities and Services.

**Land Use and Economic Element**

The Land Use and Economic Element addresses issues such as what land uses should be allowed in the various designations and the appropriate intensity of land use in various areas in the community. Preservation of the areas’ scenic qualities is reflected in commercial and building height limitations. The Browns Point Town Center, the main local shopping area, is finding its businesses struggling to survive, and redevelopment of the site is a possibility. The CPB chose to implement residential development at a lower density than previously allowed by designating the majority of the area as a Single-Family (SF) zone.

**Community Character and Design Element**

The Community Character and Design Element focused on design standards and guidelines for residential and commercial development in the area. The Town Center site was seen as an area where design goals could be implemented for redevelopment activities. Land values in the area have increased, encouraging the construction of larger single-family residences in which height increases are designed to capture more of the views of Puget Sound. As such, building height limitations are a goal for both residential and commercial uses in the plan area.

**Natural Environment Element**

The Natural Environment includes consideration of the natural resources found on Browns Point/Dash Point. Natural resources such as wildlife, clean water, parks, and open spaces are an integral and valued part of the community. The policies contained within the Natural Environment Element promote protection of critical areas, encourage preservation of natural vegetation, and address special topics such as the marine shorelines, wetlands, and fish and wildlife habitat.
Facilities and Services Element

The Facilities and Services Element addresses services such as public safety services (emergency, sewer, and stormwater), and facilities such as roads, parks and schools. Transportation and road improvements were identified for long term goals. Local parks, as facilities that attract people from outside the community, had goals associated with parking, restrooms, and other improvements.

Plan Monitoring

The Plan Monitoring Section addresses how to measure the effectiveness and impacts of the plan over time.

Implementation

The plan also contains proposed actions, located at the end of each element, which serve to implement various plan policies. These actions are grouped into short-term, mid-term and long-term endeavors. Short term actions should occur immediately or within one year of plan adoption. Mid-term actions should be completed within 1-5 years. Long term actions should be completed within 5-10 years of plan adoption. The party or parties responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to a lead entity or entities as the primary responsible party to complete.

Vision Statement

The Browns Point/Dash Point community, in keeping with its long history, envisions preserving our established residential neighborhood character and strong independent community identity. The community highly values and looks to preserve our existing marine shoreline, natural environment, scenic quality, public shoreline access, and open space. Commercial development will provide small retail and business opportunities within existing commercial areas. To improve safety and connectivity of the community, we envision streetscapes for pedestrians and bicycles. With new development and redevelopment, we want to achieve a reasonable balance between individual choice, historic preservation, and design standards. Through continual neighborhood involvement, existing public facilities and services will be improved to address the needs of the community. Through the goals and policies in the Browns Point/Dash Point Community Plan, the community creates a legacy of diverse, family-oriented, safe, and desirable places to live and work, while preserving the strength of the local environment, economy, and character.
Chapter 2: Land Use and Economic Element

Introduction

The Land Use and Economic Element of the Browns Point/Dash Point Community Plan provides policies regarding the location of preferred land uses (residential, commercial, etc.) and the density or intensity related to those uses. This element serves to refine the policies contained in the Pierce County Comprehensive Plan, specifically the Land Use Element 19A.30 and Economic Development Element 19A.50. The community plan provides more specific guidance and criteria regarding land uses than is provided in the generalized Pierce County Comprehensive Plan. In cases where this plan does not provide specific guidance, the policies in the Pierce County Comprehensive Plan shall be used to determine land use objectives and standards. The policies contained in this element provide the foundation for changes to Pierce County’s Development Regulations including the zoning maps and land use regulations.

The main issues related to economic development in the area focus on revitalizing commercial and retail businesses in the existing Browns Point Town Center. Most of the goals and policies reflect land use related efforts to achieve this. As such, what would normally be two elements in other community plans have been combined into one element.

Description of Current Conditions

The Browns Point and Dash Point communities are located in the northern portion of unincorporated Pierce County, bordered by the cities of Tacoma and Federal Way and situated on the eastern side of the entrance to Commencement Bay. The two communities are characterized by quiet residential neighborhoods and a very limited commercial area in Browns Point. The neighborhoods share breathtaking water views and are in close proximity to public beach access afforded by Browns Point Lighthouse Park and Dash Point Park. This community of roughly 2,150 residents is located entirely within the City of Tacoma’s urban service area.

Retail uses within the community are primarily limited to the Browns Point Town Center that consists of a 3.2 acre complex of retail buildings, including uses such as a grocery store, hardware store, professional offices and eating establishments. Adjacent to Dash Point Park is a small, well established restaurant located on the beach at the foot of a residential neighborhood. Less than 1.32% of the community is currently zoned for commercial retail and service use. There is very little undeveloped commercially zoned land available for new development. New commercial development would most likely entail the redevelopment of existing commercial areas.

The 2007 Pierce County Buildable Lands Report estimates that 161.62 acres of vacant land and 17.44 acres of underdeveloped and redevelopable land exist within the community.
upon information contained in the report, it is estimated that this land has the capacity to accommodate more new homes in the residentially zoned areas of the community. A majority (121 acres) of the “vacant” land code is associated with Dash Point State Park land on the south side of the park, because it is categorized through the Assessor-Treasurer’s records as residential vacant land. It should be noted that not all of this land is assumed likely to be developed.

The following information provides more detail regarding the existing land development patterns, population, and housing within the Browns Point/Dash Point Communities:

**EXISTING LAND USES**

The Pierce County Assessor-Treasurer’s Office classifies how parcels are used for purposes of calculating assessed value for taxation. The Pierce County Planning and Land Services Department routinely uses this information to determine the distribution of land uses within specific areas.

The following table summarizes the current uses of land based upon Assessor-Treasurer’s information:

<table>

</tbody>
</table>

* 121 acres (20% of total plan area) of the vacant land is within Dash Point State Park

As shown in the table, the prevailing categories of land use in the plan area are residential (55.83%) and commercial (7.37%). The dominant land use type is single-family residential
(52.22%). The physical distribution of land uses is shown on Map C-2: Historic Assessed Land Uses.

Residential uses are distributed throughout the community, with the residential lot sizes ranging from small, dense suburban lots to larger estate-type lots. Smaller lot sizes are dominant within older plats throughout the plan area. Larger lot sizes are commonly located on environmentally constrained lands such as steep slopes and areas where sewer service historically was not available as in Dash Point. Multifamily housing in the community is very limited and consists of a few scattered triplex and fourplex developments, with one large condominium complex in Browns Point’s south side.

**Current Comprehensive Plan Designations and Zoning Classifications**

The 1994 Pierce County Comprehensive Plan established two land use designations within the community plan area. The prior 1962 Comprehensive Plan had designated the Suburban Residential SR 9 in the residential areas, and Commercial C-2 at the Town Center.

The following table summarizes the land use designations and zoning classifications prior to adoption of the community plan in terms of acreage and percent of plan area.

</tbody>
</table>

**Dwelling Unit Capacity – MSF Zone**

Under pre-community plan zoning, it is estimated that a maximum total of 173.28 acres of vacant and underdeveloped land is currently available for residential use within the plan area. These lands have the capacity to accommodate approximately 589 dwelling units based upon the housing densities allowed in each zone (as a maximum density, based on the sewer and septic areas in the plan area). It is estimated that 1,572 persons could be accommodated within this housing (based on an average of 2.67 persons per household). In addition, some residential lots may accommodate an accessory dwelling unit subject to regulations. Accessory dwelling units are not included in residential capacity calculations. As previously stated, 121 acres of this total is within Dash Point State Park, and there is no expectation that the Washington State Parks Department will sell this land.

**Commercial Area Capacity**

There is one commercial center within the plan area. The Browns Point Town Center is a shopping center located in the heart of Browns Point. There is a professional center adjacent to the north held in separate ownership than the Town Center but which is integrated with the
access to the shopping center. The existing uses located at the Town Center include restaurants, convenience shopping, wholesale/retail stores, and a hardware store. The Neighborhood Center (NC) zone extends from Eastside Drive to Wa-Tau-Ga Ave. The existing uses along Wa-Tau-Ga Avenue include multifamily residential, a dentist office, and the fire station. Although Dash Point does not have a zoned commercial area, there is a restaurant located along Beach Drive.

The NC zone allows a maximum density of 25 dwelling units per acre. With multifamily residential redevelopment a possibility throughout the NC designated area, the capacity is based on the total acres, allowing a maximum of 204 dwelling units.

**Economic Conditions**

The Town Center is zoned for Neighborhood Commercial (NC) and provides for small local businesses that serve the surrounding community. There is a struggle to keep some establishments in business and turnover of commercial space in the shopping center is slow. The current businesses draw from a loyal neighborhood customer base. Dash Point State Park and the two community parks attract not only local residents to the area, but draw from outside the plan area as well. The challenge for businesses is to find the products and services that are in demand and can be supported by the limited local market.

Employment associated with these businesses is in the service and retail sectors. The majority of the plan area residents commute to Tacoma, Federal Way, and beyond for employment. The following table provides information on the size and basic land use activity in the commercial center based on the Pierce County Assessor-Treasurer’s records as of 2008. Table C-3 shows the amount of commercial development, underdeveloped land and vacant land in the NC. It should also be noted that the majority of the commercial development is within the Town Center and the professional center.

</tbody>
</table>

A survey conducted for the area contained questions related to economic indicators and commercial development in the area. The survey conveyed that most people felt that commercial uses in the area were adequate. Additionally, the survey, and those residents attending CPB meetings, indicated a mutual concern regarding the existing commercial use’s struggle to economically survive.
INCOME

From U. S. Census data, residents of Browns Point/Dash Point have a median household income of about $68,315. That income is 151.1% of the Pierce County median household income of $45,204. Table C-4 shows income distributions of households in the Browns Point/Dash Point area compared to Pierce County as a whole. The incidence and characteristics of poverty (as defined by the U. S. Census) in the plan area also differ from Pierce County as a whole.

Table C-4 shows the percentage of people with incomes below the poverty threshold in the plan area is about 1.9%, whereas the figure for Pierce County overall is 10.5%. The table also shows the Browns Point/Dash Point areas exhibit a very low incidence of poverty relative to the rest of the County.

Source: U.S. Census 2000 Block Group Data

In Table C-5, the boundaries of the census block group were very similar to county/city boundaries for the area, but it should be noted that very small portions of Browns Point and Dash Point were excluded due to having large majority of the data outside the plan area.

### Industry and Employment

As shown in Table C-6, there are approximately 30 firms operating in Browns Point/Dash Point, which employ approximately 120 people. The Neighborhood Center has the majority of these employees. The low employment numbers indicate that most people who live in the area do not work there.

WORKFORCE

Table C-7 shows that the workforce is high in the area. A majority of residents of the plan area are employed in professional and related occupations and sales and offices occupations (See Table C-8). Service occupations appear to be less than half of the Pierce County average.

Source: U.S. Census

Finally, Table C-9 shows that about 45.4% of residents commute 30 minutes or more to work. The workforce commutes to Tacoma, Federal Way, and beyond. Both of these neighborhoods are approximately 20 minutes from downtown Tacoma and Federal Way, which corresponds to the higher numbers in the 15-30 minute commute range. About 5.8% work at home, which is larger than the Pierce County rate of 3.6%. Combined with the survey results, most people accept commuting as part of living in Browns Point/Dash Point.

**Description of Desired Conditions**

People are generally content with the Browns Point/Dash Point neighborhoods. There were some key issues that the community identified for future planning, but generally the attitude of the community has been summarized as “if it ain’t broken, don’t fix it.” One of the most significant issues addressed within the community plan is land use. How land is utilized within a community directly affects the community’s character and quality of life perceived by its residents. The land uses within the plan area should reflect an urban residential character while providing limited opportunities for local employment, services and small business. The community identified the struggling Town Center as an area to target for redevelopment as a commercial or mixed use development. Residential and commercial design was identified as a concern to preserve the views of the Puget Sound and surrounding vistas. This was strongly supported within the survey results for both residential and commercial areas. Furthermore multifamily, outside of mixed use developments, was discouraged.

Overall the Community Planning Board (CPB) was satisfied with the amount of existing commercial area and with the existing limitations of nonconforming uses. The existing commercial center is clearly accepted by the community as its commercial focal point.
**Proposed Land Use Designations and Zoning Classifications**

Both the Browns Point and Dash Point neighborhoods are considered to be suburban in nature, and it is both communities’ desire to maintain a density that will preserve the neighborhood character. As such, the community proposes changing the Moderate Density Single-Family (MSF) zone to the Single-Family (SF) zone. The change to SF, as implemented in other community plans, has been to limit the maximum density to four dwelling units per acre, and make the single-family residence the primary residential use in the area. This is proposed throughout the community plan area. This does not change the base density, and meets the requirements of the Growth Management Act and Pierce County Countywide Planning Policies regarding urban density.

The Neighborhood Center (NC) zone boundary is proposed to remain unchanged. Discussions related to the commercial area along Eastside Drive, and particularly the existing commercial center, focused on its revitalization potential. The CPB recommended limited changes to the use tables that will allow for increased commercial uses and a slight increase in the allowed square footage of commercial structure. There is also a strong desire to have a mixed use of commercial and residential, in the event residential development is proposed for the site. The CPB stressed the importance of neighborhood scale in the event of any redevelopment. One way this is achieved is through a flexible height limitation where the road grade elevation of Eastside Drive is the determining factor for building height and design. Policy direction for building scale can be found in both this element and the Community Character and Design Element. Table C-10 summarizes the proposed land use designations and zoning classifications in terms of acreage and percent of plan area.

<table>
<thead>

<td>615.35</td>
<td><strong>100%</strong></td>
</tr>
</tbody>
</table>

The Pierce County Comprehensive Plan utilizes the Moderate Density Single-Family land use designation to implement a lower to medium density range of zone classifications in the urban area. Three zone classifications are considered when implementing the MSF designation. They are as follows:

- Residential Resource (RR) 1-3 du/acre
- Single Family (SF) 4 du/acre
- Medium Density Single Family (MSF) 5-6 du/acre

The Community Planning Board recommends changing the entire Moderate Density Single Family (MSF) zoned portions of the plan area to the Single Family (SF) zone. The effect of this change will involve infill development and slightly larger parcels when applications for land divisions are considered. This zone classification is typically used to implement infill development.
development within established single-family neighborhoods and emphasizes the single-family residence as opposed to other types of residential uses. The minimum size lot that could be split under the SF zone would be .38 acres as opposed to .25 acres in the MSF when sanitary sewer is present. Many parcels in both neighborhoods fall in to the range of .25 to .5 acres in size. The MSF zone allows for two-family dwellings (duplexes), while two-family dwellings would not be permitted in the SF zone. Infill development will be limited to single-family dwellings and accessory dwelling units.

A GIS review was done to determine the effect the SF zone might have on development. Based on the number of affected lots, it would be likely that many parcels that have the size necessary for adding dwelling units, would not do so based on the size of existing structures, or lot configuration. In a small plan area like Browns Point/Dash Point, it is possible to reasonably speculate the likelihood of infill using an aerial photograph.

In the community plan area:

- Of the 846 MSF parcels, 211 parcels fall into the size range of .25 acres or greater, but less than .38 acres. These parcels, which could be split in the MSF zone, would no longer be able to split if zoned SF.
- When parcels with mapped critical areas (mostly steep slopes) were taken out of this number, 94 parcels remained, or 11% of the plan area.
- When reviewing these parcels overlaid on the aerial photo, it appears that very few (up to 12 -14 parcels) of these lots actually appear underutilized (small house on a large lot,
open side yard or rear yard for access, 3 vacant lots included), 1.5% of the existing MSF parcels.

- Larger lots can still be split in the SF zone but at a lower density than in the MSF zone. The change to SF should reduce impacts to critical areas as there is some correspondence to lots with available space and mapped critical areas.

Some parcels could utilize the Accessory Dwelling Unit provisions to construct dwelling units in the plan area. The existing variability falls into what would be expected of the MSF zone as implemented at 5-6 dwelling units per acre. The Community Planning Board determined the SF zone at four dwelling units per acre to be more compatible with existing development patterns. As sewer service is not available in Dash Point at this time, there is effectively no change in that community. Although Browns Point could yield additional lots, it is unlikely due to the presence of the smaller lots that are not typically utilized for infill development.

The change in SF zoning also affects the types of residential uses expected, disallowing multifamily uses of any type. Senior housing, group homes, and nursing homes can still be permitted through the use permit process. This makes infill even more difficult and limited to single family residential use types.

**BROWNS POINT TOWN CENTER**

The Community Planning Board expressed concern that the existing commercial center is struggling to survive. As such, policies in the plan emphasize revitalization. During the planning process the ownership at the 3.2-acre Browns Point Town Center changed and the new ownership group began attending meetings. There was discussion and presentation of conceptual drawings of a mixed use development for the site. The residential component of the proposal could include multifamily residential at the current zoning code densities. No density change is proposed. Existing zoning code requirements for achieving maximum density in the NC zone are also in place, requiring a community open space component of a new residential project.

Hopefully, dialogue between the community and the ownership group will continue. The community participation in the discussion regarding the Town Center was high. Areas of agreement seem to center around the desire to have a commercial component of new development, and attraction of customers from an area broader than the two neighborhoods by attracting one or two anchor tenants. Concerns regarding the high density multifamily residential component of the project were expressed. The community identified uses and design concepts for future development. The design aspect is discussed further in the
Community Character and Design Element, while policies regarding uses are included in this element.

Discussions also involved commercial uses that need to be allowed or modified so they could be allowed in the NC zone. There is clear policy direction to make the Town Center structures conform to the NC zone by allowing a larger commercial center of up to 80,000 square feet. Use levels for specific commercial use types within the center still apply and are in keeping with the character of the area.

**Building Height for the Single-Family Zone Designation**

The Community Planning Board and survey responses indicated that view blockage from new construction was problematic in the existing neighborhood. The discussions hinged on property rights and the rights of neighboring properties. In reviewing existing height limits for the MSF zone there was then discussion about whether to change the existing 35-foot limitation. Other jurisdictions rules were reviewed as well. The City of Tacoma view protection overlay was looked at in depth. Through consensus, it was determined to work with the existing 35-foot height limit in the MSF zone and adjust zoning code definitions to address what was perceived as ways to abuse this limit. As such, new policies and definitions were developed and will be more extensively discussed in the Community Character and Design Element.

**Historic Preservation**

The CPB wished to identify and encourage retention of historic structures through recognition and Countywide incentives, in order to promote preservation of public and private areas of significance. Other areas of importance under historic preservation was the use of historic street names in the plan area, support for historical societies and improvement clubs, and education and outreach from historic preservation boards.

**Land Use Policies**

**Goals**

The health, safety, strong sense of community, and high quality of life in the Browns Point/Dash Point area will be achieved by the preservation and enhancement of existing residential neighborhoods and commercial uses. Land use and zoning designations in the area shall remain similar to those determined in the Comprehensive Plan for Pierce County. Single-family residences are the predominant land use type in the area and future development should be compatible with existing patterns of development.
**GENERAL**

**GOAL BDP LU-1**  The historically medium density character of this residential area should be preserved and, where possible, restored.

**BDP LU-1.1**  Future residential development should allow a variety of well-designed housing types and complementary land uses.

**BDP LU-1.2**  Future commercial development shall be at neighborhood scale.

**RESIDENTIAL**

**GOAL BDP LU-2**  A community that is characterized by stable neighborhoods, pedestrian accessibility, ample green spaces, and environmental stewardship is desired.

**BDP LU-2.1**  Protect residential areas from the impacts of non-residential uses of a scale or intensity not appropriate for the neighborhood.

**BDP LU-2.2**  Living areas should be buffered, or otherwise mitigated from traffic, noise, and incompatible uses.

**BDP LU-2.3**  Single-family residential uses shall be allowed outright at a maximum density of 4 dwelling units per acre.

**BDP LU-2.4**  Two-family development (duplexes) and multifamily dwelling units are discouraged in established single-family residential neighborhoods.

**BDP LU-2.5**  Multifamily residential shall be allowed in the Neighborhood Center (NC) land use designation at existing Comprehensive Plan densities.

**BDP LU-2.5.1**  Multifamily units on parcels one acre or larger shall be permitted in the NC zone when incorporated into a mixed use commercial development and consistent with the impervious cover, open space, health and sanitation regulations, and other applicable regulations.

**BDP LU-2.6**  The Browns Point/Dash Point community strongly agrees that residential new construction and remodeling in the Single-Family zone shall meet the height limits of the zone as measured from the existing grade to the height of the highest roof surface prior to site development or modification of the structure.

**PUBLIC AND PRIVATE FACILITIES**

**GOAL BDP LU-3**  Those services which enhance and are compatible with the living environment of residents may be integrated into residential neighborhoods.

**BDP LU-3.1**  Community and cultural services of a neighborhood (e.g., the Browns Point Improvement Club) should be encouraged.
COMMERCIAL

GOAL BDP LU-4 Provide well-designed, appropriately scaled retail and service development at limited locations in the community.

BDP LU-4.1 Changes to existing retail and service development within the plan area should be scaled to meet neighborhood and community needs, rather than regional needs.

BDP LU-4.2 Revitalize the existing retail area while requiring new development to be scaled and designed in keeping with surrounding residential uses. The Neighborhood Center land use designation shall remain the sole commercial designation in the plan area.

BDP LU-4.3 If redeveloped, strive for a well-designed, well-placed neighborhood scale commercial development within the Browns Point Town Center.

BDP LU-4.4 Retail and service uses should be oriented primarily to meeting the needs of the Browns Point-Dash Point community. The type and intensity of retail uses within the plan area should be regulated to discourage the development of big-box retailers that draw customers from a large geographic area.

BDP LU-4.5 Require all commercial developments to meet architectural and site design standards.

BDP LU-4.6 Landscaping of commercial sites should be required, particularly along public roads and within parking areas.

GOAL BDP LU-5 Control the location, scale, and range of commercial uses within the community in a manner as appropriate to accomplish the objectives of the community plan.

BDP LU-5.1 Commercial centers shall be a permitted use.

BDP LU-5.2 Allow for educational services appropriate to the Neighborhood Center land use designation.

BDP LU-5.3 The only commercially zoned area within the plan area is already established and defined by its compact size and location.

BDP LU-5.4 The existing commercial zoning should be limited from further expansion because distinct boundary established by the surrounding residential neighborhood and Eastside Drive.

BDP LU-5.5 To preserve neighborhood character and views, the height of new or modified commercial structures shall be of a similar scale to the surrounding single-family residences by using the existing grade of Eastside Drive as a common point by which building heights are measured.

IMPLEMENTING ACTIONS

The following actions need to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be
completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 1-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Land Use Advisory Commission (LUAC), Pierce County Planning and Land Services (PALS), Pierce County Economic Development (ED), Metro Parks District (Parks), Pierce County Public Works & Utilities (PWU), Tacoma-Pierce County Health Department (TPCHD), Pierce County Assessor-Treasurer, where appropriate.

**Short Term Actions (Upon plan adoption to 1 year)**

1. Amend the Pierce County Development Regulations – Zoning (Title 18A) to:
   - Establish allowed uses in the various residential zone classifications consistent with community plan policies.
   - Amend countywide regulations on Accessory Uses to reflect community plan policies.
   - Establish allowed residential densities throughout the plan area.
   - Establish structural setbacks and height limitations. (PALS)
2. Amend the Pierce County Zoning Atlas to change the Moderate Density Single-Family to the Single Family zone for the community plan area. (PALS)
3. Amend Title 18J, Development Regulations-Design Standards to adopt design standards and guidelines for commercial uses within the plan area. At a minimum, the design standards should address:
   - Mitigation of any negative impacts between commercial areas and residential neighborhoods.
   - The transition between commercial uses and residential uses.
   - Providing acceptable visual and physical transition in bulk, setbacks, landscaping, and architectural style between the existing commercial/industrial uses and any adjoining residential uses. (PALS)
4. Establish a Browns Point/Dash Point Land Use Advisory Commission. (PALS)

**Mid-Term Actions (1-5 years)**

1. Facilitate communication, education, and fund opportunities for historic preservation activities, including the Landmarks and Historic Preservation Commission. (LUAC, PALS)
2. Work with the Browns Point Town Center owners to use tax incentives to facilitate development of sidewalks, streetscape improvements, infrastructure, and other amenities in the commercial area. (PALS, PWU, ED)

**Long-Term Actions (5-10 years)**

1. Pursue opportunities for incentive programs that will stimulate revitalization and redevelopment projects that improve community aesthetics and services. (PALS)
2. Work with the local businesses to:
   - Help develop common promotion (advertising, joint merchandising, and special events) and business development (leasing, business recruitment, and market research) within selected commercial target areas.
   - Provide Small Business Administration (SBA) information to local businesses regarding the availability of funding for improvements, expansions, relocations, etc.
   - Develop the framework for a business improvement program including but not limited to structuring local marketing efforts, physical improvements programs, parking and building improvements, special management organizations, or other programs necessary for effective revitalization of the area.
   - Complete a monitoring report to evaluate the effectiveness of regulations and incentives. (PALS)
Map C-1: Land Use Designations

Browns Point – Dash Point Community Plan
Chapter 3: Community Character and Design Element

INTRODUCTION

The Community Character and Design Element describes the physical environment that comprises the character of a community: the streets, parks, buildings, neighborhoods, and open space that determine the way our community looks and feels. It is a blending of land use planning, architecture, landscaping, and environmental protection. This element addresses the way buildings, streets, public places, signs, natural features, and other development relate to one another and the people who use them. Improvements such as street construction, park development, commercial, residential, and civic development can be effectively coordinated to promote a unified community image. The community character policies are intended to reinforce aesthetic characteristics that the community wants to retain and build upon.

The residents of the Browns Point/Dash Point area are interested in preserving the suburban residential character of their community. Historic development has created two distinct neighborhoods with similar land use issues and local features. Residents have determined that high priority should be given to preserving the existing character of the area. The Community Character and Design Element emphasizes the community's vision of maintaining the existing qualities of the community while allowing for improvements to services and commercial uses in the area by setting forth goals and objectives.

Exemplary design invites human presence, allowing for interaction of people and recognizes the functional and visual links between developments. Conversely, poorly designed developments tend to hinder the proliferation of desired land use, and stifle pedestrian use which often leads to future blight.

DESCRIPTION OF CURRENT CONDITIONS

The Browns Point and Dash Point communities are characterized by quiet residential neighborhoods and a very limited commercial area in Browns Point. The neighborhoods share expansive Puget Sound views and are in close proximity to public beach access afforded by Browns Point Lighthouse Park and Dash Point Park. This community of roughly 2,150 residents is located entirely within the City of Tacoma’s urban service area.

Retail uses within the community are primarily limited to the Browns Point Town Center that consists of a 3.2-acre complex of retail buildings, including uses such as a grocery store, hardware store, professional offices and eating establishments. Adjacent to Dash Point Park is
a small, well established restaurant located on the beach at the foot of a residential neighborhood. Less than 1.32% of the community is currently zoned for commercial retail and service use. There is very little undeveloped commercially zoned land available for new development. New commercial development would most likely entail the redevelopment of existing commercial areas.

**RESIDENTIAL AREAS**

Both Browns Point and Dash Point have existing residential areas that are mostly developed. The sloping topography has lent itself to established neighborhoods with astounding marine and mountain views. The neighborhoods are a product of turn of the century platting patterns consisting of small narrow lots between 25’ to 30’in width. In most cases two or three of these smaller lots have been combined to accommodate single-family homes. More recent residential development has occurred at higher elevations and consists of larger size lots and larger homes.

Both communities have raised concerns regarding the height of new residential structures. The existing Moderate Density Single-Family (MSF) zone allows a 35-foot-high house. The zoning code definitions of building height and existing grade currently allow for averaging and extending this height. Views are highly prized throughout the area and new construction is often designed to maximize views from a particular property. This trend has profoundly affected views from existing home sites.

**NEIGHBORHOOD COMMERCIAL CENTER**

The Browns Point Town Center is located in the heart of Browns Point. There is a professional center adjacent to the north that is integrated with a common access to the Town Center. Uses within the Town Center include restaurants, convenience shopping, wholesale/retail stores, and a hardware store. The entire retail area is zoned Neighborhood Center (NC). Also within the NC zone are existing uses along Wa-Tau-Ga Avenue that include multifamily residential, a dental office, and fire station. Although Dash Point does not have a zoned commercial area, there is a restaurant located along Beach Drive.

**SIGNS**

Signs throughout the Browns Point and Dash Point area lack a consistent style or order. An exception to this is the Town Center where management has implemented a signage plan that requires tenants to include an art component in all proposed signage. The Pierce County sign code, Title 18B, also limits the size and amount of information allowed on signs throughout the area. There are also a few reader board signs in the community, which convey upcoming events and, on occasion, an editorial opinion. The existing Browns Point Neighborhood sign is a clear indicator of one’s arrival to the Browns Point neighborhood.
**HISTORIC AND CULTURAL RESOURCES**

There is a strong tradition of community activities and citizen involvement in the community. Both Browns Point and Dash Point have active improvement and social clubs that serve as “go to” place for community events and information. The Salmon Bake, for instance, is well known outside the community as a summer event at Browns Point Improvement Club next to Lighthouse Park.

Historically, home sites were located at places that provided easy access to the shoreline. Originally developed with beach cabins, most have since been converted to full-time residences. The Browns Point Lighthouse Park and Dash Point pier provide important cultural and historical resources that are still utilized today. Such is the case with the Browns Point lighthouse cottage that serves as a travel destination for the temporary “lighthouse keepers” program or Dash Point’s pier, a popular spot for fishing and beach access.

The preservation and enhancement of special places that relate to a community’s heritage can bring economic benefit to the community by stimulating investment and increasing community awareness and involvement in its history. This can occur through the restoration of an old residence, reuse of a historic schoolhouse or wharf, rehabilitation of an old store or restaurant, and retaining its commercial use through compatible commercial additions. Additionally, the incorporation of historic resources and landmarks into recreational facilities such as trails or scenic bike routes can help achieve this goal.

There are many federal, state, and local laws and programs that apply to historic and cultural resource preservation. Locally, the Pierce County Cultural Resource Inventory provides an indication of those properties or structures that may hold historical or cultural significance. As described in the introduction to the plan, there is a long history in both neighborhoods, with a cast of interesting characters. The Cultural Resource Inventory does not currently list some of the most important historic structures in the area. These resources include residences, the lighthouse and associated buildings, and the pier at Dash Point, among other places. Additional sites may be added to this list in the future based on additional research.

**DESCRIPTION OF DESIRED CONDITIONS**

Policies contained in the Community Character and Design Element should promote a quality visual environment consistent with the community’s heritage and future vision. New development should embrace site design and architectural standards consistent with the policies contained herein.
**Residential Areas**

The residential areas of Browns Point and Dash Point, as mostly developed communities, will experience limited infill development. There are a few larger parcels that may result in a subdivision, so design goals have been developed to consider the look of new residential construction. Front yard setbacks for residential uses should be flexible so long as porches and the main structure are emphasized, rather than the garage. Preservation of trees, neighborhood streetscapes, and clustering of homes is desirable and should be cornerstones of new residential developments. The height of residential structures is a concern as well. As such, the community is in favor of redefining how the height of a structure is measured and that it considers existing grade and the maximum peak of the roof-line.

**Building Height - Single Family Zone**

The Community Planning Board and survey responses indicated that view blockage from new construction was becoming a problem in the neighborhood. The discussions hinged on property rights and the rights of neighboring properties. In reviewing existing height limitations, there was discussion about whether to change the existing 35-foot limitation. Other jurisdictions rules were reviewed as well. The City of Tacoma view protection overlay was looked at in depth. Through consensus, it was determined to work with the existing 35-foot height limit in the SF zone and adjust zoning code definitions to address what was perceived as ways to abuse this limit. As such, new policies and terms were developed.

The policy direction the CPB decided on was as follows:

Residential new construction and remodeling in the SF zone shall meet the height limits of the zone as measured from the existing grade to the height of the highest roof surface prior to site development or modification of the structure.

The following terms for the zoning code were as follows:

- New term of “existing grade”: The gradeplane elevations prior to site development or modification where the new construction is proposed on the lot. (The International Building Code definition of gradeplane applies.)

- A new footnote for the Browns Point/Dash Point density and dimensions tables: “The vertical distance from grade plane to the height of the highest roof surface, i.e., the top of the pitch on a pitched roof.”

Current zoning code definitions for building height allow for measuring the midpoint between the pitch and eaves as the top of the structure. The finished base elevations of the structure
are averaged to determine the average elevation at the base of the structure. With the new existing grade definition, a survey may be required to determine the base elevation prior to any construction at the site. This will minimize the number of projects using large amounts of fill dirt to raise the base elevation of structures to take advantage of views at the neighbor’s expense. Pierce County Title 18A, Zoning affords a variance process for builders who can demonstrate the new policy creates a hardship in their situation.

**COMMERCIAL CENTER**

In September 2007, the CPB held a community discussion with the latest Town Center owners and discussed their plans for potential redevelopment. The ownership group listened to community concerns relating to design standards and undesirable types of developments. The discussion was lead by Gabbert Architects, an architectural design firm, and the representative from the ownership group. Conceptual design drawings and images of traditional commercial and multifamily mixed use design projects were presented. The meeting was well attended with various perspectives represented.

The design program emphasized a mixed use approach with residential multifamily above a commercial area. While the ownership group clearly understood that a successful project cannot alienate the local customers, they urged the CPB that any design restrictions imposed under the new community plan allow for flexibility. The design concepts presented were varied, with a more traditional streetscape retail character, with street trees, architectural details, and interesting building character being the most popular options. The design standards and guidelines reflect these interests and guidelines allow for design flexibility with public hearings to allow for public comment.

A design change that creates a destination shopping experience, in keeping with the neighborhood, would help with the economic challenges the Town Center currently faces. As a result, the proposed design standards emphasize a mixed use approach, but do not require a residential component. As discussed in the Land Use Element, larger sites in the NC zone are required to have a commercial component if new residential development is proposed. A large portion of discussion involved building height limitations and the NC zone. This is discussed further below.

Other design elements encouraged for the NC zone include lower level parking, a plaza area, and a design scale in keeping with the surrounding residential areas. The following goals and policies allow for design flexibility in while creating a visually attractive mixed use development at a neighborhood scale.

**NEIGHBORHOOD CENTER BUILDING HEIGHTS**

It is important that future development at the Town Center remains at a neighborhood scale, thus a flexible height limitation was proposed. To achieve this, the elevation of Eastside Drive is to be the determining factor for building height. This will require any new development abutting Eastside Drive to match in scale the height of residential uses across the roadway, but
allow for increased heights as the property slopes to the west. All properties within the NC will consider neighboring residential heights if redeveloped.

**SIGNS**

New signs should be integrated with architectural facades and shall be designed and placed in a manner to enhance the scenic atmosphere of the Browns Point/Dash Point area. Design flexibility is encouraged, with an artistic component emphasized. The Town Center would have flexibility in sign design through a master sign plan. Nonconforming signs are also addressed through incentives for new code compliance, and certain types of signs are discouraged as out of character with the communities.

**SUSTAINABILITY**

Sustainability has been defined as “sustainable development” which is a development that “meets the needs of the present without compromising the ability of future generations to meet their own needs.” Essentially the definition describes planning that will allow for maintaining a certain level of development, including economic and design improvements that consider the ecological conditions created by the design choices. The CPB discussed the need to emphasize certain areas of sustainability as it may relate to the local level. They concluded that the use of green building techniques, housing affordability, and encouragement of countywide sustainability and climate change actions were areas that could be managed at a local level.

**CULTURAL RESOURCES POLICIES**

**HISTORIC PRESERVATION**

**GOAL BDP CR-1** Encourage the use of historic street names in the plan area. Discourage numbered street names.

**GOAL BDP CR-2** Encourage support for local historical societies and improvement clubs and their interests toward the community at large in the area of historical significance.

**DESIGN AND CHARACTER POLICIES**

**GOALS**

The Browns Point/Dash Point community character should be reflected in designs and construction that are visually attractive, consistent with community identity, compatible with the atmosphere and residential character of the community, and respectful of the natural environment.
COMMERCIAL USE

GOAL BDP D-1 Ensure a high quality visual environment and encourage high quality site planning, landscaping, and architectural design in all public and private development.

BDP D-1.1 Provide adequate lighting in all pedestrian areas.

BDP D-1.1.1 Lighting should be neighborhood friendly at low heights and low intensity to minimize impacts on adjacent properties.

BDP D-1.2 Develop streetscape plans addressing streets, crosswalks, sidewalks, signage, landscaping, street furniture, utilities, public spaces, etc.

BDP D-1.3 Use well-designed fencing and landscaping to conceal outside storage and sales areas, excluding outdoor storefront display areas.

BDP D-1.4 Ensure that development on sites with more than one structure employs complementary architectural styles and/or are related in scale, form, color, and use of materials and/or detailing.

BDP D-1.5 Street-facing building facades shall be articulated and ornamented through a variety of measures including window and entrance treatments, overhangs and projections, and innovative use of standard building materials to increase visual interest.

BDP D-1.5.1 Street-facing building facades shall be modulated through a variety of measures including varied roof forms and setbacks to visually break up the appearance of large buildings.

BDP D-1.5.2 Provide pedestrian-friendly facades on the ground floor of all buildings that face public streets and entry facades that face parking areas.

BDP D-1.6 Discourage large blank walls that are visible from pedestrian walkways, parking areas, and streets.

BDP D-1.7 Locate and/or screen roof-mounted mechanical equipment to minimize visibility from public streets, building approaches, and adjacent properties.

BDP D-1.8 Enhance building entries with a combination of weather protection, landscaping, pedestrian amenities, or distinctive architectural features.

BDP D-1.9 Provide architectural elements, detailing, and pedestrian oriented features to create distinctive building corners at street intersections.

BDP D-1.10 Select plant materials that are appropriate to their location in terms of hardiness, maintenance needs, and growth characteristics.

GOAL BDP D-2 In keeping with the scale and height of residential uses along Eastside Drive (SR 509), allow for increased height of commercial structures only when utilizing the downward slope in the Neighborhood Commercial (NC) area.
BDP D-2.1 In the NC zone, no building height shall exceed 35 feet above the existing grade or elevation of Eastside Drive (SR 509).

BDP D-2.1.1 As the grade of Eastside Drive changes, the 35-foot height will be measured from that portion of the road grade that is perpendicular to the new construction to ensure a gradual and subtle transition in building height commensurate to the existing road grade (exceptions include street lighting or power poles).

BDP D-2.2 No structure shall exceed 40 feet in height at the required setback line; however, heights may be increased by one additional foot for each additional foot of setback from the property line from the portion of the building with increased height.

BDP D-2.2.1 Under no circumstance can a structure exceed 60 feet in height.

**Residential Uses**

**GOAL BDP D-3** Promote the development of well-designed urban residential areas that are mindful of the character of the environment envisioned by this community plan.

BDP D-3.1 Provide incentives for innovative site designs and clustering of single-family residential uses and mixed use multifamily.

BDP D-3.2 Promote the visual quality of neighborhood streetscapes so that they become a valued element of the character of the community and enhance neighborhood quality.

BDP D-3.3 Encourage use of narrow street profiles within residential neighborhoods.

BDP D-3.4 Provide opportunity for porches and decks within front yard setbacks.

BDP D-3.4.1 The front yard setback shall not be less than 20 feet.

BDP D-3.5 Preservation of open space and natural character is a priority.

BDP D-3.6 Where significant distant views occur, encourage recognition and incorporation of views into project design.

BDP D-3.6.1 Minimize obstruction of views of nearby properties through appropriate building placement, landscape design, height, and setbacks.

**GOAL BDP D-4** In the Neighborhood Center land use classification, develop design guidelines for two-family (duplex), attached single-family, and multifamily residential developments dealing with architectural design and scale of buildings.

BDP D-4.1 Avoid locating parking areas for multifamily developments between the buildings and the street.

BDP D-4.2 Provide for separate automobile, pedestrian, and bicycle access in new areas.

BDP D-4.3 Pedestrians and bicycle traffic shall have direct access to public destinations without having to traverse parking areas, thus avoiding the conflicts and hazards involved with moving vehicles.
GOAL BDP D-5
Residential building heights for new construction and remodeling should be limited to maintain the existing residential character of the area.

BDP D-5.1
Residential new construction and remodeling in the Single-Family zone shall not exceed 35 feet as measured from the existing grade to the height of the highest roof surface prior to site development or modification of the structure.

SIGN DESIGN

GOAL BDP D-6
Ensure that signage complements rather than dominates the character and visual amenity of an area, the buildings on which they are displayed, and the general environment.

BDP D-6.1
Prohibit the use of flashing or rotating signs, roof signs, railing signs, inflatable signs, and signs attached to private light standards.

BDP D-6.2
Prohibit the use of lights and surfaces that result in glare onto adjacent properties.

BDP D-6.3
Limit the use of pole signs.

BDP D-6.4
Allow monument and wall signs.

BDP D-6.5
Prepare standards that limit overall signage to a proportion of the length of the building facade.

BDP D-6.6
Allow canvas canopy signs and canopy signs that are backlit when incorporated into a master sign plan for the Town Center commercial complex.

BDP D-6.7
Allow a video or electronic sign only in conjunction with a master sign plan for the Town Center complex or in conjunction with limited civic uses such as a community message board, school, or fire department.

BDP D-6.7.1
Video or electronic signs shall not continually stream, scroll, or pulse a message or image.

BDP D-6.7.2
A message or image may change at intervals of no less than every 60 seconds.

GOAL BDP D-7
For the Town Center, deviations to commercial sign design standards and guidelines, including use of prohibited signs, may be considered through approval of a master sign plan that considers site specific conditions.

BDP D-7.1
Minimize the use of off-premise signs.

BDP D-7.2
Restrict the use of off-premise signs to temporary locations such as the directional signage used to identify real estate open houses, sales, and community events.

BDP D-7.3
Prohibit billboards.

BDP D-7.4
Enable individuals, businesses, and community groups to promote temporary activities to the wider community through the adoption of rules governing the use, size, and allowed duration of temporary signs.
BDP D-7.5  Banners should be of a style, size, and color that complement the surrounding environment and standard on which they are affixed.

BDP D-7.6  Commercial center banners must be primarily promoting the commercial center where they are displayed.

BDP D-7.6.1 Specific advertising of businesses or merchandise shall be allowed on a temporary basis.

BDP D-7.7  Signs that are placed within a permanent structure, such as on private light standards or within a window front, shall be calculated toward total allowed signage.

BDP D-7.8  Ensure that temporary signs are promptly removed after the culmination of the event described or symbolized on the sign.

BDP D-7.9  Signage shall contain a 50% art component.

BDP D-7.9.1 To be considered as the art component, the 50% portion shall not be purely functional and must have an aesthetic component.

### SUSTAINABILITY INITIATIVES

**GOAL BDP D-8**  Consider incentives and education for sustainably designed construction and development.

BDP D-8.1  Avoid wasting resources through unnecessary and unproductive documentation and certifications which do not provide any direct benefit.

BDP D-8.2  Provide green building information and inform the public of options available for certification.

BDP D-8.3  Encourage healthy places for people. Examples to consider:

BDP D-8.3.1 Use low-volatizing materials;

BDP D-8.3.2 Use full-spectrum lighting;

BDP D-8.3.3 Avoid high and low pressure sodium lighting;

BDP D-8.3.4 Provide ceilings with high sound-absorbing surfaces; and

BDP D-8.3.5 Use pads under carpeting to minimize injury on falls.

BDP D-8.4  Encourage public participation in determining sustainable choices that best protect the environment.

BDP D-8.5  Encourage programs that allow for environmental choices on an individual or local level. Examples to consider:

BDP D-8.5.1 Provide electric hookups for neighborhood electric vehicles;

BDP D-8.5.2 Provide bicycle racks that are spacious and easy to use;

BDP D-8.5.3 Provide recycling points with easy access and clear instructions;
BDP D-8.5.4 Provide opportunities such as bulletin boards for the community to post free or second-hand items to be re-used;

BDP D-8.5.5 Provide preference parking for high efficiency vehicles; and

BDP D-8.5.6 Use systems and techniques which are readily apparent to the public and that thereby provide education and familiarization.

BDP D-8.6 Utilize renewable energy, such as Tacoma Power’s Evergreen Options for residential and commercial development.

**IMPLEMENTING ACTIONS**

The following actions need to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 1-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Land Use Advisory Commission (LUAC), Pierce County Planning and Land Services (PALS), Pierce County Economic Development (ED), Metro Parks District (Parks), Pierce County Public Works & Utilities (PWU), Tacoma-Pierce County Health Department (TPCHD), Pierce County Assessor, and Pierce Conservation District (PCD)

**SHORT TERM ACTIONS (UPON PLAN ADOPTION TO 1 YEAR)**

1. Amend Title 18A, Zoning to amend building height standards to address commercial and residential buildings.
2. Amend Title 18J, Design Standards and Guidelines to:
   - Establish design standards and guidelines and a site plan review and approval process for all development within the NC commercial center.
   - Establish maximum impervious surface standards and minimum native vegetation retention requirements.
   - Utilize development incentives as a method for implementing design standards.
   - Implement design features that will encourage pedestrian circulation within commercial centers.
   - Integrate new development with existing developments through strategic placement of landscaping, connected parking and pedestrian pathways.
   - Encourage centralized, interconnected parking areas to locate behind or below commercial or civic uses.
   - Utilize a variety of incentives and development standards to encourage new buildings and the significant exterior remodels of existing buildings to provide a traditional urban neighborhood appearance appropriate to the Northwest. (PALS)
3. Amend Title 18B, Signs to:
   - Establish sign design standards and a sign review and approval process.
• Encourage monument signs and discourage freestanding pole signs and other signs described in the above policies.
• Encourage multi-tenant commercial developments to consolidate freestanding signs on one sign support structure.
• Authorize community entry signs at the commercial center. (PALS)
4. Provide sign design standards that would permit off-site community signs that identify civic uses, including shoreline access, bicycle routes, parks, and similar activities. (PALS)
5. Implement development incentives that encourage protection and preservation of historic landmarks and buildings. (PALS)
6. Minimize outdoor light pollution to ensure light does not impact neighboring businesses or residential homes while ensuring lighting standards provide for visibility and safety of outdoor spaces. (PALS)

**Mid-Term Actions (1-5 Years)**

1. Develop a comprehensive inventory of cultural resources including historical significant features in the plan area. (PALS)
2. Support the development of streetscape improvements within commercial center that will encourage economic development. (PALS, PWU)
3. Explore a variety of sources to fund streetscape improvements. (PALS, PWU)
Chapter 4: Natural Environment Element

INTRODUCTION

The Browns Point/Dash Point Community Plan area is best characterized as an urban area with a strong connection to its shoreline environment. Expansive views of Puget Sound throughout the area attract people to visit and live in the area. Public shoreline access through the existing waterfront parks is highly utilized and protected by the community. Water access is cherished and includes many activities including windsurfing, kite boarding, jet-skiing, and boating. Shoreline activities draw lots of people to the points, with many fishermen and barely enough room to cast a line along the shoreline when the salmon are running. There are pockets of natural areas associated with steep slopes and other critical areas. Dash Point State Park is the largest forested area in the near vicinity. The table below broadly summarizes the land cover in the area. Developed areas predominantly fall into the medium to low density residential uses.

Source: PALS Draft Shoreline Inventory and Characterization report, created from the NOAA CCAP project (2001). Data are collected into similar categories for the summary tables (e.g., high, medium, and low intensity are grouped into ‘Developed’). WRIA refers to the Department of Ecology’s Watershed Resource Inventory Areas, and Browns Point/Dash Point falls into WRIA 10.

DESCRIPTION OF CURRENT CONDITIONS

The following information has been compiled from these sources: The Shoreline Master Program for Pierce County - March 1974; The Draft Inventory and Characterization of the Pierce County Shoreline Master Program Update; Pierce County Biodiversity Network Assessment - August 2004; Hylebos Browns-Dash Point Basin Plan; Department of Ecology’s Tacoma Smelter Plume Project.

SHORELINES

The Washington State Shoreline Management Act (SMA) provides for the management of water bodies identified as “shorelines of the state.” The marine waters of Puget Sound that surround the Browns Point/Dash Point area are all regulated shorelines of the state. Areas
under jurisdiction of the SMA include the specific water bodies, all lands within 200 feet of their ordinary high water mark, and their associated wetlands and floodplains. There are no lakes, rivers or streams in the plan area that are managed under the SMA.

The Pierce County Shoreline Master Program (SMP), adopted by Pierce County under the SMA, includes five Shoreline Environments – Natural, Conservancy, Rural, Rural Residential, and Urban. All shorelines are given a Shoreline Environment designation that reflects environmental conditions and identifies the type and intensity of development allowed. The entire plan area is designated as Urban Shoreline Environment, except for Browns Point Lighthouse Park, which is designated as Conservancy Shoreline Environment.

Marine shoreline areas in the Browns Point/Dash Point area are identified as Shorelines of Statewide Significance only below the extreme low tide line. While intertidal areas and adjacent uplands within SMA jurisdiction are not Shorelines of Statewide Significance, all shoreline areas in Browns Point/Dash Point are discussed together here.

**SHORELINE CHARACTERISTICS**

The Browns Point/Dash Point nearshore is generally comprised of a mix of low-moderate bank shores with mixed sand and gravel beaches, with some higher bluff areas located just south of Dash Point and southeast of Browns Point near the southern end of the plan area. The actual points of Browns Point and Dash Point have low bank waterfront areas that allow for public access.

Dash Point and Browns Point are headlands in Puget Sound, which form the northeastern side of Commencement Bay in the City of Tacoma. These headlands lie in drainage basins where water flows from uphill areas to the marine, nearshore environment.

There are no mapped wetlands in the Browns Point/Dash Point area of the County’s marine shoreline planning area. Most of the estuarine habitat provided in the marine shoreline is un-vegetated mudflat, sandy beach or rocky shore, which are not considered wetlands by definition.

As described in the Draft Inventory and Characterization for Pierce County’s Shoreline Master Program update, “The Caledonia Creek estuary delivers fluvially-derived sediment to the nearshore, enabling broader intertidal and backshore areas to form on the adjacent shores. DNR classifies these shores as semi-protected (DNR 2001), with relatively low (on the order of 7 miles) exposure to both the north and south. Four drift cells are located within the management area. Two cells converge and form the prograding cuspate foreland at Dash Point, and another two cells converge at Browns Point. Littoral sediment from down-drift bluffs
feed and sustain these accretion shoreforms and the numerous habitats found therein.” These natural processes maintain the beaches in the area.

**SHORELINE HABITAT AND SPECIES USE**

A number of fish and wildlife species use the habitats within shorelines in Pierce County in general. Several species listed under the ESA are known to occur or could potentially occur within community plan area. Federally listed species that have been documented within the shoreline jurisdiction include bald eagle, Puget Sound Evolutionarily Significant Unit (ESU) Chinook salmon, and Coastal/Puget Sound Distinct Population Segment (DPS) bull trout.

In August of 2005, the National Oceanic and Atmospheric Administration – National Marine Fisheries Division (NOAA Fisheries) designated “critical habitat” in the larger region, protected as essential to the conservation of listed salmon ESUs. Critical habitat for Puget Sound ESU Chinook salmon includes the marine nearshore areas (NOAA Fisheries, 2005). In September of 2005, the US Fish and Wildlife Service designated “critical habitat” for the Coastal/Puget Sound Distinct bull trout which includes the marine shorelines in Pierce County (Federal Register, Vol. 69, No. 122).

The Southern Resident Population of Orca and Steller sea lion, although not documented as occurring in Commencement Bay, have the potential to occur within this area. Killer whales have been sighted periodically in Commencement Bay and Browns Point. The last reported sighting was February 2006. It is unknown if the group spotted was transient or members of the Southern Resident Population (Orca Network, 2006). Critical habitat has been proposed for killer whales, including Puget Sound marine waters deeper than 20 feet (6.1 meters) (Federal Register, 2006). No Critical habitat for steller sea lion has been designated within Puget Sound.

The entire marine shoreline area along the waterfront has been designated as a buffered connector in the 2004 Pierce County Biodiversity Network Assessment.

Some of the shellfish resources in the area include Dungeness crab, prevalent throughout Commencement Bay, and geoduck clams, documented to the north of Browns Point (WDFW Marine Resource Species). The Washington Department of Natural Resources’ Nearshore Habitat Program has been monitoring intertidal biological communities in south and central Puget Sound since 1997, and has sampled three sites near Browns Point as part of its overall effort (WDNR, 2002). Shellfish discovered include macoma clams (littleneck clams), butter clams, gaper clams, soft shell clams, rock oysters, blue mussels, black-clawed crab, green shore crab, hermit crab, chiton, and numerous gastropods.

**SHORELINE MODIFICATIONS**

Shoreline modifications associated with residential and parkland uses are prevalent in the Browns Point/Dash Point shoreline area. Browns Point Lighthouse park is bulkheaded at the base of the lighthouse. Dash Point Dock park has a concrete bulkhead. The majority of residences have concrete or rock bulkheads along the shoreline side of their properties. Many of the residential parcels have developed the area immediately landward of their respective bulkheads with accessory structures. Browns Point and Dash Point have areas that were
developed well prior to the SMA and have homes located very close to the ordinary high water mark (OHWM) of Puget Sound.

The current Shoreline Environment designation of most of the shoreline is the Urban Shoreline Environment, reflecting the high level of shoreline modification and the moderately dense single-family development pattern. The Browns Point/Dash Point area is predominantly in the Moderate Density Single Family land use designation and zone classification. The predominant use allowed in the MSF designation and zone is single-family residential development at a density of 4-6 dwelling units per acre and is consistent with development allowed in the Shoreline Urban Environment. The Browns Point Lighthouse Park is designated as a Shoreline Conservancy Environment. The passive recreational uses at the park are consistent with the intended character of the Shoreline Conservancy Environment.

**Shoreline Access**

There are two parks that provide public access to the shoreline: Browns Point Lighthouse Park and Dash Point Dock. The portion of Dash Point State Park that has waterfront access is in King County. Existing amenities at Browns Point Lighthouse Park, owned and operated by the Metro Parks District, include picnic areas. Dash Point Dock is also owned and operated by Metro Parks, and includes picnic areas and restroom facilities. Both parks provide beach access. Seasonal activity, including gathering of shellfish and use of a seasonal camp, by the Puyallup Tribe could have occurred in the area, and as such there is some potential for the presence of cultural resources. Browns Point Lighthouse, Keepers Cottage, Boat house, Pump house, and Oil house were placed on the National Registry of Historic Places. The street rights-of-way for Wan-I-Da Ave NE in Browns Point and Water St. NE in Dash Point provide access to the shoreline area.

The Browns-Dash Point Basin flows directly into Puget Sound, and covers 15 square miles (9,589 acres), which straddles the Pierce/King County boundary. Because of incorporations by the cities of Tacoma, Fife and Edgewood, there are only 758 acres (7.9 percent of the basin area) in unincorporated Pierce County. The Hylebos Browns-Dash Point Basin Plan conducted in 2005-2006 combined the watersheds and referred to them as the Browns-Dash Point Basin.

The Browns-Dash Point Basin is located upon a peninsula-like feature northeast of the City of Tacoma, which slopes gently to the west to Puget Sound, and more steeply toward the southwest to Commencement Bay. It is comprised of several smaller drainages, which mostly begin near the top of the bluffs and drain to ravines which discharge directly into Puget Sound. The Basin Plan identified 28 stormwater outfalls in the area discharging directly to Puget Sound. There are some headwaters in the northern part of the area that flow through Dash Point State Park in King County. In addition, a significant amount of flow enters from upstream tributary areas that are within the City of Tacoma.

As described in the Basin Plan, land use in the Browns-Dash Point Basin has long been residential and development did not occur in a comprehensive manner, but rather on a lot-by-lot basis. Most of the drainage infrastructure consists of open roadside ditches and pieced together pipe systems that were designed to meet the needs of these individual projects. As such, the lower portions of the stormwater system tend to be undersized and may be overwhelmed by the stormwater flows that have been created over the years. Development has encroached upon many of the stormwater facilities and easements in the Browns-Dash Point Basin to the point of creating obstacles for maintenance activities.

**STREAM HABITAT**

In 1981, the state established an instream flow protection plan for Water Resource Inventory Area 10 (WRIA 10) under administrative rule WAC 173-515. The plan area is wholly contained within WRIA 10. The Hylebos Browns-Dash Point Basin plan classified the streams within the basin area using existing data, which provides a logical basis for management measures such as stream buffers or restoration efforts. This information is useful in determining whether the stream is capable of providing fish habitat. The Basin Plan used the Washington State Department of Fish and Wildlife (WDFW) Salmonscape website to describe flow regime, channel types, and salmon presence. In the Dash Point State Park lower reach, Coho salmon presence was documented, and this reach is also the only perennial stream in the area. The other streams in the plan area are intermittent and have no record of salmon presence.

Habitat suitability for salmonid species was also investigated in the Basin Plan, using the Urban Stream Baseline Evaluation Method (USBEM) Habitat Suitability, to identify whether potential...
stream reaches provide highly suitable, secondary, or negligible fish habitat. Several reaches were characterized as providing secondary habitat suitability for Coho, Chinook, steelhead, sea run cutthroat, and bull trout. The remaining stream reaches had negligible suitability for habitat due to steep channel gradients and lack of adequate base flows.

**WATER QUALITY CHARACTERISTICS**

Outer Commencement Bay is on the Washington State Department of Ecology (WDOE) 303(d) List for fecal coliform, and establishment of a “Total Maximum Daily Load” (TMDL) has been recommended. A location off the south side of Browns Point was where samples were collected that resulted in the 303(d) listing (WDOE 2004). Also, in 1983, the U.S. Environmental Protection Agency (EPA) declared Commencement Bay nearshore tide flats a “Superfund” clean-up site. Little additional information is available regarding water quality in the plan area. Shellfish harvesting is not advised along shorelines from Commencement Bay to Everett (Washington State Department of Health 2006 Inventory of Recreational and Commercial Shellfish Areas).

**WETLANDS AND FLOODPLAINS**

The Pierce County Wetland Inventory (CWI) indicates there are two Category III wetlands in the plan area. Only the one located in Dash Point is partially verified. Wetlands are classified into categories which are reflective of each wetland’s function and value and unique characteristics. Pierce County Title 18E Critical Area Regulations defines Category III wetlands as those regulated wetlands that have a moderate level of function and have important resource value, principally due to vegetative diversity. Both wetlands are upland from the shoreline area and outside shoreline jurisdiction.

To view floodplains and wetlands in the Browns Point/Dash Point area, refer to Map C-5: Wetlands and Floodplains. The floodplain boundaries are based on Pierce County floodplain mapping conducted in 2006 and currently under review. The 100-year flood hazard area, an area estimated to have a one percent chance of flooding in any given year, is limited in the plan area. Coastal flooding in the area falls into this category at the two low bank areas of the points, both Browns Point and Dash Point.

**EARTH RESOURCES**

The Browns Point/Dash Point area encompasses a mix of geologic terrains. The geologic terrains discussed are physical features of the land, such as topography and soil layering. These terrains, the result of glacial activity, influence the patterns of surface water runoff, groundwater flow and slope stability.

The numerous advance and retreat cycles of glacial ice have shaped the Puget Sound Basin by depositing and consolidating material. Along the shorelines, glacial ice carved drainages in the uplands; later, wave action resulted in steep slopes in these drainages. The glacial activity has
resulted in a mixture of layers of highly permeable outwash deposits and relatively impervious layers of till or other sediment.

Soils affect infiltration rates, the potential for erosion, and slope stability. The Basin Plan describes soils in the Browns-Dash Point Basin as predominantly of the Alderwood-Everett Association, as identified by the Soil Conservation Service. Soils of this association consist primarily of soils formed in glacial till and glacial outwash on uplands. Map C-7: Hydrologic Soil Groups, as identified by the Natural Resource Conservation Service, is useful to characterize runoff potential. Browns Point has Group C and D soils marked by low infiltration rates. Dash Point has Group A and B soils that generally have higher infiltration rates. Among the soils of the Alderwood-Everett Association, which occupy portions of the area, are the Alderwood, Kapowsin, Indianola, Everett, and Kitsap series.

Some of the moderately erodible soils have a water table that perches seasonally on the slowly permeable, silty clay loam subsoil. Outwash/till layering commonly results in springs or groundwater seeps. Springs or seeps occur when rainfall infiltrates in the more pervious outwash soils, collects on top of the relatively impermeable till layer, migrates down gradient, and then surfaces at an exposed interface (e.g., road cut or basement excavation). This is a common condition in the Browns Point/Dash Point area, and can result in basement flooding or other drainage problems. Hence, while the outwash soils may rapidly infiltrate stormwater, the prevalence of groundwater flooding can limit the applicability of infiltration-based projects.

TOPOGRAPHY

Much of the land surface of Browns Point and Dash Point lies between sea level and three hundred feet above sea level, eventually rising to a height of 500 feet in Northeast Tacoma. The Browns Point area is characterized by a bench in the landscape at 80 to 100 feet in elevation. The Dash Point area is characterized by 20% or steeper slopes to the north. Both areas contain potential landslide and erosion areas, defined as areas with slopes of 20% or more and are shown on Map C-4: Potential Hazard Areas and Topography.

TACOMA SMELTER PLUME

For almost 100 years, the Asarco Company operated a copper smelter in Tacoma. Air pollution from the smelter settled on the surface soil over a vast region - more than 1,000 square miles of the Puget Sound basin. Arsenic, lead, and other heavy metals are still in the soil as a result of this pollution. Arsenic concentrations in local soils were studied in the Pierce County Footprint Study as part of the Tacoma Smelter Plume Project. The Tacoma smelter plume interactive map of the plan area shows the range of possible arsenic levels in the soil at 40 to 100 ppm (parts per million). The map states a relatively small number of samples were taken relative to the large area mapped. Property specific sampling is necessary to determine arsenic levels on particular properties. The project intends to provide education and outreach to affected communities regarding how people can reduce their risk from exposure to polluted soil.
WILDLIFE

The Browns Point/Dash Point plan area is a mixed suburban forest landscape that supports the wildlife species that can adapt to this environment. The area also has Dash Point State Park which provides a forested habitat area. Species that tend to do well in a variety of environments also can be found here. Residential development has substantially reduced wildlife habitat through the years.

The forested and shrub areas can support large and small mammals, birds, reptiles, and amphibians. The most common smaller mammals found in these areas include mice, opossums, raccoons, and squirrels, and a small number of larger animals including coyotes. Common bird species found in forested and shrub areas are chickadees, crows, finches, goldfinches, hawks, Jays, owls, robins, thrushes, warblers, and woodpeckers. In shoreline areas, a wide variety of bird species such as bald eagles, ducks, Canadian geese, golden-eyes, herons, kingfishers, mergansers, ospreys, and teals can be found. Amphibians and reptiles commonly found in the plan area’s forest and riparian environments are frogs, salamanders, and toads.

Congress passed the Endangered Species Act [ESA] in 1973 to protect species of plants and animals that are of “aesthetic, ecological, educational, historical, recreational, and scientific value.” The ESA is also intended to protect the listed species’ “critical habitat,” which is the geographic area occupied by or essential to the protected species. Species of concern found within the plan area may include the bald eagle, Puget Sound Chinook salmon, and great blue heron. Map C-6: Fish and Wildlife and Open Space Corridors depicts the location of habitat areas and open space in the plan area.

OPEN SPACE

The term open space can mean a variety of things to different people, with perceptions such as wild, undisturbed areas (i.e., natural open space) that serve as habitat for fish and wildlife or rural, scenic areas, or artificially landscaped areas which offer a sense of visual relief from the built environment, to conduct passive recreation activities (i.e., greenbelts, golf courses, and parks). When considered together, all of these areas provide people a place to connect with nature.

The Pierce County Countywide Planning Policies require all jurisdictions (Pierce County, cities, and towns) to plan for the provision of open space; consider open space parks, environmentally sensitive lands and greenbelts, natural buffers, scenic and natural amenities, unique geological features; designate appropriate open space; and encourage new housing to locate in a compatible fashion with open space designations or outside designated open space.

The Pierce County Council adopted open space priorities in 1998. These priorities were established for any County program that provides for the preservation of open space. Open space resources were categorized as high, medium, or low priority for preservation or acquisition. In 1999, the Pierce County Council adopted a Comprehensive Plan text...
amendment which established a revised open space/greenbelt map based upon the high priority open space categories (critical salmon habitat, fish and wildlife habitat, wetlands, tidal marshes, estuaries, rivers and streams, marine waters, and wooded areas). These areas will receive the highest priority for any Pierce County programs that acquire or otherwise preserve lands for open space. In 2004, the Comprehensive Plan Open Space Corridor map was modified to reflect revised Biodiversity Network (i.e., fish and wildlife habitat areas) data.

**DESCRIPTION OF DESIRED CONDITIONS**

The natural environment in the Browns Point/Dash Point Community Plan area provides local residents with the opportunity to live, work, and play in a healthy and scenic environment. The native vegetation and marine shorelines contribute to the livability of the area. Preserving the remaining native fish and wildlife species and vegetation that provides the habitat for these species is important to the residents of the area, within the limitations of the existing neighborhood character. While maintaining the functions and values of the natural environment is a priority, a significant portion of the goals discussed are greatly influenced by Countywide regulations. The following text describes the desired condition as reflected in the following goals and policies.

**SHORELINES**

The natural shoreline processes should be protected for present and future generations. Activities that increase the function and value of marine shorelines are encouraged while activities that would degrade the marine environment are discouraged or prohibited. As a community, Browns Point/Dash Point embraces the three pillars of the Shoreline Management Act: environmental protection, shoreline use, and public access. Development standards along shorelines should include incentives to preserve native vegetation and wildlife habitat and protect water quality. Countywide updates to the Shoreline Master Program should reflect the balance of natural systems and existing patterns of development to enhance the shoreline area. Existing public access points should be maintained. Restoration of degraded shoreline areas should be encouraged. In a community where development predated the SMA and thus a significant number of nonconforming structures exist in the shoreline area, flexibility in achieving natural environment and property use goals is desired.

**SURFACE WATER**

Surface water runoff should not negatively impact properties located downstream from development. Uncontrolled surface water can damage property, negatively impact the natural environment, and disturb salmon spawning areas and shellfish beds. To minimize impacts associated with uncontrolled surface water runoff, including soil erosion, flooding, and stream
scouring, it is imperative that new development be properly designed. Pollutants and sediment are often carried to surface water bodies by stormwater runoff. The Hylebos Browns-Dash Point Basin Plan has identified projects that would benefit the community surface water systems, addressing historic flooding problems from piece-meal development in some parts of the plan area. Efforts to educate the public regarding the function, value, and importance of protecting surface waters should be pursued.

OPEN SPACE AND WILDLIFE RESOURCES

The existing native fish and wildlife species and the natural habitats that support these species should be protected. New open space dedications should be linked with adjacent open space or critical areas to facilitate wildlife movement. Dash Point State Park maintenance should promote protection of wildlife habitat. Programs that reduce pollution of shoreline areas should be implemented. Permanently preserving open space in the area is also a priority. Public and private acquisition, preservation, and restoration efforts within the designated open space areas should be pursued through cooperative agreements, development incentives, and public education and outreach efforts. Open space areas that provide quality fish and wildlife habitat or that contain designated critical areas should be preserved. Sites that provide important links between open space areas, offer significant views, or are registered as a historic place, are priorities for open space acquisition. The Countywide Open Space map should reflect the existing and desired system of open space within the community.

ENVIRONMENT POLICIES

GOALS

The various natural systems and critical areas in the Browns Point/Dash Point Community Plan area provide residents the opportunity to live, work, and play in a healthy environment. The function and value of these features which contribute to the scenic beauty and livability of the area should be maintained, protected, and enhanced for the enjoyment and use of present and future generations.

Marine and freshwater shorelines have historically contributed to the economic, recreational, and cultural identity of the Browns Point/Dash Point Community Plan area. Because of the high quality of life that is offered by living and working near the water, these shoreline areas have received some of the greatest development pressures within the community plan area. It is important that the natural features and critical functions of the marine shoreline areas be preserved and protected for present and future generations. The natural character and ecology of the shoreline environment should be preserved. Land use policy should promote long-term values and goals above short-term interests, with acknowledgment of the existing urban residential character of much of the plan area.
**SHORELINES**

**GOAL BDP ENV-1**  Construction along and within nearshore areas shall be limited to water-related uses and limited residential accessory uses.

**BDP ENV-1.1**  Promote education, awareness, and outreach programs that emphasize best management practices (BMPs) and environmental stewardship for waterfront property owners.

**BDP ENV-1.2**  Encourage the use of low-flow plumbing fixtures and appliances to reduce the possible exacerbation of slope failures by saturating on-site system drainfields.

**BDP ENV-1.3**  Encourage shoreline restoration activities that increase the function and value of the nearshore environment.

**WATER QUALITY/SEPTIC SYSTEMS**

**GOAL BDP ENV-2**  Septic systems provide wastewater disposal for land uses in the Dash Point area and portions of the Browns Point area. Current technology allows properly installed modern septic systems to clean wastewater. Special care shall be taken when designing and installing septic systems near the marine shorelines or other sensitive environmental features. Existing systems must be properly maintained and failing systems must be repaired or replaced.

**BDP ENV-2.1**  Identify areas where restoration activities could potentially have a positive effect on water quality and encourage restoration projects within these areas.

**BDP ENV-2.2**  Work with existing community and volunteer groups to provide restoration actions on identified sites.

**BDP ENV-2.3**  Support and enhance hazardous spill response coordination within the plan area.

**BDP ENV-2.4**  Work with the Pierce County Department of Emergency Management to identify appropriate methods for handling spill response in high-risk areas (e.g., Port of Tacoma).

**GOAL BDP ENV-3**  Existing septic systems near marine shorelines need to be monitored closely.

**BDP ENV-3.1**  Encourage property owners to participate in the TPCHD monitoring programs.

**BDP ENV-3.2**  Educate property owners and encourage the use of plumbing fixtures and appliances that reduce slope failures near marine bluffs due to oversaturation of on-site system drainfields.

**SLOPE STABILITY**

**GOAL BDP ENV-4**  Slope stability, within identified critical areas of the plan area, is important to the protection of private property while allowing for the natural erosion process that provides components of the area’s beaches.
IMPLEMENTING ACTIONS

The following actions need to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 1-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Land Use Advisory Commission (LUAC), Pierce County Planning and Land Services (PALS), Metro Parks District (Parks), Pierce County Public Works & Utilities (PWU), Tacoma-Pierce County Health Department (TPCHD).

SHORT TERM ACTIONS (UPON PLAN ADOPTION TO 1 YEAR)

1. Amend Title 18J, Design Standards and Guidelines to:
   • Encourage innovative design solutions, including low impact development techniques, to reduce impervious surfaces and promote aquifer recharge.
   • Require any open space dedication for new development be located adjacent to other open space tracts, wooded areas or critical areas, i.e., Dash Point State Park (PALS)
2. Provide property owners with information regarding seawater intrusion and techniques for prevention. (PALS, TPCHD)
3. Encourage low impact development techniques along marine shorelines. (PALS, PWU)
4. Update the Countywide Open Space/Greenbelt Map to reflect local conditions. (PALS)

MID-TERM ACTIONS (1-5 YEARS)

1. Consider amending Current Use Assessment program to provide a tax incentive on properties that make improvements that reduce downstream pollution or conserve land or water resources. (PALS, Parks, Assessor)
2. Complete an update to the Pierce County Shoreline Master Program. Actions to be considered in the SMP update should include:
   • Updates to the shoreline environment designations.
   • Identification of potential locations for additional public access including unopened County road ends.
   • Incentives for beach nourishment or other soft armoring techniques.
   • Standards that would require construction of non-water dependent structures at a sufficient distance from the ordinary high water mark.
   • Protection of sand spits by discouraging new bulkheads below feeder bluffs.
   • Discouraging new dock and pier construction except for public use facilities.
   • Incentives that encourage the retention of native vegetation along marine shorelines. (PALS)
3. Provide a list of bulkhead design options that encourage alternatives to traditional concrete, rock, or timber bulkheads. (PALS, PWU, TPCHD)
4. Identify point and non-point sources of pollution that affect shoreline areas. (PWU-Water Programs, TPCHD)
5. Provide financial support for projects identified in the Hylebos Browns-Dash Point Basin Plan. (PWU-Water Programs)
6. Promote the use of the Pierce County Conservation Futures Program and the Current Use Assessment-Public Benefit Rating through workshops, newspaper advertisements and direct mailing to eligible property owners. (PALS, Parks, Assessor).
7. Identify tax incentives or density credits for public and private developers who choose to provide public access to parks, trails, shorelines, and other passive recreational areas. (PALS, Parks, Assessor)
8. Conduct an inventory of public access points to marine shorelines and watercourses within the plan area to determine best locations for aquatic recreation areas. (PALS, PWU, Parks)
9. Support development of public restrooms at Dash Point Dock. Pursue public/private partnerships, grant funding, land donations and other opportunities that would facilitate this project. (PALS, Parks)
Map C-7: Hydrologic Soil Groups

Note: Hydrologic Soil Groups are defined by the Natural Resource Conservation Service. Each soil type unless a complex type falls into one of four groups that represent varying degrees of runoff potential. Complex soils contain multiple soil types.

Group A: Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well-drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B: Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C: Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D: Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of soils that have a high sheet-spot potential, soils that have a high water table, soils that have a canopy or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

Map Disclaimer: The map features are approximate and are intended only to provide an indication of said feature. Additional areas that have not been mapped may be present. This is not a survey. The County assumes no liability for variations measured by said survey. ALL DATA IS EXPRESSLY PROVIDED "AS IS" AND "WITH ALL FAULTS." The County makes no warranty of fitness for a particular purpose.

Browns Point / Dash Point Community Plan
Chapter 5: Facilities and Services Element

Introduction

The Facilities and Services Element of the Browns Point/Dash Point (BPDP) Community Plan provides policy direction to decision makers in Pierce County regarding the development regulations and financial investments associated with parks and trails, sewer utilities, public schools, and transportation projects.

Urban services include, but are not limited to transportation infrastructure (such as roads, sidewalks, street trees, street lighting), parks, sanitary sewage disposal, and stormwater and surface water management systems. Facilities are generally considered the physical structures in which a service is provided. One of the principal goals of the Growth Management Act (GMA) is for cities to provide compact urban growth areas (UGAs) that accommodate the majority of growth and development in a community so that the necessary urban facilities and services are provided and delivered efficiently and cost effectively. Urban level facilities and services are only permitted within UGAs. Certain public facilities and services must be provided at a specific level of service (LOS), concurrently with development. This requirement is intended to ensure that development will not occur without the necessary infrastructure. Developers and property owners are typically required to construct the necessary infrastructure or provide a fee to compensate for their fair share of facilities and services (as associated with a proposed building or development permit) that are necessary to maintain an established LOS (as defined by Pierce County). This LOS standard for public facilities is identified in the Capital Facilities Element of the Comprehensive Plan. Since the Browns Point/Dash Point community is almost entirely built out and essentially isolated from other unincorporated areas of the County, a unique set of level of service circumstances exist. These circumstances and the areas reliance of non-County service providers is described further in the element.

Description of Current Conditions

The following sections provide an analysis of the existing infrastructure and services in the community plan area. This information provides the basis for analyzing the levels of service (LOS) for infrastructure in the community and for developing policies which articulate the community’s desires. The LOS described in these sections may show that some facilities or services exceed Pierce County’s adopted levels of service for public facilities or that there is a deficiency in certain circumstances.
The Pierce County Comprehensive Plan contains general policies that serve as a guide for future development of park and recreation facilities in the County. These policies cover a range of issues including the responsibility for providing parks, technical assistance, and location criteria for new regional parks. Section 19A.20.090 of the Comprehensive Plan states that primary reliance is upon cities and towns and special purpose districts to provide local park facilities and service appropriate to serve local needs. The location criteria for park and recreation areas state that new parks must be located on public roads. If a park is located in an urban area then urban services need to be available. Open space recreation parks should be located on land offering significant environmental features.

The Browns Point/Dash Point community does not have any Pierce County park land or facilities within the plan area. However, Metro Parks does operate and maintain three facilities within the plan area that provide recreational opportunities. Additionally, public recreation opportunities are associated with the public schools. Dash Point State Park is a regional park facility that provides recreational opportunities for the public who live far beyond the surrounding community.

The following contains a brief description of the existing park facilities:

**Browns Point Lighthouse Park** - A community park located on the tip of historic Browns Point, the park features waterfront access and an attractive picnic site. The waterfront is utilized by beachcombers year round and sun bathers, boaters, and picnickers during the summer. Once an active United States Coast Guard station with a full-time crew, the station closed in 1964 and it was converted to a public park.

**Browns Point Play Field** - As a neighborhood park, this playfield provides neighboring residents with fields and for baseball and soccer, tennis courts and a playground for children.

**Dash Point Park and Pier** - This community park offers views of Puget Sound to the north and northeast toward Seattle. It contains picnic facilities and 300 feet of beach. An “L- shaped” pier extends 300 feet out into the sound with 100 feet of pier at the end that provides lots of room for fishing and crabbing.

**Dash Point State Park** - Dash Point State Park is a 398-acre camping park with 3,301 feet of saltwater shoreline on Puget Sound. The beach provides unobstructed views of the Sound and excellent opportunities for sea-life study. Boating is available to smaller boats (e.g., canoes and kayaks) that do not require a watercraft launch. Additionally, the park contains 11 miles of hiking and bike trails.

The information found in the Recreational Park Land Inventory table is provided by Metro Parks and describes the park classifications and level of services that serve the community.

TRANSPORTATION

THE ROADWAY NETWORK

The Browns Point/Dash Point Community Plan area is served by a network of roadways comprised of a total of 10.2 miles. The table below lists the jurisdiction, mileage, and classification of the various roads. With the exception of SR 509, all of the roadways are of County jurisdiction (private roads are not noted here). SR 509, also alternatively known as Eastside Highway within the community plan, is classified as an Urban Minor Arterial with a speed limit of 35 miles per hour.

The balance of the public jurisdiction roadways in the community plan area are County roads carrying significantly lower volumes of traffic than SR 509.

TRAFFIC VOLUMES

As shown on Table C-15 below, SR 509 or Eastside Drive carries the highest volumes of Annual Average Daily Traffic (AADT) of 4,500 vehicles. The AADT represents a roadways two-way traffic volume for a 24-hour period. Le-Lou-Wa Pl NE carries the highest volume of County roadways depicted here with 2,350 vehicles per day. It should be noted that all of the volumes shown in the table below are within the capacity threshold of the respective roadways.

### Roadway Operating Conditions

All of the roadways within the plan area are comprised of two lanes. There are no signalized intersections at time. Because much of the roadway network serves primarily “internal” trips, trips with an origin or destination within the community, there is limited through traffic. It is anticipated that based on growth trends within and outside of the community that there will be adequate roadway capacity.

### Nonmotorized Facilities and Usage

Bicyclists and pedestrians may be seen walking along a number of the roadways in the community plan area. The County roadways typically do not have a paved or unpaved shoulder developed for the nonmotorized user. Many of the local roadways have ditches or swales for the purpose of conveying water.

### Public Transit

Pierce Transit’s existing routes do not provide scheduled service within the BPDP Community Plan area. Pierce Transit does provide Bus Plus service. This service is designed to serve neighborhoods that do not have the population densities needed to support fixed route service. This service utilizes smaller buses that are designed to hold a maximum of 15 passengers and can operate on neighborhood streets that are unsuitable for full-sized buses. Passengers may also request special “by request stop locations” in advance. The frequency of this bus is generally one bus per one half hour to one hour. The nearest bus routes are:

- #61 – Northeast Tacoma route carries passengers from downtown Tacoma to Northshore Pkwy & Nassau and 55th & Frances.
- #61 – Bus Plus Service (by request) serving lower Browns Point- Eastside Drive – Dash Park-Pier and Dash Point Blvd.

Pierce Transit route # 61 does connect with King Co. Metro Park-and-Ride lot at Twin Lakes that can accommodate up to 600 vehicles.

### Public Schools

The plan area is served by Tacoma Public School District. No schools are actually located within unincorporated Pierce County. The area is served by three elementary schools, one middle school and one high school. The District has prescribed Recommended Program Capacity (RPC) for the various schools serving this portion of the County. The RPC is essentially students per
facility ratio. The following table displays current capacity for schools serving the BPDP Community Plan area as of October 2007:

<table>

**SANITARY SEWER**

Pierce County Sewer Utility provides sanitary sewer service in the plan area. Only the Browns Point neighborhood is served by sanitary sewers with limited exception in Dash Point. The community is serviced by approximately 5.9 miles of sewer line comprised of 1.5 miles of “force main” line, 4.4 miles of “gravity main” line, and four pump stations all directing flow to the Tacoma Central Wastewater Treatment Plant (WWTP). The Tacoma Central WWTP where Pierce County owns approximately 3MGD (millions of gallons per day) of capacity. As of January 2008, Pierce County provides sewer services in the Browns Point/Dash Point service area to 423 single-family residences, 109 multifamily residences, and 10 commercial accounts in the unincorporated/urban zone area.

Pierce County Sewer Code and Tacoma-Pierce County Board of Health Regulations for on-site sewer systems require properties within 300 feet of an existing public sewer line to connect to the sewer system when proposed for development. Existing developments may continue use of on-site sewer systems unless there is failure of the system and public sanitary sewers are within 300 feet or the existing structure is expanded.

Current regulations require vacant properties within 300 feet of an existing sewer main to connect to the sewer system when proposed for development. Existing developed property does not have to connect unless there is a proposal to change the use, a septic failure, or an additional to a structure that would substantiate additional bathrooms.

In the late 1990s Pierce County adopted regulations that require new subdivisions which do not connect to the sewer system to construct dry-line sewer infrastructure in addition to an interim septic system - the premise being that when sewer lines are extended past the project in the future, the interim septic systems will be disconnected and the dry-line infrastructure will be connected to the sewer system. The costs of constructing an interim septic system and dry-line infrastructure, maintenance, and the engineering challenges have encouraged developers to connect projects to the sewer system, with limited exceptions.
The Browns-Dash Point basin is located in the north part of the County and is within the Puyallup Basin, however, it releases water directly into Puget Sound rather than discharging to the Puyallup River. Only one square mile of the entire Browns-Dash Point Basin is within unincorporated Pierce County. The area has been extensively studied in the Hylebos Browns-Dash Point Basin Plan. This document was prepared by Pierce County Public Works & Utilities-Water Programs Division and adopted by County Council in December of 2006. The plan serves as a comprehensive guide to storm drainage and surface water management in the Hylebos Creek and Browns-Dash Point drainage areas. The Basin Plan addresses surface water management, flooding, erosion, water quality, and habitat problems, by identifying problems and proposing solutions.

**STORMWATER MANAGEMENT**

As natural vegetative cover is replaced with homes, businesses, parking lots, and roads, surface water runoff (stormwater) tends to increase both in volume and rate at which the water drains off the land. If not properly addressed, this post development increase in stormwater volume and rate can result in flooding, water quality and habitat degradation, and soil erosion. The Browns-Dash Point Basin consists of several small catchments individually discharging to the Puget Sound. Very typically the lower ends of these conveyance systems were historically small ravines which have since been encroached or enclosed to accommodate adjacent land use conversions. The Hylebos Browns-Dash Point Basin Plan identifies existing stormwater problems caused by the absence of drainage facilities, undersized facilities, inadequate maintenance of existing facilities, and erosion of natural drainage channels by increased peak flows and durations. These problems are not uncommon in areas built prior to the establishment of site development stormwater regulations and are typically built out incrementally without the benefit of master drainage planning.

The Basin Plan goes on to state that many of the older site drainage improvements were sized with limited hydrologic and hydraulic analysis and did not anticipate upstream developments or flows from other jurisdictions. The area, as built out, would not meet current design standards. Limited access decreases the ability of Water Programs to provide maintenance, thus causing flooding in certain areas.

Pierce County Water Programs has determined which existing problems should receive further discussion or analysis within the Basin Plan. This screening involved determining if the problem was within County right of way, if Water Programs was responsible for addressing the problem, and if the problem warranted a Capital Improvement Project (CIP). Examples of problems that would not be selected for additional evaluation would be where the problem is due to the natural drainage characteristics of the site, groundwater flooding, flooding on private properties not resulting from County facilities or actions, or issues that simply require routine maintenance of existing facilities. The following table presents the results of Water Programs final screening process:
Table C-17: Screened List of Problems in the Browns Point Basin

* As Identified in the Hylebos Browns-Dash Point Basin Plan

Please refer to Chapter 5 of the Hylebos Brown-Dash Point Basin Plan for more detailed descriptions of the areas identified in this table.

DOMESTIC WATER

Residents and businesses within the plan area receive their potable water (or drinking water) from the City of Tacoma (Tacoma Water). On a typical day, Tacoma Water supplies more than 300,000 people with approximately 50 million gallons of water, increasing to over 90 million gallons on a hot summer day. The Green River, located in King County, provides 90 percent of this needed supply. Under its first diversion water right, Tacoma Water is authorized to use up to 72 million gallons of Green River water per day. Tacoma Water can substitute this Green
River supply with groundwater from seven wells located along the North Fork Green River when the river water is too turbid (or cloudy), usually in the fall and winter. Tacoma Water also has 23 wells in and around the City of Tacoma capable of providing additional supply of up to 62 million gallons per day. In some cases, Tacoma Water wells have not yet been fully developed to utilize the individual water rights associated with the various sources of supply.

The Green River is also the source of water for a new regional partnership formed by the City of Kent, the Covington Water District, the Lakehaven Utility District, and Tacoma Water. The Second Supply Project—so-called because it is the second supply coming from the Green River—provides up to 65 million gallons per day to the four project partners.

As a Group A water system, Tacoma Water is required to develop a water system plan every six years and have that plan approved by the Washington State Department of Health (DOH). Tacoma Water’s latest water system plan (2006 Comprehensive Water Plan Update, July 2007) received DOH approval in December 2007. A water system plan provides the justification to DOH of a water system’s ability to provide timely and reasonable water service to existing and future customers.

As part of the development of the 2006 Comprehensive Water Plan, Tacoma Water completed a water storage analysis for each of Tacoma Water’s six primary service zones. This water storage analysis is a comparison of Tacoma Water’s available storage to that required for operations, equalizing, standby, fire and dead storage uses, both currently and into the future. The plan area is included in Tacoma Water’s Indian Hill service zone. The conducted water storage analysis concluded that the Indian Hill service zone has adequate storage until at least the year 2020.

Tacoma Water also completed a transmission and distribution system analysis to identify areas, if any, experiencing low flows based on existing maximum day and peak hour demands as part of the development of the 2006 Comprehensive Water Plan. The analysis resulted in the identification of five low flow areas, all of which are outside the Plan Area. Generally, water pressures throughout Tacoma Water’s 1,200 miles of distribution system range from an average of 55 psi in residential areas and average up to 100 psi in industrial zones.

Tacoma Water’s residential per capita (or per person) water use has consistently dropped since 1990. For example, in 1990 the residential per capita water use was 92 gallons per day, decreased to 90 gallons per day in 1995 and to 76 gallons per day in 2005. Currently, Tacoma Water’s stated conservation goal is to reduce per capita water use by 10 percent between 2000 and 2010.

**DESCRIPTION OF DESIRED CONDITIONS**

The urban growth area is intended to accommodate the majority of new growth and development in the community plan area. It is important therefore, that the majority of public expenditures for urban facilities and service should also be directed to UGA. Urban levels of service should be required as a component of all new development in the UGA. Pierce County should ensure that new development supports the costs associated with public facility and service expansions that are made necessary by each development project. The UGA should not
exceed a size that can be serviced by the urban facilities and services that exist or can be provided within a 20-year planning horizon. Prior to expanding the UGA, it must be demonstrated that adequate public facilities and services can be provided for each public facility and service.

Although recent growth within the plan boundary has been minimal, adjacent areas to the east, within the City of Tacoma, have experienced new residential development. This high rate of growth in the city has impacted this community in that many of the public services are shared in common with city residence. Residents have experienced deficiencies in public facilities, services, and infrastructure. Ensuring that adequate schools, parks, roads, sewer and water systems are present in the community is a major goal of this plan. The Browns Point/Dash Point Community Planning Board has anticipated the expected growth and accounted for the current deficiencies when forming plan policy recommendations.

PUBLIC PARKS

The objectives, policies, and standards focus on the stewardship and maintenance of existing public parks. Strategies identify possible funding mechanisms and public agency partnerships. Additional policies address deficiencies in park facilities and identify methods of funding and operating neighborhood and community scale parks.

TRANSPORTATION

ROADWAYS BEYOND ROADWAY CAPACITY

The transportation concerns of the community extend beyond the bounds of simple roadway capacity. Given the amount of anticipated development within the community and the somewhat heavy local usage of the roadways, there is unlikely to be growth of traffic that would necessitate significant roadway capacity improvements. The focus of the transportation planning policies for this area is not on the capital improvement side but rather the operations and maintenance of the system.

ROADWAY MAINTENANCE

Maintaining the quality of the roadway surface is important to any community. There is strong support from the community for the regular (approximately every two years) inspection of the roadway network. Based on these inspections, the County determines whether chip sealing, a method of preserving the roadway pavement surface, should be performed. It is noted that chip sealing may create the inconvenience of loose gravel and tar after application, but it is noted that aside from the significant cost savings of applying this treatment versus asphalt overlay, chip sealing raises the surface of the road significantly less than the conventional
overlay. This is a significant benefit for the Browns Point/Dash Point community. The raising of the roadway surface through the application of additional asphalt has created impacts upon a number of adjacent property owners that do not have the drainage features to convey significantly more water on their property. While chip sealing may raise certain concerns, it has been advocated as a more sustainable, longer term road maintenance strategy for this plan area.

**NONMOTORIZED**

There are a number of Transportation Project Recommendations for providing unpaved shoulders along certain roadways. The community plan recommends that Olympic Dr NE, Dash Point Blvd NE, and 21st Ave NE have shoulder improvements for nonmotorized use. The plan also recommends that the practice of “covering” the existing swales be applied where viable in order to create these shoulders when the right-of-way is limited.

**SPEEDING**

Concerns have been raised about autos traveling above the posted speeds along Tok-A-Lou Ave NE, Hyada Blvd NE, and La-Hal-Da NE. The community plan would suggest that these roadways be considered for traffic calming measures in the near future and monitored on a longer term basis.

**PARKING**

Both Dash Point Park and the Browns Point Lighthouse Park draw strong usage from the local and more distant population. Both parks experience periodic “overflow” of their parking lots affecting the local street network. This condition should be monitored and addressed.

**PUBLIC SCHOOLS**

This plan recognizes that the Tacoma Public School District is the responsible entity to address school district issues. Policies encourage increased coordination between the County and the district to develop strategies that address student capacity deficiencies. Specifically, the district is encouraged to actively pursue an increase in impact fees that are collected through the County’s building permit process. Additional coordination is also needed between the two entities to ensure students have safe walking routes from their residential neighborhoods to schools.

**SANITARY SEWER**

There are no plans to expand sewer service within the plan area.

**STORMWATER MANAGEMENT**

This plan focuses primarily on the management of surface water in efforts to reduce the amount of runoff caused from new development. Policies support the Hylebos Browns-Dash
Point Basin Plan’s recommendations which include discouraging development in areas prone to flooding. The community desires public and private stormwater facilities that are incorporated into the natural landscape and are properly maintained.

**DOMESTIC WATER**

Pierce County and Tacoma City Water should coordinate their activities to ensure that an adequate and reliable domestic water supply is available to support projected population growth. The availability of an adequate potable water supply should be verified prior to the approval of new land divisions. If water purveyors are incurring problems of supplying water for new land divisions, then they should explore connections with other water systems that have adequate water supplies.

**CAPITAL FACILITIES POLICIES**

**GOALS**

- The existing conditions of public facilities, services, and infrastructure within the community will be evaluated. Where deficiencies exist such that the adopted level of service standards are not being achieved, measures will be taken to correct the deficiency or to prevent the deficiency from becoming more severe;
- The need for public facilities, services, and infrastructure will be anticipated and planned for in advance, where possible. Growth and development within the community will be managed to the extent feasible to ensure that these facilities, services, and infrastructure can be provided as efficiently as possible;
- The cost of providing additional public facilities, services, and infrastructure needed to serve development will be paid by the development; and
- Annual monitoring of the condition of public facilities, services, and infrastructure in the community will be performed and corrective action will be taken as necessary.

**LAW ENFORCEMENT**

**GOAL BDP CF-1** Encourage outreach programs between the plan area and the Pierce County Sheriff’s Department.

- **BDP CF-1.1** Support neighborhood watch groups.
- **BDP CF-1.2** Support the neighborhood patrol deputy program.
PARKS AND RECREATION POLICIES

GENERAL

GOAL BDP PR-1 Develop and improve recreational facilities identified and desired by the Browns Point/Dash Point community.

BDP PR-1.1 Actively pursue opportunities to address the following types of park and recreational facilities:

BDP PR-1.1.1 Dash Point Dock restroom facilities;
BDP PR-1.1.2 Browns Point Lighthouse Park restroom facilities;
BDP PR-1.1.3 Parking and access solutions for Browns Point Lighthouse Park;
BDP PR-1.1.4 Upgrades for the Browns Point Playfields and Dash Point Dock;
BDP PR-1.1.5 Mooring buoys for temporary moorage at waterfront parks;
BDP PR-1.1.6 Develop a trail system that connects the two community plan neighborhoods for use by nonmotorized vehicles and pedestrians; and
BDP PR-1.1.7 Increase trail connections from Dash Point State Park and the neighborhoods to the west and south.

BDP PR-1.2 Explore a need for additional active and passive recreational uses including a community recreation center, children’s park facilities, a community garden, and trails.

BDP PR-1.3 Prohibit the vacation or trading of unopened public rights-of-way at shoreline locations except when the vacation or trade would enable a public authority to acquire the vacated property for public purposes.

BDP PR-1.4 Develop a trail linkage that safely connects the Browns Point and Dash Point areas along SR 509.

BDP PR-1.5 Actively pursue opportunities to develop a community-wide trail system connecting Browns Point and Dash Point.

FACILITY DEVELOPMENT AND LEVEL OF SERVICE (LOS) STANDARDS

GOAL BDP PR-2 Develop appropriate LOS standards for park projects financed at the local level.

BDP PR-2.1 The County should assist the community by exploring funding alternatives to enable development of these facilities.

BDP PR-2.2 The community believes there are unmet needs for active and passive parks, recreation, and open space in the plan area.
BDP PR-2.3 Develop level of service standards that appropriately address the heavy use received by Browns Point’s Lighthouse Park and Dash Point Dock as community parks.

BDP PR-2.4 Increase enforcement of park hours and boundaries at the two regional parks managed by Metro Parks: Dash Point Dock and Browns Point’s Lighthouse Park.

BDP PR-2.5 Increase coordination of parking at Dash Point Dock in summer peak use periods.

BDP PR-2.6 Explore solutions for the need to access Browns Point Lighthouse Park from Tulalip Street NE.

BDP PR-2.7 Ensure that publicly-owned park sites are protected and maintained in perpetuity.

BDP PR-2.8 Pursue mechanisms for protection and improvement in existing and acquired publicly-owned park sites that restrict future uses to park and recreation activities.

**Existing Parks and Recreation Programs**

**GOAL BDP PR-3** Maintain the existing park and recreation facilities and programs located within the plan area.

BDP PR-3.1 Conduct maintenance and renovations that serve to enhance park and recreation facilities and programs.

BDP PR-3.2 Community parks with heavy use need higher level of maintenance.

**Transportation Policies**

**Goals**

The Browns Point/Dash Point community’s transportation system should provide safe, efficient, aesthetic, and functional movement for both the resident and visitor of the community.

**General**

**GOAL BDP T-1** The transportation system comprised of roadways, nonmotorized facilities, and transit services, should strengthen the unique small-town character of this Pierce County community. This can be achieved through maintaining and improving the transportation system as the usage of the transportation system increases.

BDP T-1.1 The County should consider analyzing and applying traffic calming on the following roadways:

BDP T-1.1.1 Tok-A-Lou Ave. NE, between Hyada Blvd. NE to Hyada Blvd. NE;

BDP T-1.1.2 La-Hal-Da Ave. NE between Hyada Blvd. NE to Ton-A-Wana-Da Ave. NE;

BDP T-1.1.3 La-Hal-Da Ave. NE between Hyada Blvd. NE to Ton-A-Wana-Da Ave. NE;
BDP T-1.1.4  Le-Lou-Wa Place NE between SR 509 to Tok-A-Lou Ave. NE; and
BDP T-1.1.5  Markham Ave. NE at SR 509 to Dash Point Dock.

BDP T-1.2  The County should consider the development of a one-way loop due to safety considerations at SR 509. Arthur Street and upper Soundview Drive NE are currently two-way streets that intersect SR 509.

BDP T-1.2.1  Due to sight distance issues and limited pavement width, it is strongly suggested that the County change the directionality of Arthur Street to northbound only (away from SR 509) and of Soundview Drive NE to southbound only (toward SR 509).

ROADWAY DESIGNATIONS AND SIGNING

GOAL BDP T-2  Provide roadway designations and directional signing that will improve the sense of place and raise the certainty for drivers.

BDP T-2.1  Clear signing for selected designations within the community should be provided. This would not only promote a better sense of place within the community, but would improve the operations of the roadways by raising the level of certainty and safety for drivers and other roadway users.

BDP T-2.2  To provide continuity of SR 509, change its name from East Side Drive to Marine View Drive as found in the adjacent jurisdictions.

NONMOTORIZED IMPROVEMENTS

GOAL BDP T-3  Identify and provide where needed additional shoulder width for roadways that have been identified as key nonmotorized routes within the community.

BDP T-3.1  Such techniques as the covering of existing swales should be considered to achieve this objective.

UTILITIES POLICIES

SEPTIC SYSTEMS

GOAL BDP U-1  Septic systems provide the only means of wastewater disposal for all land use types in the Dash Point area. Individual on-site septic systems are typically utilized; however, a variety of community systems may be used under certain circumstances. Septic systems should be designed using the newest technology and needs to be maintained regularly to properly function.
SANITARY SEWER

GOAL BDP U-2    Sewer facilities provide wastewater disposal for land uses in the Browns Point area. Special care shall be taken when designing and installing sewer lines near the marine shorelines or other sensitive environmental features.

GOAL BDP U-3    Continue to educate the community in conservation measures that minimize the impacts of water usage associated with sewer utilities. Encourage low-flow fixtures, cost-effective incentive programs for plumbing fixture and appliance replacement, and other public information and education programs on water conservation in service areas.

STORMWATER MANAGEMENT

GOAL BDP U-4    Minimize development related impacts to existing hydrologic conditions and functions and strive to correct current deficiencies resulting from past development practices.

    BDP U-4.1    Provide better enforcement and maintenance of storm drainage systems.

RENEWABLE ENERGY

GOAL BDP U-5    The provision of reliable electric utility service should be achieved in a manner that balances public concerns over the impacts of utility infrastructure with the consumer’s interest in paying a fair and reasonable price for utility products.

    BDP U-5.1    Alternative energy sources and new technologies should be pursued when these alternatives are environmentally sustainable and cost effective.

    BDP U-5.2    Neighborhood scale electrical facilities should be permitted in the plan area.

    BDP U-5.3    Encourage regional electrical providers to work with Pierce County in developing quiet and unimposing home based power generation.

IMPLEMENTING ACTIONS

The following actions need to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 2-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Land Use Advisory Commission (if applicable), Pierce County Planning and Land Services (PALS), Pierce County Economic Development (ED), Metro Parks District (Parks), Pierce County Public Works (PW), and Tacoma-Pierce County Health Department (TPCHD).
**SHORT TERM ACTIONS (UPON PLAN ADOPTION TO 1 YEAR)**

1. Adopt standards for the placement and design of stormwater facilities. (PALS, PW)
2. Utilize basin planning hydrologic condition modeling when making decisions regarding the allowable range and intensity of land uses. (PALS)

**Transportation**

3. Amend the Pierce County Transportation Plan and projects and 6-year Transportation Improvement Plan to reflect the projects and priorities of the Browns Point/Dash Point Community Plan as set forth in Appendix A. (PW)
4. Revise development standards to require developments to provide safe, convenient, and efficient connections between adjacent existing or future residential and commercial developments. (PW, PALS)
5. Create a process for notifying land use advisory commissions of proposed right-of-way vacations and establish options for the County to preserve and acquire right-of-way within identified transportation corridors. (PW, PALS)

**MID-TERM ACTIONS (1-5 YEARS)**

1. Develop “model” site plans that demonstrate techniques to retrofit existing commercial development with pedestrian uses. (PALS, PW)

**Parks**

2. Work with Metro Parks to annually evaluate the level of service for regional parks in the plan area and correct deficiencies through capital improvements. (LUAC, Parks)

**Transportation**

3. Create a process for increased bonus densities when right-of-way is donated, access is shared, or other public improvements, including road improvements and sewer extensions, are made. (PALS)
4. Continue to minimize environmental impacts in the design and construction of transportation projects. (PALS, PW)
5. Coordinate with the Tacoma School District to identify and prioritize designated school walking routes in need of safety improvements. (PW)

**LONG-TERM ACTIONS (5-10 YEARS)**

1. Coordinate recommendations from the Hylebos Browns-Dash Point Basin Plan with any updates to the community plan to address surface water runoff and flooding issues. (PALS, PW)

**Parks**

2. Support efforts to establish mechanisms that support the stewardship of neighborhood and community scale parks by conducting a series of education workshops regarding the...
3. Utilize the level of service standards and the design and location standards when establishing neighborhood or community scale parks. (Parks)

**Transportation**

4. Develop and implement county-wide standards for a comprehensive sidewalk system. (PW)

5. Work with Pierce Transit to increase the availability and effectiveness of transit within the commercial centers, and in connecting the Neighborhood Center and residential areas, and the region at large. (PW)
Chapter 6: Plan Monitoring

The 1990 State Growth Management Act (GMA) requires jurisdictions to report on progress made in implementing the Act, and to subject their comprehensive plans to continuing evaluation and review. As a component of the County’s Comprehensive Plan, the Browns Point/Dash Point Community Plan is subject to this requirement. Generally, community plans are updated every five years and monitored yearly. The monitoring process includes evaluating the development standards, regulations, actions, and other programs called for in the plan for the purpose of determining their effectiveness in fulfilling the vision of each of the five elements of the plan.

Monitoring actions steps includes the development and implementation of regulations and design standards, coordinating the provision of facilities and services, developing educational programs and handouts, acquiring parks, preserving open space, and other actions. Information obtained from the monitoring program, with continued community input, can be used to offer recommendations to decision makers as to what changes to the community plan may be needed in order to attain specified goals and meet the visions in the plan.
Appendix D: Frederickson Community Plan

The Frederickson Community Plan’s narrative text and policies are in addition to the Countywide Comprehensive Plan narrative text and policies and are only applicable within the Frederickson Community Plan Boundary.

- “Current” or “Existing” conditions are in reference to conditions at time of adoption (Adopted Ord. 2003-94s, Effective 12/15/2003).
- “Proposed” or “Desired” conditions are those which required Council action and may have also been amended over time through a Comprehensive Plan Amendment (amendments are reflected in this document).

Chapter 1: Introduction

Overview of the Plan Area

Over the past three decades, Frederickson, like many communities in Pierce County, has experienced tremendous growth. This period of growth has transformed the area from a quiet, rural community to a suburban community of many homes and businesses. In the past decade alone, the population of Frederickson has doubled, increasing from approximately 7,350 persons in 1990 to more than 14,000 persons by 2002. Growth of industry and business within the area has also been significant with the arrival of The Boeing Company, Toray Composites, and dozens of other small and medium-sized businesses.

The rapid growth in population, homes, and business in the area has not come without a cost, however. Since 1980 alone, more than 2,000 acres of the area has been platted and developed with residential and commercial uses which has in turn resulted in a measurable loss of open space, tree cover, wildlife habitat, and a general decline in the quality of the natural environment. During this same time period the volume of traffic on local roads has increased significantly and local schools have become overcrowded. Average traffic volumes on Canyon Road near 176th Street East, for example, have increased from approximately 12,000 vehicles per day in 1990 to nearly 25,000 vehicles today. Student enrollment in the local school district has grown substantially, with enrollment increasing by more than 2,500 students since 1995. Estimates indicate that the high rate of growth is expected to continue in the community into the foreseeable future, with population expected to exceed 18,000 by the year 2017.

The continued growth of population and business within Frederickson and surrounding communities is inevitable. The challenge is not to stop growth, but to control and plan for growth to occur in a manner which will have beneficial impacts on the community. With this in mind, representatives of the community have come together to develop a plan for the future growth of Frederickson. This plan is premised on the idea that through proper management of growth, the community can avoid, minimize, or mitigate many existing and future problems. Responsible growth is the central concept of this plan. Failure to appropriately plan for this growth will undoubtedly contribute to further declines in the quality of life experienced by those who live and work in the community.

The Frederickson Community Plan area is located approximately three miles south of SR 512, midway between Pacific Avenue and Meridian Avenue East in central Pierce County. The plan area is bounded on the north by Brookdale Road/160th Street East and the communities of South Hill, Summit View, and North Clover Creek-Collins, on the south by 208th Street and the...
Graham community, to the west by approximately 22nd Avenue East, Waller Road, and the community of Spanaway, and to the east by approximately 86th Avenue East and the community of South Hill. The geographic center of the community is near the intersection of Canyon Road East and 176th Street East.

**Frederickson Community Plan Area**

The plan area is roughly twelve square miles in size and encompasses a little over 8,000 acres of land. A key feature of the community is the Frederickson Employment Center, which is the largest designated industrial area in unincorporated Pierce County. Under the Pierce County Comprehensive Plan, over 2,800 acres of the community are designated for the Employment Center accounting for 40% of the community's total land area. Substantial growth potential exists within the Employment Center with about half its acreage being vacant. Nearly 60% of the community (approximately 5,000 acres) is designated for residential use and is characterized by a range of uses varying from semi-rural, large lot properties to newer higher density urban neighborhoods. The remaining acreage in the community (about 250 acres) is designated for commercial and multifamily use. Major transportation routes in the community include Canyon Road, Brookdale/160th Street East, and 176th Street East. The community is also served by Tacoma Rail, which provides regularly scheduled freight service to industrial users in the area.
One of the most significant environmental features in the community is Clover Creek. This creek is salmon bearing and is one of the largest creeks within Pierce County’s urban area. The headwaters of this creek originate in the northeastern corner of Frederickson with the creek then flowing through the north half of the plan area, leaving the community near the intersection of Brookdale and Waller Roads. The creek then winds northwesterly to join with Chambers Creek and Puget Sound approximately ten miles away. The majority of the creek and associated floodplain within the community is undeveloped. Aside from its ecological value, the creek played an essential role in the early settlement of the community, with many of the first settlers in Frederickson settling along its shores. Another significant environmental feature of Frederickson is the Clover-Chambers Creek Aquifer that underlies the entire community as well as most of Pierce County’s urban growth area.

**History of Frederickson**

**Early History through the 1900’s**

It is known that Native Americans were present in the Pacific Northwest for many generations before Captain George Vancouver first explored the coastline of Puget Sound in 1792. Some of the more commonly known of these peoples are the Puyallup, Steilacoom, Nisqually, and Muckleshoot who lived and traveled throughout the Puget Sound area including present day Pierce County. Trade and communication between these peoples and other Native American peoples east of the mountains occurred through the use of a series of ancient trails that ran through mountain passes. One of these ancient routes, the Naches Trail, passed through the Frederickson community near Clover Creek.

Records of the Hudson Bay Company note Euro-American settlements in the area as early as 1849. Many of these early pioneers settled in the vicinity of Clover Creek. Christopher Mahon was one of the earliest homesteaders to the area, locating his donation land claim along Clover Creek near the Naches Trail in the area that is the present Brookdale Golf Course around 1850. It was on Mr. Mahon’s claim that the first immigrant wagon train into western Washington, the Longmire party, camped in October 1853 before disbanding. Mr. Mahon is given credit for
naming Clover Creek, so naming it “because wild clover was so abundant along the creek.” He is also given credit for founding the first school in the community sometime in the late 1850's - Elk Plain School, later called Clover Creek District #4. Remnants of Mahon’s early settlement of the area, including the family cemetery, still exist. Another early settler of the area was Fred K. Meyer, who also located his donation land claim along Clover Creek near the Naches Trail between present day Old Military Road and 176th Street East. Mr. Meyer played an important role in the early years of the Clover Creek school district, serving as its clerk from 1866 to 1880, and donating land to the district for the siting of a new schoolhouse in 1897. The present day Clover Creek Elementary School is located on this land.

Locations of Donation Land Claims in the Vicinity of the Frederickson Area
The first military road into the area was established along the Naches Trail in the mid 1850’s. This road linked Forts Walla Walla and Steilacoom. Present day Old Military Road is a remnant of that original road. During the Indian War of 1855-56, Camp Montgomery was constructed along this road near land owned by another early settler of the area, John Montgomery. Fort Hicks, a blockhouse built by the Washington Territorial Volunteers, was located at the camp. A stone monument honoring this camp is located just east of the present day intersection of Old Military Road and 36th Avenue East.

**Early 1900’s Activity in the Vicinity of Frederickson Area Donation Land Claims**

Information from 1909 timber survey conducted by Pierce County. Survey shows donation land claims in Frederickson area, topography, land use, roads, and the Tacoma Eastern rail lines during that time period. Note the extensive amount of cleared and cultivated lands, prairies, and school site.
Rapid growth in Tacoma, the harvesting of timber and other natural resources in the area, and the desire to develop a rail route to Mount Rainier resulted in the first rail line being extended to Frederickson in 1900 by the Tacoma Eastern Railroad. By 1911, the railroad was carrying more than 100,000 passengers a year between Tacoma and Mount Rainier. In 1912, yard facilities and a change of alignment were constructed at Salcich Junction just southwest of the present day intersection of Canyon Road and 176th Street East. A sawmill was operated near this junction between 1910 and 1920 by Olaf B. Frederickson. It is from this individual that the community’s name is said to be derived. A post office, store, and railway stop were also located at the junction. Several of these buildings still exist. In 1919, the Tacoma Eastern Railroad became owned by the Milwaukee Road.

In 1935 the Columbia Powder Plant was built just east of Salcich Junction. The explosives manufacturing plant was the first industrial operation, other than sawmills, to locate in the area. The plant and its related facilities occupied several hundred acres and produced explosives until its closure in 1976. Bonneville Electric Power transmission lines were constructed to run diagonally across the community in the 1940’s, as was a natural gas pipeline.

In the early 1930’s, the single school in the community became overcrowded due to an influx of people from the Midwest, who were fleeing the dust bowl of that time, forcing the school to convert a playshed at the school into an additional classroom. In 1938, a new colonial style school house was constructed at the site, replacing the prior two-room school house. After the merger of the Clover Creek and Bethel School Districts in 1956, the school was further expanded with the construction of two brick additions and a playshed. The colonial style school was eventually replaced in 1981 with the present day Clover Creek Elementary school building.

Other than the Columbia Powder Plant, Frederickson remained rural throughout this period. There were scattered residents on farms or wooded lots. Timber operations by companies such as Weyerhaeuser or individual timber land owners were carried out in the community. Farming and livestock production continued to be the primary activity in the area. Several large dairies operated along Clover Creek, including the Mayflower, Honey Dew, and Dragonetti dairies. Old barns from these dairies still exist in several locations in the community. The Clover Creek Grange Association was established in March of 1927 and a grange hall was constructed near the Clover Creek School. Farming and dairies continued to be major activities in the area through the 1950’s and early 1960’s. Aerial photographs of the area taken in 1955 show the area to be mostly agricultural fields, pastures, prairies, and forest, with only a few hundred widely scattered homes.
THE 1960’S THROUGH THE 1990’S

Frederickson’s population began to increase dramatically with the beginning of the development of SR 512 in 1956 and its completion in 1972. Other improvements to the transportation system in the community, such as the construction of 176th Street and the extension of Canyon Road, were also made during this time period, allowing for easy commuting to major employment centers in the region making Frederickson a more attractive place to live. Consequently, many individuals began to subdivide large tracts of land in the community for new home sites. It is estimated that over 95% of the approximately 5,000 existing homes within the community have been built since 1970, with almost half of this housing being built since 1990.

Industrial activity within the community has also been significant during this period. Mineral extraction operations have operated in the Frederickson area for many years. Randles Sand and Gravel has been operating since 1969 and continues to be a significant gravel operation in Pierce County. In 1968, the Port of Tacoma purchased about 500 acres of land in the area for industrial development purposes. The Port has maintained a strong presence in the community since this time to the present day and has been directly involved in attracting many new businesses to the area including The Boeing Company, Toray Composites, and Medallion Foods. The Boeing Company’s presence in the area began in 1990 with the construction of its skin and spar facility located at the former Columbia Powder Plant site. This facility contains more than one-million square feet of building and currently employs approximately 1,000 people. Currently dozens of small, medium, and large industrial operations are located within Frederickson. Industrial growth continues to the present day.

Rail service in the Frederickson area ceased for several decades with the bankruptcy of the Milwaukee Road in 1964. The City of Tacoma reestablished rail service to the area in 1998 with the purchases and restoration of the rail lines in the area. Tacoma Rail now provides freight service to several manufacturing operations in Frederickson and will provide limited tourist passenger service to Mount Rainier in the future.

Today the community continues to be characterized by rapid growth and change. The community is currently attempting to address the long-standing central issue of how to manage impacts from rapid growth through planning efforts mandated by the Washington State Growth Management Act. The Frederickson Community Plan is a component of that effort.

PLANNING HISTORY

COUNTY PLANNING

1962 PIERCE COUNTY COMPREHENSIVE PLAN AND ZONING

The first Pierce County Comprehensive Land Use Plan and the Pierce County Zoning Code were adopted in 1962. Zoning districts were established that dictated the appropriate location for
commercial business and residential homes. However, the Plan did not offer much protection from incompatible uses and did not recognize the unique individuality of communities.

### 1980 Parkland-Spanaway Comprehensive [Community] Plan

The Parkland-Spanaway Comprehensive [Community] Plan was adopted by Pierce County in 1980. In addition to the Parkland and Spanaway communities, the plan also included the Midland and North Clover Creek/Collins communities and the northwestern portion of Frederickson. In 1983, the Midland area was removed from the control of the 1980 plan and reverted to the control of the 1962 Pierce County Comprehensive Plan. The 1980 Parkland-Spanaway-Comprehensive [Community] Plan remained in effect as a component of the new Comprehensive Plan, but many aspects of the 1980 plan were not consistent with the new County Comprehensive Plan and consequently were superseded by the new countywide plan and implementing Development Regulations-Zoning that became effective in July 1995.

### 1991 Frederickson Area-Wide Rezone, Ordinance No. 91-57S

A large portion of the community was rezoned from General Use under the 1962 Comprehensive Plan to a variety of suburban residential and manufacturing zones in 1991. Minimum residential lot sizes under this zoning ranged from 8,000 square feet to 12,000 square feet. This zoning remained in effect until the adoption of the Pierce County Comprehensive Plan in 1994.

### 1994 Pierce County Comprehensive Plan

The Growth Management Act (GMA) was passed by the Washington State Legislature in 1990. It required Pierce County to update its existing Comprehensive Plan and Development Regulations, including community plans such as Frederickson’s. The GMA required Pierce County to develop and adopt a comprehensive plan which would control residential, commercial, and industrial growth.

In 1991, Interim Growth Management Policies were adopted as a transition between the 1962 Comprehensive Plan and the new plan required under the Growth Management Act. In 1992, the Pierce County County-Wide Planning Policies were adopted. The policies provided the framework and process by which Pierce County and the cities and towns within the County would establish urban growth areas, provide infrastructure and services, and preserve agricultural and natural resource lands.

COMMUNITY PLANNING

Although the Growth Management Act does not require comprehensive plans to provide for community plans, Pierce County Ordinance 90-47s directed County officials to prepare a community plans element of the Comprehensive Plan. The majority of unincorporated County residents live in community plan areas. Community plans must be consistent with the Comprehensive Plan and the GMA.

The community plans element of the 1994 Pierce County Comprehensive Plan envisions a local voice in how the Comprehensive Plan and its Development Regulations will be carried out in communities. This element provides the flexibility for communities to refine comprehensive plan land use designations and associated densities and make decisions about specific design standards that should apply in community planning areas. Preserving and building community character while ensuring an efficient and predictable development approval process is a central theme in community plans.

SCOPE OF THE COMMUNITY PLAN

LEGISLATIVE AUTHORITY TO DEVELOP THE PLAN

In the community plans element of the 1994 Pierce County Comprehensive Plan, the Frederickson area was identified as a community in need of a community plan. The Pierce County Council directed the Department of Planning and Land Services to begin the preparation of the plan in the fall of 1999 through Resolution No. R99-103s.

A community planning board (CPB) was formed in the spring of 2000. The CPB was tasked with the responsibility of developing the community plan. The CPB consisted of 17 members with a wide-variety of backgrounds representing a variety of interests. The first meeting of the community planning board was held in April of 2000.

PURPOSE AND USE OF THE COMMUNITY PLAN

The Frederickson Community Plan gives the residents, businesses, property owners, and the County a clear, more detailed sense of how the community should develop in the future and what standards could be utilized to control the character of the community. The desired outcomes of the Frederickson Community Plan include:

- Development of a long-range vision for the Frederickson community;
- Evaluate the vision for the Frederickson community in light of the Pierce County Comprehensive Plan and make refinements as necessary to ensure consistency between the overall Countywide plan and the community plan; and
- Identify actions necessary to implement the policies of the community plan, including: adopting or revising land use regulations; identifying priorities for use of public funds to develop physical improvements, such as roads, sidewalks, street landscaping, street lights,
water-related improvements, and park development; social programs; economic programs, etc.

**COMPONENTS OF THE COMMUNITY PLAN**

**VISION STATEMENTS AND POLICIES**

The vision statements and all of the policies (goals, objectives, principles, and standards) were developed through citizen input. When applying the policy statements, each should be afforded equal weight and consideration.

**VISIONING PROCESS AND VISION STATEMENTS**

Visioning is typically completed through a series of public meetings or workshops structured to allow the community to articulate hopes for the future. Statements, thoughts, and ideas brought forth in the visioning process become the basis for the visions, goals, objectives, and principles of the community plan.

A vision is a statement of hope within the best of circumstances. It is placed on the horizon of the future, provides direction, and is a reflection of who and what the community is and what it wants to become.

Vision statements can be either: 1) broad - painting a picture of what the community should strive to be like, physically and socially; or 2) focused – to express how the concerns, values, and hopes of the community should be reflected in various topics.

**GOALS**

Goals describe a desirable future for the community: identifying who, what, why, and how the broad values and hopes set forth in the vision statement will be accomplished. Goals provide the framework from which objectives, policies (principles and standards), and implementing actions and recommendations will be developed.

**OBJECTIVES**

Objectives are statements which specifically define goal actions.

**PRINCIPLES AND STANDARDS**

Principles set a particular course of action to accomplish objectives. Standards, quantitative or qualitative, are specific benchmarks or targets to be accomplished in the ongoing development of the community.

**IMPLEMENTING ACTIONS**

Implementing actions are refinements and changes to policy documents, regulations, capital facility plans, and statements directing agencies and community groups to revise or develop
plans, regulations, programs, and other non-regulatory measures. Implementing actions set forth a direction or mechanism to accomplish vision and policies.

**CONSISTENCY WITH THE PIERCE COUNTY COMPREHENSIVE PLAN**

The goals, objectives, principles, and standards in the Frederickson Community Plan are consistent with the provisions in the Pierce County Comprehensive Plan. Although the community plan proposes to change land use designations within the area, the proposed designations are already defined and policy direction is included in the County Comprehensive Plan. No new land use designations will be added to the Comprehensive Plan. The plan does propose rezoning of certain areas to implement the existing land use designations. The rezoning utilizes existing zone classifications contained with the Pierce County Zoning Code. No new zone classifications are proposed.

**PUBLIC INVOLVEMENT**

Development of the plan incorporated a variety of public involvement strategies including the formation of Community Planning Boards and committees, public workshops and open houses, and various surveys. These public involvement techniques ensure that the plan is developed as a representation of the general will and values of the community.

**COMMUNITY PLANNING BOARD**

The development of the Frederickson Community Plan could not have been accomplished without the CPB. The CPB was appointed in the spring of 2000 and consisted of seventeen members representing a variety of interests and geographic locations of the community.

The CPB was charged with the following responsibilities: 1) serving as a sounding board for the community; 2) developing a vision and goals for the community plan area; 3) guiding the development of policies and map changes that address community concerns while remaining consistent with the Comprehensive Plan; and 4) forwarding a recommended plan to the Pierce County Planning Commission and Pierce County Council.

**OPEN HOUSES**

The Community Planning Board held its first open house in April 25, 2001. The open house was well attended by the community, with over 100 people present. The open house provided an overview of the planning process and provided information on the work completed to date by the Community Planning Board. Open houses showcasing the community planning board’s final recommendations were held in February and March 2003.
These open houses gave the general public the opportunity to review and comment on the draft plan prior to its transmittal to the Pierce County Planning Commission and Pierce County Council. These open houses also provided the Community Planning Board with important community feedback regarding their recommendations.

## Survey

### 2000 Community Survey

In 2000, a survey was distributed throughout the community to solicit input on a variety of issues such as perceived quality of life, adequacy of facilities and services within the plan area, quality of the natural environment, and location and intensity of residential, commercial, and industrial uses.

The survey was conducted between June and October of 2000. The survey was sent to 8,356 households located within and adjacent to the community plan area boundaries. It contained 86 questions broken down into three different categories: Existing Conditions in the Community; Policy Choices for the Community; and Household Characteristics. Within these categories, questions were divided by subject area such as quality of life, the natural environment, transportation, etc. At the end of the survey, respondents were given the opportunity to add their own comments regarding the community or the survey. The results of the survey helped PALS staff and members of the Frederickson Community Planning Board assess community views regarding a variety of issues and were used as an aid in the development of the community plan.

A total of 684 surveys were completed and returned. This equates to a return rate of 8.2%. Statistically, a sufficient number of surveys were returned to obtain an accurate representation of household opinion to within approximately +/- 5 percent.

In regard to current conditions, the survey noted that the areas of greatest concern were traffic, availability of recreational areas, and control of land use. The areas of least concern were the quality and affordability of housing and quality/availability of emergency services.
## SUMMARY OF THE FREDERICKSON COMMUNITY PLAN

The Frederickson Community Plan contains policies and implementing actions for five subject areas or elements: Land Use Element, Community Character and Design Element, Natural Environment Element, Economic Element, and the Facilities and Services Element.

### LAND USE ELEMENT

The Land Use Element addresses the location and intensity of land uses within the communities. A complete description of land use designations and their implementing zone classifications can be found in this element.

### COMMUNITY CHARACTER AND DESIGN ELEMENT

The Community Character and Design Element addresses community character, heritage, and social interaction. This element also contains policies that will guide the design of both commercial and residential development.

### NATURAL ENVIRONMENT ELEMENT

The Natural Environment Element includes consideration of the natural resources found in the area. Policies contained in this element define existing resources and guide future development with consideration of on-site environmental constraints.

### ECONOMIC ELEMENT

The Economic Element analyzes the economy of the area and considers a myriad of opportunities to diversify the economic base. The element also provides guidance on ways the community can maintain a viable economic environment.

### FACILITIES AND SERVICES ELEMENT

The Facilities and Services Element addresses infrastructures and services needed to support the proposed land use growth and development. Infrastructure includes capital facilities such as roads, trails, sewage disposal, parks, and utility lines. The policies within the community plan identify the capital improvements that are necessary to support the plan (sewers, water, sidewalks, etc.) and discuss potential partnerships and sources for funding opportunities.

### PLAN MONITORING

The Plan Monitoring section provides a framework both for monitoring the various actions undertaken to implement the plan and for offering recommendations to make adjustments to the actions in order to better fulfill each of the visions in the plan. This framework provides a
means for measuring the effect of each action, identifies participants and their roles in monitoring the actions, lays out time frames for monitoring, and specifies how the monitoring program should be documented. Information from this program will be used in the next plan update cycle to help identify what changes the community plan may need in order to attain specified goals and meet the visions in the plan.

IMPLEMENTATION

The plan also contains proposed amendments to the Pierce County Comprehensive Plan and Development Regulations which serve to implement various plan policies. These proposed amendments will become effective upon final plan adoption.

VISION STATEMENT

The community realizes that continued growth within Frederickson and the surrounding communities is inevitable. The challenge to the community is not to stop growth, but to control and plan for growth to occur in a manner which will have beneficial impacts on the community. This plan is premised on the idea that through proper management of growth, the community can avoid, minimize, or mitigate many existing and future problems. Responsible growth is the central concept of this plan. The community envisions that as it grows in the future:

- Natural resources, natural environment and ecosystems, and natural processes will be respected, protected, maintained, and where degraded, be restored;
- Adequate public infrastructure and services including, but not limited to, roads, water, sewer, recreation, and schools will be available prior to or concurrent with actual need;
- Neighborhoods will be more livable with new developments being designed in a manner which supports interaction of residents and pedestrian mobility, and existing neighborhoods protected from incompatible or more intense uses;
- Nonmotorized transportation facilities including sidewalks, pathways, and trails will be planned and systematically developed within the community so that in the future residents can travel to schools, parks, commercial areas, and other destinations safely without relying upon the automobile;
- Commercial and industrial development will be well designed and will respect the character of residential areas, and new residential developments will be designed and located in a manner that does not unduly restrict the use of adjacent industrially and commercially designated properties; and,
- A diverse, healthy, and sustainable economic center for the community and Pierce County will be developed.

The ideals set forth above are of paramount importance to the community. The community is also sensitive to the rights of the landowner. The impact of the community plan on these rights must be carefully considered to ensure landowners will not be deprived of the reasonable use of their land.
Achievement of the goals of the plan will help ensure that a high quality living environment exists in the community. To strive for anything less would deprive current and future generations of the abundant benefits associated with a healthy natural environment, quality schools, roads, and parks, livable neighborhoods, sustainable commercial and industrial development, and a healthy local economy.
Chapter 2: Land Use Element

INTRODUCTION

The Land Use element of the Frederickson Community Plan provides direction regarding the location and intensity of land uses. This element is intended to supplement and further refine the Land Use element of the Pierce County Comprehensive Plan. Where the community plan provides specific guidance regarding land uses, the policy language of this plan will govern. Where the community plan does not provide specific guidance, the reader is directed to utilize the land use objectives, principles, and standards of the Pierce County Comprehensive Plan.

The Land Use element addresses the location and intensity of commercial, industrial, residential, and civic land uses. The element contains two main components: visions, objectives, principles, and standards that provide policy direction and guidance; and, regulatory and non-regulatory implementation actions to carry forth the policy direction.

DESCRIPTION OF CURRENT CONDITIONS

Frederickson is a community characterized by change. In the last 30 years, the community has been transformed from a quiet rural community containing farms and large tracts of undeveloped land to a busy suburban community of many homes and businesses. During this time period, the number of people in the community has increased dramatically, growing from less than 1,000 people in the late 1950s to over 14,000 people by 2002. Today, nearly 5,000 homes exist within the community and more are being constructed every day. More than 95% of these homes have been built since 1970, with nearly half of the homes being built in the last ten years. Under the 1994 Pierce County Comprehensive Plan, more than 60% of the community is zoned for residential use at densities of 2 to 6 dwelling units per acre.

Retail uses within the community are currently very limited consisting of a small complex of retail buildings, including a grocery store, near the intersection of 160th Street East and Canyon Road and a few scattered commercial and retail business in other areas of the community. Residents travel to the adjacent communities of South Hill and Spanaway to meet many of their retail and service needs. Less than 5% of the community is currently zoned for commercial retail and service use. There is, however, considerable undeveloped commercial zoned land just north of the community along Canyon Road.

Industrial development within the community has been significant over the past few decades, with most of this development occurring since 1980. During this time industrial activity has shifted from resource based activities such as surface mining and lumber manufacturing, to
manufacturing and processing facilities of various types and sizes. As of 2003, nearly three million square feet of commercial and industrial buildings exist within the Employment Center. The Boeing Company owns over one million square feet of these buildings. Other large manufacturing operations include Toray Composites, Medallion Foods, and Hardie Board. A wide range of goods are currently produced including aircraft components, carbon composites, construction materials, packaged foods, musical instruments, and fireworks. More recently, Frederickson experienced a loss of one of the larger lumber manufacturers in Pierce County, Spanaway Lumber Company. Despite this industrial loss, Frederickson has been more attractive to smaller scale manufactures, with several such companies locating in the area in the past few years. In addition to manufacturing, surface mining continues to be a major activity within the Employment Center. The Employment Center occupies more than 35% of the total land area within the community.

While there has been much development activity within the community in the past few decades, there remains capacity for much more to occur. The Pierce County Buildable Lands Report estimates that 2,574 acres of vacant land and 3,061 acres of underdeveloped and redevelopable land exist within the community. Based upon information contained in the report, it is estimated that this land has the capacity to accommodate approximately 5,700 more new homes in the residentially zoned areas of the community and 22,000 new jobs in the Employment Center. Planning for this future growth is one of the principle purposes of the community plan.

The following information provides more detail regarding the existing land development patterns, population, and housing within the Frederickson community.

**Existing Land Uses**

The Pierce County Assessor-Treasurer’s Office classifies how parcels are used for purposes of calculating assessed value for taxation. The Pierce County Planning and Land Services Department routinely uses this information to determine distribution of land uses within specific areas. The Assessor’s information is known to periodically contain errors, but is considered accurate for planning purposes. The Assessor’s information reflects only how land is currently being used and does not reflect zoning.

The following table summarizes the current uses of land within Frederickson based upon Assessor information:
Table D-1: Existing Land Uses

</tbody>
</table>

As shown in the table, the two prevailing categories of land use in the plan area are residential (43.8%) and vacant (22.7%). Together these two use categories account for 66.5% of total acreage in the community. The dominant land use type is single-family residential (42.6%, including mobile homes). The next most extensive land use types are: roads and rights of way (7.9%), resource lands (7.2%), and industrial (5.7%). Undefined/other lands account for 58% of the community. The physical distribution of land uses is shown on Map D-2: Historic Assessed Land Uses.

As previously noted, the prevailing land use within Frederickson is residential. Residential uses are distributed throughout the community with the greatest concentrations of housing occurring in the southeastern and northwestern portions of the community. Residential lot sizes in the community vary from small, densely suburban lots to larger estate-type lots. Smaller lot sizes are dominant within subdivisions in the northwestern and southeastern portions of the plan area. Larger lot sizes are commonly located on environmentally constrained lands such as steep slopes or wetlands and areas where sewer service historically was not available. Large lots are found along Clover Creek and in the northeastern and southwestern portion of the plan area. The largest lot sizes are found within the Employment
Multifamily housing in the community is very limited and consists of a few scattered duplex, triplex, and fourplex developments.

**Current Comprehensive Plan Designations and Zoning Classifications**

The 1994 Pierce County Comprehensive Plan, as amended, establishes four different land use designations within Frederickson. These land use designations are Moderate Density Single Family (MSF), High Density Residential District (HRD), Employment Center (EC), and Mixed Use District (MUD). These land use designations indicate the type, intensity, and density of land uses authorized by the Comprehensive Plan.

The MSF and HRD designations are residential in nature, the EC designation is industrial and office, while the MUD designation is auto-oriented commercial that also allows residential uses. These land use designations are implemented on a parcel specific basis through zoning. The land use designations do not necessarily reflect the current use of land. For example, property used for auto-oriented commercial purposes could be designated EC, an industrial use designation.

The following table summarizes the land use designations in terms of acreage:

Land use designations are shown on Map D-3: Historic Land Use Designations.

**Moderate Density Single-Family**

The Moderate Density Single-Family (MSF) land use designation/zone classification is intended to provide areas for urban single-family and two-family residential development at densities of 2-6 dwelling units per acre. The MSF designation is the predominant designation in Frederickson. Approximately 61% of Frederickson (4,881 acres) is designated as MSF.

**High Density Residential District**

The High Density Residential District (HRD) designation is intended to provide areas of multifamily and high density single-family housing along with limited neighborhood commercial retail and service uses. Allowed residential densities in the HRD range from 6 to 25 dwelling units per acre. There is one area designated HRD located in the vicinity of 176th Street East and 78th Avenue East. This designation accounts for less than 3% of the community and contains 205 acres.
**Mixed Use District**

The Mixed Use District (MUD) designation provides for auto-oriented commercial and land intensive commercial uses along major arterials, state highways, and major transit routes. Commercial activity in MUDs serves a customer base beyond the surrounding neighborhoods or community. The MUD designation is typically located along a roadway used by residents of more than one community or serving a region. The MUD designation also allows for multifamily residential uses. The MUD designation accounts for approximately 83 acres of land, totaling approximately 1.0% of the community.

**Employment Center**

The Employment Center (EC) designation provides land for industrial, manufacturing, and office jobs. Uses in the EC range from land intensive heavy industrial, (e.g., manufacturing, product assembly, fabrication and processing, and heavy trucking uses) to light manufacturing, assembly, and wholesale activities, to corporate office and office park development. Commercial uses subordinate to and supportive of employment uses are also permitted. The EC designation is the second most prevalent land use designation in the community, totaling 2,834 acre and over 35% of the community’s total area.

**Description of Desired Conditions**

One of the most significant issues addressed within the community plan process is land use. How land is utilized within a community directly affects the community's character and the quality of life perceived by its residents. The utilization of land also directly influences many other planning considerations, including but not limited to transportation system planning, provision of water and sewer infrastructure, and protection of the natural environment. In regard to land use, members of the Frederickson Community Planning Board have reviewed the Pierce County Comprehensive Plan in light of the existing conditions present in the plan area. This review has identified a series of modifications that should be made to the Pierce County Comprehensive Plan in order to assure that this plan accurately reflects the needs and desires of the community. These modifications include changes to the land use designations and zoning classifications within the plan area and the adoption of a series of new land use related policies.

**Proposed Designations and Zoning Classifications**

The community plan retains the range of land use designations that apply within the plan area. Four land use designations are proposed. These designations are: Moderate Density Single-
Family, High Density Residential District, Employment Center, and Mixed Use District. The zoning used to implement these designations, however, is proposed for modification.

The range of zoning classifications would be expanded from the current four zones to nine zones under the community plan. New zones that would be introduced to the area include Single Family (SF), Residential Resource (RR), Residential-Office-Civic (ROC), Moderate High Density Residential (MHR), Community Employment (CE), and Employment Service (ES). The new zones are proposed in order to more closely manage the location, type, and intensity of land uses that occur within certain areas of the community. The proposed modifications are discussed in detail below:

**Moderate Density Single-Family Designation**

The community plan retains the Moderate Density Single-Family (MSF) designation as the dominant land use type for Frederickson. This designation is the same as the general Pierce County designation and allows for single-family or two-family dwellings. Multifamily housing is also permitted on a limited basis. Commercial and industrial uses are prohibited. Specific densities are based on physical constraints and the availability of urban services such as sewers. The designation generally allows 2 to 6 dwelling units per acre. The land area to which this designation applies would slightly increase from that which is designated under the 1994 Pierce County Comprehensive Plan. Under the Pierce County Comprehensive Plan, 4,881 acres are designated MSF. MSF acreage would be increased to 5,097 acres under the community plan.

**Proposed Zoning**

The Moderate Density Single-Family plan designation will be implemented by three zoning classifications: Moderate Density Single-Family (MSF), Single Family (SF), and Residential Resource (RR).

The MSF zone that is proposed by the community plan is generally the same as Pierce County’s current MSF zone classification. The zone provides for a wide variety of housing choices based largely upon the market place. The primary land use allowed is low to moderate one- and two-family housing and compatible civic uses such as churches or schools. The minimum density for the zone (two dwelling units per acre) and the maximum density for the zone (six units per acre) remain unchanged. The total amount of area zoned MSF would be approximately 15% less than that which is zoned MSF under the Comprehensive Plan, a total reduction of 713 acres. The reduction would be the result of rezoning parcels along Clover Creek to RR, parcels at the intersection of Old Military Road and Canyon Road East to MUD, and rezoning of parcels in the upper drainage basin of Clover Creek to SF.

The second zone used to implement the MSF designation is the Single Family (SF) zone. The zone is intended to provide residential areas that are less dense and more homogenous than those developed under the MSF zone. The primary land use allowed within this classification is moderate density single family and compatible civic uses. Single-family detached housing is the primary housing type that is permitted. Duplexes and other multiple family housing types are prohibited. The SF zone permits a density of four dwelling units per acre. The zone is applied in the upper drainage basin of Clover Creek as a means of reducing impacts to the creek while
continuing to allow urban density residential development. Approximately 372 acres are proposed to be zoned SF.

The third zone used to implement the MSF designation is the Residential Resource (RR) zone. The zone is intended to provide for lower residential densities, increased open space, and reduced impervious surfaces along Clover Creek and its associated wetlands and floodplains in order to better protect this high priority resource. The zone classification is the least intensive of Pierce County’s urban zones, permitting a density of one to three dwelling units per acre. The RR zone is currently used by Pierce County in the adjacent communities of Parkland, Midland, and Spanaway to provide higher levels of protection to Clover Creek and other high priority resources in those communities. The RR zone in Frederickson is simply a continuation of this zoning. Approximately 7% (557 acres) of the Frederickson plan area would be zoned RR.

**Employment Center Designation**

The Employment Center designation is the second most prevalent land use designation within Frederickson. The Employment Center (EC) designation provides land for industrial, manufacturing, and office jobs. Uses in the EC range from land intensive heavy industrial (e.g., manufacturing, product assembly, fabrication and processing, and heavy trucking uses) to light manufacturing, assembly, wholesale activities, and corporate office and office park development. Commercial uses subordinate to and supportive of employment uses are also permitted. Under the Pierce County Comprehensive Plan, 2,834 acres of land within Frederickson are designated EC. The community plan would reduce this area to 2,629 acres. The community plan proposes the elimination of EC zoned lands in two locations within the community. The first location is an “island” of EC located west of Canyon Road between Military Road East and 176th Street East. The area contains approximately 157 acres of land and is mostly vacant. Clover Creek passes through the area and a substantial portion of the properties are encumbered by floodplain and wetland. Access to the properties is limited due to the presence of the creek and the lack of access from 176th Street East. The area is proposed for rezoning to RR and MSF. The second location where EC will be eliminated is the area east of the Tacoma Sportsman Club between 66th Avenue East and 70th Avenue East. The area contains approximately 80 acres consisting of single-family homes and vacant parcels. Clover Creek also passes through the area and a substantial portion of the properties are also encumbered by floodplain and wetland. Access to properties in the area is poor, primarily consisting of private easements through a variety of residential developments. The area is proposed for rezoning to RR. In total, the proposed EC reductions equal approximately 211 acres or 9 percent of the existing EC designated area within the community.

**Proposed Zoning**

The EC designation would continue to apply to approximately 2,623 acres of land within the community. The EC designation would be implemented by three zone classifications: Employment Center (EC), Community Employment (CE) and Employment Service (ES).

The EC zone is the most intensive industrial zone classification and would be applied to the core of the Employment Center - principally those lands south of 176th Street East. The range of
uses in the EC zone would be expanded slightly from that currently permitted in order to allow for the addition of certain office uses. All commercial retail and service uses, however, would be prohibited. The community plan zones approximately 2,246 acres as EC.

The CE is a light industrial zone and would be applied north of 176th Street East. The CE zone differs from the EC zone in that certain heavy industrial uses, such as basic manufacturing and hazardous materials storage and processing are not permitted. Impervious surfaces are limited to not more that 70% of site coverage within open space corridors. The CE zone serves to provide greater protection of Clover Creek and associated floodplains and wetlands and as a transitional zone to residential and commercial areas. Commercial retail and service uses would be prohibited. The community plan zones approximately 308 acres as CE.

The ES zone is a new zone for Frederickson and Pierce County. This zone focuses on providing those goods and services needed on a daily basis by workers within the Employment Center in a well-defined location. Certain light industrial uses are also permitted. This zone would be applied at the intersection of 176th Street East and Canyon Road East. Approximately 74 acres are zoned ES under the community plan.

**High Density Residential District Designation**

The High Density Residential District (HRD) designation will continue to apply within the community as it currently does today, but will be expanded to include property along 176th Street East between the 3900 and 4200 blocks. Properties north of 176th Street East and west of 78th Street East will be eliminated from the HRD designation. The HRD is to be developed as multifamily and high-density single-family attached with very limited commercial uses.

**Proposed Zoning**

The High Density Residential District plan designation will be implemented by two zone classifications: Moderate-High Density Residential (MHR) and Residential/Office-Civic (ROC). No areas would retain the current HRD zoning.

The MHR zone is a new zone classification for Frederickson. It differs from Pierce County’s HRD zone in that it does not allow for commercial uses and permits a slightly different range of residential densities. The MHR zone permits high-density single-family attached and multifamily housing and compatible civic uses. The residential density for this zone generally ranges from 12 to 18 dwelling units per acre. Areas zoned MHR are located in the vicinity of the intersection of 176th Street East and 78th Avenue East.

The ROC zone is also a new zone for Frederickson. The ROC zone differs from the MHR zone in that it permits a variety of office, civic, and small-scale retail and service uses. Single-family attached and multifamily housing are permitted at a density range of 12 to 18 units per acre.
Areas zoned ROC are located at the intersection of 176th Street East and 78th Avenue East and along 176th Street East between the 3900 and 4200 blocks.

**Mixed Use District Designation**

The primary role of the Mixed Use District is to serve auto-oriented commercial activities. Mixed Use Districts have a loosely defined sense of place, are auto-oriented, and are generally moderate to high intensity of uses. Mixed Use Districts are areas of mixed commercial retail, service, and office uses where single trip, auto-oriented, and auto-dependent businesses dominate. Mixed Use Districts are characterized by individual businesses on separate lots with separate access and parking lots. Commercial activity in Mixed Use Districts caters to a customer base beyond the surrounding neighborhoods or community due to its placement on a roadway used by residents of more than one community.

**Proposed Zoning**

The Mixed Use District plan designation will continue to be implemented by the Mixed Use District (MUD) zone classification. Currently MUD zoning exists at the intersection of 160th Avenue East and Canyon Road East, the intersection of Military Road East and Canyon Road East, and along 176th Street East between 46th Avenue East and the rail line. MUD zoning will continue to apply to the intersection of 160th and Canyon, however, the total acreage of MUD will be reduced by approximately 20 acres to better reflect existing industrial use of land in that area. MUD zoning at the intersection of Military Road East and Canyon Road East will be expanded to include approximately eight acres of land south of Military Road. MUD zoning along 176th Street East will not be altered.

The following tables and maps illustrate the changes in land use designations and zone classifications contained within the community plan.

**Table D-3: Proposed Land Use Designations**

**Dwelling Unit Capacity**

Under the Growth Management Act, Pierce County is required to plan for a density of at least four dwelling units per net acre within its urban growth areas. The community plan seeks to ensure that overall housing capacity of Frederickson in not diminished as a result of the zone changes implemented in the community in order that future population growth can be accommodated in an efficient manner.

Under current zoning, it is estimated that a total of 3,514.5 acres of vacant and underdeveloped land is currently available for residential use. After removing acreage that is environmentally constrained and accounting for nonresidential uses (such as churches and schools), roads, capital facilities, and market factors, these lands have the capacity to accommodate approximately 6,505 dwelling units based upon the housing densities allowed in each zone. It is estimated that 14,311 persons could be accommodated within this housing. The associated housing density of this residential growth would be approximately 4.3 dwelling units per net acre.

In contrast, under the community plan, it is estimated that a total of 3,653.4 acres of vacant and underdeveloped land is currently available for residential use. After making the same deductions for environmentally constrained areas and accounting for nonresidential uses (such as churches and schools), roads, and market factors, the community plan increases the housing capacity of the community slightly due to an increase in the number of acres zoned for residential use and a decrease in acreage zoned for industrial use. Under proposed zoning, the community has the capacity for approximately 6,655 dwelling units, 150 more units than that provided under current zoning. It is estimated that 14,641 persons could be accommodated by this housing, approximately 330 more persons than under current zoning. The associated housing density of new residential growth would equate to 4.14 dwelling units per net acre.
A breakdown of vacant and underdeveloped lands under current zoning and the community plan follows:

### Table D-5: Inventory of Vacant and Underdeveloped Lands Available for Residential Use

<table>
<thead>
<tr>

</tbody>
</table>

Net acreage reflects land available for development after deductions have been made for wetlands and other critical areas, roads, non-residential uses such as churches and schools, capital facilities, and real estate market factors. Vacant parcels less than 1/2 acre in size are also excluded.

Accordingly, the community plan further increases the residential capacity of the area slightly, and continues to provide for average residential densities in excess of four dwelling units per net acre, satisfying the population and urban density requirements of the Growth Management Act.

As noted above, the community plan increases overall dwelling unit capacity in the community by 702 dwelling units and increases buildout density to 4.60 units per acre. This enables approximately 1,334 more people to be accommodated within the community at full buildout. The majority of this population (83%) would be accommodated in single-family homes at low to moderate densities within the RR and MSF zones. The remaining population would be accommodated at high densities within the ROC, MUD, and MHR zones.
**LAND USE POLICIES**

**GOALS**

In the Frederickson Community the principle goal of the plan is to foster a predominantly residential community that balances environmentally sensitive areas, high traffic corridors, desired open space, and job creation while maintaining a quality living environment. The predominant housing type within the community will be moderate density single-family housing. Limited areas of multifamily housing will be provided along major traffic corridors near commercially zoned lands. Low density housing will be located along Clover Creek to minimize development impacts to this high value natural system. A commercial center will develop at the intersection of 176th Street East and Canyon Road. This center will help to provide a greater sense of identity to the community through quality site planning and building design. This center will meet the daily needs of the growing workforce employed within the Employment Center. Continued growth and development within the Frederickson Employment Center will be actively encouraged by ensuring that necessary infrastructure is available and by promoting an efficient and predictable regulatory environment.

**GENERAL**

**GOAL FR LU-1** Promote the continued development of the Frederickson Employment Center by emphasizing a regulatory environment that is supportive of the establishment of new businesses and the expansion of existing businesses.

**FR LU-1.1** Promote a system of land use control that meets future growth needs in a predictable and efficient manner.

**FR LU-1.1.1** Provide sufficient residential and commercial land capacity within the community to meet the needs of the community for the next 20 years.

**FR LU-1.1.2** Ensure that the residential densities and land area provided for each of the various zone classifications within the community enable a residential density of at least 4 dwelling units per net acre to be achieved as the community is developed.

**FR LU-1.1.3** Regularly monitor and evaluate growth trends within the community to determine if planned densities are being achieved. In the event monitoring indicates that planned densities are not being achieved, Pierce County shall develop recommendations to address the situation and shall present such recommendations for consideration during the next community plan update.

**GOAL FR LU-2** Support the continued existence of the Rural Separator north of Frederickson.

**FR LU-2.1** Recognize the benefits the Employment Center and the overall Frederickson community derive from the presence of the Rural Separator.
In the event any changes to allowed uses, density, or zoning within the Mid-County area are contemplated, Pierce County should analyze the impacts of such changes on future traffic volumes and operating conditions of Canyon Road and 176th Street East.

The Rural Separator provides a desirable buffer between the Urban Growth Areas for Pierce County and the cities of Tacoma, Fife, and Puyallup. The presence of this buffer helps to create more defined urban areas, improved community identity, and valuable open space benefits. The important public benefits the Rural Separator provides, as discussed above, should be considered and analyzed as a component of any proposal to study or modify the Rural Separator.

Provide strict guidance for rezones to ensure community plan goals and objectives are properly implemented.

The proposed zone must be an allowed zone under the existing land use designation.

Changes in land use designation are not permitted through the rezone process.

Ensure commercial and industrial rezone applications are consistent with the goals, objectives, and standards set forth in the Frederickson Community Plan.

Commercial and industrial rezones shall be allowed only when the following criteria are met:

A Planned Development District (PDD) application shall accompany all rezone applications;

An analysis of market vacancy has demonstrated there is a need for the commercial or industrial use type within the Frederickson Community Plan area. The analysis must consider the availability of vacant commercial or industrial buildings and land for the same type of use and shall demonstrate why the rezone is necessary. The analysis shall not be an analysis of market potential; and

The Examiner shall provide written findings that the proposed zone and PDD implement the goals, objectives, and standards of the designation better than the existing zone.

Ensure that changes in land use designations, zoning, and development standards within the community do not adversely affect the viability of the Employment Center.

Utilize the industrial land location criteria set forth in the Pierce County Comprehensive Plan when evaluating Employment Center zoned lands for possible rezoning.
FR LU-4.1.1 Evaluate the benefits of any proposed change in land use designations, zoning, or development standards within or adjacent to the Employment Center against the impacts to businesses within the center.

GOAL FR LU-5 Provide an orderly transition from the Employment Center to residentially zoned properties and environmentally sensitive areas.

FR LU-5.1 Review the zoning atlas and recommend changes to create logical boundaries and transitions from the Employment Center to residentially zoned properties and environmentally sensitive areas.

FR LU-5.1.1 Use ownership patterns, roadways, topography, lot size, and environmental features to establish logical boundaries to the Employment Center.

FR LU-5.1.2 Zone areas within the Employment Center designation along Clover Creek as Community Employment (CE).

FR LU-5.1.3 Limit development within the CE zone to light industrial and office uses only. Mineral extraction, salvage yards, and similar heavy industrial uses should be prohibited.

FR LU-5.2 Establish a transition area between the Employment Center and residential zones.

FR LU-5.2.1 Limit heights and uses within the transition area or provide some other means of promoting greater compatibility with residentially zoned parcels.

FR LU-5.2.2 All developments on the periphery of the industrial area shall be designed, screened, or bermed to mitigate undesirable impacts upon surrounding residential areas.

GOAL FR LU-6 Create a well-defined commercial and civic service area within the Employment Center that will meet the daily goods and service needs of the employees of the center and local residents.

FR LU-6.1 Designate identified properties around the intersection of 176th Street East and Canyon Road East as Employment Service.

FR LU-6.1.1 The Employment Service zone shall be considered a light industrial zone and shall be permitted only under the Employment Center land use designation.

FR LU-6.1.2 The boundaries and size of the area zoned as Employment Service shall be based upon the employment capacity of the Employment Center, land ownership patterns, and natural and built environment features.

FR LU-6.1.3 The Employment Service area shall not exceed 95 acres in size.

FR LU-6.1.4 Limiting the size of the Employment Service area is necessary to avoid the risk of traffic congestion associated with retail development in the Central Place. Therefore, rezones or other subsequent expansions of the Employment Service zone at Canyon Road and 176th Street are prohibited.

FR LU-6.1.5 The Employment Service area shall permit a range of light industrial, office, retail, service, utility, and civic uses.
FR LU-6.1.6  Residential uses shall be prohibited within the Employment Service zone.

FR LU-6.1.7  For purposes of Chapter 8.76 of the Pierce County Code, the Employment Service zone should be assigned a Class C Environmental Designation for Noise Abatement.

FR LU-6.1.8  High quality site and building design shall be required within the Employment Service zone.

FR LU-6.1.8.1  Design standards shall seek to create a well-defined sense of place, ensure compatibility with adjacent uses, provide ample landscaping, facilitate pedestrian movement, and limit the number of vehicular access points onto Canyon Road East and 176th Street East.

COMMERCIAL

GOAL FR LU-7  Provide well-designed, appropriately scaled retail and service development at limited locations in the community.

FR LU-7.1  Retail and service development within the plan area should be scaled to meet neighborhood and community needs. Anchor tenants between 75,000 and 170,000 square feet may be authorized in the Central Place subject to Council approval of a Project Specific Development Agreement. Individual buildings or tenants shall not exceed 170,000 square feet in the Employment Service zone.

FR LU-7.2  Strive for the development of well-designed, well-placed neighborhood and community-scale commercial development within the plan area.

FR LU-7.2.1  Retail and service uses should primarily meet the needs of the Frederickson community.

FR LU-7.2.1.1  The type and intensity of retail uses within the Employment Center shall be consistent with the Frederickson Community Plan. Anchor tenants between 75,000 and 170,000 square feet may be authorized in the Central Place subject to Council approval of a Project Specific Development Agreement pursuant to RCW 36.70B.170 and Pierce County Code 18A.100. Individual buildings or tenants shall not exceed 170,000 square feet in the Employment Service zone.

FR LU-7.2.1.2  A Project Specific Development Agreement submitted for Council consideration shall include a detailed site plan with identification of specific uses and activities. The level of detail shall be such that the County can determine the appropriate level of mitigation related to, but not limited to, transportation, stormwater and critical areas.
Before Council approval of a Development Agreement authorizing retail buildings larger than 75,000 square feet, project proponents shall be required to demonstrate to the satisfaction of the County Engineer that traffic impacts will be mitigated resulting in no adverse impacts on freight movement within the 176th Street E corridor and Canyon Road E corridor. The burden of mitigating cumulative traffic impacts shall not fall on future industrial development within the Frederickson Manufacturing/Industrial Center.

Commercially zoned areas should be compact in size and should be located at prominent intersections within the community.

Require all commercial developments to meet architectural and site design standards.

Landscaping of commercial sites should be required, particularly along public roads and within parking areas.

Control the location, scale, and range of commercial uses within the community in a manner as appropriate to accomplish the objectives of the community plan.

Allow for the continued existence of a limited mixed use commercial area at the intersection of Military Road East and Canyon Road East. This area should not exceed 15 acres in size.

Limit additional commercial development along 176th Street east and west of the planned commercial center at 176th Street East and Canyon Road.

Encourage the communities of Summit View and North Clover Creek Collins to carefully control and limit commercial development along Canyon Road to maximize the efficiency of this roadway as a major north-south arterial and to prevent the development of a continuous commercial strip into the Frederickson community.

Implement compatibility requirements to minimize the impact of commercial activities on adjacent residential uses.

Require intensive screening and buffering of commercial uses adjacent to residential areas.

Residential density should vary based upon characteristics of the built and natural environment.

Areas of the community with no significant environmental constraints or compatibility issues should be zoned as Moderate Density Single-Family (MSF) and should be developed generally at densities of 2 to 6 dwelling units per acre.
Properties along the Clover Creek corridor should be zoned Residential Resource (RR) reflecting the more environmentally sensitive nature of these lands.

These properties should be developed generally at densities of 1 to 3 dwelling units per acre.

Properties in the upper drainage basin of Clover Creek should be zoned Single-Family (SF) reflecting the environmental characteristics of these lands and proximity to Clover Creek.

These properties should develop generally at a density of 4 dwelling units per acre.

Limited areas for high density single- and multifamily development should be designated near the intersections of 78th Avenue/176th Street East and 40th Avenue/176th Street East, reflecting proximity to major transportation routes and commercial centers.

These areas should be zoned as Moderate-High Density Residential (MHR) or Residential/Office-Civic (ROC).

Density in these areas should range generally from 12 to 18 dwelling units per acre.

Lots of record within the Employment Center (EC) having an area of 2 acres or less created for the purpose of single-family residential use and recorded prior to January 1, 1995 should be allowed to accommodate one single-family unit per parcel.

Accessory dwelling units should not be permitted.

Design standards should be applied to reduce compatibility issues with existing or future industrial uses within the Employment Center.

Existing or future industrial uses should not be construed as a public nuisance to residential uses.

Efforts should be taken to ensure consistency/compatibility with residually zoned lands immediately adjacent to the community plan area.

The SF zone should primarily be developed with detached single-family housing and compatible civic uses. Multifamily housing should be prohibited.

GOAL FR LU-9
Develop special overlay standards to protect special interest areas from incompatible uses.

FR LU-9.1
Utilize airport overlays within the plan area to protect the public’s health, safety, and welfare and to address incompatible uses with airport operations.
FR LU-9.2 Establish an Airport Overlay-Small Airport designation in the vicinity of Shady Acres Airport.

FR LU-9.3 Apply Airport Overlay-Small Airport regulations to the portion of the plan area identified as Airport Overlay-Small Airport in the vicinity of Shady Acres Airport.

**IMPLEMENTING ACTIONS**

The following list of actions needs to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 2-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Frederickson Advisory Commission (FAC), Pierce County Planning and Land Services (PALS), Pierce County Economic Development (ED), Pierce County Parks and Recreations (Parks), Pierce County Public Works (PW), and Tacoma-Pierce County Health Department (TPCHD).

**SHORT TERM ACTIONS**

1. Amend Title 18A-Zoning according to Land Use policies. (PALS, CPB)
   - Create a light industrial and office use zone (Community Employment).
   - Create a well-defined commercial and civic service zone (Employment Service) within the Employment Center designation to meet the daily goods and service needs of the Frederickson residents and businesses rather than regional needs.
   - Provide for a range of housing types and densities.

2. Ensure the viability of the Employment Center (EC) through: (PALS, CPB)
   - Land use designations, zoning, and development regulations;
   - Maintaining the land area devoted to EC uses;
   - Providing a transition between EC land and residential or environmentally sensitive areas;
   - Creating standards to promote compatibility with surrounding uses; and
   - Limiting the acreage of the Employment Service area.

3. Provide retail and service areas in limited locations in the community. Retail and service areas shall: (PALS, CPB)
   - Be appropriately scaled to meet community needs rather than regional needs;
   - Meet architectural and site design standards;
   - Minimize driveway access onto major roads;
   - Be controlled by the location, scale, and range of commercial uses allowed;
   - Be limited to identified location areas in the community; and
   - Use standards to promote compatibility with surrounding uses.

4. Provide for a range of housing types and densities within the community. (PALS, CPB)
• Areas with no significant environmental constraints should be zoned Moderate Density Single Family. Densities should be 2 to 6 units per acre.
• Areas within the Clover Creek corridor should be zoned Residential Resource to reflect the environmentally sensitive nature of these lands. Densities should be 1 to 3 units per acre.
• Certain intersections in proximity to major transportation routes and commercial centers should be zoned Moderate-High Density Residential or Residential Office Civic. Densities should range from 12-18 units per acre.

5. Amend Title 18A to clarify that changes in land use designation are not allowed through a rezone application and to require that rezone applications include a PDD, an analysis of market vacancy and a demonstration of need for the rezone. In the case of a rezone in the Employment Center designation, the industrial land location criteria set forth in the Pierce County Comprehensive Plan shall be used. (PALS)

**Mid-Term Actions**

1. Update Chapter 8.76 of the Pierce County Code to be consistent with the designations identified in the Comprehensive Plan and the Frederickson Community Plan. (TPCHD)
2. Develop and implement incentive based regulations by incorporating a minimum, base, and maximum density for each zone. Developments exceeding base density shall have to meet additional criteria to exceed the base density. (PALS, CPB)
3. Develop a regulatory framework to allow higher densities in compensation for a developer’s voluntary investment in public infrastructure and services. (PALS)

**Long Term Actions**

1. Complete a monitoring report to evaluate growth trends to determine if planned densities are being achieved and urban levels of facilities and services are provided. (PALS)
2. Complete a monitoring report to evaluate the effectiveness of regulations and incentives. (PALS)
*Note: The legend shows only the land use designations within the Frederickson Community Plan Area. The areas outside this plan area are masked within the map display.

Frederickson Community Plan
Chapter 3: Community Character and Design Element

INTRODUCTION

Community design deals with the physical elements that compose the character of our communities: the streets, parks, buildings, open space, and neighborhoods that determine the way our communities look and feel. It is a blending of land use planning, architecture, landscape architecture, and environmental protection. Community design looks at the way in which buildings, streets, public places, natural features, and other development relate to one another and the people who use them. Through community design, individual improvements, such as street construction, park development, land use regulation and new commercial, industrial, residential and civic development can be effectively coordinated with each other to promote a unified community image.

The way in which people experience their communities and interact with one another is determined, in large measure, by a community’s design. Designs that emphasize community are those that invite human presence and allow for interaction of people. Where design is not a consideration, land use planning and regulation often fail to recognize the functional and visual links between developments. Poorly designed development tends to hinder the development of desired land uses.

While the regulation of appearance and design is often a basic component of urban regulatory systems, it is also one of controversy. Many people feel that such regulation is inherently subjective and hence inappropriate for government. However, design regulation is not only capable of making a substantial difference in the character of a community and its quality of life, but it also plays an important role in how the community perceives itself and how it is perceived by outside visitors.

The Community Character and Design Element is a new addition to the set of documents comprising the Pierce County Comprehensive Plan. The need for a community plan element articulating the desired appearance and character of individual communities is inferred through policies in the 1994 Pierce County Comprehensive Plan and is stressed through public input gathered through the Frederickson and other community planning efforts.

The Community Character and Design Element is an integral part of the entire growth management planning process for Frederickson. Design directly affects land use patterns,
transportation planning and community and neighborhood livability, and overall quality of life. The design policies are intended to establish and reinforce a visual character for Frederickson.

The Community Character and Design Element is affected by the Land Use Element which develops policy direction for urban form and, in turn, affects the Land Use Element by providing guidelines for how the urban form can be achieved and critical areas can be integrated into future projects. The design direction found in the Community Character and Design Element is also closely linked with and provides support for policy direction in the Economic Development, Natural Environment, and Facilities and Services elements of the community plan.

**Description of Current Conditions**

Historically, Frederickson has been defined by its rural and agricultural characteristics. As recently as the late 1950s and early 1960s, only a few hundred homes existed in the community. Up until this time, the community was characterized by its low density, agricultural uses, prairies, and forests. Much of this character has been lost, however, in the face of rapid growth.

Over the past three decades, the number of homes in the community has swelled to nearly 5,000. Population has increased from less than 1,000 people in the early 1960s to more than 14,000 people today. During this time considerable industrial growth has also occurred in the community. Retail and service development within Frederickson, however, is very limited and there is no defined commercial/civic core within the community. Residents typically travel to adjacent communities to meet their shopping needs.

Today, the most defining characteristic people associate with Frederickson is the Employment Center and the Boeing Company’s manufacturing plant located there. This association is very appropriate given that almost 40% of the community is devoted to industrial uses. Aside from the industrial area, Frederickson is essentially a bedroom community, mostly comprised of newer subdivisions built within the past 30 years.

While much change has occurred in the community in recent years, opportunity still remains to significantly shape the future character of Frederickson. Canyon Road East and 176th Street East are still relatively undeveloped and are not dominated by continuous commercial strips. Significant pockets of open space and vacant land remain, and substantial tree cover is still present.

**Description of Desired Conditions**

The citizens of Frederickson want to better define the community and help to ensure that it remains a desirable place to live as it continues to grow in the future. The community plan
enacts measures to ensure future development will contribute to visual and functional amenities. The goals of the community plan are accomplished through policies, regulations, and design standards. However, adoption of the community plan will not result in immediate change. Significant and lasting change will occur over time through the realization of the implementing actions and citizen support.

**Central Place**

Frederickson needs a centralized commercial and civic core that can help to better define the community as a place. The community plan would create such a core at the four corners of the intersection of 176th Street East and Canyon Road East, near the geographic center of Frederickson. This core will provide a mix of community scale commercial and civic uses business interconnected with plazas and pedestrian walkways. Potential uses include grocery stores, banks and other professional services, barber shops and other personal services, and government offices. The core is intended to provide opportunity for community members to interact with one another and to be a well-designed area that residents and visitors can easily identify as being with Frederickson. Buildings will be of quality architectural design and sites will incorporate ample landscaping, plazas, signage, and other features that will be used to create an aesthetically pleasing atmosphere and provide a sense of the community.

**Design**

The Frederickson Community Plan integrates the natural and built environments to create neighborhoods and business centers that are functional, visually attractive, and compatible with the natural surroundings. Design standards require new development to demonstrate that filling and grading are minimized, trees are retained or replaced, and pedestrian connections are in place. Landscape standards are increased for parking lots and commercial buildings. Building and site design will emphasize safety through effective use of lighting, site design, and landscaping. Within the core commercial area, amenities such as courtyards or plazas, well-defined pedestrian pathways, benches, and lighting will be integrated into site design to attract pedestrian uses. The apparent scale of multifamily and commercial buildings will be reduced through the design and placement of structures and through the effective use of landscaping.
**Gateways**

Canyon Road East and 176th Street East are the major routes into the community. Creating attractive entrances to the community along these roadways is needed to better identify Frederickson as a place. Standards included within the plan require specific design features at these important gateways.

Additionally, the plan emphasizes landscaping along Canyon Road and 176th Street East. These roadways are the most visible and traveled areas of the community and as such are significant to the community’s character. The plan emphasizes abundant tree plantings, wide landscaping buffers, and similar treatments along these roadways.

**Signs**

The community plan sets new standards for signs as a means of enhancing the streetscape of Canyon Road and 176th Street East. Policies and regulations strive to reduce the number and size of signs. In commercial complexes with multiple businesses, signs will be consolidated to diminish the visual clutter. New pole signs will be limited.

**Trees**

Trees and vegetation retention are addressed through two methods in the community plan. First, the plan introduces standards for tree retention or replacement. These standards require trees on a site to be retained or, if the site is void of trees, to be replaced with trees similar to the surrounding neighborhood. Trees are also addressed through landscape standards.

**Pedestrian Linkages**

To promote mobility within neighborhoods and throughout the community, a strong emphasis is placed on ensuring pedestrian sidewalks are constructed. Commercial business and residential developments will construct sidewalks within their developments as well as along the perimeter. Roadways will be separated from pedestrian and bicycle pathways so as to encourage a variety of modes of transportation.
GOALS

Promote community cohesion and a high quality visual environment by establishing requirements related to architectural, site, and landscape design.

COMMUNITY ENTRIES AND STREETSCAPES

GOAL FR D-1 Provide design concepts and policies that will create attractive, easily identifiable community entrances and streetscapes within the Frederickson community.

FR D-1.1 Create identifiable boundaries, entries, gateways, and other visual cues so that residents, workers, and visitors know they are entering the community.

FR D-1.2 Provide distinctive designs at the edges, entrances, and other key locations within the community.

FR D-1.3 Use a variety of measures to create distinctive entrances, e.g., landscaping, tree planting, graphics, signage, lighting, monuments, pavement treatment, and public art.

FR D-1.4 Recognized entries consisting of tree plantings, signage, or public art shall be established at the following locations to create a gateway effect into the community:

FR D-1.4.1 Canyon Road East at 160th Street East;
FR D-1.4.2 Military Road East at Waller Road;
FR D-1.4.3 176th Street East at Canyon Road East;
FR D-1.4.4 176th Street East in the vicinity of 22nd Avenue East;
FR D-1.4.5 176th Street East at 78th Avenue East;
FR D-1.4.6 176th Street East in the vicinity of 87th Avenue Court East;
FR D-1.4.7 Future Canyon Road East extension at 208th Street East;
FR D-1.4.8 192nd Street East at 22nd Avenue East;
FR D-1.4.9 Waller Road East at Brookdale Road East; and
FR D-1.4.10 208th Street East at 22nd Avenue East.

FR D-1.5 Pierce County shall support and assist the community in developing and maintaining entrances. Support and assistance may be in the form of grant writing, developing a landscaping plan, working with the business community, and other methods to solicit interest in the development of the entrances.
GOAL FR D-2 Enhance neighborhood quality and promote a strong sense of community by utilizing design standards to promote streetscapes.

FR D-2.1 Develop a standard streetscape design for Canyon Road East and 176th Street East.

FR D-2.1.1 Landscaped medians, landscaped buffer areas, lighted crosswalks, textured or decorative crosswalk surfaces, sidewalks, and sidewalk connections to adjacent developments should be incorporated into the design and construction of road improvement projects affecting Canyon Road East and 176th Street East.

FR D-2.1.2 Where feasible and practical, pedestrian refuges should also be provided.

FR D-2.2 Promote the planting of street trees to enhance community character.

FR D-2.2.1 Require the planting of street trees and other vegetation along all arterial roadways within the community.

FR D-2.2.2 Pierce County shall update standards and guidelines for street tree species selection, installation, and maintenance.

FR D-2.2.3 Pierce County, in conjunction with business organizations, community groups, and property owners, shall develop street tree management programs. Such programs shall focus on maintenance and enforcement.

FR D-2.3 Promote the use of native vegetation as an integral part of streetscapes.

COMMERCIAL AND INDUSTRIAL CHARACTER

GOAL FR D-3 Develop commercial and industrial requirements dealing with site design, building design, landscape design, and sign design and placement.

FR D-3.1 Emphasize the importance of street corners through building location, pedestrian access, special site features, or landscape features.

FR D-3.2 Develop detailed streetscape plans addressing streets, crosswalks, sidewalks, signage, landscaping, street furniture, utilities, public spaces, etc.

FR D-3.3 Use durable, high quality materials in site furnishings and features for ease of maintenance.

FR D-3.4 Use fencing and landscaping to conceal outside storage and sales areas with high quality materials.

FR D-3.5 Integrate water quality treatment techniques such as biofiltration swales and ponds with overall site design, where appropriate.

FR D-3.6 Encourage pedestrian movement between commercial properties and neighborhoods by providing gates, ramps, and steps where natural or man-made barriers exist.

GOAL FR D-4 Architectural and site design of non-residential, commercial developments should reflect desired community character.
FR D-4.1 Discourage nondescript architecture that has few design features, lacks cohesiveness, or is scaled to be appreciated at automobile speeds.

FR D-4.2 Within a given commercial or civic development, require consistent architectural themes and colors for buildings, street furniture, and amenities.

FR D-4.3 Provide pedestrian-friendly facades on the ground floor of all buildings that face public streets and parking areas.

FR D-4.4 Enhance building entries with a combination of weather protection, landscaping, pedestrian amenities, or distinctive architectural features.

FR D-4.5 Locate or screen roof-mounted mechanical equipment to minimize visibility from public streets, building approaches, and adjacent properties.

FR D-4.6 Locate or screen utility meters, electrical conduit, and other utility equipment to minimize visibility from the street.

GOAL FR D-5 Site and building design requirements within the Employment Center zone should focus primarily on ensuring appropriate transitions to non-industrial areas and public roadways.

FR D-5.1 Limit site and building design requirements within the Employment Center zone to landscaping, setback, height, and lighting control.

FR D-5.2 Industrial uses should provide substantial landscaped areas when adjacent to residually zoned areas and public roadways.

FR D-5.3 A system of varied building setbacks and heights should be implemented for industrial uses based upon the intensity of the use, site characteristics, and adjacent land uses.

GOAL FR D-6 Through policy, design, and land use regulations, create an urban core or central place that is a focal point for the Frederickson community.

FR D-6.1 Promote the development of a centralized, coordinated, high-quality commercial center that can meet many of the goods and service needs of residents, employers, and employees while also serving as a civic and social center for the community.

FR D-6.1.1 Designate the Employment Service zoned properties at the four corners of the intersection of 176th Street East and Canyon Road East Plan as the Frederickson Central Place.

FR D-6.2 Adopt design standards for the Frederickson Central Place that facilitate the development of a high quality, pedestrian-friendly built environment that can serve as a focal point for the community.
FR D-6.2.1  Site design shall require the coordination of site layout, landscaping, setbacks, pedestrian access points, vehicular entrances, and other site elements to unify all four corners of the Frederickson Central Place.

FR D-6.2.2  Significant landscaping shall be used to reduce the scale of parking lots, define pedestrian routes and common areas, screen and buffer adjacent uses, and create an attractive streetscape along the perimeter of the Frederickson Central Place.

FR D-6.2.3  The Frederickson Central Place should have a strong pedestrian and transit orientation that is reflected in site development and design standards which separate automobile and pedestrian circulation through the use of raised walkways, change in pathway material texture, use of landscaping, covered walkways, and parking lots broken into segments.

FR D-6.2.4  Pedestrian amenities, such as plazas, courtyards, covered walkways, outdoor art, seating, lighting, and trash receptacles should be incorporated into the overall design.

FR D-6.2.5  Site design should create distinct street edges along Canyon Road East and 176th Street East and should accentuate the intersection of these two roads through building placement or a special landscaping or pedestrian feature.

FR D-6.2.6  Integrate the design and placement of exterior lighting with the architectural design and materials of on-site buildings, overall site character, and the surrounding neighborhood.

FR D-6.2.7  Building architecture and materials shall be of high quality in order to emphasize the role of the Frederickson Central Place in the community.

FR D-6.2.8  Street-facing building facades shall employ a variety of measures including window and entrance treatments, overhangs and projections, and innovative use of building materials and landscaping to increase visual interest and visually break up large building mass.

FR D-6.2.9  Provide pedestrian-friendly facades on the ground floor of all buildings that face public streets and parking areas.

**RESIDENTIAL USES**

GOAL FR D-7  Promote the development of well-designed urban residential areas.

FR D-7.1  Develop specific design guidelines for single-family and multifamily residential development dealing with site planning and building placement.

FR D-7.2  Provide incentives for innovative site designs and clustering of single-family residential uses and high density multifamily uses.
FR D-7.2.1 Promote the visual quality of neighborhood streetscapes so that they become a valued element of the character of the community and enhance neighborhood quality.

FR D-7.2.2 Encourage use of curvilinear streets and narrower street profiles within residential neighborhoods.

FR D-7.2.3 Provide opportunity for porches and decks within front yard setbacks.

FR D-7.3 Permit single-family detached dwelling units to encroach into front yard setbacks the same distance the garage entrance is recessed behind the front yard setback line. The front yard setback shall not be less than 15 feet.

FR D-7.4 Encourage underground stormwater retention systems by providing development incentives.

FR D-7.5 Provide incentives for innovative architectural design of two-family (duplex), attached single-family, and multifamily residential development.

FR D-7.6 Encourage two-family developments that provide alley access to the vehicle enclosure.

FR D-7.7 Avoid locating parking areas for multifamily developments between the buildings and the street.

GOAL FR D-8 Encourage and provide incentives for providing open space and retaining existing native vegetation on sites proposed for urban development.

FR D-8.1 Provide a procedure for removing dangerous or diseased trees that require mitigation including replacement of any removed trees.

FR D-8.1.1 Sites that are devoid or deficient in vegetation shall be required to introduce supplemental landscaping with plantings that are native to the Pacific Northwest and are based on the historic indigenous plant species for the underlying soils.

FR D-8.1.2 These supplemental plantings shall equal the minimum amount required for retention.

FR D-8.2 Reduce the amount of density or intensity allowed within a proposed development for lack of permanently designated usable open space.

Urban Open Space

GOAL FR D-9 Property improved with buildings, parking areas, and other impervious cover shall include areas of natural and landscaped vegetative cover to protect the aesthetic qualities of the area, to protect aquifers and aquifer recharge areas, provide urban wildlife habitat, and to prevent runoff to adjoining properties, streams, and other critical areas.
FR D-9.1 Provide a range of open space dedication requirements based upon the density or intensity of the proposed use.

FR D-9.2 Require a permanent dedication of open space as a condition of approval for a site plan or division of land. The following activities should be allowed within designated open space areas and are listed in order of priority.

- FR D-9.2.1 Preservation of natural vegetation including fish and wildlife habitat.
- FR D-9.2.2 Natural resource protection including steep slopes, streams, and wetlands.
- FR D-9.2.3 Buffers between incompatible land uses.
- FR D-9.2.4 Passive recreation (pervious and impervious trails).
- FR D-9.2.5 Active recreation (parks).
- FR D-9.2.6 On-site utilities (drainfields, stormwater retention facilities).
- FR D-9.2.7 Pedestrian and bicycle trails shall be permitted uses within designated open space tracts.

FR D-9.3 Require the open space area to be clearly marked and identified as a protected area through the use of methods such as fencing (when appropriate) and signage.

### Landscape Design

**GOAL FR D-10** Use creative landscaping to calm traffic, attractively screen service areas, minimize the impact of parking lots, and revitalize the natural environment.

- **FR D-10.1** Require a landscaped area between the traffic and the sidewalk that includes elements, such as mature trees, that provide shade. The purpose of the landscaped area is to provide shade to pedestrians and to provide a safe buffer between pedestrians and the street. Landscaping shall not inhibit driver sight distance or visibility.

- **FR D-10.2** Newly planted landscaped strips shall contain trees that are at least 8’ tall and 2” in diameter. Trees must be a minimum of 35’ at maturity, except where conflicts occur with utility or corridors.

- **FR D-10.3** Trees that serve to assist in noise reduction for commercial or industrial properties shall consist primarily of evergreen and coniferous species.

- **FR D-10.4** Landscape Canyon Road East with trees, plants in the median, and lush green areas along its edges. New plantings should be at least 12’ in height and 3” diameter and capable of a minimum height of 35’ at maturity.

- **FR D-10.5** Encourage the use of bioretention swales in parking lot landscaped areas to break up the expanse of asphalt and assist in stormwater treatment and infiltration.

- **FR D-10.6** Parking lot landscaping shall be significant and dispersed throughout the lot in order to provide shade, pedestrian refuge, and visual relief.
Parking lot vegetation should consist of a variety of trees and vegetation. New trees should be at least 8’ in height and 2” diameter and capable of a minimum height of 35’ at maturity, except where conflicts with utility corridors would occur.

Where commercial or industrial land uses abut residential uses, a landscaped buffer shall be provided to reduce noise and glare impacts.

Vegetation that is native to the Pacific Northwest and that is drought tolerant is preferred for landscaping.

Increase the amount for the landscaping bond that is required prior to final plat approval to ensure developments are built-out with the required landscaping. The increase of the bond shall cover the potential overhead costs that Pierce County may experience in the employment of a third party to plant the required landscaping.

**SIGN DESIGN**

**GOAL FR D-11** Establish and implement uniform and balanced requirements for new signs and an amortization schedule for the removal of signs made nonconforming with the adoption of regulations implementing this plan.

**FR D-11.1** Incentives should be provided to bring existing signs into conformance with new codes. Incentives should include tax credits or dismissal of permit fees for replacing the sign prior to the assigned sunset date.

**FR D-11.2** Billboards should have an amortization period consistent with the Internal Revenue Service depreciation schedule.

**FR D-11.3** Aggressively seek nuisance abatement to eliminate problems that inhibit the goals of the districts and the community. Pierce County shall identify dilapidated, abandoned, and illegal signs for future abatement action.

**FR D-11.4** Ensure that temporary signs are promptly removed after the culmination of the event described or symbolized on the sign.

**GOAL FR D-12** Ensure that all signs undergo design review to ensure that the design and placement of signs is consistent with the Frederickson Design Standards and Guidelines.

**FR D-12.1** Ensure that signage is integrated with the overall architectural framework and structural elements of the building, reinforcing the shape and proportion of the façade through such techniques as detailing, use of colors and materials, and placement.

**FR D-12.2** Prohibit the use of flashing or rotating signs, video signs, roof signs, railing signs, inflatable signs, and signs attached to private light standards.

**FR D-12.3** Prohibit the use of lights and surfaces that result in glare onto adjacent properties.

**FR D-12.4** Limit the use of pole signs.
FR D-12.5  Allow monument and wall signs.
FR D-12.6  Require consolidation of signage within commercial development to reduce visual clutter along streets and the freeway.
FR D-12.7  Prepare standards that limit overall signage to a proportion of the length of the building façade.
FR D-12.8  Prohibit canvas canopy signs and canopy signs that are backlit.

GOAL FR D-13  Minimize the use of off-premise signs within Frederickson.
FR D-13.1  Restrict the use of off-premise signs to temporary applications such as the directional signage used to identify real estate open houses and garage sales.
FR D-13.2  Prohibit new billboards within Frederickson.
FR D-13.3  Existing billboards should be eliminated over time through use of an amortization period.

GOAL FR D-14  Enable individuals, businesses, and community groups to promote temporary activities to the wider community through the adoption of clear regulations governing the use, size, and allowed duration of temporary signs.
FR D-14.1  Allow banners for community activities and events.
FR D-14.2  Banners should be of a style, size, and color that complement the surrounding environment and standard on which they are affixed. Consideration should be given to whether or not the structures from which the banners are being suspended can support the weight and the force of the wind upon the banners.
FR D-14.3  Commercial center banners must be primarily promoting the commercial center where they are displayed. Specific advertising of businesses or merchandise is prohibited.
FR D-14.4  Temporary signs that are placed within a permanent structure, such as on private light standards, shall be prohibited.
FR D-14.5  Prohibit temporary signs that are affixed to a utility pole unless expressly reviewed and approved by the utility provider.

LIGHTING DESIGN

GOAL FR D-15  Consistently apply and enforce lighting regulations.
FR D-15.1  Provide lighting that is integrated with the overall architectural concept in scale, detailing, use of color and materials, and placement.
FR D-15.2  Integrate the design and placement of exterior lighting with the architectural design and materials of on-site buildings, overall site character, and surrounding neighborhood.
FR D-15.3  Require lighting to be reviewed during design review in all new developments.
GOAL FR D-16 Ensure that lighting in communities contributes to vehicle and pedestrian safety.
FR D-16.1 Provide adequate lighting levels in all pedestrian areas including building entries, along walkways, parking areas, transit, and other public areas.
FR D-16.2 School bus stops should be lit and safe. The school district should plan the stops and developments should contribute to construction and safety.

GOAL FR D-17 Encourage energy efficient lighting solutions.
FR D-17.1 Encourage all non-essential exterior commercial and residential lighting be turned off after business hours and/or when not in use.
FR D-17.2 Encourage the use of lights on a timer.
FR D-17.3 Encourage the use of motion-activated lighting for security purposes.

GOAL FR D-18 Encourage parking area lights to be greater in number, lower in height, and lower in light level, as opposed to fewer in number, higher in height, and higher in light level.

GOAL FR D-19 Parking lot lighting shall not exceed Illuminating Engineering Society of North America recommended lumens.

IMPLEMENTING ACTIONS

The following list of actions needs to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 2-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Frederickson Advisory Commission (FAC), Pierce County Planning and Land Services (PALS), Pierce County Economic Development (ED), Pierce County Parks and Recreations (Parks), Pierce County Public Works (PW), and Tacoma-Pierce County Health Department (TPCHD).

SHORT TERM ACTIONS

1. Amend Title 18A-Zoning (PALS, FAC)
   • Establish minimum setbacks, height and gross floor area limitations and maximum impervious surface standards for all zone classifications; and
   • Create a new zone classification - Employment Service, to be applied to properties at the four corners of the intersection of 176th Street East and Canyon Road East as Employment Service.
2. Amend Title 18J-Design Standards and Guidelines (PALS, FAC)
   • Develop a standard streetscape design for Canyon Road East and 176th Street East;
   • Develop provisions for street trees, other vegetation, or landscaped areas along all arterial roadways;
• Update standards and guidelines for street tree species selection, installation, and maintenance;
• Establish urban design standards and guidelines for:
  • Commercial and industrial uses dealing with site design, building design and placement, landscaping, lighting, and circulation.
  • Two-family, attached single-family, and multifamily residential development dealing with site planning, building placement, and building scale.
• Establish a range of open space dedication requirements based upon the density or intensity of the proposed use;
• Require landscaping buffers to separate dissimilar or incompatible uses.
3. Amend Title 18B-Signs (PALS, FAC)
4. Control the size, type, design, and location of signs;
   • Implement uniform and balanced requirements for new signs and an amortization schedule for the removal of signs made nonconforming with the new regulations;
   • Apply design standards and guidelines to the design and placement of signs within the community;
   • Allow temporary signs that are controlled by the use, size, and duration of the sign.

**Mid-Term Actions**

1. Work toward the creation of community entrances and streetscapes at identified locations through the use of design concepts and standards. (PALS, FAC)
2. Develop a street tree management program. (PALS, FAC)
Chapter 4: Natural Environment Element

INTRODUCTION

The Natural Environment element addresses the protection and conservation of the natural resources in the Frederickson community such as water, air, vegetation, fish, and wildlife. The residents of the Frederickson community are concerned about the loss and continual degradation of natural resources that have occurred over the past couple of decades.

Of great importance to the community is the long-term protection of Clover Creek. This creek is one of the most significant natural features in the community and provides essential habitat to a variety of fish and wildlife species, including salmon. Clover Creek is also one of the largest stream systems in urban Pierce County and is designated as a Shoreline of the State. In addition to its high environmental value, the creek also provides a link to the community’s past as it was essential to the early settlement of the Frederickson area. Much of Frederickson’s early identity was drawn from the creek and the creek continues to be a community symbol today. Continued urban development in the community poses a significant threat to the health of the creek. Ensuring Clover Creek is adequately protected as the community grows is a key component of the community plan.

Another area of concern to the community is the preservation of tree cover. The trees and vegetation of the Pacific Northwest offer valuable habitat to wildlife while providing the human environment with visual relief, shade, noise barriers, and an opportunity for integration of the earth’s natural resources. In surveys, open houses, and public meetings, the citizens of Frederickson have repeatedly expressed concern about the continuing loss of tree cover within the community. It is estimated that more than 50% of the tree cover in the community has been lost over the past 30 years as a result of land clearing and development activities. During this same time period, heavily forested areas in the community (areas with more than 70% tree canopy cover) have been decreased by more than 75%, while areas having little or no canopy cover have increased by more than 60%. Reducing future tree loss in the community is another key component of the Frederickson Community Plan.
Conservation of open space is also a high priority of the community. Open areas have been lost at a rapid pace as new development has occurred in the community. It is estimated that since 1980 alone, more than 2,000 acres of land within the community has been platted and developed with commercial and residential uses. The community plan identifies the remaining highest valued open space areas and encourages public and private acquisition of these areas for long-term preservation. Significant emphasis is given to conservation of open space along Clover Creek. In addition to acquisition, the community plan also seeks to maintain open space in other areas of the community through the use of developer dedication, transfer of development rights, and other methods.

Lastly, the community plan also recognizes and seeks to protect the quality of several other important environmental attributes including ground and surface water quality, air quality, and light and noise levels. Policies and implementing regulations set forth in the community plan contain variety of strategies addressing these areas.

**DESCRIPTION OF CURRENT CONDITIONS**

The natural environment refers to those elements of the environment which tend to occur naturally and are generally not created by man. Examples include soil, topography, and geology.

**EARTH RESOURCES**

**SOILS**

According to the Pierce County Soil Survey, sixteen soil types occur within the plan area. Of these sixteen, three are most dominant: Everett gravelly sandy loam; Kapowsin gravelly loam;
and Spanaway gravelly sandy loam. Approximately 89% (6,703 acres) of the plan area falls into these three soil types.

Spanaway and Everett gravelly sandy loams are well drained and experience little surface water runoff. The high permeability of these soils has made them desirable for development as stormwater runoff is easily controlled and on-site septic systems are viable. Consequently, large areas of these soil types have been developed with single-family homes utilizing on-site septic systems. Kapowsin gravelly loam is less well drained and experiences a shallow perched water table during the rainy season. The seasonal shallow water table makes stormwater control more difficult. On-site septic systems generally do not function well in this soil type. As a consequence, development in these areas has been limited primarily to single-family homes on large lots.

The remaining 829 acres of the plan area contains 13 different soil types exhibiting a range of characteristics. The approximate acreage and characteristics of these soil types is as follows:

- **230 acres** are classified as hydric (three percent of the plan area) and are very poorly drained. These hydric soils include Bellingham silty clay loam, DuPont muck, Tanwax muck, and Tisch silt. Hydric soils are often characterized by the presence of wetlands and other water features and often experience flooding problems. The largest area of hydric soils is located along Clover Creek.
- **180 acres** are classified as Everett stony loamy sand. This soil type is very stony and is highly permeable. Surface water infiltration is rapid with little or no surface water runoff occurring. The largest pocket of this soil type in the plan area is approximately 150 acres in size.
- **115 acres** are classified as Alderwood gravelly sandy loam. This soil type is moderately well drained. A perched water table may occur for short periods during the spring and winter rainy seasons. The soil generally is not well suited to on-site septic system usage due to the seasonal perched water table.
- **The remaining 300 or so acres** contains Indianola loamy sandy, Kitsap silt loam, Ragnar sandy loam, Siana loam, Neilton gravelly loamy sand, fill areas, and gravel pits. These soil types occur in pockets of 30 acres or less in size scattered throughout the plan area.

TOPOGRAPHY

The majority of the plan area consists of relatively flat uplands with slopes of 6% or less. Scattered throughout the plan area are long, narrow, moderately steep slopes that break abruptly along the edges of the upland areas. In general, these slopes have grades of 15% to 30%. However, there are a few areas where slopes exceed 30%. This pattern of topographic breaks along the edges of large, relatively flat upland areas is most prevalent in the northern portion of the plan area which drains to Clover Creek. Areas with slopes of 15% or greater total approximately 485 acres or 6.6% of the total plan area. Areas having slopes of 15% or greater are considered potential landslide and erosion hazards areas. Development in these areas is controlled by Pierce County’s Critical Area Regulations. These regulations generally require that
these slopes remain in an undisturbed condition and that development be setback a certain distance from the slope areas.

**Seismic Hazard Areas**

Seismic hazard areas are areas subject to severe risk of damage as a result of earthquake induced ground shaking, slope failure, settlement, or soil liquefaction. Seismic hazard areas are noted by the presence of alluvial surficial geology or recessional outwash geology overlain by Barneston, Everett, Neilton, Pilchuck, or Spanaway soils. There are two areas of potential seismic hazard mapped within the community. These areas are located in the eastern portion of the plan area. Approximately 400 to 500 acres of seismic hazard area are centered on the intersection of 78th Avenue and 184th Street East. An additional 100 or so acres are located along the eastern boundary of the plan area between 160th Street East and 170th Street East.

New land use activities within seismic hazard areas are subject to more stringent engineering requirements, including the submittal of geotechnical reports with recommendations for mitigation measures to be taken to reduce the risk of structural damage from a seismic event. Single-family homes less than 5,000 square feet in size and subdivision of property are exempt from the geotechnical reporting requirements.

**Volcanic Hazard Areas**

There are no volcanic hazard areas located within the community.

**Water Resources**

*Sources: Flood Insurance Rate Maps, FEMA; National Wetlands Inventory; Pierce Co. Wetlands Inventory; WDFW Streamnet; and, Groundwater Pollution Potential (DRASTIC) maps, 1998*

**Surface Waters**

Hydrology mapping by the Washington State Department of Natural Resources indicates that there is one stream (Clover Creek), three small ponds/lakes, and several small, unnamed drainage channels within the community plan area. Clover Creek is classified as a Type 1 stream along most of its length and is listed as a Shoreline of Statewide Significance. The creek is mapped as being salmon bearing, but is not listed on the Draft Chinook Status map as containing Chinook salmon. Coho salmon presence is noted, however, by the Washington State Department of Fish and Wildlife. The three lakes/ponds include Stony Lake, which is approximately 13.2 acres in size, and two unnamed lakes/ponds of 1.1 and .58 acres each.
The headwaters of Clover Creek originate in the community plan area and are formed by a series of springs at the base of steep slopes, east of Canyon Road. The headwaters are located on large parcels owned by Tacoma City Water and the Tacoma Sportsman Club. These parcels are largely forested with second-growth timber and contain multiple springs and wetlands, which form the headwaters.

**Flood Hazard Areas**

Pierce County defines flood hazard areas as those lands “in a floodplain within Pierce County subject to a one percent or greater chance of flooding in any given year.” These areas have been mapped by the Federal Emergency Management Agency (FEMA) and the National Flood Insurance Program. Flood hazard areas may be referred to as the 100-year floodplain. The FEMA maps for Pierce County indicate there are 29 flood hazard areas (100-year floodplains) within the boundaries of the community plan area. The 29 areas have a combined acreage of 535 acres. A substantial portion of this acreage is located along Clover Creek. In addition to the 100-year floodplain areas, there are an additional 17 areas mapped by FEMA as being prone to flooding on a less frequent basis. These less frequently flood areas are referred to as 500-year floodplains. A total of 129 acres is mapped as being within these 500-year floodplains. Pierce County regulates 500-year floodplains in the same manner as 100-year floodplains. Approximately 9% of the plan area is mapped as either 100 or 500-year floodplain.

In addition to the mapping completed by FEMA, Pierce County is currently conducting an inventory of flood prone areas as a component of a watershed basin planning effort for Clover Creek. This inventory is not yet complete, but may reveal additional flood prone areas within the community not mapped by FEMA.

**Wetlands**

Wetlands are areas that are inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support a prevalence of vegetation typically adapted to life in saturated soil conditions. Examples of wetlands include swamps, marshes, bogs, and similar areas. Wetlands are of significant biological and physical value and are required to be protected under federal, state, and local laws. Pierce County uses the National Wetlands Inventory (NWI), Pierce County Wetlands Inventory (CWI), and site specific investigations to determine the presence of wetlands. The CWI indicates that there are 98 wetlands. These wetlands have a combined area of 645 acres. Approximately 8.5% of the plan area is classified as wetland. It should be noted that the CWI and NWI maps are not entirely complete and that there may be small wetland areas throughout the community that are not noted in these inventories.

Wetlands in Pierce County are classified and protected according to category. Category I wetlands are the most valuable wetland systems and are typically large, diverse wetlands which provide habitat for threatened or endangered species. Category I wetlands are protected with a 150-foot buffer. Category II wetlands are typically large, diverse systems that provide significant habitat. 100-foot buffers protect these wetlands. Category IV wetlands are the least valuable, and are hydrologically isolated, less than one acre in size, and have only one dominant
plat species. A 25-foot buffer protects these wetlands. Category III wetlands are wetlands that do not meet the criteria of Category I, II, or IV and are protected with a 50-foot buffer. Most wetlands in Pierce County fall into either Category II or III. If an average buffer size of 75 feet (average of buffer width for Category II and III wetlands) is applied to the wetlands in the plan area, the acreage affected by wetlands increases from 645 acres (total wetland acreage) to 1068 acres (total wetland acreage with 75-foot buffers). When buffers are considered, approximately 14% of the plan area is affected by wetlands.

**GROUNDWATER**

The Frederickson community is located in the regional recharge area for the Clover/Chambers Creek aquifer system. Depth to groundwater is 30 or more feet. The geology of the majority of plan area is such that infiltration of rainfall is rapid. This high degree of permeability makes the groundwater in the area very susceptible and vulnerable to contamination.

The recharge area for the Clover/Chambers Creek aquifer system is designated as an Aquifer Recharge Area by Pierce County. All of Frederickson lies within the Aquifer Recharge Area. Within this area, Pierce County has established regulations intended to prevent or minimize potential impacts to groundwater resulting from new land use activities.

**FISH AND WILDLIFE HABITAT**

(Source: WDFW PHS Digital Database)

**PRIORITY HABITAT AND SPECIES**

Priority fish and wildlife habitat and species locations have been mapped by the Washington State Department of Fish and Wildlife (WDFW) and are identified in WDFW’s Priority Habitat and Species Database. This database indicates that there are 25 such areas within Frederickson. Of these 25 areas, 20 are associated with wetlands or streams, three are areas of seasonal waterfowl concentration, and two are large areas of relatively undisturbed natural vegetation.

Pierce County protection of these areas is limited to wetlands, streams, and those areas that provide habitat for state or federally listed threatened, endangered, candidate, monitored, or sensitive species. Accordingly, 20 of the 25 areas are protected to some degree through the establishment of protective buffers for associated streams or wetlands. The remaining five areas are not documented as providing habitat for protected species and as a consequence are currently not protected by Pierce County’s critical area regulations.
AIR QUALITY

The Washington State Department of Ecology and the Puget Sound Clean Air Agency monitor air quality in the Puget Sound Area. In Pierce County, air quality monitoring stations are located at Milton, Tacoma Tideflats, south of Puyallup, Eatonville, and Mount Rainier. These stations track numerous air pollutants including particulate matter, carbon monoxide, ozone, nitrogen dioxide, sulfur dioxide, and lead. The sources of these pollutants include motor vehicles, industrial emissions, residential woodstoves and fireplaces, outdoor burning, and other sources. Of these sources, motor vehicles are the largest source of pollutants, generating an estimated 57% of all air borne pollutants in Washington State.

Air quality standards are established by the Environmental Protection Agency (EPA) and Washington State. Failure to meet the established standards results in an area being designated as a “nonattainment area” by the EPA. When an area is designated as nonattainment, a plan is required to be developed to bring the area back into compliance with the established standards. The most recently published annual air quality report for the Puget Sound Region is for the year 1998 and was released by the Department of Ecology in April 1999. This report indicates that the air quality of the Puget Sound region, including Pierce County, is in compliance with established standards. The trend in air quality over the past ten years in the Puget Sound region has been one of continuing improvement.

DESCRIPTION OF DESIRED CONDITIONS

The Frederickson community, like many suburban communities, assigns high value to the trees, streams, and other natural areas within its boundaries. These areas contribute to the quality of life experienced by the community’s residents and are important aspects of the community’s identity. Like many communities in Pierce County, residents of Frederickson have seen much degradation of the natural environment over the past 30 years as growth has occurred. This pattern of degradation is expected to continue and is inevitable as the population of the area continues to grow. The community realizes that action must be taken now in order to ensure that those elements of the natural environment most important to the community are preserved for present and future generations.

CLOVER CREEK, HEADWATERS, AND ASSOCIATED WETLANDS AND FLOODPLAINS

Clover Creek and its associated wetlands and floodplains are identified as being of high ecological importance, providing habitat for a wide variety fish, wildlife, and plant species. Most notably, the headwaters area of Clover Creek is presently intact and functioning well. Preserving the integrity of Clover Creek and its headwaters area and restoring the natural functions and values of this stream system is one of the highest priorities of the community plan. Much of the area along Clover Creek is currently undeveloped, including the headwaters area. Where development has occurred it is generally of low density and large lot size reflective of the environmental limitations of this area. The community plan recognizes this trend and recognizes these constraints through new zone classifications that will limit the
density and intensity of development to better coincide with the development capacity and capability along the creek. The community plan contains policies calling for additional study of the headwaters area to better identify and protect the freshwater springs located there which are so vital to the creeks continued ecological and hydrological integrity.

**TREE COVER**

Citizens of Frederickson place a high value on remaining forests and areas of significant vegetation. New development will not occur without retaining trees on the property or, at a minimum, replacing them with like kind. In recognition of the high priority placed on tree and vegetation retention, the community plan contains a number of policies on the subject and regulations are included with the plan implementation package. It is recognized that trees and vegetative cover not only provide habitat for wildlife, but also alleviate the impacts of high density or intensive developments. Trees can act as buffers from noise, light, and glare while providing shade and areas for children to play and reduce air pollution through the uptake of contaminants.

**OPEN SPACE**

An important step toward integrating the built and natural environments is recognizing the role of open space corridors. The open space corridors in Frederickson coincide with wetlands, flood hazards, slopes, and streams. Emphasis is given to preservation of lands along Clover Creek. The community plan strives to preserve these resources through policies, regulations, and long-term educational outreach. Open space corridors in Frederickson are also inclusive of Priority Habitat and Species as listed on Washington Department of Fish and Wildlife maps. The community plan prioritizes the acquisition of open space in environmentally constrained areas. The County’s Conservation Future Program is recognized as a key tool to help preserve these areas into perpetuity. Stewardship and management plans that address long-term protection and maintenance should also be developed. In addition to public acquisition efforts, a variety of other open space acquisition and conservation strategies are suggested to ensure long term preservation.

**GROUND AND SURFACE WATER QUALITY**

The community supports continued regulatory efforts by local government aimed at protecting ground and surface water quality. These regulations have been developed based upon review of the best available information and are frequently updated to reflect changes in environmental conditions and further research. The community desires that these regulations be properly enforced. The community also supports the use of low impact development techniques to minimize impacts to ground and surface water quality associated with new development.
GOALS

Protecting the health of the natural environment and providing adequate parks and other public and private open space areas are of high importance and interest to the community. These features must be present to achieve the high quality living environment envisioned in the plan. At a minimum, the plan will strive to ensure:

- The area’s natural resources, natural beauty, and livability will be maintained and preserved by ensuring that when development occurs, changes to vegetation, topography, and surface water runoff characteristics will be minimized;
- Surface and ground water quality will be protected by controlling the intensity and density of land uses within sensitive areas and by enforcing existing regulations aimed at protecting streams, wetlands, and aquifer recharge areas;
- Areas of critical importance to fish and wildlife will be adequately protected; and
- Tree cover will be maintained in the community through tree preservation, replacement, and restoration.

CLOVER CREEK AND ASSOCIATED RESOURCES

GOAL FR ENV-1 Maintain the natural functions and values of Clover Creek and its associated wetlands and floodplains to the greatest extent possible as the community continues to urbanize.

FR ENV-1.1 Manage land use in the vicinity of Clover Creek and associated wetlands and floodplains so as to maintain, and where appropriate, restore the natural hydrologic and habitat values of this system.

FR ENV-1.2 Adopt development standards and zoning restrictions that strive to maintain sufficient habitat adjacent to Clover Creek and other riparian areas to meet the needs of terrestrial species, including sufficient travel corridor widths and sufficient areas for cover, foraging, and other habitat requirements.

FR ENV-1.2.1 Apply resource based zoning to lands that contain or are adjacent to designated riparian corridors and other significant habitat areas. The goal of this zoning is to ensure the conservation of the habitat functions and values these areas provide. At a minimum, these performance standards should address intensity of land use (density, impervious surfaces, etc.), open space and vegetation retention, surface water management, and lighting and noise control.
FR ENV-1.2.2 Develop a system of incentives and credits to encourage greater protection of designated riparian corridors and other significant habitat areas. This system could provide for on and off-site density transfers, variances to bulk requirements (e.g., building setbacks, lot sizes, roadway widths, etc.), and property tax incentives.

FR ENV-1.3 Allow limited activities within riparian area buffers only when such activities are compatible with the overall functions of the buffer and when such activities do not diminish the functional value of the buffer.

FR ENV-1.3.1 Buffers should include any associated flood hazard areas and wetlands, as well as adjacent slopes having grades of 30% or greater.

FR ENV-1.3.2 Require the location of all designated riparian area buffers be clearly and permanently marked as a native growth protection/stream buffer area on any project site prior to initiation of site work.

FR ENV-1.3.3 Require all designated riparian area buffers be reserved as open space and identified as native growth protection/stream buffer area on the face of the plat and/or as a deed restriction on the property. Native growth protection easements for buffers should be established and recorded as part of the approval process.

GOAL FR ENV-2 Identify and remove barriers to fish passage in Clover Creek.

FR ENV-2.1 Prioritize correction of any fish blockages in the next Capital Improvement Program update.

FR ENV-2.2 Reconstruct infrastructure that acts as a barrier to fish passage as part of any public road or utility projects associated with the blockage.

FR ENV-2.3 Reduce culverts and encourage bridges, when needed, when constructing or reconstructing water passages under roads.

GOAL FR ENV-3 Identify and inventory the spring-fed headwaters of Clover Creek.

FR ENV-3.1 Coordinate freshwater spring inventory activities with the Clover Creek Basin Plan.

FR ENV-3.2 Delineate freshwater springs within the headwater vicinity.

FR ENV-3.3 Consider spring locations when determining development standards and land uses.

FR ENV-3.4 Pursue grants and other alternative funding options to acquire monies that would be used to hire a consultant to conduct the inventory.

FR ENV-3.5 Ensure that the freshwater springs, which form the headwaters of Clover Creek, are preserved and adequately buffered from development activity.

SURFACE AND GROUNDWATER RESOURCES

GOAL FR ENV-4 Protect and conserve groundwater supplies contained within the Chamber-Clover Creek aquifer.
FR ENV-4.1 Institute minimum tree/natural vegetation retention requirements that provide areas for infiltration of surface water and groundwater recharge to occur. Such requirements should be complimentary to retention requirements for other elements of the natural environment.

FR ENV-4.2 Establish impervious surface limitations within the community.

FR ENV-4.3 Install signage around the perimeter of wellhead protection areas and/or the most sensitive aquifer recharge areas.

FR ENV-4.4 Pursue funding opportunities to map spill locations on state routes for areas that have a potential to enter the one-year time of travel zone and/or storm drainage systems.

FR ENV-4.5 Work with the Pierce County Emergency Management Department to identify appropriate methods for handling spill response in high-risk areas.

FR ENV-4.6 Maintain the natural hydrologic conditions within the community to the greatest extent possible.

GOAL FR ENV-5 Promote the use of low impact development techniques in the community.

FR ENV-5.1 Support development standards that allow low impact development techniques for controlling stormwater such as:

FR ENV-5.1.1 Maximize retention of native vegetation and tree cover to intercept, evaporate, and transpire precipitation.

FR ENV-5.1.2 Assess the site’s soils, current and native vegetation cover, wetland areas, streams, ponds, and other critical areas. Establish buffers and delineate protected areas.

FR ENV-5.1.3 Preserve permeable, native soils and restore disturbed soils with compost and other amendments to infiltrate and store stormwater.

FR ENV-5.1.4 Retain and incorporate topographic site features that promote infiltration and storage of stormwater.

FR ENV-5.1.5 Direct the location of buildings and roads away from critical areas and soils that can effectively infiltrate stormwater.

FR ENV-5.1.6 Minimize building footprints, and road widths and lengths to reduce impervious surfaces. Eliminate effective impervious surfaces.

FR ENV-5.1.7 Utilize permeable surfaces (e.g., pervious pavement, pavers, and gravel systems) where possible to promote stormwater infiltration.

FR ENV-5.1.8 Utilize small, decentralized bio-retention areas with appropriate vegetation to infiltrate, store and transpire precipitation.

FR ENV-5.1.9 Reduce the reliance on traditional conveyance and pond technologies to manage stormwater quality and quantity.

FR ENV-5.1.10 Manage stormwater as close to its origin as possible.
GOAL FR ENV-6 Develop a Transfer of Development Rights and Purchase of Development Rights program for wetland area density transfers.

FR ENV-6.1 Development right transfers shall only be permitted when both the sending and receiving site are located within the Frederickson Community Plan area boundaries. Development rights from other communities shall not be transferred to Frederickson.

**TREE COVER AND VEGETATION RESOURCES**

GOAL FR ENV-7 Emphasize the conservation and restoration of tree canopy cover and wooded areas, in order to ensure the protection and preservation of the important and necessary environmental functions and processes provided by these resources and the high value placed upon these resources by the community.

FR ENV-7.1 Promote the long-term conservation of trees, wooded areas, and native vegetation within the community.

FR ENV-7.2 Establish minimum development standards for the conservation and restoration of wooded areas and tree canopy cover within the community.

FR ENV-7.2.1 Establish minimum tree conservation requirements by land use designation and use within the community plan area.

FR ENV-7.2.2 Encourage the retention of existing trees whenever possible, but permit the use of replacement trees whenever site design, tree health, or tree or stand structure does not favor retention.

FR ENV-7.2.3 Sites that contain too few trees to meet the minimum tree conservation standards shall be required to plant supplemental trees as necessary to achieve the standards.

FR ENV-7.2.4 Trees selected for planting must be compatible with the natural and built features of the site. Emphasis should be given to the use of native tree species, whenever feasible.

FR ENV-7.2.5 Monitor construction activities to ensure developer compliance with vegetation retention and replacement requirements. In the event violations of these requirements occur, withhold occupancy permits, final plat approval, and other needed final approvals until such time as the violations are rectified.

FR ENV-7.3 Pierce County should assume a leadership role in the conservation and restoration of trees and tree cover within the County.

FR ENV-7.3.1 Pierce County should adopt design standards for public buildings, roadways, and other public infrastructure that promotes the conservation and restoration of trees and tree cover within the urban growth area.
OPEN SPACE

GOAL FR ENV-8 Foster the acquisition and conservation of open space within the plan area through the use of a variety of strategies.

FR ENV-8.1 Pierce County should utilize park impact fees that are collected within the Frederickson Community Plan area to purchase open space land within the community plan area.

FR ENV-8.2 Pierce County should encourage participation within the Conservation Futures and Current Use Assessment programs by conducting informational workshops on the programs within the plan area.

GOAL FR ENV-9 Public open space acquisition efforts within the plan area should give a higher priority to those parcels located within a designated open space area as depicted on the official Open Space Corridors Map.

FR ENV-9.1 The highest priorities for open space acquisition should be given to those parcels that contain the following characteristics in the order listed:

FR ENV-9.1.1 Contain Clover Creek or its associated wetlands and floodplains.

FR ENV-9.1.2 Contain high priority resources, i.e., critical salmon habitat, fish and wildlife habitat areas, streams, wetlands, and wooded areas or contain other sensitive resources such flood hazard areas, and landslide and erosion hazard areas.

FR ENV-9.1.3 Provide important links between existing open space, park and recreation, and school sites.

FR ENV-9.1.4 Offer significant views of Mount Rainier; or

FR ENV-9.1.5 Exceed five acres in size.

FR ENV-9.2 Properties identified on the County’s officially adopted Open Space Corridors map should be given higher priority for acquisition than non-identified properties.

GOAL FR ENV-10 Protect and maintain publicly-owned and/or purchased open space sites in perpetuity.

FR ENV-10.1 Place conservation easements or covenants on existing and acquired publicly-owned open space sites that restrict future uses to passive open space recreation activities.

FR ENV-10.1.1 Conservation easements should be worded to maintain open space use and function of a parcel in perpetuity.

FR ENV-10.2 The sale of publicly-owned open space areas within the Frederickson Community Plan area is discouraged.
In the event that such sales occur, any proceeds from the sales shall be used to purchase an equivalent or greater amount of land for passive open space recreation use and/or land which provides an equivalent or greater ecological function and value within the Frederickson Community Plan area.

GOAL FR ENV-11 Promote privately owned greenbelts and passive recreational areas as a supplement to the public open space system within the community.

FR ENV-11.1 Establish standards for the private dedication of greenbelts and passive recreational areas within new development.

FR ENV-11.2 The dedication of greenbelts and passive recreational areas should be proportional to the scale and impact of a development proposal.

FR ENV-11.3 Dedication requirements should be determined based upon a review of the Pierce County Parks and Recreation plan and other available documents including published state and national guidelines and standards.

FR ENV-11.4 Utilize greenbelts as buffers between uses and visual relief from the built environment.

FR ENV-11.5 Utilize greenbelts and passive recreational areas for pathways and integrate this system into the nonmotorized transportation network.

FR ENV-11.6 Greenbelt and passive recreational areas should integrate or bridge critical areas, such as wetlands and fish and wildlife habitat areas, or designated open space areas when possible.

IMPLEMENTING ACTIONS

The following list of actions needs to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 2-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Frederickson Advisory Commission (FAC), Pierce County Planning and Land Services (PALS), Pierce County Economic Development (ED), Pierce County Parks and Recreation (Parks), Pierce County Public Works (PW), and Tacoma-Pierce County Health Department (TPCHD).

SHORT TERM ACTIONS

1. Designate and zone areas that contain or are adjacent to designated riparian corridors and other significant habitat areas with resource based zones. (CPB, PALS)
2. Apply standards to zones that address intensity of land uses, open space, tree, and vegetation retention, surface water management, and lighting and noise control. (PALS)
3. Allow activities within riparian area buffers that are compatible with the overall function of the buffer and do not diminish the functional value of the buffer. (PALS)
4. Modify the open space corridor to include additional properties as specified in the plan policies. (CPB, PALS)

**Mid-Term Actions**

1. Develop a system of incentives and credits to encourage greater protection of designated riparian corridors and other significant habitat areas such as on and off-site density transfers and variances to bulk requirements. (PALS)
2. Remove or correct barriers to fish passage based on the results of the Clover Creek Basin Plan, prioritize these projects in the Capital Improvement Program update, and construct or reconstruct infrastructure to improve fish passage. (PW)
3. Install signage around the perimeter of wellhead protection areas and/or the most sensitive aquifer recharge areas. (TPCHD)
4. Identify appropriate methods for handling spill response in high-risk areas with Pierce County Emergency Management Department. (FAC, PALS)
5. Implement recommendations of the Clover Creek Basin Plan where applicable within the plan area. (PALS, PW)
6. Require property disclosure requirements for real estate transfers that serve to notify new property owners that a parcel contains a wetland. (PALS)
7. Develop a Transfer of Development Rights and Purchase of Development Rights program for wetland area density transfers and designated open space acquisition. Development rights shall be transferred within the respective community. (PALS, FAC)
8. Conduct public workshops on the County’s Current Use Assessment Program, Public Benefit Rating System (tax reduction) that encourage property owners to designate wetlands as open space. (Assessor-Treasurer)
9. Develop design standards for public buildings, roadways, and other public infrastructure that promote conservation and restoration of trees and tree cover within the urban growth area. (PALS)
10. Pursue grants and other alternative funding options to acquire monies that would be used to hire a consultant to conduct a freshwater spring inventory within the Clover Creek headwaters vicinity.
11. Pursue the development of passive use trails that make connections throughout the Open Space Corridor.

**Long Term Actions**

1. Pursue grants and other alternative funding options to acquire monies that would be used to hire a consultant to conduct a wetland inventory and coordinate this inventory with the Buildable Lands Project. (FAC, PALS)
2. Enhance partnerships with the Pierce Conservation District and Washington State University-Cooperative Extension to provide public education and outreach for preserving wetlands within the plan area. (FAC, PALS)
3. Analyze the annual cost and staffing requirements associated with sponsoring an urban forestry program that promotes the conservation and restoration of trees and tree cover within unincorporated Pierce County. (PALS, FAC)

4. Utilize various strategies to acquire open space within the plan area. Plan policies shall be applied to prioritize open space acquisition and manage the acquired parcels for the community’s long term interest in open space conservation. (FAC, PALS, Parks)

Frederickson Community Plan
Chapter 5: Economic Element

INTRODUCTION

Frederickson is unique among communities in Pierce County in that such a large portion of the community is devoted to industrial use, with nearly 40% of the community being designated for this type of activity. The Economic Element of the community plan focuses largely upon this aspect of the community emphasizing the Frederickson Employment Center and its important role in the overall economy of Pierce County. The Frederickson Employment Center is the largest designated industrial area in unincorporated Pierce County and is an essential component of the County’s goal of developing a jobs based economy. The community takes pride in their role in the regional economy and through the Community Plan seeks to promote the continued viability of the Employment Center.

DESCRIPTION OF CURRENT CONDITIONS

The Frederickson community contains nearly two-thirds of all the industrial zoned land in unincorporated Pierce County and has many attributes attractive to potential industrial users. Some of these attributes include an abundance of large undeveloped parcels of land that can accommodate a wide-range of industrial users, rail access, direct access to major transportation corridors, minimal environmental constraints, excellent soils, and availability of adequate sewer, water, and power utilities. Currently, approximately 50% of the total acreage within the Employment Center is vacant (1,357 acres). An additional 37% (1,005 acres) of the Employment Center is considered underdeveloped. Nearly 80% of this vacant and underdeveloped land is held in parcels that are 10 acres or larger in size.

Growth within the Employment Center has been substantial over the past decade with the arrival of The Boeing Company, Toray Composites, and dozens of other small and medium-sized businesses. While much development has occurred within the Employment Center in recent years, significant growth capacity still exists. The Pierce County Buildable Lands report released in September 2002, estimates that the Employment Center currently has the capacity to accommodate approximately 22,000 more jobs than currently exist.

Despite the presence of the Employment Center, Frederickson is still a bedroom community with most area residents commuting to job locations elsewhere. Residents reported in the most recent federal census that average commute time to work was approximately 37 minutes with residents traveling to Tacoma, Puyallup, Auburn, military bases, and other employment locations in the region.
Industry and Employment in and around the Frederickson Community

(Note: The following information is drawn from a variety of sources and examines the area covered in zip codes 98375, 98387, and 98446. Taken together, the boundaries of these zip codes are larger than the Frederickson Community Plan area as data is not available at a lesser scale. Accordingly, this data represents general characteristics and trends in and around the community. See Appendix A for a map of the area examined.)

Employment Sectors

Employment located in and around the Frederickson area is heavily concentrated in the Retail Trade, Construction and Services sectors, with over 49% of all employment in those two sectors. By comparing the area’s level of employment in a sector to a benchmark, such as that sector’s concentration in the county or the state, concentrations that may indicate a comparative locational advantage for the area can be found. The location quotients in Table D-6 show employment concentrations in the area in comparison to Washington State and Pierce County. A location quotient greater than one indicates a high-concentration sector, a location quotient less than one indicates low concentration. Put another way, areas with a high location quotient and high employment concentration in a sector may have a locational advantage for that sector. Relative to the State and Pierce County, the area has an extremely high concentration of employment in Construction. Retail Trade is also somewhat higher than the State and County. Relative to Pierce County, the area also has higher concentrations of employment in Agriculture, Forestry and Fishing, and Manufacturing. The area has substantially lower concentrations than the State and Pierce County in Wholesale Trade and Transportation, Communications and Public Utilities, and somewhat lower than the state and County in Services and Finance, Insurance and Real Estate.

Area Workforce

Workforce participation and employment in the area is similar to the rest of Pierce County for all statuses of employment, as shown in Table D-7.

The area workforce is similar in educational attainment to the Pierce County workforce as a whole, with some exceptions. As shown in Table D-8, the area has similar concentrations of people with and 8th-grade or lower education through associate degree, but a smaller proportion of people with 4-year or advanced degrees.

Table D-9 shows that the area workforce is roughly similar Pierce County as a whole in terms of occupation, with the exceptions that there is a higher concentration of workers in Private Household Services, Transportation, and Precision Production and Repair, and a lower concentration in Professional Specialty.

### Area Employers

The number of businesses reporting tax information from the area increased steadily through the 1990s. While the number of businesses increased, there was some lag time before gross business income showed a corresponding increase. Average gross income per firm showed strong growth from 1995 through 1997, but has since leveled off at the higher rate (Figure D-1).

![Figure D-1: Firm Data](image)

Size of firm data show that 47% of firms in the area have 1-4 employees, and another 25% report no employees (Table D-10). Those 72% of firms represent approximately 12% of the area’s employment and provide about 7% of the area’s wages. Two firms employ 250 people or
more and account for 35.5% of the employment and 33.2% of the wages paid by area employers. Firms that employ between 5 and 249 people make up 28% of all firms and provide 53% of the area’s employment and 60% of the wages.

**Land and Improvement Values Within Frederickson**

Based upon Pierce County Assessor's information, land and improvements within Frederickson are currently valued at approximately $1.4 billion and represent about 15% of the total land and improvement value within Pierce County's unincorporated urban area. On a per acre basis, the combined land and improvement values within Frederickson are somewhat higher than the combined average values of the overall urban unincorporated area. Values are somewhat evenly split between the industrial and residential lands within the community. On a per capita basis, values within Frederickson are much higher than the overall unincorporated urban area reflective of Frederickson's lower population density and high concentration of industrial lands.

**Table D-11: Comparison of Land and Improvement Values**

<table>
<thead>
<tr>
<th></th>

</tbody>
</table>

Estimate utilizes a population of 149,768 for urban area and 14,473 for Frederickson. Unincorporated urban area is 55,246 acres. Frederickson area is 8,003 acres.
**DESCRIPTION OF DESIRED CONDITIONS**

**EMPLOYMENT CENTER**

The Frederickson Employment Center is envisioned as being a major source of future employment in Pierce County. In order to realize this vision and ensure that new uses have a beneficial impact on the community, care must be taken in the development of the Employment Center and surrounding properties. The siting, design, and approval of new uses must take into consideration employment density, aesthetics, impacts to surrounding properties, future transportation projects, and other factors. Industrial users will be more willing to locate in the Employment Center with future Canyon Road improvements, construction of the Cross-Base Highway, and extended freight rail services. Additionally, the public must be willing to support the infrastructure improvements necessary to make the Frederickson Employment Center an attractive place for industry to locate.

**COMMERCIAL CORE**

A viable and well-designed commercial core is desired in the community in order to better define Frederickson as a place and to provide for the goods and service needs of the community in an efficient manner. Attractive, commercial areas create a positive image for the surrounding residential neighborhood and stimulate investment, which in turn provide economic growth for the area and its residents and an increased tax base for local government.

**BUSINESS ASSISTANCE AND MARKETING**

Local businesses struggle with a variety of issues such as marketing and promoting strategies, managing employees, capital for operations, upgrades, and expansions, and long-term business goals. This plan is intended to illustrate methods or strategies for helping local businesses within the communities plan area stay in business while still enhancing community values.

**PUBLIC/PRIVATE PARTNERSHIPS**

The community desire of a balanced economic environment often requires commitment by both the public and private sectors. Public involvement can include providing the necessary infrastructure, facilities, services, and financial incentives that promote commercial and industrial development. Private investment can construct and maintain existing commercial and industrial uses in a way that enhances the area’s viability. The community also desires to highlight creative methods of public and private interaction that serve to increase the potential for commercial and industrial development within the plan area.
EMPLOYMENT OPPORTUNITIES

The economic prosperity of the local citizenry is an important goal of both the Growth Management Act and the local planning documents which are adopted to address economic development. This element should foster strategies which address the need to assure that unemployed, underemployed, and disadvantaged persons within the communities plan area have access to the local job market.

EDUCATION RESOURCES

The community recognizes that economic prosperity of the local citizenry is directly linked to successful educational programs. This element should foster strategies which address the need to assure that school districts continue to work with the local citizenry to develop goals and strategies that result in higher test scores, higher graduation rates, work study programs, and higher placement into institutions of higher education.

ECONOMIC DEVELOPMENT POLICIES

GOALS

The following statements comprise the goal for economic development in the Frederickson community:

- Encourage economic investments which will result in a variety of family wage job opportunities and help to create a well balanced economic base;
- Economic activities are encouraged, but not to the detriment of either the natural environment or residential neighborhoods as identified in this plan. Minimum design requirements, including but not limited to, aesthetics, noise, and odor control, will be achieved;
- The type and scale of economic development proposed for specific locations in the community shall be compatible with nearby residential neighborhoods and other land uses. New uses will be designed and located in manner that minimizes impacts on surrounding properties and the community; and,

Ensure that allowed uses adjacent to the Employment Center will be controlled so as to minimize compatibility problems in the future.

EMPLOYMENT CENTER

GOAL FR EC-1  Develop a planned action ordinance for the Frederickson Employment Center.
FR EC-1.1  Define and implement an appropriately sized planned action area within the Employment Center.
Use existing State Environmental Policy Act (SEPA) documents, buildable land wetland and steep slope information, screenline and traffic count information, and other information to develop a baseline environmental analysis for the planned action area.

Enable uses identified within the baseline environmental analysis to utilize an abbreviated review process to satisfy SEPA requirements.

Seek to issue development permits within the Employment Center within 60 days of the submittal of a complete application.

Give priority to proposals within the Employment Center in the development review process.

Establish an ombudsman/permitting team for the Employment Center.

Monitor permit issuance timelines within the Employment Center and take corrective actions as necessary to achieve permit issuance goals.

Identify and correct infrastructure deficiencies that impede development of the center.

Establish a task force to identify gaps in water, sewer, transportation and other infrastructure within the Employment Center.

Work with the appropriate service provider to address infrastructure deficiencies.

Encourage businesses within the Employment Center to consider the use of freight rail service as an alternative to truck transport.

Monitor areas designated for commercial and industrial development, redevelopment, and revitalization to determine if the actual level of development provides an adequate amount of land for economic growth and vitality within the community plan area.

Pierce County shall track annual development of commercial and industrial uses within the community plan area to determine if it is consistent with the levels of anticipated growth.

Monitor a variety of economic indicators to determine if policies contained within this plan are meeting the objectives for economic growth and vitality.

Pierce County shall prepare a report related to annual economic indicators every five years or in conjunction with a community plan update, whichever comes first.

Economic indicators shall include but are not limited to the following: taxes in the area, new construction permits, business licenses, increase/decrease in the standard of living, wage levels, business stability/turnover (if declining or high turnover, what kind, how many and why), kinds of businesses the community attracts and why, and police activity (crime level increasing/decreasing, graduation rates/drop out rates).
**COMMERCIAL CORE**

**GOAL FR EC-6** Develop strategies to encourage the development of a high quality commercial and civic core within the community.

**GOAL FR EC-7** Promote the development of a commercial and civic core at the intersection of 176th Street East and Canyon Road East that is scaled to meet the needs of the local community and employers and employees within the Employment Center.

**GOAL FR EC-8** Desired commercial uses within the commercial core include grocery stores, financial services, personal services, restaurants, day care centers, recreation and entertainment, and government offices.

**GOAL FR EC-9** Encourage federal, state, or local government services to locate within the commercial core in order to provide an anchor for other businesses

**BUSINESS ASSISTANCE AND MARKETING**

**GOAL FR EC-10** Seek the support of business organizations and associations to provide marketing and promotion assistance to businesses within the communities plan areas targeted for commercial and industrial development.

**FR EC-10.1** Request that the Economic Development Division of Pierce County and other appropriate organizations prepare a market assessment for the Frederickson area to help determine the market strengths and weakness of the area.

**FR EC-10.2** Market assessments shall provide an update of the commercial and industrial market through analyzing the area’s past and recent performance in the various sectors; documenting existing conditions, emerging trends, opportunities, and constraints (i.e., the depth of the market); and identifying a portfolio of key properties and development opportunities.

**FR EC-10.3** The market assessment shall help rank and prioritize the potential target areas for the receipt of public improvements.

**FR EC-10.4** Utilize existing or form new local business associations to help develop common promotion (advertising, joint merchandising, and special events) and future business development (leasing, business recruitment, and market research) within selected commercial target areas.

**GOAL FR EC-11** Provide educational opportunities to businesses within the communities plan area on community values.

**FR EC-11.1** Pierce County shall through development of policies and implementing actions in the Land Use and Community Character and Design Elements promote amenities within the commercial areas that address safety, adequate lighting and parking, and cleanliness.
FR EC-11.2 Pierce County shall maintain current commercial and industrial site survey information such as available and projected public services, surrounding land uses, transportation capabilities, critical areas, and other relevant economic information.

**PUBLIC/PRIVATE PARTNERSHIPS**

**GOAL FR EC-12** Pierce County shall participate in special public/private ventures within the community plan area when such ventures provide public benefits, support commercial or industrial development or commercial revitalization policies, and are appropriate to the long-range goals of the County.

FR EC-12.1 Pierce County shall act in partnership with the private sector to fund infrastructure as part of the community plan to encourage redevelopment to convert outdated and underutilized land and buildings to high-valued or appropriate land uses.

FR EC-12.2 Pierce County shall budget for public infrastructure to encourage commercial and industrial development, with the priority towards those areas with substantial private development.

**GOAL FR EC-13** Ensure access to jobs within the communities plan area by coordinating public transportation between residential areas and commercial and employment center sites.

FR EC-13.1 Encourage Pierce Transit to route bus service between and through residential neighborhoods and commercial and employment center sites and in those corridors such as Canyon Road East and 176th Street East where service is currently not provided.

FR EC-13.2 Encourage employers to promote rideshare and public transportation subsidies for employees who utilize public transportation.

**IMPLEMENTING ACTIONS**

The following list of actions needs to be completed in order to implement the policies contained within this plan. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short-term actions should occur within one year of plan adoption. Mid-term actions should be completed within 2-5 years. Long-term actions should be completed within 5-10 years of plan adoption. The entity or entities responsible for leading the effort to complete the action item is listed in parenthesis following the action. Actions are assigned to the Frederickson Advisory Commission (FAC), Pierce County Planning and Land Services (PALS), Pierce County Economic Development (ED), Pierce County Parks and Recreations (Parks), Pierce County Public Works (PW), and Tacoma-Pierce County Health Department (TPCHD).
**SHORT TERM ACTIONS**

1. Adopt design guidelines and standards and development regulations which mitigate negative impacts between commercial/industrial areas and residential neighborhoods and sensitive features in the natural environment. (PALS, CPB)

2. Promote the development of a commercial and civic core at the intersection of 176th Street East and Canyon Road East that is scaled to meet the needs of the local community and employers and employees with the Employment Center. Desired uses include grocery stores, financial services, personal services, restaurants, day-care centers, recreation and entertainment, and government offices. (PALS, CPB)

**MID-TERM ACTIONS**

1. Develop a planned action ordinance for the Frederickson Employment Center (PALS, ED)

2. Seek to issue development permits within the Employment Center within 60 days of the application submittal. (PALS)

3. Establish an ombudsman/permitting team for users of the Employment Center. (PALS, ED)

4. Establish a task force to identify gaps in water, sewer, and other infrastructure and work with appropriate service providers to address infrastructure deficiencies within the Employment Center. (PALS, ED, FAC)

5. Track annual development of commercial and industrial uses to determine if it is consistent with the levels of anticipated growth. (PALS)

6. Act in partnership with the private sector to fund infrastructure to encourage new commercial and industrial development and encourage redevelopment to convert outdated and underutilized land and buildings to high-valued or appropriate land uses.

**LONG TERM ACTIONS**

1. Prepare a report related to annual economic indicators every five years or in conjunction with a community plan update, whichever comes first. (ED)

2. Assist businesses in the community by: (ED)
   - Requesting that the Economic Development Division create a market assessment to help determine the viability of potential target areas. The assessment will help prioritize the potential target areas for receipt of public improvements;
   - Forming new local business associations to help develop common promotion and future business development;
   - Targeting and promoting educational opportunities on how to operate a small business. Topics should include, at a minimum, marketing and promotion strategies, developing business plans and reports, management skills, and new technology;
   - Supporting the Economic Development Division in promoting available information and providing technical assistance and loans for business expansion and job creation.
3. Provide educational opportunities on job training and employment opportunities by:
   (ED)
   • Developing education programs for job opportunities available within the plan area;
   • Promoting job search and skills training opportunities provided by local community
     and technical colleges through education of employers and potential employees;
   • Encouraging Pierce Transit to route bus service between and through residential
     neighborhoods and commercial and employment center sites and in those corridors
     such as Canyon Road East and 176th Street East;
   • Encourage employers to promote rideshare and public transportation subsidies for
     employees who utilize public transportation.
Chapter 6: Facilities and Services Element

INTRODUCTION

The Facilities and Services element of the Frederickson Community Plan provides policy direction to decision makers in Pierce County regarding the development regulations and financial investments associated with parks and trails, stormwater facilities, sewer utilities, public schools, and transportation projects.

Urban services include, but are not limited to transportation infrastructure (such as roads, sidewalks, street trees, street lighting), parks, sanitary sewage disposal, and stormwater and surface water management systems. Facilities are generally considered the physical structures in which a service is provided. One of the principal goals of the Growth Management Act (GMA) is for cities to provide compact urban growth areas (UGAs) that accommodate the majority of growth and development in a community so that the necessary urban facilities and services are provided and delivered efficiently and cost effectively. Urban level facilities and services are only permitted within UGAs. Certain public facilities and services must be provided at a specific level of service (LOS), concurrently with development. This requirement is intended to ensure that development will not occur without the necessary infrastructure. Developers and property owners are typically required to construct the necessary infrastructure or provide a fee to compensate for their fair share of facilities and services (as associated with a proposed building or development permit) that are necessary to maintain an established LOS (as defined by Pierce County). This LOS standard for public facilities is identified in the Capital Facilities Element of the Comprehensive Plan.

Pierce County Transportation Planning

History of Transportation Planning in Frederickson

In 1992, the Pierce County Transportation Plan (PCTP) was adopted by the Pierce County Council. The PCTP was the first county-wide transportation plan establishing policies and prioritizing transportation improvements for the following twenty years and beyond. The PCTP was the result of a four-year work program involving many citizen volunteers representing different geographic areas of Pierce County and various residential, commercial, industrial and recreational groups interested in the transportation system. The PCTP was organized into five main topic areas: Transit, Nonmotorized Transportation, Roads, Other Motorized

Pierce County Comprehensive Plan | Frederickson Community Plan D-93
Transportation and Implementation Strategies and Actions. The PCTP served as the starting point for developing a list of transportation policies and project recommendations for the Frederickson Community Plan.

In 1994, the Pierce County Comprehensive Plan was adopted to comply with the Washington Growth Management Act. The Comprehensive Plan’s Transportation Element was predominantly based upon the recommendations included in the PCTP. The Comprehensive Plan summarized a new system for coordinating the planning, funding, programming and construction of transportation improvements with future land development. This concept, known as transportation concurrency, is implemented in Pierce County through the Traffic Impact Review Policy (adopted in 1998) and Transportation Improvement Program (adopted annually).

The South Canyon Corridor Plan Committee worked with Pierce County staff in 1995 to develop and adopt the South Canyon Corridor Plan (SCCP). The SCCP describes the committee's recommendations for transportation improvements in the Canyon Road Corridor from SR 512 to 224th Street E. The plan provides the framework for the design of roadway and transportation improvements, as well as guidance for future development of the South Canyon Corridor. The Canyon Road improvement recommendations that have resulted from the SCCP are included in the Frederickson Community Plan.

In 1997, the County adopted its first Nonmotorized Transportation Plan (NMTP). An extensive public involvement campaign was used to identify and prioritize pedestrian and bicycle projects, and to create nonmotorized policies for the entire county. Since 1997, both the PCTP and the NMTP have been updated and combined into one Transportation Element contained in the Pierce County Comprehensive Plan. This chapter of the Pierce County Comprehensive Plan (Chapter 19A.80) was used as the starting point to develop the Frederickson Community Plan.

**COORDINATION WITH THE PIERCE COUNTY COMPREHENSIVE PLAN-TRANSPORTATION ELEMENT**

The transportation policies and project list contained in the Frederickson Community Plan work in coordination with the Transportation Element of the Pierce County Comprehensive Plan (Chapter 19A.80). The transportation guidance found in the Frederickson Community Plan supplements the guidance provided in Chapter 19A.80.

Transportation improvements that are financially programmed within the next six years can be found in the County’s most recent copy of the Transportation Improvement Program (TIP). The TIP is updated annually and provides a snapshot of the transportation improvements programmed for the following six years. The Frederickson Community Plan and Chapter 19A.80 play a major role in determining which transportation improvements will be included in the TIP.
The timing of projects and the phasing of various parts of projects are largely based on the anticipated funds available for each project. Unfortunately, the factors determining funding and priority can and do change from year to year.

The Pierce County Transportation Plan (Chapter 19A.80.100) includes policies detailing the process used to prioritize transportation improvement projects. The policies list criteria such as safety/accidents; congestion/level of service; incomplete transit, roadway, bicycle, pedestrian, and ferry systems; traffic impacting neighborhoods; and other criteria. The intent of the policies is to use a standardized, well-documented priority process to establish clear priorities for transportation expenditures in the County. The Pierce County Transportation Plan states that the first priority is to maintain or upgrade existing facilities to serve existing residents and business at acceptable levels of service. The second priority is to upgrade or build new transportation facilities to encourage and support growth and economic development in the more urban areas of the County. The third priority is to upgrade or build new transportation facilities in the more rural areas of the County.

Another important development in Pierce County’s Transportation Planning is the collection of transportation impact fees. Pierce County is currently developing a transportation impact fee program to provide for the equitable financing of growth related transportation improvements. This program will provide Pierce County with a systematic way to equitably distribute the “fair share” contribution for transportation improvements from developers of new projects. The impact fee program will be applied to new developments throughout Pierce County including Frederickson.

### Description of Current Conditions

The following sections provide an analysis of the existing infrastructure and services in the community plan area. This information provides the basis for analyzing the levels of service (LOS) for infrastructure in the community and for developing policies which articulate the community’s desires. The LOS described in these sections may show that some facilities or services exceed Pierce County’s adopted levels of service for public facilities or that there is a deficiency in certain circumstances.

### Public Parks

The Pierce County Comprehensive Plan contains general policies that serve as a guide for future development of park and recreation facilities in the County. These policies cover a range of issues including the responsibility for providing parks, technical assistance, and location criteria for new regional parks. Section 19A.20.090 of the Comprehensive Plan states that primary reliance is upon cities and towns and special purpose districts to provide local park facilities and service appropriate to serve local needs. The location criteria for park and
recreation areas state that new parks must be located on public roads. If a park is located in an urban area then urban services need to be available. Open space recreation parks should be located on land offering significant environmental features.

The Frederickson community does not have any Pierce County park land or facilities within the plan area. The only public recreation facilities located in the plan area are associated with three public schools. The community is served by the following Pierce County Regional Facilities: Sprinker Recreation Center and Spanaway Lake in Spanaway and Frontier Park in Graham all of which are within five miles of the plan boundary. Table D-12 and Table D-13, Recreation Land Inventory and Facility Inventory describe the park land and recreation facilities that serve the Frederickson community. Brewer’s Sports Complex (30 acres) and Tacoma Sportsman’s Club (80 acres) are two private recreation facilities located within the plan area which are not considered in determining level of service.

* All facility types listed in this table are within five miles of the Frederickson Community Plan boundaries and are considered to be providing services to the Frederickson Community.

The Pierce County Comprehensive Park, Recreation, and Open Space Plan (referred to as the Parks Plan) provides general direction and guidance for both facilities and programs. The Parks Plan does not contain project specific plans for the County’s park properties. Although, the Parks and Recreation Department is a regional provider, the department assists communities with identifying their individual park and recreation needs. Table D-14 describes the park land and facility inventory that currently exists within the Frederickson Community Plan area and projects the future need for expected population growth.

</table>

* Note, there is no park-land or park facilities in the Frederickson Community plan area. However, the community is served by the following Pierce County Regional Facilities: Sprinker Recreation Center, Frontier Park and Spanaway Lake, all of which are within five miles of the plan boundary.

** Number of new facilities needed by 2017 is derived by multiplying the estimated 2017 population for the Frederickson Community (18,062) expressed as persons-per-1,000 (18.062) by the county LOS standard for the facility type.

TRANSPORTATION

ROADS AND HIGHWAYS

The transportation system in Frederickson reflects the area’s rural past. The road system is primarily made up of two lane roads that are aligned north-south and east-west. However, the grid system is incomplete and there are only four primary routes into and out of the community plan area: Canyon Rd E, 176th St E, Waller Rd E, and 160 St E/Brookdale Rd E. According to preliminary analysis completed in anticipation of creating the Pierce County Traffic Impact Fee Program, six roads are identified as having capacity deficiencies in Pierce County. Two of the six roads are located in the Frederickson Community Planning Area: 176th St E and 78th Ave E. The Frederickson Community Planning Board recommended improvements to these two roads and others based on current and future needs to reduce the growth in congestion.

The lack of nonmotorized facilities such as sidewalks, paved shoulders and trails within the Frederickson Community Plan area has become an important issue to many in the community as the residential population continues to grow. Many of the plan’s transportation recommendations include nonmotorized facilities to increase transportation and recreational opportunities for community residents.

Additional road and highway issues addressed during the planning process include: controlling access to arterials, minimizing impacts to the environment and wildlife, improving safety,
building new facilities at the time they are needed, preserving right-of-way, and providing connections between developments.

**RAIL SERVICES**

The Tacoma Rail Mountain Division owns the railroad lines traveling through the Frederickson Community Planning area. The length of rail line running through the Frederickson Community Plan area is approximately 6.5 miles. This is part of 132 miles of track in the Mountain Division. Growth in freight volumes and customers has increased since Tacoma took over the rail lines four years ago. Currently freight is carried between Frederickson, Thurston County, Lewis County and the Port of Tacoma for interchange with the Burlington Northern-Santa Fe and Union Pacific railroads for service to all parts of the U.S., Canada and Mexico. Freight service to Frederickson is on a five day a week schedule with occasional service on Saturdays and Sundays. Improvements are being made on track and right-of-way to run freight from Morton and Mineral by the end of 2002. This additional freight will pass through Frederickson.

Passengers may be carried on the rail lines in the future. One possibility is to run a passenger train from Frederickson to connect to the Sound Transit regional rail in downtown Tacoma. An excursion opportunity is a train between Freighthouse Square in Tacoma and the proposed Inn at Park Junction located near Elbe/National. The “Train to the Mountain” is in the planning stages and will require substantial upgrade of track and right-of-way to allow operations at greater than 20 mph.

**AIRPORT**

The Shady Acres Airstrip is the only aviation facility within the Frederickson Community Plan area. The privately owned airstrip is located just west of 46th Avenue East between 200th Street East and 208th Street East. The airstrip is open to the public and is the base for approximately 42 aircraft. The airstrip averages 118 operations per week which is 90% transient general aviation and 10% local general aviation.

**PUBLIC TRANSIT**

Pierce Transit’s existing routes do not travel within the Frederickson Community Plan area. The nearest bus routes are:

- #1 - Carries passengers on 6th Avenue and Pacific Avenue (SR 7).
• #402 - Carries passengers across South 224th, on Meridian (SR 161) and between the Roy Y Park and Ride, Graham, Puyallup, Enchanted Parkway and Federal Way.
• #410 - Carries passengers on 112th Street East between Parkland and Puyallup.

In February 2002, local voters approved an increase in the local sales tax levy to support Pierce Transit. The additional tax revenue will replace funding that was lost when the state Motor Vehicle Excise Tax was eliminated. The approved local sales tax levy will allow Pierce Transit to provide increasing levels of local bus service, SHUTTLE transportation for people with disabilities, vanpool services, and additional Park & Ride lots, at a rate that will keep pace with Pierce County population growth.

PUBLIC SCHOOLS

The plan area is served by Bethel School District No. 403. The District includes 15 elementary schools, 4 junior high, 2 high schools, and 1 alternative high school with a total capacity of 12,281 students. Capacity is based on 2002 school district service standards of 80 square feet per student at the elementary schools, 110 square feet per student at the junior high schools, and 120 square feet per student at the high schools. Enrollment in 2002 was 15,997 students.

Naches Trail Elementary, Pioneer Valley Elementary, and Clover Creek Elementary are the only Bethel School District facilities located within the plan area boundaries. A fourth elementary school, Elementary School No. 16, will be located north of 176th Street East and west of 74th Avenue East.

Bethel School District’s Capital Facilities Plan for 2002-2003, provides for the construction of an additional junior high with a capacity for 750 students, and an additional high school with a capacity for 1,250 students. This will increase total capacity of the district to 14,281 by the year 2005. Additional new facilities will not address potential future growth of the school district which is projected to grow to 16,897 by 2005. This will leave the district with a net shortfall of 2,616 students in 2005. The district will need to approach the voters for an additional elementary school and junior high school in 2005 to address the future growth.

SANITARY SEWER

The Frederickson community is serviced by approximately 24 miles of sewer lines. The majority of these lines are gravity (96%) with the remainder being force mains.
Pierce County Sewer Code and Tacoma-Pierce County Board of Health Regulations for On-Site Sewer Systems require properties within 300 feet of an existing public sewer line to connect to the sewer system when proposed for development. Existing developments may continue use of on-site sewer systems unless there is failure of the system and public sanitary sewers are within 300 feet or the existing structure is expanded.

Current regulations require vacant properties within 300 feet of an existing sewer main to connect to the sewer system when proposed for development. Existing developed property does not have to connect unless there is a proposal to change the use, a septic failure, or an additional to a structure that would substantiate additional bathrooms.

In the late 1990s Pierce County adopted regulations that require new subdivisions which do not connect to the sewer system to construct dry-line sewer infrastructure in addition to an interim septic system - the premise being that when sewer lines are extended past the project in the future, the interim septic systems will be disconnected and the dry-line infrastructure will be connected to the sewer system. The costs of constructing an interim septic system and dry-line infrastructure, maintenance, and the engineering challenges have encouraged developers to connect projects to the sewer system, with limited exceptions.

STORMWATER SEWER SERVICE

STORMWATER MANAGEMENT

As natural vegetative cover is replaced with homes, businesses, parking lots, and roads, surface water runoff (stormwater) tends to increase both in volume and rate at which the water drains off the land. If not properly addressed, this post development increase in stormwater volume and rate can result in flooding, water quality and habitat degradation, and soil erosion.

Within the Frederickson plan area there is very little in the way of man-made constructed drainage systems due to the porous nature of the underlying Spanaway soils. These soils do not generate significant surface water runoff and therefore, does not facilitate the natural formation of drainage channels. Most of the development that has occurred in the plan area has been at such a density that construction of large piped conveyance systems along roadways has not been necessary because runoff has infiltrated along the shoulders of the road or in roadside ditches. Only when development has become more intense (i.e. construction of a major arterial or the creation of subdivisions with more than one or two dwelling units per acre) has the need for collecting and conveying the excess runoff to a storm drainage pond or to small scale drywell within the roadway been necessary.
There are some pocket locations within the plan area comprised of till soil types that do not allow runoff to infiltrate into the ground and precipitation in these areas is quickly converted to runoff. These areas are in the Southwest corner of the plan area, south of 192nd St. E. and west of 42nd Ave. E. and also south of Clover Creek between Canyon Road and the 8400 block and north of approximately 182nd St. E. These areas are relatively undeveloped, but have formed the natural drainage courses characterized with culverts at road crossings and steep ravines where the drainage courses traverse steep slopes.

 Portions of the Frederickson community are within a closed depression drainage basin where stormwater flows to a series of potholes. No natural surface water outlet is present in these potholes and the only means of conveyance is through evaporation and infiltration. This type of topography is susceptible to increased levels of flooding due to the increased rate of runoff created from development within the closed depression becoming greater than the evaporation and infiltration rate. As a preventative measure, current stormwater regulations require development within the closed-depression areas to maintain stormwater flow peaks and volumes at the same level prior to the development and manage any excess volumes on-site.

Pierce County has developed some regional stormwater facilities within the Frederickson plan area. These facilities are typically situated at a pothole location within the closed depression basin and are designed to maximize the infiltration rate of the pothole while providing protection from development occurring within the pothole. Two of these facilities, Sandpit Pond and the Brookdale Pit, are on the border of the northern portion of the plan area and receive most of their runoff from northern areas outside of the plan area. Another regional facility located in the southwest corner of the plan is an unnamed facility located just east of 22nd Ave. E. and south of 192nd St. E. The following table describes these facilities in more detail.

<table>
<thead>
<tr>
<th>Facility Name</th>
<th>Location</th>
<th>Purpose and Contributing Area.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brookdale Pit</td>
<td>South of Brookdale Road at 46th Ave. E</td>
<td>Retention Pond. Receives runoff from a seasonal stream known as the 3rd tributary of Clover Creek. Drains areas around Canyon Road south of 128th St. E.</td>
</tr>
<tr>
<td>Sandpit Pond</td>
<td>NW corner of 156th and 78th Ave. E</td>
<td>Retention Pond. Receives runoff from a seasonal stream known as the 7th tributary of Clover Creek and reduces flooding around 160th St. E. Drains areas to the north and east of plan area, south of 144th St. E. and west of 86th Ave. E.</td>
</tr>
<tr>
<td>192nd &amp; 22nd</td>
<td>East of 22nd Ave. E. and south of 192nd St. E</td>
<td>Retention Pond. Receives runoff from a pocket of till soils in the southeast corner of the plan.</td>
</tr>
</tbody>
</table>

The regional ponds identified above are in addition to the smaller publicly owned retention/detention ponds and a large amount of drywells associated with individual
developments. These publicly owned stormwater facilities have been inventoried and are currently documented on the County’s GIS system for routine maintenance. Privately owned facilities within the plan area, which are associated with private road developments and gated communities, are not well inventoried. Private parties such as homeowners associations are responsible for maintaining those facilities. Sporadic checks have documented poor maintenance of these private facilities despite maintenance agreements required at the time of plat approval. This is probably due to loose-knit organizations of homeowners associations and lack of funding to perform the necessary maintenance. Pierce County has not had the resources necessary to track and pursue enforcement of the maintenance agreements.

**Basin Planning**

To assist in future decision making associated with stormwater issues, a series of basin plans are being prepared by Pierce County to address all aspects of surface water management. The Clover Creek Basin Plan encompasses the entire Frederickson Community Plan area and has currently been approved by the Pierce County Planning Commission. More public hearings are expected before the County Council with an anticipated adoption in February/March of 2003. Implementation of the plan’s recommendations will help ensure that actions taken to improve stormwater drainage in the County are in compliance with federal and state laws and regulations, particularly the federal Clean Water Act and Endangered Species Act.

**Potable Water Supply**

Frederickson residents and businesses receive their potable water (or drinking water) from one of several types of public water systems operating under different ownership arrangements (i.e., municipal, mutual or investor-owned) or from “individual wells.” The majority of residents receive their drinking water from a Group A water system; a public water system serving more than 15 connections. While approximately 10 Group A water systems operate in the Frederickson community, the majority of the community plan area is served by one of the following: Spanaway Mutual, the City of Tacoma, Firgrove Mutual or the Southwood/Sound water system. In addition to Group A water systems, a percentage of Frederickson residents obtain their drinking water from a Group B system; a public water system serving between 2 and 15 connections. Finally, a lesser amount of Frederickson residents obtain their drinking water from a private source or individual well.

The Washington State Department of Health (DOH) has regulatory responsibility over Group A public water systems while the Tacoma-Pierce County Health Department (TPCHD) in conjunction with DOH has primary regulatory responsibility over Group B systems. TPCHD is responsible for the permitting of individual wells. Water systems meeting certain conditions (i.e. size) are required by DOH to prepare water system plans every six years. Such plans are
required to be consistent with growth and zoning conditions contained in the relevant jurisdiction’s comprehensive plan and must demonstrate how the system is to provide water service to the projected growth. All users of surface water and users of more than 5,000 gallons of groundwater per day (or irrigation of more than ½ acre of land) are required to obtain a water right from the Washington State Department of Ecology.

The Central Puget Sound area faces significant challenges in meeting the water needs for people and fish habitat with available resources. At current levels of water use, additional water supplies will be needed to meet both near-term (through 2020) and long-term (through 2050 and beyond) water demand in the region. While many of the region’s water systems would prefer the ability to drill for new sources of groundwater within their service areas, the likelihood of doing so is questionable. Instead, water systems are beginning to recognize the need to seek a regional water source to supplement existing sources of supply. Such recognition is reflected in several new regional planning efforts, such as the Central Puget Sound Water Initiative and ESHB 2514 watershed management planning processes.

At the local level, several Pierce County water purveyors operating within the urban growth boundary are in need of new sources of supply to serve anticipated new growth. Currently, Spanaway Mutual and the Southwood/Sound water system, each serving a portion of the Frederickson community, are reaching capacity in terms of their water rights. Spanaway Mutual is currently updating its water system plan which must include a water right evaluation and a source of supply analysis. It is anticipated that through the development of its water system plan, Spanaway Mutual will address its plans for the future supply of water to its existing and projected customers.

A water system plan for the Southwood/Sound system was recently approved by DOH (September 13, 2002). As the water system plan was under review, the system’s designated water service area was revised to more closely reflect an area to which the system can provide water service for expected growth. The majority of this area, now considered to be “undesignated” in terms of public water service, is located outside the urban growth boundary; however, a portion of the Frederickson Employment Center was removed from the Southwood/Sound water service area and is, therefore, considered to be undesignated. The City of Tacoma provides water service to the majority of the Frederickson Employment Center. It is anticipated that the City of Tacoma will expand its designated service area to incorporate the recently relinquished Southwood/Sound service area. In order to further address its water deficit, the Southwood/Sound water system has recently formalized a wholesale water request to the City of Tacoma. The Tacoma Public Utility Board is currently reviewing that request.

Another smaller water system providing water service in the Frederickson community, Bethel Water Company, also recently revised its service area leaving an additional portion of the Frederickson Community planning area undesignated in terms of public water service. The Firgrove Mutual water system recently addressed its projected water resource deficit by entering into a wholesale water arrangement with the City of Tacoma.
DESCRIPTION OF DESIRED CONDITIONS

The urban growth area is intended to accommodate the majority of new growth and development in the community plan area. It is important therefore, that the majority of public expenditures for urban facilities and service should also be directed to UGA. Urban levels of service should be required as a component of all new development in the UGA. Pierce County should ensure that new development supports the costs associated with public facility and service expansions that are made necessary by each development project. The UGA should not exceed a size that can be serviced by the urban facilities and services that exist or can be provided within a 20-year planning horizon. Prior to expanding the UGA, it must be demonstrated that adequate public facilities and services can be provided for each public facility and service.

Due to the high rate of growth in the Frederickson area, residents have experienced deficiencies in public facilities, services, and infrastructure. Ensuring that adequate schools, parks, roads, sewer and water systems are present in the community is a major goal of this plan. The Frederickson Community Planning Board has anticipated the expected growth and accounted for the current deficiencies when forming plan policy recommendations.

PUBLIC PARKS

The objectives, policies, and standards focus on the acquisition and development of property for public parks. Strategies identify possible funding mechanisms and public agency partnerships. Additional policies address deficiencies in park land and facilities and identify methods of creating, funding, and operating neighborhood and community scale parks. Properties and methods identified attempt to remedy the deficiency in level of service within the plan area and attempt to achieve a level of service that meets the needs and desires of the Frederickson community.

Map D-14: Park Acquisition Properties identifies nine new sites as possible parks including many properties located within or adjacent to the Open Space Corridor. The CPB has recommended the following sites as potential park and recreation facilities:

- Naches Trail Elementary (152nd St E & Waller Rd)
- Pierce County property at 27th Ave E
- Pierce County property at Brookdale Rd E
- Tacoma City Water parcels at 164th St E & Canyon Rd
• Tacoma Sportsmen’s Club (16409 Canyon Rd E)
• Brewer’s Sports Complex (6715 176th St E)
• Port of Tacoma parcel (Lake Frederickson) at 192nd St E
• Viewpoint properties in the vicinity of 30th Ave E & 208th St E (Section 24, Township 18, Range 03)
• Oxbow properties in the vicinity of 204th St E and 208th St E
• Pioneer Valley Elementary (7315 Eustis Hunt Rd E)

The potential acquisition sites that are identified are not listed in order of priority.

TRANSPORTATION

The objectives, policies, and standards help describe Frederickson’s transportation future. The transportation project list and map guides the identification, financing, design, and construction of transportation facilities in the Frederickson Community Plan area. The community plan’s transportation element needs to be used in conjunction with the Transportation Element of the Pierce County Comprehensive Plan. Many of the projects and policies contained in the Frederickson Transportation component have evolved from the Pierce County Comprehensive Plan and South Canyon Corridor Plan.

An evaluation of the roads in the Frederickson area was completed to help create the project list. The evaluation looked at Frederickson traffic in 2025. Assuming all of the projects in the Pierce County Comprehensive Plan Transportation Element were built, the model showed that most of the roads would function adequately except for Canyon Road East and 78th Avenue East in the p.m. peak travel hour. The forecast assumed that Canyon Road East was improved to 7 lanes as far south as 176th Street East and improved to 5 lanes from 176th Street East south to SR 7. The forecast assumed no improvements were made to 78th Avenue East.

Additional components of the transportation system examined during the planning process included safety, maintenance, neighborhood and environmental impacts, access to arterials and project funding. The transportation projects and policies are intended to slow the growth in traffic congestion, improve transportation flow for residents, business interests, and industrial needs, decrease the number of collisions, increase route options for pedestrians and bicyclists, and improve transit service. The community would like to have the nonmotorized and transit systems improved in their area to provide transportation options for people who are unable to drive, for fitness and recreation, and to reduce the growth in the number of cars traveling within the Frederickson community. The committee recognized the importance of the nonmotorized and transit systems in providing mobility for people of all ages, physical abilities, and socioeconomic standing.

FINANCING

Transportation projects were prioritized using several factors: 1) priorities determined by previous citizen planning committees, 2) traffic forecasts, 3) perceived needs for the future, 4) environmental and neighborhood impacts, and 5) financial resources. In 2002, over 60% of
the County’s Road Fund was generated from property taxes. Another 25% came from fuel taxes and vehicle license fees. The remaining 15% was generated from other government agencies, forest taxes and miscellaneous revenues. The total of the 2002 Pierce County Road Fund was nearly $54 million.

Over 30% of the Road Fund is spent on road maintenance. Twenty-one percent of the Road Fund is transferred to the County’s Construction Fund and 16% percent of the Road Fund goes to management and administration. The remaining 23% percent is spent on equipment purchases, engineering, planning, ferry operations, insurance, and other services.

The Construction Fund is the source of money for new construction or major reconstruction. As noted above, 21% of the Road Fund was transferred to the Construction Fund in 2002. In addition, the Construction Fund receives money from previous years’ appropriations, developer contributions, and successful state and federal grant applications. In 2002, the previous year’s carryover was $17 million and the total Pierce County Construction Fund was just over $54 million.

According to the 2000 update to the Pierce County Comprehensive Plan—Transportation Element, it is estimated that planned transportation improvements will cost a little over one billion dollars over the next 20 years. However, only 369 million dollars in revenues is expected. The needs and revenues estimated in the Pierce County Comprehensive Plan—Transportation Element are countywide.

Figure D-2 below compares the total estimated cost of the Frederickson Community Plan transportation projects to the Pierce County Comprehensive Plan—Transportation Element estimated revenues. The total estimated cost figure of $148 million is for projects in the Frederickson Community Plan area. The $148 million cost estimate includes many important regional transportation projects such as widening and improving Canyon Road East and 176th Street East. These two projects along with many other proposed projects serve citizens living outside the Frederickson Community Plan area as well as Frederickson residents. The estimated cost to construct 176th Street East and Canyon Road East within the Frederickson Community Plan area is approximately $36 million or nearly 25% of the total Frederickson estimated cost of $148 million. The total estimated transportation revenue for all of Pierce County over the next 20 years is $369 million. Building all of the projects listed in the Frederickson Community Plan over the next 20 years would require approximately 40% of the County’s construction budget. However, there are only 56 miles of county-maintained road (a little under four percent) within the Frederickson Community Plan area. Figure D-2 shows a familiar pattern of transportation funding shortfalls being played out in other areas of Pierce County, Washington State and the Nation. The cost of identified transportation needs far outweigh the revenues available to meet those needs.
PUBLIC SCHOOLS

This plan recognizes that the Bethel School District is the responsible entity to address school district issues. Policies encourage increased coordination between the County and the district to develop strategies that address student capacity deficiencies. Specifically, the district is encouraged to actively pursue an increase in impact fees that are collected through the County’s building permit process. Additional coordination is also needed between the two entities to ensure students have safe walking routes from their residential neighborhoods to schools.

SANITARY SEWER

As sewer utilities are placed throughout the community to serve the denser population, the community recognizes the need for coordination during the construction phase to eliminate disruption and long delays in the transportation system. In efforts to maintain reasonable housing costs, the community encourages new methods and practices of sewer installation.

STORMWATER SEWER SERVICE

This plan focuses primarily on the management of surface water in efforts to reduce the amount of runoff caused from new development. Policies support the Clover Creek Basin Plan’s recommendations which include discouraging development in areas prone to flooding. The community
desires public and private stormwater facilities that are incorporated into the natural landscape and are properly maintained.

**Potable Water**

Pierce County and water purveyors should coordinate their activities to ensure that an adequate and reliable domestic water supply is available to support projected population growth. The availability of an adequate potable water supply should be verified prior to the approval of new land divisions. If water purveyors are incurring problems of supplying water for new land divisions, then they should explore connections with other water systems that have adequate water supplies.

**Parks and Recreation Policies**

**Goals**

Improve park and recreational opportunities by developing new regional park facilities and improving existing facilities; providing support to community efforts to establish a system of publicly owned and maintained community and neighborhood parks; and by pursuing cooperative agreements with the Bethel School District to improve public recreational opportunities at public school sites.

Provide and maintain a level of service for regional parks in the community that meets or exceeds the countywide standard. Promote various efforts and methods for park and recreation organizations to acquire and develop facilities to be used as community and neighborhood parks. Enter into cooperative agreements between Pierce County and the Bethel School District to improve and maintain public recreational opportunities at public school sites.

**Regional Parks**

**Goal FR PR-1** Achieve and sustain an acceptable level of service for regional park facilities.

**FR PR-1.1** Monitor and maintain the level of service for regional park facilities.

**FR PR-1.1.1** The level of service for regional parks shall be evaluated annually.

**FR PR-1.2** Level of service deficiencies in regional park facilities should be corrected through capital improvements such as constructing new facilities and/or expanding existing facilities. Non-capital remedies, such as lowering the desired level of service, are not preferred and should be avoided.

**FR PR-1.3** The Frederickson community should be identified as a high priority location for a new regional park based upon the following:

**FR PR-1.3.1** The Frederickson community currently contains no public park and recreation facilities within its boundaries;
FR PR-1.3.2 The Frederickson community is serviced by several major arterial roadways and is close to the urban population centers of Pierce County. A regional park facility within Frederickson would be readily accessible to the citizens of Pierce County;

FR PR-1.3.3 Sewer facilities and other necessary utilities are available; and,

FR PR-1.3.4 A regional park facility accessible to the employees of the Frederickson Employment Center could improve the desirability of the area for current and future businesses.

FR PR-1.4 New regional parks within the Frederickson Community Plan area should be designed and located to serve the needs of community residents as well as providing countywide benefits. New regional parks should meet the following criteria.

FR PR-1.4.1 Park sites should be located in a manner to take advantage of the physical amenities in the plan area. Priorities include Clover Creek, wetlands, forested areas, steep slopes, and historical and scenic areas.

FR PR-1.4.2 Regional parks should generally be 40 acres or more in size; however, these parks may be developed on smaller parcels based upon land availability, facility type, community need, site characteristics and other factors.

FR PR-1.5 The following are high priority sites for regional park land acquisition within the Frederickson Community Plan area. The sites are not listed in any order of preference or importance.

FR PR-1.5.1 Triple-play properties and adjacent wetlands (formerly Brewers, 30 acres);

FR PR-1.5.2 County-owned property located at the intersection of 173rd and Waller (36 acres);

FR PR-1.5.3 Properties located within or adjacent to the Clover Creek open space corridor;

FR PR-1.5.4 Other properties as identified on the Park Acquisition Recommendations Map for Frederickson.

FR PR-1.6 The Frederickson representative on the Pierce County Parks Citizens Advisory Board should be provided with all necessary information to help inform civic, community groups, and local governmental agencies about the plans and operations of the County regarding regional park location and development.

FR PR-1.7 Development of facilities at a regional park should not occur prior to completion of the necessary site plan.

FR PR-1.8 Where appropriate, develop park facilities that generate funds.

FR PR-1.8.1 Incorporate revenue collection into the design of new parks.

FR PR-1.8.2 Consider charging user fees at sites that provide recreational opportunities at an appropriate rate that will help support the maintenance and operation of these facilities.
NEIGHBORHOOD AND COMMUNITY PARKS

GOAL FR PR-2 Pierce County shall support the creation of a Park Service Area or District to help fund and develop community and neighborhood scale parks throughout the plan area.

FR PR-2.1 Identify local organizations interested in the improvement of park and recreational opportunities within the community and provide the initial technical and financial assistance necessary to form a Park Service Area or District.

FR PR-2.1.1 The Pierce County Parks and Recreation should conduct a series of education workshops regarding the formation, financing, and management of park service areas and districts.

FR PR-2.1.2 Identify a sponsor(s) willing to lead in efforts to form the park service area or district.

FR PR-2.1.3 Upon generating sufficient public interest in the formation of a park service area or district, Pierce County shall bring the issue to a vote of the citizens at the following general election.

FR PR-2.1.4 Pierce County Parks Department shall provide the park and recreation providers technical expertise in site planning and facility needs assessments.

FR PR-2.1.5 Pierce County Parks Department shall provide assistance in the preparation of grants for property acquisition, operation, and maintenance.

GOAL FR PR-3 Pierce County should require an impact fee, land dedication, or fee-in-lieu of dedication for community and neighborhood scale parks based upon the LOS standards set forth in Tables 11 and 12.

FR PR-3.1 Pierce County should require all new residential subdivisions and multifamily residential developments to pay an impact fee, dedicate land, or pay a fee-in-lieu of land dedication for the development of community and neighborhood parks. The structure of each of these options shall be correlated to the LOS standards set forth in Table D-16 and Table D-17.

FR PR-3.2 Pierce County should delay the implementation of the impact fee and fee-in-lieu of dedication program until such time as a Park Service Area or District is formed. In the interim, Pierce County should only require land dedication. Such land dedication shall be focused on the provision of small-scale parks within new residential development.

FR PR-3.3 Pierce County shall develop regulations controlling the location, use, and improvement of land dedicated for community and neighborhood park purposes. Such regulations shall, at a minimum, prescribe minimum park dedication amounts, access, amenities, location, and maintenance.

GOAL FR PR-4 Establish LOS standards for community and neighborhood level park and recreation facilities.

FR PR-4.1 Utilize the following LOS standards for community level parks within the plan area:
### Table D-16: Frederickson Community Park Facilities Level of Service Standards

<table>
<thead>
<tr>
<th>Facility</th>
<th>Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Community Park Land</td>
<td>3.5 acres per 1,000 population</td>
</tr>
<tr>
<td>Fields for softball and youth baseball, and soccer, football, or pickup games</td>
<td>0.23 fields per 1,000 population</td>
</tr>
<tr>
<td>Multi-use outdoor paved courts (tennis, basketball)</td>
<td>0.4 courts per 1,000 population</td>
</tr>
<tr>
<td>Tennis court</td>
<td>0.3 courts per 1,000 population</td>
</tr>
<tr>
<td>Children's play area</td>
<td>0.35 play area per 1,000 population</td>
</tr>
<tr>
<td>Picnic area</td>
<td>0.5 area per 1,000 population</td>
</tr>
<tr>
<td>Trails or pathways (minor)</td>
<td>0.2 miles per 1,000 population</td>
</tr>
<tr>
<td>Restrooms</td>
<td>0.23 facilities per 1,000 population</td>
</tr>
<tr>
<td>Parking</td>
<td>0.23 spaces per 1,000 population</td>
</tr>
</tbody>
</table>

**FR PR-4.2** Utilize the following LOS standards for neighborhood level parks within the plan area:

### Table D-17: Frederickson Neighborhood Park Facilities Level of Service Standards

<table>
<thead>

<tr>
<td>Multi-use paved games court (1/2 court)</td>
<td>0.3 courts per 1,000 population</td>
</tr>
<tr>
<td>Children's play area</td>
<td>0.2 play area per 1,000 population</td>
</tr>
</tbody>
</table>

**GOAL FR PR-5** New community and neighborhood parks within the plan area should be designed and located to serve the needs of all segments of the community.

**FR PR-5.1** New park sites should be located in a manner to take advantage of the physical amenities within the plan area.

**FR PR-5.1.1** Priorities include Clover Creek, wetlands, forested areas, steep slopes, historical areas and scenic areas.

**FR PR-5.2** The size of a community park is typically 15 to 25 acres.

**FR PR-5.2.1** Access to a community park should be from an arterial street if traffic volumes are anticipated to be high and parking shall be dependent upon the facilities provided.

**FR PR-5.2.2** Restroom facilities should be provided at a community park.

**FR PR-5.3** Ideally, a neighborhood park should be 5 to 10 acres in size.

**FR PR-5.3.1** However, these parks may be considerably smaller when located within a private development.

**FR PR-5.3.2** Neighborhood parks should be separated from one another in a relatively even manner throughout the plan area.
FR PR-5.3.3 Typically a 1- to 2-mile separation is desirable.
FR PR-5.3.4 Neighborhood parks should be reasonably central to the neighborhood they are intended to serve.
FR PR-5.3.5 Access to a neighborhood park should be via a local residential street.
FR PR-5.3.6 Walking and bicycle access routes should avoid physical barriers such as major arterial roads or stream crossings whenever possible.
FR PR-5.3.7 Parking or restroom facilities are typically not provided at a neighborhood park.
FR PR-5.4 Neighborhood parks should be developed adjacent to school sites whenever possible in order to promote facility sharing.
FR PR-5.4.1 Facilities on the neighborhood park site should supplement uses that the school does not provide such as trails, open space, picnic areas, playground equipment, and multi-purpose paved courts.

TRANSPORTATION POLICIES

GOALS

- Adequate public infrastructure and services including, but not limited to, roads, water, sewer, recreation, and schools will be available prior to or concurrent with actual need;
- Neighborhoods will be more livable with new developments being designed in a manner which supports interaction of residents and pedestrian mobility, and existing neighborhoods protected from incompatible or more intense uses; and
- Nonmotorized transportation facilities including sidewalks, pathways, and trails will be planned and systematically developed within the community so that in the future residents can travel to schools, parks, commercial areas, and other destinations safely without relying upon the automobile.

A quality transportation system is vital to the Frederickson community. Unfortunately, past growth in the community and surrounding areas coupled with limited public expenditures for roads and other transportation improvements have resulted in increasing levels of traffic congestion in the community and a progressive degradation in the quality of the transportation system. The current transportation system is becoming inadequate and is no longer able to fully meet the needs of area residents, business, and industry. Improvements to the transportation system are necessary to address current and future needs. Recent efforts by government, business and industry leaders, residents and others hold the promise of accomplishing some of the needed improvements. Examples of these efforts include the development of the South Canyon Corridor Plan and the reopening of freight rail service in the area. The community must build upon and supplement these efforts to achieve the transportation system it desires. At a minimum, the plan will strive to ensure:
• The transportation system within Frederickson and adjacent communities is designed and improved in a manner that seeks to balance the needs of residents, business, and industry;
• The South Canyon Road Corridor Plan is implemented and considered for future improvements along and adjacent to Canyon Road East;
• Recommended transportation improvements are implemented;
• Rail service to the Frederickson community is encouraged and improved;
• Arterial road access to, from, and within the community is improved by controlling access in a manner which improves safety and reduces congestion;
• Pedestrian and bicycle mobility is improved in the community, where appropriate;
• Transit service is encouraged;

An equitable system of financing transportation system improvements is developed. This system should include an impact fee system that ensures new development pays its fair share of the cost of transportation improvements necessitated by such development. All new development, regardless of size, will be subject to the system in order to avoid unmitigated cumulative impacts.

**ACCESS CONTROL**

**GOAL FR T-1** Ensure road safety and traffic flows by controlling access points on selected roadways.  
**FR T-1.1** Encourage the consolidation of access to Canyon Road East, 176th Street East and other major and secondary arterials in order to reduce interference with traffic flow on the arterials, and reduce conflicts between nonmotorized modes of travel and motor vehicles.

**CONNECTIVITY**

**GOAL FR T-2** In order to connect the community, encourage community involvement in the preparation of a road network throughout Frederickson.  
**FR T-2.1** Through roads and nonmotorized facilities shall be provided when feasible in order to complete the grid system within the community.

**GOAL FR T-3** Encourage development along Canyon Road East and 176th Street East that considers pedestrian use and the retrofitting of existing land and commercial uses.  
**FR T-3.1** Require existing commercial development along Canyon Road East and 176th Street East to provide pedestrian and automobile access to adjacent property when improvements are made to the existing business.

**GOAL FR T-4** Develop regulations that require new subdivisions to be designed in a manner that maximizes opportunities for connectivity.
**FR T-4.1**  Through-roads or road stub outs shall be provided when feasible in order to increase connectivity for the community.

**FR T-4.2**  Allow internal sidewalk requirements to be reduced to one side of road if 30 or fewer lots within the development access roadway.

**FR T-4.3**  The County shall actively explore opportunities to connect existing subdivisions and neighborhoods with surrounding subdivisions and the larger community.

**FR T-4.4**  Ensure connections are provided between neighborhoods and to commercial centers for local traffic.

---

**ENVIRONMENTAL DESIGN**

**GOAL FR T-5**  Allow nonmotorized connections, including trails, through wetland buffers and other sensitive areas where roads cannot occur.

**FR T-5.1**  Pierce County should explore the need and options for providing a safe wildlife crossing and pedestrian crossing of Canyon Road in the Clover Creek Corridor when Canyon Road is improved between 160 St. E. and 176 St. E.

---

**NONMOTORIZED TRANSPORTATION**

**GOAL FR T-6**  Encourage provisions for nonmotorized facilities, including sidewalks and trails, where it is appropriate to provide safe and convenient access between properties and pedestrian oriented facilities.

**FR T-6.1**  Pierce County should work cooperatively with the school districts to develop a program to identify and fund the construction of needed sidewalks to provide access to existing and proposed schools.

**GOAL FR T-7**  Local nonmotorized networks should provide reasonable direct routes to properties within the area by minimizing dead end cul-de-sacs and providing direct connections to adjacent developments.

**FR T-7.1**  Discourage the vacation of right-of-way when the right-of-way could complete the grid system within the community.

**FR T-7.2**  Work with the County Public Works department to allow on-street parking on its roadways.

---

**RAIL SERVICE**

**GOAL FR T-8**  Support and encourage rail service as an important element of the transportation system in the plan area.

**FR T-8.1**  Preserve Frederickson Rail Lines to provide transportation and economic benefits to Pierce County.

**FR T-8.2**  Improve passenger and freight rail service.
**GOAL FR T-9**  
Encourage Pierce Transit to evaluate and prioritize service on the following routes:

**High Priority**

**FR T-9.1**  
176th Street East between Pacific Avenue (SR 7) and Meridian (SR 161); Park and Ride Lot at 176 Street E/Tacoma Rail;

**FR T-9.2**  
Canyon Road East to its new terminus; Park and Ride Lot/Train Station in the vicinity of Canyon Road E/176 Street E;

**Other**

**FR T-9.3**  
22nd Avenue East;

**FR T-9.4**  
38th Avenue/Military Road/36th Avenue/176th Street East (Brookdale Road East to 224th Street East): See projects F3, F4, F5 and F6 shown in Appendix B (New arterial proposal);

**FR T-9.5**  
70th Avenue East (New arterial proposal);

**FR T-9.6**  
86th Avenue East (New arterial proposal);

**FR T-9.7**  
152 Street East;

**FR T-9.8**  
192 Street East;

**FR T-9.9**  
200th Street East (38th Avenue East to Canyon Road East);

**FR T-9.10**  
208 Street East;

**FR T-9.11**  
Brookdale Road East/160 Street East;

**FR T-9.12**  
Military Road East; and

**FR T-9.13**  
Waller Road East.

**UTILITIES POLICIES**

**GOALS**

- The existing conditions of public facilities, services, and infrastructure within the community will be evaluated. Where deficiencies exist, such that the adopted level of service standards are not being achieved, measures will be taken to correct the deficiency or to prevent the deficiency from becoming more severe;

- The need for public facilities, services, and infrastructure will be anticipated and planned for in advance, where possible. Growth and development within the community will be managed to the extent feasible to ensure that these facilities, services, and infrastructure can be provided as efficiently as possible;
- The cost of providing additional public facilities, services, and infrastructure needed to serve development will be paid by the development; and,
- Annual monitoring of the condition of public facilities, services, and infrastructure in the community will be performed and corrective action will be taken as necessary.

### General

**GOAL FR U-1** The community intends to balance future residential and industrial growth with adequate infrastructure needed to maintain a desired quality of life.

### Sanitary Sewer

**GOAL FR U-2** Schedule construction activities to avoid sensitive time periods in the lifecycle of fish and wildlife, such as spawning, nesting, and migration.

**GOAL FR U-3** Whenever possible, construction will be scheduled to minimize disruption of access to area residences and businesses.

### Stormwater Service

**GOAL FR U-4** Minimize development related impacts to existing hydrologic conditions and functions and strive to correct current deficiencies resulting from past development practices.

**FR U-4.1** Identify the areas within and adjacent to the community that are highly sensitive to changes in hydrologic conditions and functions. Within these highly sensitive areas, establish standards that provide for near zero change in hydraulic and hydrologic function on a property (i.e., no net increase in the peak flow or volume of runoff or erosion leaving a site) post development.

**FR U-4.2** Reduce the amount of allowable impervious surface that can be placed on a site.

**FR U-4.2.1** Change existing parking standards to reduce the total amount of effective impervious surface.

**GOAL FR U-5** Support the Clover Creek Basin planning effort.

**FR U-5.1** Utilize the results of the Clover Creek Basin planning effort to help identify needed modifications to land use designation and development regulations to protect water quality, riparian habitat and alleviate flooding problems within the community.

**FR U-5.2** Request that the basin planning process model changes to hydrologic conditions resulting from development under current land use designations and under the changes to land use designations proposed by the community plan. Consider the basin modeling results when making decisions regarding the allowable range and intensity of land uses within the community.
FR U-5.3 Coordinate the identification of appropriate areas for potential rezoning with the watershed basin planning processes.

FR U-5.4 Evaluate the current Pierce County Surface Water Management fee credit program in light of any changes in performance standards resulting from the community plan or basin plan efforts.

**Potable Water**

**GOAL FR U-6** Revise water service boundaries in cases where the designated water service provider cannot provide timely or reasonable service.

**Implementing Actions**

**Short Term Actions**

1. Encourage urban densities to reduce the per-unit cost of public facilities and services. (PALS)
2. Adopt standards for the placement and design of stormwater facilities. (PALS, PW)
3. Utilize basin planning hydrologic condition modeling when making decisions regarding the allowable range and intensity of land uses. (CPB, PALS)

Parks

4. Annually evaluate the level of service for regional parks in the plan area and correct deficiencies through capital improvements. (Parks)

Transportation

5. Encourage the consolidation of access and provisions for pedestrian access to Canyon Road East, 176th Street East and other major and secondary arterials, including implementation of the access plan for the Frederickson Central Place set forth in Appendix C. (PALS, PW)
6. Amend the Pierce County Transportation Plan and projects and 6-year Transportation Improvement Plan to reflect the projects and priorities of the Frederickson Community Plan as set forth in Appendix B. (PW)
7. Revise development standards to require developments to provide safe, convenient, and efficient connections between adjacent existing or future residential and commercial developments. (PW, PALS)
8. Create a process for notifying land use advisory commissions of proposed right-of-way vacations and establish options for the County to preserve and acquire right-of-way within identified transportation corridors. (PW, PALS)

**Mid-Term Actions**

1. Coordinate with the Bethel School District to identify and prioritize designated school walking routes in need of safety improvements. (PW)
2. Evaluate the short platting and subdivision ordinances to ensure the availability of potable water is taken into account during all phases of the permitting process. (PALS, PW)
3. Amend the Coordinated Water System Plan (CWSP) to revise water service boundaries where the designated water service provider cannot provide timely or reasonable service. (PW)

Parks
4. Amend the Pierce County Parks and Recreation Plan to: (Parks)
   - Identify Frederickson as a high priority location for new regional parks;
   - Include criteria established in this plan element for the design location, and acquisition of parks and/or parklands within the plan area.

5. Support efforts to establish mechanisms that support the development of neighborhood and community scale parks by conducting a series of education workshops regarding the formation, financing, and management of parks service areas and districts and require impact fees, land dedication, or fee-in-lieu of dedication. (Parks)

6. Utilize the level of service standards and the design and location standards when establishing neighborhood or community scale parks. (Parks)

7. Partner with the Bethel School District to facilitate joint County-District recreational opportunities within the community. (Parks)

Transportation
8. Create a process for increased bonus densities when right-of-way is donated, access is shared, or other public improvements, including road improvements and sewer extensions, are made. (PALS)

9. Develop and implement a viable transportation impact fee program for funding transportation improvements and meeting concurrency requirements. (PW)

10. Develop “model” site plans that demonstrate techniques to retrofit existing commercial development with pedestrian uses. (PALS, PW)

11. Continue to minimize environmental impacts in the design and construction of transportation projects. (PALS, PW)

12. Lobby the State Legislature to enable Counties the ability to allow on-street parking on its roadways. (PW)

LONG TERM ACTIONS

1. Coordinate recommendations from the Clover Creek Basin Plan with any updates to the community plan to address surface water runoff and flooding issues. (PALS, PW)

Transportation
2. Develop and implement county-wide standards for a comprehensive sidewalk system. (PW)

3. Partner with Tacoma Rail to develop nonmotorized transportation routes along the rail right-of-way. (PW)

4. Work with Pierce Transit to increase the availability and effectiveness of transit within the commercial centers, and in connecting Mixed Use Districts, Employment Centers, residential areas, and the region at large. (PW)

Chapter 7: Plan Monitoring

PURPOSE

The 1990 State Growth Management Act (GMA) requires jurisdictions planning under GMA to report on progress made in implementing the Act, and to subject their comprehensive plans to continuing evaluation and review. As part of the County’s Comprehensive Plan, the Frederickson Community Plan is subject to this requirement. One mechanism for conducting this evaluation and review is to monitor the development standards, regulations, actions, and other programs called for in the plan for the purpose of determining their effectiveness in fulfilling the vision of each of the five plan elements.

This section provides a framework both for monitoring the various actions undertaken to implement the plan and for offering recommendations to make adjustments to the actions in order to achieve the plan’s vision. Actions may include the development and implementation of regulations and design standards, coordinating the provision of facilities and services with other entities, developing educational programs and handouts, acquiring parks, preserving open space, and other actions. This framework for monitoring provides a means for measuring the effect of each action, identifies participants and their roles in monitoring the actions, lays out time frames, and specifies how the monitoring program should be documented.

Information obtained from the monitoring program will be used to offer recommendations to decision makers as to what changes the community plan may need in order to attain specified goals and meet the visions in the plan.

HOW TO MEASURE THE EFFECT OF STANDARDS

The Frederickson Community Plan identifies actions that need to be implemented to meet its vision, goals, objectives, principles, and standards. Monitoring evaluates the effectiveness of the actions in fulfilling the plan policies. The monitoring program outlined here includes several steps which are intended to identify actions taken, the ease with which they can be used, and whether the actions actually meet the objectives they were intended to achieve.

To do this, the monitoring program is divided into five steps: Actions, Inputs, Process, Outputs, and Outcomes. Each of the steps and the responsible participant are discussed briefly here.

PHASE 1 – ACTIONS:

Phase 1 monitoring would consist largely of reviewing the policies and standards stated in the plan and identifying all the actions that need to be undertaken to be consistent with the plan. The actions should be grouped according to the objectives they are intended to meet. PALS staff and the Frederickson Advisory Commission (FAC) would be the primary participants in this activity.
**Phase 2 - Inputs:**

Phase 2 monitoring would determine whether actions called for in the plan have actually been undertaken and completed. PALS staff would evaluate if regulations and design standards have been adopted and are being implemented. The PALS staff, FAC, or other County Departments would review the plan to determine if other actions have been completed and could be done to accomplish the vision of the plan.

**Phase 3 - Process:**

Phase 3 monitoring would evaluate whether an action is straightforward, understandable, or easy to use. In the case of regulations and design standards, those persons who have submitted permit applications requiring compliance with the regulations and design standards would need to be involved in the evaluation. The Pierce County Hearing Examiner and the FAC, which review such applications, as well as PALS staff, would need to be included in the monitoring. PALS staff would coordinate the monitoring and could conduct interviews or distribute questionnaires to persons who have submitted or reviewed permit applications subject to the regulation being monitored.

**Phase 4 - Outputs:**

Phase 4 monitoring would determine whether the action has been carried out as stated in the plan. For example, monitoring would determine whether a regulation or design standard has been complied with and identify reasons for any noncompliance. In regard to non-regulatory activities, monitoring would determine whether the objectives of the activity have been met. Participants would include residents, property owners, the FAC, and PALS staff.

**Phase 5 - Outcomes:**

Phase 5 monitoring would evaluate the extent to which each action results in the desired effect on the community. The primary participants are the residents and property owners in the plan area. Assistance would be provided by the FAC and PALS staff. PALS staff would assist in organizing public meetings, preparing and distributing questionnaires, and using other means to gather this information.

**Timeline**

It is anticipated that the Frederickson Community Plan will take a substantial period of time to be implemented. There are a number of actions that can be accomplished within a short timeframe, some will take much longer, and others will involve ongoing actions with no specific completion date. It is important that monitoring be done on a continuing basis with specific actions monitored at different times.
In regard to monitoring the development and implementation of regulations and design standards, it would be appropriate for monitoring to be phased over time as the five phases outlined above are accomplished. Phase 1 would begin almost immediately upon the plan adoption. Phase 2 would take place within two years following the plan adoption. This would provide adequate time for the County Council to adopt implementing regulations called for in the plan. Phases 3, 4, and 5 would occur within two to three years following completion of Phase 2. This would allow time for the regulations to be applied to a number of development projects. Phase 3 analysis of how understandable the regulations are, and the ease to which they can be applied, would then be based on the application of the regulations to those projects developed within that time period. Phases 4 and 5 monitoring would be done simultaneously with Phase 3 monitoring. The total time for initial monitoring for Phases 1 through 5 would be about five years. As changes are made to regulations and design standards, the monitoring cycle would need to be repeated to address the changes.

Other actions that do not involve the implementation of regulations or design standards would be monitored on a similar timetable. Phase 1 and Phase 2 would occur within two years of adoption of the plan, while Phase 3, 4, and 5 monitoring would occur within five years of plan adoption.

As amendments are made to the plan, monitoring would need to continue to determine how effective the changes are in carrying out the goals in the plan. In addition, it would be appropriate to continue monitoring all actions in the plan every five years to evaluate whether the actions continue over time to effectively carry out those goals.

**Documentation**

A review of baseline information is necessary to effectively monitor whether the goals of the Frederickson Community Plan are being met. Information regarding community attitudes, visual characteristics of the community, community services, infrastructure, business climate, land uses, permitting activity, and other community characteristics would be evaluated.

As each phase of monitoring is completed, a report should be prepared by PALS staff which identifies the action being monitored, the specific purpose of the monitoring, methods used in monitoring, data collected, analysis of the data, and recommendations for further action. The report should be submitted to the FAC for review and comment and to the County Council for its consideration.

**Recommendations for Further Action**

In addition to determining the effectiveness of the plan in fulfilling the goals of the community, a key component to monitoring would be the recommendations for further action. These recommendations should clearly identify the specific goals being addressed, how the recommended action corrects a deficiency in the plan, how the recommended action will contribute to fulfilling the goal in question, and a timeline for completing the proposed action.

Frederickson Community Plan
Figure D-3: Driveway Use Restrictions and Access

**Note 1:** The Major Driveway Intersections depicted on this drawing to the west, south, and east of the intersection of Canyon Road East and 176th Street East are intended to illustrate the closest points that they may lie in relation to that intersection. A development proponent may shift the location of any of those three major driveways further away from the intersection in connection with a development proposal only if the owner(s) of the property across Canyon Road East or 176th Street East (as the case may be) from the subject development consent to the proposed shift.

**Note 2:** Restricted Access Areas are shown with hatch lines and denote areas where new driveways will be limited to those designated for right in and/or right out only traffic movements. Additionally, existing driveways located within these areas may be limited to right in and right out only traffic movements when traffic volumes or improvements to Canyon Road East or 176th Street East warrant such limitations. Applications for right-turn driveways within the Restricted Access Areas will be reviewed at time of application submittal, with spacing generally not to be less than 200 feet between driveways and/or intersections. The appropriate location of all driveways within the Restricted Access Areas shall be determined by the Pierce County Public Works and Utilities Department. Temporary full access at these driveways may be allowed by the Pierce County Public Works and Utilities Department based upon a review of traffic conditions and construction of improvements to Canyon Road East and 176th Street East. If granted, this temporary full access will terminate at such time as traffic volumes warrant or at such time as Canyon Road East or 176th Street East are constructed to their ultimate planned configurations as set forth in Note 4, whichever occurs first.

**Note 3:** The requirements of this plan shall not preclude any property owner from proposing an additional Major Driveway Intersection on Canyon Road East north of 176th Street East and south of the Planned Major Driveway Intersection shown on this plan through a request to the Pierce County Public Works and Utilities Department. There is no assurance, however, that such an additional driveway will be approved.

**Note 4:** This plan illustrates Canyon Road East and 176th Street East in their ultimate planned configurations as follows:

- **Canyon Road East north of 176th Street East** - 8 lanes including 1 right turn lane, 2 through lanes, and 2 left turn lanes southbound, and 3 through lanes northbound.

- **Canyon Road East south of 176th Street East** - 7 lanes including 2 through lanes southbound, and 2 left turn lanes, 2 through lanes, and 1 through-right turn lane northbound.

- **176th Street East west of Canyon Road East** - 6 lanes including 2 through lanes westbound, and 2 left turn lanes, 1 through lane, and 1 right turn-through lane eastbound.

- **176th Street East east of Canyon Road East** - 7 lanes including 2 through lanes eastbound, and 2 left turn lanes, 2 through lanes, and 1 right turn only lane westbound.
The Gig Harbor Community Plan’s narrative text and policies are in addition to the Countywide Comprehensive Plan narrative text and policies and are only applicable within the Gig Harbor Community Plan Boundary.

- “Current” or “Existing” conditions are in reference to conditions at time of adoption (Adopted Ord. 2002-113s, Effective 12/1/2002).
- “Proposed” or “ Desired” conditions are those which required Council action and may have also been amended over time through a Comprehensive Plan Amendment (amendments are reflected in this document).

Chapter 1: Introduction

Overview of the Plan Area

The Gig Harbor Peninsula Community Plan area is located in northwest Pierce County, Washington. The Gig Harbor Peninsula and Fox Island encompass approximately 58 square miles of urban, suburban, and rural lands. The Gig Harbor Peninsula is the southeastern most extremity of the vastly larger Kitsap Peninsula. Puget Sound marine waters surround the Peninsula on three sides (Henderson Bay, Carr Inlet, Hale Passage, the Tacoma Narrows, and Colvos Passage). The plan area is abutting Kitsap County on the north, connected on the west to the Key Peninsula by the Purdy sand spit and bridge, and connected to the remainder of the mainland portion of Pierce County and the City of Tacoma via the Narrows Bridge. The 1996 estimated population of the plan area is 30,500 persons, including 6,350 persons within the Gig Harbor city limits. In addition to the City of Gig Harbor, several small-unincorporated communities exist throughout the plan area.

The Peninsula is essentially bisected from the southeast to the northwest by State Route 16 (SR 16). The highway is the major link between Tacoma, mainland Pierce County, and the rest of the Central Puget Sound region, Bremerton, Port Orchard, the remainder of the Kitsap Peninsula, the Olympic Peninsula, and Hood Canal. State Route 302 (SR 302) connects the plan area with the Key Peninsula area of Pierce County, the south end of the Kitsap Peninsula, Hood Canal, and the Olympic Peninsula.

The community plan provides a framework for consistent land use standards in the UGA for both Pierce County and the City of Gig Harbor. Directing new residential subdivisions as well as commercial and industrial development into areas that are served by urban services (such as sewers) provides efficient economies of scale which promote cost effective public facilities. These public facilities include sidewalks, parks, and open space that the community desires. This growth management planning concept also eliminates urban development patterns from sprawling into the rural area, allowing the rural area to retain the low density, pastoral, and forested characteristics that the community favors.

Urban Growth Area

City of Gig Harbor

The City of Gig Harbor is located in the east-central portion of the plan area adjacent to Gig Harbor Bay. The city is surrounded by its 3,417 acre Urban Growth Area (UGA). The City of Gig Harbor is the historic focus of civic and commercial activity in the plan area and is the location of moderate density residential neighborhoods. The City is oriented around Gig Harbor Bay and its commercial fishing and pleasure boat facilities.
Purduy

Purdy is located at the north end of Henderson Bay, adjacent to Burley Lagoon at the intersection of SR 16 and SR 302. Along with residential uses, several gas stations, retail businesses, Peninsula Light Company, and Peninsula High School are located in this area. The Purdy Bridge crosses the southern portion of Burley Lagoon and connects the Gig Harbor Peninsula with the Key Peninsula at the Purdy sand spit.

Canterwood

Canterwood is a planned residential, golf course community located immediately north of the city limits of Gig Harbor and east of SR 16. The Canterwood development is adjacent to the future planned development referred to as Gig Harbor North (Gig Harbor North is located entirely within the city of Gig Harbor). Canterwood is primarily developed with detached single-family residential homes with a few multifamily townhouses.

Swede Hill

Swede Hill refers to an area located west of SR 16 in the vicinity of Bujacich Drive NW. The neighborhood is dominated by moderate single-family residential neighborhoods with quite a number of single-family homes on lots that average from one to five acres in size. There are also a significant number of large vacant parcels that have historically been used for agriculture or forestry. Several commercial uses are located along Burnham Drive near SR 16. Fire District Number 5 headquarters and the Washington State Correction Center for women are located in the Swede Hill area.

Donkey Creek Corridor

Donkey Creek (also known as North Creek) flows into the northwest corner of Gig Harbor Bay in the vicinity of Harborview Drive and Burnham Drive. The Donkey Creek corridor follows Burnham Drive northwest towards SR 16 at the Swede Hill interchange. The city limits of Gig Harbor and the future development of Gig Harbor North are located northeast of the Donkey Creek corridor. Several businesses are located in the area, however because the corridor is dominated by the steep slopes and wetlands along the ravine formed by Donkey Creek, the land use pattern is dominated with single-family dwellings and large vacant parcels.

East Gig Harbor

The east shoreline of Gig Harbor Bay is referred to as East Gig Harbor. This residential neighborhood is dominated with large homes with views of the Harbor. Many of the parcels adjacent to the shoreline are one quarter acre or smaller while the upland areas contain several large lots that are undeveloped.
**WEST GIG HARBOR**

The neighborhood located outside the city limits of Gig Harbor, west of SR 16 and south of Bujacich Drive is referred to as West Gig Harbor. This area of the UGA contains the vacant property that has been designated as an Employment Center.

**REID DRIVE NEIGHBORHOOD**

The Reid Drive neighborhood is located south and east of the city limits of Gig Harbor, between the marine bluffs of the Tacoma Narrows and SR 16. The neighborhood is predominantly improved with moderate density, detached single-family neighborhoods, several of which contain the greatest density of homes in the plan area with densities near six dwelling units per net acre. The 62-unit Harbor Heights apartments are one of the few multifamily residential developments in the plan area.

**RURAL AREA**

The rural area of the Gig Harbor Peninsula includes all property located outside of the incorporated city limits of Gig Harbor and outside of the UGA surrounding the city. The rural area currently includes approximately 23,146 acres. The rural area is developed primarily with single-family dwellings at low densities with a number of moderate density single-family subdivisions. There are also a limited number of civic, commercial, and industrial uses located throughout the rural area on the Peninsula. The Tacoma Narrows Airport is located in a rural area near Point Fosdick. A significant amount of vacant and undeveloped land, pasture lands, and forestland remain in the rural area.

**CRESCENT VALLEY**

Crescent Valley is mostly undeveloped; however, some small farms and residences are located adjacent to Crescent Valley Drive and along the shoreline of Crescent Lake. The Crescent Valley area contains the lowest residential densities in the plan area. The largest undeveloped parcels in the plan area are located directly east of Crescent Valley between Crescent Valley Drive and Hallstrom Drive.

**ROSEDALE**

A small rural business center with a store, church, and community park is located near the intersection of Rosedale Street and Ray Nash Drive. Large tracts of forest and pastureland dominate the Rosedale area. Several moderate density single-family neighborhoods are found in the area and the shorelines of Lay Inlet and Sylvia Lake are improved with fairly high density single-family dwellings that have mostly been converted from summer cabins to permanent year-round homes. Raft Island is located in Henderson Bay to the west of Rosedale and is developed as a moderate density single-family neighborhood.
**RAY NASH VALLEY**

Ray Nash Valley is a small rural valley south of Rosedale between the Artondale area and Henderson Bay. Land uses in the area generally include small farms and pasturelands as well as single-family homes on 5 to 10-acre lots. Kopachuck State Park is located directly to the west of Ray Nash Valley and extends to the shoreline of Henderson Bay.

**ARTONDALE**

Artondale is generally considered the area northwest of Wollochet Bay, south of Rosedale and east of Arletta. There are several large undeveloped lots in the Artondale area ranging from 20 to approximately 100 acres. Some of these large parcels contain mature stands of timber. There are also a number of moderate density single-family neighborhoods, most notably in the vicinity of 40th Street and 70th Avenue. The Gig Harbor Golf and Country Club is located in Artondale.

**ARLETTA**

Arletta is located north of Hale Passage, directly east of Horsehead Bay. There is a community center and small grocery store at the intersection of 36th Street and Ray Nash Drive. Large lots, single-family homes, pastureland, and forestland characterize land uses at Arletta. Development along the shoreline of Horsehead Bay and Hale Passage consists of smaller lots with detached single-family homes. Similar to the development pattern in the Rosedale neighborhood, many of the waterfront cabins have been demolished or remodeled and are now used all year as permanent homes.

**CROMWELL AND WARREN**

The Cromwell and Warren neighborhoods extend along Hale Passage from Wollochet Bay to Shaw Cove. Fairly steep marine bluffs characterize the shoreline of Cromwell, while the shoreline in the vicinity of Warren Drive is considered low to medium bank waterfront. Upland from the shoreline, both Cromwell and Warren have large forested tracts and pasturelands. Along Hale Passage, many of the original waterfront cabins have been replaced by permanent homes. The bridge that connects Fox Island to the Gig Harbor Peninsula is located in Warren.

**POINT FOSDICK**

The Point Fosdick area consists of the southern end of the Gig Harbor Peninsula between Wollochet Bay and the Tacoma Narrows. The shoreline in the Point Fosdick area is primarily high bank, marine bluffs with low bank properties extending toward Wollochet Bay. The largest landholder in the area is the City of Tacoma which owns and operates the Tacoma Narrows Airport. The Tacoma Narrows Airport is classified as a general aviation airport. Several businesses, including a convenience store and a gas station, are located near the intersection of Stone Drive and Point Fosdick Drive. The area has been developed with a number of moderate density single-family neighborhoods, most notably west of the Tacoma Narrows Airport and near the Tacoma Narrows Bridge. Pierce County owns a waterfront park along the shoreline of the Tacoma Narrows.
History of the Gig Harbor Peninsula and Fox Island

Native American Settlement

Native Americans settled in and utilized the Gig Harbor Peninsula and Fox Island for thousands of years before Europeans arrived. The tribal groups that inhabited the Gig Harbor Peninsula vicinity were mainly of Puyallup, Nisqually, and Steilacoom groups. Native Americans had permanent settlements in villages along waterways and had seasonal homes in places such as Fox Island for the purposes of fishing and food gathering. Known village sites exist at the north end of present-day Gig Harbor near Donkey or Crescent Creek, Wollochet Bay and Burley Lagoon. Some Native Americans continued to live in the area selling or trading fish and woven baskets to European settlers well into the 1900s. Native Americans continue to enjoy fishing and clamming rights in their usual and accustomed fishing grounds in waters surrounding the Peninsula and Fox Island.

European/American Exploration and Settlement

In 1792, British Captain George Vancouver led the first European exploration of the Puget Sound area. In 1841, American Navy Lieutenant Charles Wilkes led the team to explore the entire Puget Sound. It is not known which member of Wilkes’ expedition gave the name of Gig Harbor to the small bay they discovered. The name pays homage to the gig, a small boat used to conduct surveys.

The first European and American settlers came to the Gig Harbor Bay area in 1867. These early settlers were involved in fishing. With the arrival of the transcontinental railroad to Tacoma in 1887, more people began to settle in the area. In the early days, homesteaders and others settled along the shoreline for easy access to boats since much of the inland areas did not have adequate roads and most transportation was through the waterways on boats. Later, inland locations came to be valued more for the purposes of cultivating farms, ranches, and orchards. The harbor area was developed with docks and wharves that served the “Mosquito Fleet,” a group of steamers that transported freight, mail, and people across the Sound to Tacoma. Logging activity preceded specialty or diversified farming that included fruit orchards in the area. Shipbuilding for commercial fishing, car ferries, and other craft became an important industry in Gig Harbor.

In the late 19th and early 20th centuries, passengers, horses, wagons, mail, supplies, logs, timber, fish, crops, and bricks were transported in boats and steamers across Puget Sound from the Peninsula to Tacoma. Steamers stopped at major pick-up locations and bays along the shoreline in the Narrows, Wollochet Bay, Hale Passage, Carr Inlet, and Henderson Bay. By the 1930s, the steamer transport declined largely due to the convenience of larger ferries and appearance of automobiles on the Peninsula starting in the 1910s.

The first Purdy Bridge across Henderson Bay was constructed in the early 1890s to enable the farmers from Mason, Kitsap, and Pierce Counties to reach the urban market in Tacoma with their produce, through Gig Harbor. The present bridge was constructed in 1938. The first
Narrows Bridge collapsed in 1940, four months after completion. The second Narrows Bridge was not completed until 1950. After the collapse of the first bridge, ferries again transported people and goods between the Peninsula and Tacoma until the second bridge was completed. With the completion of the second Narrows Bridge, the Peninsula began to evolve into a suburban residential community. This growth accelerated from the 1950s through the mid-1990s, due to the growth in the Tacoma, mainland Pierce County, and Central Puget Sound economy, and the convenient access to Interstate 5 that the bridge and the conversion of State Route 16 into a 4-lane, restricted access freeway provided. In addition, the completion of the Tacoma Industrial Airport in 1963 and the development of the Washington Corrections Center for Women at Purdy spurred further development of the area.

Today, the plan area is a mix of small town and suburban-style urban areas and wooded suburban neighborhoods interspersed with rural forest and pasturelands.

**PLAN AREA COMMUNITIES**

The following current or historic communities provide the character that currently defines the Gig Harbor Peninsula and Fox Island.

**ARLETTA**

The first post office was established in 1893 in Arletta. The first postmaster named the community Arletta by combining her daughter's name Arla with her friend’s name Lucetta (Castle). The first European-American settlement began in the late 1870s. Most early settlers farmed. Other activities in the area included logging, fishing, and trapping. When a permanent dock was constructed, a business district developed around the waterfront and included a store, fish fertilizer factory, and warehouse. By 1910 the first roads had been constructed between Warren, Arletta, and Horsehead Bay.

**ARTONDALE**

Artondale extends north and west of the head of Wollochet Bay. Settlement started here in 1877. The community served as a banking and shipping point. The community had two brickyards. Approximately 150 people lived in the community in the 1880s. The early settlers in the area established orchards and farms after clearing the forest.

**CROMWELL**

The community, along Hale Passage across from Fox Island, was originally called “Little Norway” because of many Norwegian immigrants who settled in the area starting in the 1870s. Farming and ranching were the common early activities in the area. The name of the community was changed in 1902 when local residents petitioned for direct mail delivery and John Cromwell from the federal post office recommended that the community receive such service. The first post office and school in the area were established about 1900.
FOX ISLAND

Native Americans called the island Bu-ta-u. According to the Native American legend, Bu-ta-u was the name of a daughter of a Nisqually Indian chief. The present name of the island was established during the 1841 Wilkes Expedition after an assistant surgeon on the crew named Fox. Native Americans used the island for seasonal gatherings and fishing. Tanglewood Island was used as a Native American burial ground. During the Indian uprisings of the 1850s, Fox Island was designated as a reservation for friendly Indians, and for a few years prior to resettlement to other reservations, there were some 800 Puyallups and Nisquallys living on the island.

European-American settlement began in the 1850s. A number of activities had been established on the island at various times, including fishing, gathering of dogfish and oysters, fish processing, logging, farming, and manufacturing basic items such as bricks and sleds, wheelbarrows, and baby carriages. In the 1860s, the dogfish and oyster industry was developed with Native Americans employed to fish and gather. The local farmers also grew prunes on the island and a prune dryer was employed to process harvested prunes for shipping starting in the 1890s. A flower industry was established on the island in 1904 with bulbs brought from Iowa. The Brick and Clay Works Company started on the south side of the island in the late 1880s. The company utilized the local clay deposits to manufacture pipes, bricks, and tiles and shipped the manufactured products to Tacoma on the steamer, “Susie.” The plant closed down by 1910 due to the depletion of the clay deposits. The post office, schools, stores, and churches formed the early centers of community life. Before the Fox Island Bridge opened in 1954, residents relied on ferry service for transportation.

CITY OF GIG HARBOR

Gig Harbor was named during the 1841 Wilkes expedition after a crewmember in small boat, called the captain’s gig, sighted a harbor and led other boats exploring in the area to take refuge in the harbor during a storm. When the first European-American settlers came to the harbor in 1867, there was a Native American village, with longhouse, located at the head of the harbor near a small creek. In 1867, two Slovenians, Samuel Jerisich and Peter Goldsmith, and a Portuguese man, John Farragut, rowed a skiff south from British Columbia to fish in the area. They entered Gig Harbor by accident to seek shelter at night. Samuel Jerisich liked the area and decided to stay while the other two men decided to return to British Columbia. Samuel Jerisich married a fifteen-year-old native woman from near Vancouver Island and settled in Gig Harbor. He was the first European-American settler in Gig Harbor. Soon Yugoslavians, Germans, and Scandinavians followed to settle in the harbor. A major boatyard, lumber mills, salmon fishing fleet, and farming provided the early economic base for the town. In 1886, the Indian longhouse served as the first school. Later, the Indian village became the site of C. O. Austin’s mill.

Dr. Alfred Burnham, from Albert Lea, Minnesota, filed a plat for the town site on April 28, 1888. Dr. Burnham was the town’s first doctor and opened the first general store near today’s business section in North Gig Harbor. Chicken farming prospered in the 1920s and 1930s. Early fishermen used rowboats to fish. Later, motorized boats began to lighten the labor required to
fish and enabled fishermen to go greater distance to fish in places such as Alaska starting around 1905.

The town incorporated as a fourth class city in 1946 because of the need to provide for water and sewer systems. Gig Harbor was home to a fishing fleet of more than 70 vessels in the 1970s that decreased to 30 vessels in the late 1980s.

Early fishermen, including Nick Costello, Andrew Gilich, and the Skansie Brothers, organized a fund drive in 1914 to build the first St. Nicholas Catholic Church in Gig Harbor. The Skansie Brothers founded the Skansie Shipbuilding Company in 1912. The company produced four-to-five boats per season and had 25 to 30 employees during peak periods. The company built a variety of boats including ferries and wooden fishing boats. One of four Skansie brothers operated the Washington Navigation Company, which operated ferries around the Puget Sound in the 1910s until the 1940s when the first Narrows Bridge was constructed. Mitchell Skansie and his son Bill operated the Washington Navigation Company. They operated ferries for the state between the time the first Narrows Bridge collapsed and the second Narrows Bridge was constructed.

Lumber was one of the early industries in the area. The first mill in Gig Harbor started operating in 1887 on the west side of the harbor. A shingle mill was built near the first mill at the head of the bay around the early 1890s. Another mill was constructed by C. O. Austin in 1909.

Many early settlers engaged in diversified farming. Some agricultural operations became profitable businesses including production of apples, pears, or loganberries. Holly growing became another successful agricultural venture in the area. Chicken farming was successful during the 1920s but declined by the 1930s.

**Midway**

Midway was named due to its midway location between Gig Harbor and Point Fosdick. A Midway School District No. 79 was formed in 1892. Originally it was a part of Artooldale District No. 14, but became a separate school district with fifteen children. The school became a center of community-oriented activities.

**Point Fosdick**

Point Fosdick was named during the 1841 Wilkes Expedition. It was a federal military reservation used by the local Native American tribes of Nisqually, Puyallup, Yakima, and Cowlitz in the late 1800s. A long house was constructed which later became Berg’s Landing. In the early 1890s, Charles L. Berg established a floating dock that served the “Mosquito Fleet,” a fleet of steamers that transported freight and mail. Berg’s Landing served as an automobile ferry dock until the second Narrows Bridge was built in 1950. Once forests were cleared, orchards, vegetable and berry production, and later, chicken farming became prevalent in the area.
Purdy

The area was named Purdy in the 1880s when Joseph Purdy, a grocery store owner from Tacoma, offered to provide lumber for a school if the area were named after him. Four men, including Joseph Purdy, constructed a mill in the area in 1885. The mill complex also included a post office, grocery store, and workers’ housing. Mr. Ouelette, “the Frenchman,” opened the first Oyster Company in the area around 1900 processing and canning the oysters from the land on the spit he owned. In the 1890s, a drawbridge was constructed across Henderson Bay at Purdy. In 1919, another bridge was provided. The present bridge was constructed in 1938. In the early 1900s, most settlers in the area were in diversified farming, including fruit, dairy, and poultry farming. Oysters and clams were also important products from Purdy from the early settlement period.

Raft Island

The Wilkes Expedition named the island “Allhouse Island” after Private Allhouse. Later, Raft Island was so named because from a distance the island appeared to some sailors be a floating raft. Raft Island was first settled by two men who claimed the entire island in 1889. The island was clearcut and logs were shipped out from the early settlement period of the 1880s. The second-growth timber was used for pilings, saw logs, and mine props in the 1920s. Large rafts of logs were harvested from throughout the Henderson Bay area, including the island, and were gathered to be shipped out through steamer transport. In the late 1920s, a Mr. Noble bought the entire island and used it as a hunting and recreational resort. Later, the portion of the land where Mr. Noble built a residential structure became the Catholic Church camp. Mr. Noble brought electric power to Raft Island. The bridge to Raft Island was built over the narrow, tidal channel on the south side. There are presently 190 families residing on the island. There are a private campground and three community beaches and parks.

Rosedale

Rosedale was named because of the wild roses growing in the area. In the early 1880s, the first school district and post office were established in the area. Logging and farming were the most prevalent activities engaged by early settlers. By the early 1910s, a small business district developed in the community which included two stores, two docks, a church, a public library, and schools.

Warren

The first Euro-American settlement began in the late 1870s. A permanent dock was constructed in the early 1910s. Farming formed the economic base for the community at the beginning. In the late 1920s, local settlers constructed a road that connected Warren to Arletta and Horsehead Bay.

Wollochet Bay

Some believe that the Indian name Wollochet means “cut throat.” It was connected to the Native American legend about a young man who was discouraged that he could not marry the
woman of his choice and ended his life by cutting his throat. It is also speculated that it may be connected to another Native American word which means “squirting clams” of which plenty were found on the beach in the area. The Native Americans fished and sold the fish to the European-American settlers. They also traded woven baskets for clothing and other items. Early European-American settlers engaged in logging and farming. Orchards were common among homesteaders. Many chicken farms in the area had thousands of chickens per farm. Dogfish were caught and used as fertilizer.

**PLANNING HISTORY**

**COUNTY PLANNING**

**1962 PIERCE COUNTY COMPREHENSIVE PLAN AND ZONING**

The first Pierce County Comprehensive Land Use Plan was adopted on April 2, 1962. The Pierce County Zoning Code, which implemented the Comprehensive Plan, was adopted on October 8, 1962. The 1962 Pierce County Comprehensive Plan designated the Gig Harbor Peninsula as "Suburban Residential." These rules followed very basic planning principles. Zoning districts were established that dictated the appropriate location for commercial business and residential homes. However, the Plan did not offer much protection from incompatible uses and did not recognize the unique individuality of communities. In May 1966, a Comprehensive Plan Study was completed for the Peninsula under Section 701 of the Federal Housing Act. This study served as a platform for planning efforts on the Peninsula in the early 1970s.

**1975 GIG HARBOR PENINSULA COMPREHENSIVE PLAN AND DEVELOPMENT REGULATIONS**

In June 1975, the Gig Harbor Peninsula Comprehensive Plan and Development Regulations were adopted by the Pierce County Board of Commissioners. The 1975 Gig Harbor Peninsula Comprehensive Plan included land in the Burley-Minter-Wauna area of northeastern Key Peninsula, in addition to the Gig Harbor Peninsula and Fox Island.

This was a very innovative plan and zoning program. It was based on the physical features of the Peninsula such as topography and aquifer recharge areas. Lands that contained environmental constraints such as steep slopes or wetlands were considered the most sensitive and received a designation of Natural Environment. Areas that were appropriate for residential land uses were designated the Residential Environment. Land that had very few physical impediments to development and was located near SR 16 received an Urban Environment designation. Generally, any land use was permitted in any zone classification provided the proposed development met minimum environmental standards and was compatible with adjacent uses. This zoning scheme was quite successful and remained in effect until January 1, 1995 when the new Pierce County Comprehensive Plan became effective.
**Burley Minter Drainage Basin Water Quality Plan**

In January 1988, the Burley/Minter Drainage Basin Water Quality Plan was adopted. This plan was implemented through amendments to the Gig Harbor Peninsula Development Regulations and established a sensitive watershed environment in the Burley/Minter area. Due to ongoing contamination of shellfish beds, further restrictions were required including larger lot sizes, best management practices, and buffers on streams and waterways. In November 1978, these areas were also designated as environmentally sensitive areas pursuant to the State Environmental Policy Act (SEPA).

In 1989, the Gig Harbor Peninsula Comprehensive Plan and Development Regulations were revised to create a rural-residential environment for Fox Island, which resulted in lower permitted densities of one dwelling unit per acre. In 1992, the rural-special environment was established to provide greater protection through lower densities and restricted uses to several rural valley areas. The 1992 amendments also modified the provisions for the rural environment to encourage greater preservation of natural features.

**1994 Pierce County Comprehensive Plan**

In April 1990, the Growth Management Act (GMA) was passed by the Washington State Legislature. It required Pierce County to update its existing Comprehensive Plan and Zoning Regulations, including community plans. The GMA required Pierce County to develop and adopt a comprehensive plan which would control residential, commercial, and industrial growth. Thirteen goals are listed in GMA to guide policy development in six required elements. The required elements include land use, housing, capital facilities, utilities, rural, and transportation. Pierce County also elected to include four additional elements: environment and critical areas, economic development, community plans, and essential public facilities. Each of the six GMA required elements must conform to specific standards set in the legislation. GMA required cities and counties to plan for growth based on population forecasts. Where growth is allowed, facilities and services must be planned and provided.

The Rural Element requirements in the originally adopted GMA contained very general standards. It stated that Counties shall include a rural element including lands that are not designated for urban growth, agriculture, forest, or mineral resources. The Rural Element shall permit land uses that are compatible with the rural character of such lands and provide for a variety of rural densities. Rural areas must also be planned for and include preservation of open space, agricultural opportunities, recreational opportunities, and protection of natural resources.

In April 1991, Interim Growth Management Policies were adopted as a transition between the 1962 Comprehensive Plan and the more complex plan developed under the Growth Management Act. In June 1992, the Pierce County County-Wide Planning Policies were adopted. The policies provided the framework and process by which Pierce County and the cities and towns within the County would establish urban growth areas, provide infrastructure and services, and preserve agricultural and natural resource lands.
In November 1994, Pierce County adopted a new Comprehensive Plan. The 1994 Pierce County Comprehensive Plan replaced the 1962 Pierce County Comprehensive Plan in its entirety. The plan established population projections, urban growth areas, and rural areas. The 1994 Comprehensive Plan identified the portion of the plan area surrounding the City of Gig Harbor as an "urban growth area" and designated the remainder of the Peninsula and Fox Island as "rural." The 1975 Gig Harbor Peninsula Comprehensive Plan remained in effect as a component of the new Comprehensive Plan but many aspects of the 1975 Plan was not consistent with the Growth Management Act and the newly adopted County Comprehensive Plan. Consequently the 1975 plan policies were superseded by the new County-wide plan and implementing zoning regulations that became effective in July 1995.

COMMUNITY PLANNING

Pierce County Comprehensive Plan policies located in the Community Plans Element address community autonomy, community character, new community plans, consistency with the Comprehensive Plan, consistency with the Development Regulations-Zoning, transition strategies, and joint planning agreements.

The Community Plans Element of the 1994 Pierce County Comprehensive Plan envisions a local voice in how the Comprehensive Plan and its Development Regulations will be carried out in communities. Community plans exemplify how the objectives and policies of the Comprehensive Plan play out when applied to detailed and specific conditions. They indicate specific land use designations, appropriate densities, and the design standards that should apply in community planning areas. Preserving and building community character while ensuring an efficient and predictable development approval process is a central theme. Community plans help citizens decide what they want to retain and what they want to change at the local level.

Although the Growth Management Act (GMA) does not require comprehensive plans to provide for community plans, Pierce County Ordinance 90-47S directs County officials to prepare a Community Plans Element of the Comprehensive Plan. The majority of unincorporated County population resides in community plan areas. The Community Plans Element spells out how to coordinate consistency between community plans and the Comprehensive Plan. Community plans must be consistent with the Comprehensive Plan and the GMA. Flexibility exists only in the interpretation of how Comprehensive Plan policies apply in a given community or in areas where the Comprehensive Plan is silent on an issue or does not provide detailed guidance.

GIG HARBOR PENINSULA COMMUNITY PLANNING EFFORTS

The Pierce County Council passed Resolution R97-94 on August 12, 1997, requesting the Department of Planning and Land Services update the 1975 Gig Harbor Peninsula Comprehensive Plan. The resolution called for the Planning Department to combine the requirements of the Growth Management Act with the most successful provisions of the 1975 Gig Harbor Peninsula Comprehensive Plan. The updated community plan focuses on the Gig Harbor Peninsula and Fox Island. The Burley-Minter-Wauna area of the Key Peninsula, which
was under the jurisdiction of the 1975 Community Plan, is not within the jurisdiction of the updated plan.

Information regarding the plan update was distributed to various citizen groups in the spring of 1998 and the planning process started in August 1998. A Community Planning Board and various committees developed plan policies starting in the fall of 1998 through summer of 2000.

**SCOPE OF THE COMMUNITY PLAN**

**LEGISLATIVE AUTHORITY TO DEVELOP THE PLAN**

In the Community Plans Element of the 1994 Pierce County Comprehensive Plan, the Gig Harbor Peninsula was identified as a community with an existing community plan that needs to be updated.

**PURPOSE AND USE OF THE COMMUNITY PLAN**

The Gig Harbor Peninsula Community Plan will give residents, property owners, business people, and Pierce County government a detailed sense of how the community wants to develop in the future and what standards could be utilized to create and maintain the look and feel identified in the community plan. The Gig Harbor Peninsula Community Plan develops a vision for the entire Peninsula and Fox Island. In some circumstances, the plan refines the Pierce County Comprehensive Plan to more closely reflect the needs, concerns, and desires of the Peninsula residents. The plan also identifies actions necessary to implement the community plan, including adopting or revising land use regulations; identifying priorities for use of public funds to develop physical improvements such as sidewalks, street landscaping, street lights, water-related improvements, and park development; social programs; and economic programs.

**VISIONS, GOALS, OBJECTIVES, PRINCIPLES, AND STANDARDS**

**VISIONS**

Visioning is the process of defining the expectation of what the community could be in the future. Visioning is typically completed through a series of public meetings or workshops structured to allow the community to articulate hopes for the future. Statements, thoughts, and ideas brought forth in the visioning process become the basis for the visions, goals, objectives, and principles of the community plan.

Vision statements can be either: 1) broad - painting a picture of what the community should strive to be like, physically and socially; or 2) focused - to express how the concerns, values, and hopes of the community should be reflected in various topics.
Goals, objectives, and policies (principles and standards) are used to provide measurable statements to fulfill the vision statements and are an integral part of the visioning process.

**GOALS**

Goals describe a desirable future for the community: identifying who, what, why, and how the broad values and hopes set forth in the vision statement will be accomplished. Goals provide the framework from which objectives, policies (principles and standards), and implementation actions and recommendations will be developed.

**OBJECTIVES**

Objectives are statements which specifically define goal actions.

**POLICIES (PRINCIPLES AND STANDARDS)**

Principles set a particular course of action to accomplish objectives. Standards, quantitative or qualitative, are specific benchmarks or targets to be accomplished in the ongoing development of the community.

**IMPLEMENTATION ACTIONS AND RECOMMENDATIONS**

Implementation actions and recommendations are statements that provide changes to policy documents, regulations, capital facility plans, and statements directing agencies and community groups to revise or develop plans, regulations, and non-regulatory measures.

The vision and all of the goals, objectives, policies and implementation actions and recommendations are developed through citizen comment and represent the will of the people translated into decision-oriented statements. When applying the policy statements, each should be afforded equal weight and consideration.

**PUBLIC INVOLVEMENT**

**GIG HARBOR PENINSULA COMMUNITY PLANNING BOARD**

The development of the Gig Harbor Peninsula Community Plan could not have been accomplished without the Gig Harbor Peninsula Community Planning Board (GHPCPB). The GHPCPB consisted of a fifteen-member group representing a variety of interests and geographic locations of the community. Representatives included: Peninsula Light Company, Pierce County Fire District #5, the Peninsula School District, the City of Gig Harbor, the Gig Harbor Peninsula Chamber of Commerce, development interests, business interests, parks and open space interests, the Key Peninsula Gig Harbor Islands (KGI) Watershed Committee, the Peninsula Neighborhood Association, the Peninsula Advisory Commission, and local residents.

The GHPCPB was charged with five main responsibilities: 1) serving as a sounding board for the community; 2) developing a vision and goals for the community plan area; 3) working with sub-committees in developing policies and implementing actions related to various topics; 4)
guiding the development of policies and map changes that address community concerns while remaining consistent with the Comprehensive Plan; and 5) forwarding a draft updated Gig Harbor Peninsula Community Plan to the Pierce County Planning Commission and Pierce County Council.

COMMUNITY PLAN SUBCOMMITTEES

Eight subcommittees were formed to address the following topic areas: the Urban Growth Area, rural areas, parks, open space, transportation, the natural environment, economic development, and facilities and services. The role of each subcommittee was to work with staff in researching and developing detailed policies and implementation actions related to the goals adopted by the CPB and forward draft policy and implementation actions to the CPB for review and approval.

TIMELINE FOR PUBLIC INVOLVEMENT

</tr>
<tr>
<td>Spring/Summer 2000</td>
<td>Natural Environment Committee developed environmental policies and completed its work in June 2000. CPB review of the Natural Environment Committee recommendations was completed in July 2000.</td>
</tr>
</tbody>
</table>
Environment Committee recommendations was also completed in June 2000.

Summer/Fall 2000  Economic Development Committee developed economic policies and completed its work in August 2000. CPB review of the Economic Development Committee recommendations was completed in October 2000.

Winter 2001  The second open house was held on January 24, 2001. The purpose of this open house was to provide a copy of the draft community plan and the environmental impact statement for the Gig Harbor Peninsula Community Plan to the public.

Winter 2001  The Gig Harbor Peninsula Community Plan was presented to the Peninsula Advisory Commission (PAC) on January 24, 2001.

Winter 2001  The Pierce County Planning Commission held public hearings on the draft community plan in February and March 2001.

Spring 2001  The Pierce County Council held public hearings on the Planning Commission’s recommendation in May, June, and July 2001.

**OPEN HOUSES**

An open house was held on September 9, 1999, to describe the efforts of the Community Planning Board and various subcommittees in drafting urban and rural land use policies for the community plan.

A second open house was held on January 24, 2001. The purpose of this open house was to provide a copy of the draft community plan to the public.

**SURVEY**

In February of 1999, Pierce County Planning and Land Services (PALS) distributed a community survey for the Gig Harbor Community Plan area. The survey was developed by PALS staff and reviewed and approved by the Urban Growth Area Committee and the Pierce County Council representative for the area. The survey was intended to help PALS staff and community plan members solicit the community's views regarding the current state of the area in terms of quality of life, current and future challenges to the community and planning concerns of importance to the citizens of the area. The survey also solicited demographic information such
as household size, number of miles driven to and from work on a daily basis, and shopping habits.

The survey was mailed to all registered voters residing within the plan area who have voted in three of the last four general elections. A total of 6,233 surveys were mailed. Those receiving the survey were allowed approximately three weeks to complete and return the survey, with the deadline date for return of the surveys being March 1, 1999. A total of 483 surveys were returned which represents a return rate of 8%.

The survey requested the respondents to rate their quality of life, identify the reasons they reside in the area, identify future challenges to quality of life, and identify things which should be changed or be planned for to maintain quality of life. Respondents rated the quality of life in the community on a one to ten scale. Respondents also identified the top five reasons why they live in the community plan area (healthy environment, proximity to the urban area, low crime rate, quality schools, and rural character). The three issues of greatest concern for the respondents during the next twenty years included controlling growth and development, traffic congestion and the potential for a second Tacoma Narrows Bridge. The three things they would change to improve quality of life in the plan area were reduce the rate of growth and development, improve transportation, and reject the construction of a second Tacoma Narrows Bridge.

The survey requested the respondent to respond to six statements regarding the natural environment, and to identify the three areas of the natural environment most important to them for protection. The overwhelming majority of respondents (93%) indicated that protection of the natural environment was very important to them. An overwhelming majority also indicated that protection or improvement of water bodies is necessary (87%). Again an overwhelming majority, 89% of respondents, indicated that rural-like areas within the UGA should be protected from intense development. The same number, 89% of all respondents, indicated that preservation of natural vegetation through open space set aside, significant tree preservation, or other techniques should be sought. An overwhelming majority (86%) indicated that vegetative buffers should be required along all State and County roads. Eighty-five percent of all respondents indicated that vegetation along the shoreline of Puget Sound should be preserved. When asked to rank the components of the natural environment most important for protection the respondents indicated that trees and native vegetation, general water quality, air quality, shorelines, and wetlands were the most critical.

The survey also requested the respondents to respond to twelve statements regarding the built environment and to identify shopping habits. An overwhelming majority (82%) of respondents indicated that they were opposed to allowing duplexes within all single-family residential neighborhoods. A strong majority (68%) indicated duplexes should be allowed only in duplex neighborhoods. When asked about size of commercial structures, a strong majority of respondents (68.7%) indicated that commercial buildings should be no larger than 5,000 square feet if outside the City of Gig Harbor. A strong majority (61.4%) also indicated they were opposed to buildings of up to 35,000 square feet and an overwhelming majority (78.2%) indicated they were opposed to buildings in excess of 35,000 square feet. When asked about nonconforming businesses, an overwhelming majority (75%) indicated they were opposed to
allowing these businesses to expand when located in residential areas. An overwhelming majority (85%) indicated that pedestrian pathways and sidewalks should be provided between businesses. When asked about architectural and site design standards, an overwhelming majority indicated that both architectural (76.5%) and site design (86.7%) should be required.

Respondents were also asked several questions regarding the state and demand for recreational facilities in the community. When asked which three parks and recreation needs are most important at the present time, the most popular responses included more access to shoreline, more open space, and more outdoor recreational areas.

The survey also requested respondents to identify infrastructure improvements currently needed. The facilities and services mentioned most often included neighborhood/community parks, bike lanes, paved roadway shoulders, and sidewalks.

Finally, respondents were asked whether or not they would be willing to support higher taxes or fees to provide facility and service improvements. Responses were: "Yes" (41%), "No" (24%), and "Maybe" (35%).

### SUMMARY OF THE GIG HARBOR PENINSULA COMMUNITY PLAN

The Gig Harbor Peninsula Community Plan contains policies and implementing actions for five major subject areas or elements: Land Use, Community Character and Design, Natural Environment and Open Space Element, Economic Development, and the Facilities and Services Element.

The Land Use Element addresses issues such as coordination between Pierce County and the City of Gig Harbor, what land uses should be allowed in the various designations and the appropriate intensity of land use in various areas in the community. This element is separated into a section dealing with the Urban Growth Area surrounding the City of Gig Harbor and a second section dealing with the rural area.

The Community Character and Design Element addresses urban design, urban character, urban open space protection, rural design, and rural character. The policies contained within the Community Character and Design Element promote and enhance site plan design, architectural design, sign design, and vegetation retention.

The Natural Environment and Open Space Element include consideration of the natural resources found on the Gig Harbor Peninsula. Natural resources such as wildlife, clean water, forests, and open spaces are an integral and valued part of the community. The policies contained within the Natural Environment Element of the Gig Harbor Peninsula Community Plan promote protection of critical areas, encourage preservation of natural vegetation, and address special topics such as the marine shorelines, wetlands, and fish and wildlife habitat.

The element also identifies a system of open space corridors throughout the community. This element fosters the preservation, restoration, and enhancement of the areas that have been designated as open space. The policies in the plan refine the open space/greenbelt map, identify preferred sites for open space acquisition, encourage enhancement, preservation, and retention of these areas, and provide strategies to accomplish these goals.
The Economic Development looks at the economy of the Peninsula and considers several opportunities to provide the community with a desired balance of employment and economic return with its impact. The majority of Peninsula residents appear to be satisfied with the current economy and are generally not interested in expanding the area designated for new businesses. It seems the most desirable growth would be for more service, commercial, and professional business as a means to reduce reliance on the Narrows Bridge. The policies contained in the Gig Harbor Peninsula Community Plan promote home occupations, small entrepreneurs, resource-based business, and environmentally sound business.

The Facilities and Services Element addresses the basic facilities needed to keep the whole system functioning. Infrastructure includes capital facilities such as roads, trails, sewage disposal, parks, domestic water, stormwater control, electricity and natural gas. Services include solid waste disposal, fire protection, law enforcement, public schools, and library services. The policies within the Gig Harbor Peninsula Community Plan identify the capital improvements that are necessary to support the community plan (septic, water, rest area, sidewalks, etc.) and discuss potential sources for funding the infrastructure and services.

The Plan Monitoring Section addresses how to measure the effectiveness and impacts of the plan over time.

### Community Wide Goals

#### Introduction

After completing an agreed upon vision statement, the next step in the development of the community plan update was to achieve a consensus on some broad community-wide goals regarding the future of the Peninsula area.

The community recognized that the natural resources and amenities of the Peninsula were the features that make the community a desirable place in which to live, work, and play. Protection of these resources (the forests, pastures, shorelines, fish and wildlife habitat, clean air and water, and the rural character, to name a few) is paramount if the quality of life is to be maintained for both existing and future residents. Development must be required to respect these resources and amenities since poor development or over development could very easily destroy these values.

The Community Planning Board updated the community-wide goals from the 1975 Comprehensive Plan for the Gig Harbor Peninsula. These updated goals pertain to economic development, water supply and sewage disposal, market demands, recreation, transportation, urban neighborhoods, preservation of significant features and implementation, incentives fees and taxation.

The community-wide goals that follow are the basis around which the detailed goals, objectives, principles, and standards in the plan are structured. They are by design broad goals that strive for the ultimate in good development for the community residents and landowners. Idealistic as they may seem, they are nevertheless worth striving for by everyone who is
interested in seeing the Peninsula community grow and develop in a manner befitting its forested-rural-marine character.

**ECONOMIC DEVELOPMENT**

Goal: To encourage economic development which is responsive to the needs of the community and is contained within the City of Gig Harbor's Urban Growth Area or a Rural Neighborhood Center. Economic development should provide the community with a desirable balance of employment and economic return to impact, provided that new economic development shall not significantly contribute to light, noise, water, air, or land pollution.

**WATER SUPPLY AND SEWAGE DISPOSAL**

Goal: To permit in the rural areas only that land use which does not exceed a level which can be supported and sustained by existing natural resources and systems. Land use within the City of Gig Harbor's Urban Growth Area should be supported by public utility facilities.

**MARKET DEMANDS**

Goal: To accommodate market demands for more intensive use of the land only within the City of Gig Harbor's Urban Growth Area and to assure that proposed changes to a zone classification, land use designation, or Urban Growth Area boundary are based on a public or community need.

**RECREATION**

Goal: To assure that abundant and varied recreation opportunities are established and enhanced to serve as focal points for present and future population needs as an integral part of neighborhoods and the larger community.

**TRANSPORTATION**

Goal: To develop a motorized, nonmotorized and pedestrian transportation system that provides the necessary infrastructure concurrent with development that will safely and conveniently serve the needs of the community while preserving the natural characteristics of the land.

**URBAN NEIGHBORHOODS**

Goal: To develop safe neighborhoods where people can know and interact with each other, that provide for a diversity of housing forms and densities, neighborhood shopping, recreational, cultural, educational, and other public and private facilities and services, that will generally accommodate a variety of lifestyles.
**Preservation of Significant Features**

Goal: To identify, restore, and preserve sites containing features of historical, ecological, archeological, cultural, and scientific significance and promote beautification and preservation of public and private spaces, scenic vistas, marine settings, and other areas that represent community character and community values.

**Implementation**

Goal: To require effective implementation of and compliance with the community plan in both the spirit and the letter of its content. To require coordination with the City of Gig Harbor, to encourage citizen participation in both project review and the legislative process, and to provide for review/revision at least every five years.

**Incentives, Fees, and Taxation**

Goal: To encourage a system of incentives, fees and taxation which will be consistent with sound principles of environmental land use planning, further the goals of the community plan, and yield adequate resources to preserve the forested, pastoral, open space, and marine characteristics of the Peninsula.

**Vision Statement**

The Gig Harbor Peninsula Community Plan is intended to provide for the planned and orderly growth of the Gig Harbor Peninsula. In keeping with the desires of the majority of its citizens and without depriving landowners and/or residents of the reasonable use of their land, the community plan will:

- Protect and maintain the natural resources, natural environment, and ecosystems by respecting the natural processes;
- Preserve the forested, pastoral, open space and marine characteristics of the area;
- Recognize and preserve historic communities;
- Support safe, diverse neighborhoods where people can know and interact with each other; and
- Strive for well designed and well placed urban development within the Urban Growth Area while fostering a rural character outside of the Urban Growth Area.
Chapter 2: Land Use Element

Introduction - Urban

The Land Use Element is intended to articulate the direction for future growth and development within the unincorporated Gig Harbor Peninsula Community Plan area. Land use policies are distinguished as either urban (affecting land within the City of Gig Harbor’s Urban Growth Area (UGA) or rural (affecting lands located outside of the City’s UGA). These policies create the basis for land use regulations that are implemented in various development regulations as a response to specific land use concerns in the community. Community plan policies provide direction to residents, the business community, and investors and serves as a guide to County planners, Planning Commission members, the Hearing Examiner, and elected officials in their land use decision-making capacity.

The goals, objectives, principles, and standards in the plan direct urban growth and development to the UGA which surrounds the incorporated City of Gig Harbor. Directing new residential subdivisions, commercial, and industrial development into areas that are served by urban services (such as sewers) provides efficient economies of scale which promote cost effective public facilities including nonmotorized transportation, parks, and open space that the community desires. This growth management planning concept also eliminates urban development patterns from sprawling into the rural area. This allows the rural area to retain the low density, pastoral and forested characteristics that the community favors.

Urban Growth Area

Introduction

Surrounding the city limits of Gig Harbor is its Urban Growth Area. The Urban Growth Area is the unincorporated area in which the city intends to provide urban level facilities and services over the next 20 years and eventually annex into the city itself. The policy and regulatory framework discussed below provides the transition between the city’s vision of the area and the currently unincorporated residents’ vision for the area.

Description of Current Conditions - UGA

The following information provides background information on the existing land use designations and zoning classifications, land development patterns, and demographics in the plan area. This information provides the basis for analyzing the existing or planned conditions in the UGA and the development of new and revised policy and regulatory measures.

Current Comprehensive Plan Designations, Zoning Classifications, and Overlays

The land use plan designations of the Pierce County Comprehensive Plan are currently implemented by zoning classifications that mirror the plan designations in name and location.
The Urban Growth Area currently has four land use designation/zoning classifications and two overlay classifications. The four land use designations/zoning classifications are: Moderate Density Single-Family, Master Planned Community, Employment Center, and Community Center. The two overlay classifications are the Mineral Resource Overlay and the Essential Public Facility/Rural Airport Overlay. Table E-1 shows how many acres are found in each plan designation/zoning classification. Table E-2 shows how many acres are found in each of the overlay classifications. Map E-3: Historic Assessed Land Uses illustrates the locations of the plan designations, zoning classifications, and overlays.

</tbody>
</table>

**Moderate Density Single-Family (MSF)**

This designation is intended to provide areas for urban single-family and two-family residential development at moderate densities of 2-6 dwelling units per acre. The MSF designation is the dominant land use designation in the City of Gig Harbor’s Urban Growth Area.

**Master Planned Community (MPC)**

This designation is intended to achieve well designed, compact, urban development with a balance of uses, more efficient use of public facilities, and a greater amount of open space than would be required under standard development. MPCs integrate a mix of housing, services, and recreation and are approved through a planned unit development or planned development district process. Densities in a MPC must average between 4-10 dwelling units per acre with individual densities within the community ranging from 2-25 dwelling units per acre. MPCs must encompass a minimum of 320 acres. In the Gig Harbor UGA, the only MPC lies at the north end of the UGA. This MPC encompasses the Canterwood Golf Community which has been in existence since the late 1970s.

**Employment Center (EC)**

This designation is intended to provide for adequate industrial, manufacturing, and office jobs to serve the needs of the community. Uses in the EC range from land intensive heavy industrial (e.g., manufacturing, product assembly, fabrication, processing, and heavy trucking uses) to light manufacturing, assembly, and wholesale activities, to corporate office and office park development. The EC designation is currently located in several spots along the SR 16 highway corridor, in Purdy, west of the Burnham Drive/N. Rosedale intersection, and south of the Washington Corrections Center for Women at Purdy. Commercial uses subordinate to and supportive of employment uses are also permitted.
community center (cc)

This designation is intended to be the center for general purpose shopping activity in a community. Community centers are designed to serve the needs of multiple neighborhoods while remaining small enough to be compatible with surrounding residential areas. CCs are intended to be places for the community to gather and converse, places where people live, and places with civic elements. The CC designation is currently located at or near the Burnham Drive/N. Rosedale and Purdy interchanges of SR 16 and in Purdy proper.

Table E-2: Current Overlay Classifications (UGA – 2000)

<table>
<thead>
<tr>
<th>Overlay Classifications</th>

</tr>
</thead>
<tbody>
<tr>
<td>Mineral Resource Overlay (MRO)</td>
<td>44</td>
</tr>
<tr>
<td>Essential Public Facility - Rural Airport Overlay (RAO)</td>
<td>18</td>
</tr>
<tr>
<td>Urban Sensitive Resource Overlay (USRO)</td>
<td>16</td>
</tr>
</tbody>
</table>

mineral resource overlay (mro)

This designation identifies those lands devoted to the extraction of minerals that have a known or potential long-term commercial significance for the extraction of minerals. The MRO designation includes only those lands with a valid Washington State Department of Natural Resources (DNR) Surface Mining Permit and a valid Pierce County Unclassified Use or Conditional Use Permit. Once the mining activity ceases on the property, only the permitted land uses of the underlying designation will be allowed. There are currently five MRO designations, for gravel mining, in the UGA. The existing MRO lands are located along the SR 16 corridor from Purdy to central Gig Harbor.

essential public facility (epf)/rural airport overlay

This designation refers to the Tacoma Narrows Airport property. The airport is considered an essential public facility. These facilities are typically difficult to site and require a specified planning process. For the Tacoma Narrows Airport, the planning process will include an advisory committee composed of the Federal Aviation Administration, the Cities of Gig Harbor and Tacoma, Pierce County, airport users and operators, community groups, business people, and interested residents. This planning process will result in the development of a master plan for the airport to be approved by Pierce County as a planned unit development (PUD). The vast majority of the Tacoma Narrows Airport lies outside the UGA, though a small portion of the northern buffer area, currently used as a golf course, lies within the UGA.

urban sensitive resource overlay (usro)

Fragmentation of the remaining open space corridors that create habitat for wildlife species native to the Gig Harbor Peninsula shall be avoided. An open space overlay will be established in the urban area to implement the open space/greenbelt map. Low impact development techniques will be required in this overlay area.
**CURRENT LAND USES**

A land use inventory was conducted for the plan area in the spring of 2000. Using the Pierce County Assessor’s data for each tax parcel, information was gathered on current uses, acreage, and ownership. Table E-3 summarizes current land uses within the UGA and Map E-3: Historic Assessed Land Uses illustrates these land uses.

The majority of property within the UGA is currently being used for single-family residential development. On an average, each home has approximately 3/4 of an acre of land with 1,274 acres providing 1,682 home sites. Vacant land is the next largest use of property in terms of the number of parcels and total acreage; 1,097 acres are currently taxed as vacant property. Fifty-seven acres within the community plan area are being utilized (according to tax records) for commercial forestry. Approximately 41 acres are currently used for a variety of agricultural production uses. Commercial development comprises 61 lots and 95 acres. Only 8 lots and 16 acres are being used for industrial purposes. The following table summarizes the existing use of land within the UGA.

Source: Pierce County Assessor/Treasurer’s Office data

**DEMOGRAPHICS OF THE URBAN GROWTH AREA**

**POPULATION ESTIMATES**

The population estimates for the Gig Harbor Peninsula Community Plan were derived from the 1998 annual population estimates by census tract generated by the Puget Sound Regional Council (PSRC) and based on the 1990 national census. Because census tracts differ slightly from plan boundaries, certain adjustments were made to exclude the Key Peninsula and the City of Gig Harbor.
Three factors assumed in estimating population are: housing units, persons per household (pphh), and housing vacancy rates. Traditionally the decennial census provides the basis for these factors. The PSRC updates the 1990 census housing unit count through annual collection of residential building permits. The 1990 census pphh and vacancy rates are adjusted through an economic regression model by PSRC.

### 20 Year Population Projections

The 2017 population projection for the Gig Harbor Peninsula is approximately 61,800. The Urban Growth Area for the City of Gig Harbor is allocated a 2017 population of 26,230. Of this total, 9,800 are allocated to areas within the 1995 municipal limits. The remaining 16,434 is allocated to areas of the UGA outside the municipal limits.

The Peninsula’s resulting annual growth rate from the 2017 population projection is slightly higher than the County’s growth rate by approximately one percent: 2.8 percent vs. 1.6 percent. A higher annual growth rate is projected to occur within the unincorporated UGA at a range between 5.9 to 7.0 percent. The City of Gig Harbor’s annual growth rate is estimated to be approximately 2.3 percent through 2017.

The 1998 population estimate for the Gig Harbor Peninsula Community Plan area is 30,500 persons. Of the 30,500 people currently residing in the plan area, approximately 15-18% reside within the unincorporated Urban Growth Area (UGA).

### Descriptions of Desired Conditions - UGA

#### Future Land Uses in the Urban Growth Area

**Overview**

The land use pattern that has been established through implementation of the 1994 Comprehensive Plan will continue as growth and development activity is directed to the UGA. The community plan offers a framework that will provide for consistent standards and a coordinated land use pattern in this area. Directing new residential subdivisions as well as commercial and industrial development into areas that are served by urban services will provide cost effective public facilities and infrastructure. The most noticeable land use change will be an increase in commercial and employment development in Purdy and Swede Hill as development is encouraged in these neighborhoods. Development in areas that are identified as open space will be required to meet low impact development standards. Site and architectural design will be a necessary component of many new projects. Incentives such as bonus densities, reduced setbacks, and a reduction in minimum lot size will be offered for development that reduces impervious surfaces, protects open space, preserves trees, etc.
| RESIDENTIAL |
New residential density in the UGA will average 4 dwelling units per acre. This density will allow a moderate residential development pattern in the urban area. Flexibility in subdivision design will be provided through a series of development incentives. Natural buffer areas adjacent to natural features, vegetated screening along SR 16, sidewalks, street trees, street lighting, and neighborhood parks are examples of residential development standards that will provide the character in the UGA that the community desires.

| COMMERCIAL |
Commercial development is not expected to become a significant land use feature outside of the city limits of Gig Harbor, however, commercial development will be encouraged in the Purdy area and at Swede Hill. The property adjacent to the shoreline in Purdy will be a commercial center oriented towards Henderson Bay where a future boardwalk is envisioned. Businesses that cater to pedestrians are encouraged along the Purdy waterfront area. Swede Hill will be a general business district that encourages wholesale sales, rental and repair services, and other business services that tend to be automobile-oriented. New commercial development in these areas is expected to provide open space and other design amenities that the community desires. Commercial design standards will be a component of new developments.

| EMPLOYMENT |
Several new employment areas have been designated through the community plan. These new EC designations recognize the existing land use patterns in two locations of the UGA. In Purdy, the Peninsula Light Company property, the Pierce County Road Shop, and the Peninsula School District properties are recognized as public institutions. South of Swede Hill, the Peninsula Park and Recreation District owns land extending to the Washington Corrections Center for Women at Purdy that has been designated EC as well. The majority of land that is designated for new economic development in the UGA is located south of the women's prison, however, very little development has occurred in this area because of environmental constraints. Economic development in the Gig Harbor Peninsula is not a priority for the community and as a result is a minor component of the community plan.

| PROPOSED LAND USE DESIGNATIONS |
The community plan proposes six land use designations to achieve the community's goals in Gig Harbor's UGA: Moderate Density Single-Family, Master Planned Community, Neighborhood Center, Community Center, Employment Center, and Mixed Use. Table E-4 shows how many acres are found in each plan designation. The proposed designations are intended to be consistent with the City of Gig Harbor's land use plan for the UGA. Map E-1: Land Use Designations illustrates the proposed designations for the UGA.

Land use designations provide the boundaries for generally defined land use activities such as commercial or residential use. The zoning classifications that implement the designations...
provide the specific detail as to the type or scale of activity that is permitted. Several zoning classifications may implement one land use designation. For example, within the Employment Center designation, several zoning classifications (such as Community Employment Center and Public Institutional) may be established to encourage different types of employment uses (e.g., high technology vs. public utility services) in various neighborhoods. The policies in the community plan describe the location criteria, permitted uses, and the level of development intensity that is permitted in each of the implementing zone classifications.

</tr>
<tr>
<td>Mixed Use Districts (MUD)</td>
</tr>
<tr>
<td>Park &amp; Recreation (PR)</td>
</tr>
</tbody>
</table>

**Moderate Density Single-Family (MSF)**

This designation is intended to provide areas for urban single-family and two-family residential development, at moderate densities averaging four dwelling units per acre. The MSF designation is the dominant land use designation in the City of Gig Harbor’s Urban Growth Area. The MSF designation is implemented with two single-family zone classifications.

**Mixed Use District (MUD)**

The Mixed Use District (MUD) designation is intended to provide areas of mixed commercial retail, service, office, and residential uses. Commercial activity caters to a customer base beyond the surrounding neighborhoods or community. The MUD designation will be implemented through a Mixed Use District (MUD) zone classification.

**Master Planned Community (MPC)**

This designation is intended to achieve well designed, compact, urban development with a balance of uses, more efficient use of public facilities, and a greater amount of open space than would be required under standard development. The Canterwood Golf Community, which has been in existence since the late 1970s, is the only existing MPC in the community plan area. The community plan recognizes the Canterwood MPC and proposes no changes to this designation.

**Neighborhood Center (NC)**

This designation is intended to provide small-scale office, civic, and retail uses in the urban growth area. Residential development shall not be permitted. Neighborhood Centers should
Neighborhood Centers should provide significant screening from adjacent residential area and rural zone classifications. The NC designation will be implemented through a Neighborhood Center (NC) zone classification.

**Community Center (CC)**

This designation is intended to be the center for shopping and business activity in the UGA. The CC designations will be located in the Purdy and Swede Hill areas. They will be compact centers and will permit a variety of commercial uses such as business services, personal services, rental and repair services, professional offices, commercial sales, and contractor yards. The CC designation will be implemented through Waterfront Commercial (WC) and Community Center (CC) zone classifications.

**Employment Center (EC)**

This designation is intended to provide for adequate industrial, manufacturing, and office jobs to serve the needs of the community. The EC designation is intended to provide land for clean industrial, high technology, light assembly, professional office, and similar uses which create employment opportunities in the community. The EC designation proposed in the Community Plan will be implemented through Community Employment Center (CEC) and Public Institutional (PI) zone classifications.

**Urban Sensitive Resource Overlay (USRO)**

Fragmentation of the remaining open space corridors that create habitat for wildlife species native to the Gig Harbor Peninsula shall be avoided. An open space overlay will be established in the urban area to implement the open space/greenbelt map. Low impact development techniques will be required in this overlay area.

**Introduction – Rural**

The portion of the plan area outside of the Gig Harbor city limits and its UGA, including Fox Island and Raft Island, is designated as a rural area of Pierce County. The rural area of Pierce County has different characteristics from place to place. Furthermore, each rural community has different visions for its part of the County. This is certainly true for the residents of the Gig Harbor Peninsula. The policies and regulatory framework discussed below set forth how the community desires the rural part of its community to develop and how its resources will be managed.

**Description of Current Conditions - Rural Area**

The following information provides background information on the existing land use designations and zoning classifications, land development patterns, and demographics in the plan area. This information provides the basis for analysis of existing or planned conditions in the rural area and the development of new and revised policy and regulatory measures.
Current Comprehensive Plan Designations, Zoning Classifications, and Overlays

The land use plan designations of the Pierce County Comprehensive Plan are currently implemented by zoning classifications that mirror the plan designations in name and location.

The rural area currently has three land use designation/zoning classifications: Rural 10, Reserve-5, and Rural Neighborhood Center as well as one overlay designation: Essential Public Facility/Rural Airport Overlay. Table E-5 shows how many acres are found in each plan designation/zoning classification. Table E-6 shows how many acres are found in the rural overlay designation. Map E-2: Historic Land Use Designations/Zoning illustrates the locations of these designations, zoning classifications and overlay.

Rural 10 (R10) Designation

This is found throughout many areas of Pierce County. The designation is intended to maintain rural character and open space. It allows opportunities for resource-based industries such as agriculture, forestry, or mining provided these uses do not require urban-level services. Residential densities allow a basic density of one dwelling unit per 10 acres. However, if at least 50 percent of the property is designated as open space, a density of two dwelling units per 10 acres is allowed. If at least 75 percent of the property is designated as open space, a density of 2.5 dwelling units per 10 acres is allowed. The minimum lot size for any newly created lot cannot be less than one acre. Existing parcels that are less than 10 acres and are zoned R10 can be built upon as long as the other criteria such as septic, water, critical areas, and other County requirements are met. The R10 designation is located on Fox Island, and the northeastern, western, and southern parts of the Gig Harbor Peninsula.

Reserve 5 (Rsv5) Designation

This is an area with low density residential land uses with required clustering of residential lots so that the land may be more intensively utilized in the future when the UGA area is expanded. The designation is intended to provide usable lands for potential inclusion into the UGA for the City of Gig Harbor when the need for additional land is identified and an amendment to the Comprehensive Plan is adopted. The maximum density in the Rsv5 designation is one dwelling unit per five acres, with a maximum lot size of 12,500 square feet. New lots in the Rsv5 designation shall be clustered in lot groups not to exceed 12 in size, with the balance of the tract set aside for future development at urban densities. The Rsv5 designation surrounds the City of Gig Harbor's UGA, with the exception of the Crescent, Wollochet, and Artondale Creek drainages.

Rural Neighborhood Center (RNC) Designation

This is intended to recognize areas having established commercial uses that provide for limited convenience shopping and services which meet the daily needs of the surrounding area and which provide immediate access onto state routes or major or secondary arterial roads. Sewers are not extended to RNC designations. The only RNC in the plan area is located on Fox Island.

</tbody>
</table>

(1) The acreage for Essential Public Facility/Rural Airport Overlay overlaps the underlying land use designation, i.e., Rsv5.

### Essential Public Facility - Rural Airport Overlay

This designation refers to the Tacoma Narrows Airport. The airport is considered an essential public facility. These facilities are typically difficult to site and require a specified planning process. For the Tacoma Narrows Airport, the planning process will include an advisory committee composed of the Federal Aviation Administration, the Cities of Gig Harbor and Tacoma, Pierce County, airport users and operators, community groups, business people, and interested residents. This planning process will result in the development of a master plan for the airport to be approved by Pierce County as a planned unit development. The vast majority of the Tacoma Narrows airport lies within the Rsv5 designation, with small portions lying in the R10 and MSF designations.

(1) The acreage for Essential Public Facility/Rural Airport Overlay overlaps the underlying land use designation, i.e., Rsv5.

### Current Land Uses

A land use inventory was conducted for the plan area in the spring of 2000. Using the Pierce County Assessor’s data for each tax parcel, information was gathered on current uses, acreage, and ownership. Table E-7 summarizes current land uses within the rural area, and Map E-3: Historic Assessed Land Uses illustrates these land uses.

The majority of property within the rural area is currently being used for single-family residential development. On an average, each home has approximately 1.19 acres of land with 10,840 acres providing 9,128 home sites. Vacant land is the next largest use of property in terms of the number of parcels and total acreage; 6,629 acres are currently taxed as vacant property. Each of these 3,376 vacant parcels is available for residential development. Approximately 2,367 acres within the Community Plan area are being utilized (according to tax records) for commercial forestry. Approximately 723 acres are currently used for a variety of agricultural production uses. Commercial development comprises 49 lots and 163 acres. Only 10 lots and 26 acres are being used for industrial purposes.

Demographics of the Rural Area

Population Estimates

The population estimates for the Gig Harbor Peninsula Community Plan were derived from the 1998 annual population estimates by census tract generated by the Puget Sound Regional Council (PSRC) and based on the 1990 national census. Because census tracts differ slightly from plan boundaries, certain adjustments were made to exclude the Key Peninsula and the City of Gig Harbor.

The 1998 population estimate for the Gig Harbor Peninsula Community Plan area is 30,500 persons. Of the 30,500 people currently residing in the plan area, approximately 82-85% (25,010 – 25,925) live in the rural area.

20-Year Population Projections

The 2017 population projection for the Gig Harbor Peninsula is approximately 61,800. The Urban Growth Area for the City of Gig Harbor is allocated a 2017 population of 26,230. Of this total, 9,800 are allocated to areas within the 1995 municipal limits. The remaining 16,434 is allocated to areas outside the municipal limits. The population for the rural areas of the Gig Harbor Peninsula is projected to be approximately 35,500 in 2017.

The Peninsula’s annual growth rate resulting from the 2017 population projection is slightly higher than County’s growth rate by more than one percent, 2.8 percent vs. 1.6 percent. The annual growth rate associated with the rural area of the community plan is estimated at between 1.9 and 1.7 percent. This anticipated growth rate is close to the County’s annual growth rate.

**DESCRIPTION OF DESIRED CONDITIONS - RURAL AREA**

**FUTURE LAND USES IN THE RURAL AREA**

**OVERVIEW**

The land use pattern that has been established through implementation of the 1994 Comprehensive Plan will continue as growth and development activity is directed away from the rural area and into the City of Gig Harbor’s UGA. Preservation of the remaining agricultural and forest lands is a priority. Residential development would be at the same low densities as currently permitted (one dwelling unit per 10 acres with a bonus of up to 2.5 dwelling units per 10 acres when 75 percent of a site is placed in open space). Development standards would ensure that Reserve Five lands would be retained for future urban growth once the UGA reaches capacity. Two new RNC designations would be added to recognize the existing development pattern at Rosedale and Arletta. Limited commercial and civic activities would continue serving these rural neighborhoods. The aviation related activities at Tacoma Narrows Airport would be permitted through implementation of a Planned Unit Development (PUD). Incompatible uses adjacent to the general aviation facility would be discouraged. Development in the valleys and stream corridors that are designated as open space would be subject to low impact development techniques. Incentives such as bonus densities, reduced setbacks, open space current use assessment programs, and similar programs will be offered for development that reduces impervious surfaces, protects fish and wildlife habitat, preserves open space, etc.

**RESIDENTIAL**

New residential development in the rural area will average one dwelling unit per 10 acres. This low-density pattern will prohibit sprawling urban residential development outside of the UGA. Development standards in Reserve Five lands will be retained for future urban growth once the UGA reaches capacity. Preservation of open space will be a priority for all new residential development projects within the rural area.

**COMMERCIAL**

Commercial development is not expected to be a significant land use in the rural area. Limited commercial and civic uses are permitted in the rural area when they are consistent with the policies in the community plan. The RNCs provide opportunities for redevelopment or expansion of the existing commercial and civic uses in the centers. The development possibilities are limited however, based on a five-acre maximum size for these neighborhood commercial centers. The best opportunity for commercial or industrial development in the
rural area is at the Tacoma Narrows Airport. This opportunity exists because the airport is considered an essential public facility. Development options at the airport are limited, however, because urban services such as sanitary sewers are not permitted to serve new development in the rural area.

**Resource**

Resource uses including commercial agricultural and forest practices are permitted and encouraged in the rural area. Best Management Practices are encourage or required, depending on the specific resource use. All resource uses in the plan area are required to meet the necessary environmental standards that would mitigate any negative impacts that may be associated with the farming or forestry operation.

**Proposed Designations**

The community plan proposes five land use designations to achieve the community's goals in the rural part of the plan area: Rural 10 (R10), Rural 5 (R5), Rural Neighborhood Center (RNC), Rural Airport (RA), and Rural Sensitive Resource (RSR). Table E-8 shows how many acres are found in each plan designation. Map E-1: Land Use Designations illustrates the proposed designations for the rural area.

Land use designations provide the boundaries for generally defined land use activities such as commercial or residential. The zoning regulations that implement the designations provide the detail as to the type or scale of activity that is permitted. Several zoning classifications may be established in one land use designation.

**Table E-8: Community Plan - Rural Land Use Designations**

<table>
<thead>
<tr>
<th>Rural Designation</th>
<th>Acres</th>
</tr>

<tr>
<td>Rural Neighborhood Center (RNC)</td>
<td>29.68</td>
</tr>
<tr>
<td>Rural Sensitive Resource (RSR)</td>
<td>6,278.46</td>
</tr>
</tbody>
</table>

**Rural 10 (R10)**

This designation primarily accommodates low-density single-family residential, agricultural, forestry, and recreational uses. There are several proposed changes to the allowed uses within this designation. Light industrial and commercial uses may be permitted when associated with agricultural, forestry, or natural resource related uses. Recreational uses such as parks, walking and biking trail systems, athletic fields, and golf courses are permitted. The policies and
associated regulations for Rural 10 authorize land development activities if the operations do not negatively impact the character of the rural community or the environment. Although many small parcels exist within this area, the base density for new land subdivisions is one unit per ten acres. Up to 2.5 units per 10 acres may be reached if specific open space provisions are met. Existing parcels that are less than 10 acres and are zoned R10 can be built upon as long as the other criteria such as septic, water, critical areas, and other county requirements are met. The Rural 10 (R10) zoning classification implements this plan designation. A Rural Airport Overlay will be established within 1,000 feet of the Tacoma Narrows Airport to protect the airport from uses that are incompatible with aviation activities.

### Table E-9: Community Plan - Rural Overlay Designations

<table>
<thead>
<tr>
<th>Rural Designation</th>
<th>Acres</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rural Airport Overlay (RAO)</td>
<td>153.76</td>
</tr>
<tr>
<td>Urban Sensitive Resource Overlay (USRO)</td>
<td>667.84</td>
</tr>
</tbody>
</table>

**Rural 5 (R5)**

This designation is an area with low density residential land uses that requires clustering of new residential lots so that the land may be more intensively utilized in the future, when the UGA is expanded. The designation is intended to provide usable lands for potential inclusion into the Urban Growth Area for the City of Gig Harbor when the need for additional land is identified and an amendment to the Comprehensive Plan is adopted. The principal permitted use in the R5 designation is detached single-family dwelling units. Civic and recreational uses may be permitted, but are generally limited to a maximum size of 5,000 square feet. The maximum density in the R5 designation is one dwelling unit per five acres, with a maximum lot size of 12,500 square feet. The R5 designation surrounds the City of Gig Harbor's UGA, with the exception of the Crescent Creek, McCormick Creek, Wollochet Creek, Murphy Creek, and Sullivan Gulch Creek drainages. The Rural 5 (R5) zoning classification implements this plan designation.

**Rural Neighborhood Center (RNC)**

This designation is intended to recognize several historic commercial and civic centers in the rural area. These centers have established civic and commercial uses that provide for limited convenience shopping and services for their rural neighborhoods. RNCs are not permitted to exceed five acres in size. Appropriate commercial uses include food stores and the sale of general merchandise. Appropriate civic uses include daycare centers, community service centers, postal services, churches, and public safety services. Sewers are not permitted to extend to RNC designations. The three RNCs in the plan area are located on Fox Island, Rosedale, and Areletta. The Rural Neighborhood Center (RNC) zoning classification implements this plan designation.
**ESSENTIAL PUBLIC FACILITY-RURAL AIRPORT (EPF-RA)**

This designation is intended to recognize existing airports classified as an essential public facility in the rural area. New commercial and light industrial uses are appropriate when consistent with an applicable community plan.

**RURAL SENSITIVE RESOURCE (RSR)**

This designation includes those properties designated as open space on the Pierce County open space/greenbelt map. This designation is intended to protect surface waters, aquifers, and fish and wildlife habitat from degradation. New development within the RSR designation shall utilize low impact development techniques. The properties within the RSR designation are considered a high priority for community space preservation and acquisition efforts. The RSR designation follows the rural valleys and streams corridors on the Peninsula which have historically been protected from development pressures by low-density zoning and sensitive area designations. The Rural Sensitive Resource (RSR) zoning classification implements this designation.

**LAND USE POLICIES**

**GOALS**

Promote environmentally conscientious development on those lands surrounding the city limits of Gig Harbor that are capable of accommodating the projected population with efficient urban services over the next 20 years. Developments shall maintain the natural and forested characteristics and small town atmosphere of the community that the citizens enjoy.

**GENERAL**

**GOAL GH LU-1**  Direct growth and development to those unincorporated urban areas that are least constrained by environmental factors, which do not impair the function of critical areas, and are served or easily connected to urban services.

**GH LU-1.1**  Encourage consistent land use policy direction and map designations between the County and City of Gig Harbor.

**GH LU-1.2**  Urban Growth Area boundaries, comprehensive land use map designations and implementing zone classifications should coincide with maps adopted by Pierce County and those adopted by the City of Gig Harbor.

**GH LU-1.3**  A relationship between the County and city land use designations shall exist within the Urban Growth Area. The range of uses and densities should be the same in corresponding zones.

**GH LU-1.4**  When determining the availability of developable industrial and commercial lands, lands within the corporate limits of the City of Gig Harbor must also be considered.
GH LU-1.5 Infill, renovate, or redevelop existing commercial areas at Purdy and Swede Hill, where appropriate, before designating new commercial areas.

GH LU-1.6 Develop standards which seek to bring nonconforming uses into compliance with the community's adopted design standards and landscaping requirements while permitting replacements of the use or changes to more conforming uses with fewer impacts.

GH LU-1.7 Strictly enforce the community plan land use regulations.

### RESIDENTIAL

**GOAL GH LU-2** Infill development should be designed to be compatible with the established neighborhood through transitions in housing density, screening, or other appropriate methods.

GH LU-2.1 Infill development on parcels less than 2 acres in size shall not exceed the density of the adjacent development pattern by more than 50% or 2 dwelling units per acre, whichever is greater.

GH LU-2.2 Residential infill development on sites exceeding 2 acres in size shall be required to be buffered from adjacent residential uses when the density of the infill exceeds the density of the existing platting and development pattern by more than 50%. At a minimum, a 30-foot natural buffer area shall be required. The density and depth of the buffer should be proportional to the intensity of the use.

**GOAL GH LU-3** Residential density within the unincorporated portion of the Urban Growth Area should average 4 dwelling units per acre.

GH LU-3.1 Two-family development (duplexes) and attached single-family dwelling units should be allowed in single-family residential neighborhoods when they meet community design standards.

GH LU-3.2 An accessory dwelling unit should be permitted on lots where a single-family residence exists.

GH LU-3.3 Multi-family units shall be permitted in commercial and high-density residential zones when consistent with the impervious cover, open space, health and sanitation regulations, and other applicable regulations.

### COMMERCIAL

**GOAL GH LU-4** Prior to designating new commercial centers, show that the new center is consistent with the City of Gig Harbor's Comprehensive Plan as well as the other applicable policies of the Gig Harbor Community Plan.

GH LU-4.1 Designate the commercial center located at Purdy as a commercial zone.

GH LU-4.2 Designate the commercial center located at Swede Hill as a commercial zone consistent with Limited Areas of More Intensive Rural Development.
GH LU-4.3 Designate the property southeast of the intersection of 36th Street NW and Point Fosdick Drive NW as a Neighborhood Center.

GH LU-4.3.1 New commercial centers or expansion of existing centers should not be located in proximity to other commercial centers to avoid sprawling, linear commercial development patterns along transportation corridors. Extension of commercial centers should not result in a commercial development pattern greater than 2,640 feet along any arterial street.

GOAL GH LU-5 Allow for a range and intensity of land uses within urban commercial centers based upon community plan policies, market factors, compatibility with the neighboring area, and consistency with the City of Gig Harbor Comprehensive Plan.

GH LU-5.1 The commercial zone along the waterfront should allow for a variety of mixed uses with an emphasis on marine-oriented uses, including eating and drinking establishments, lodging, general retail sales, professional offices, and multifamily residential development.

GH LU-5.1.1 Provide incentives for marine-oriented uses that focus on the shoreline environment within the Purdy area.

GH LU-5.1.2 New uses and redevelopment of existing uses within the Purdy area abutting Henderson Bay and Burley Lagoon should provide pedestrian access to the shoreline.

GH LU-5.1.3 Encourage development of a boardwalk along the Purdy business district shoreline to promote the marine-oriented character of the neighborhood.

GH LU-5.2 The Commercial and Employment Center designations at Swede Hill should allow for a variety of uses including wholesale sales, business and professional offices, rental and repair services, personal and professional uses, business services, contractor yards, and automobile services, excluding motorized vehicle, trailer, and boat sales consistent with Limited Areas of More Intensive Rural Development.

GH LU-5.3 The Neighborhood Center zone should allow for a variety of office, civic, and commercial uses at a scale compatible with surrounding residential neighborhoods.

GH LU-5.3.1 Allow professional offices, personal services, eating and drinking establishments, and other commercial services that cater to local residents.

GH LU-5.3.2 Prohibit auto-oriented commercial facilities, including drive-through restaurants, gas stations, and similar businesses.

GH LU-5.3.3 Prohibit residential development.

GH LU-5.4 New uses in the Neighborhood Center zone shall provide a 50-foot wide natural buffer between the development and adjacent residential land uses and Rural Residential zone classifications.
**GH LU-5.5** The Mixed Use District designation should allow for a mix of commercial retail, service, office, compatible light industrial, and residential uses. Residential uses may include single-family and multifamily development with densities between 12 and 16 units per acre.

**GH LU-5.6** A Mixed Use District designation should be established in the Purdy area to create a transition between surrounding residential, civic and, commercial uses.

### Employment Areas

**GOAL GH LU-6** Access Employment Centers via an arterial roadway and locate in close proximity to SR 16. Direct heavy truck traffic away from residential neighborhoods.

**GOAL GH LU-7** Employment Centers should avoid lands significantly constrained by critical areas or environmentally sensitive areas. Where critical areas or environmentally sensitive areas cannot be avoided, buffering, increased setbacks, lighting control, stormwater control, and other techniques shall be used to protect the critical area or environmentally sensitive area from adverse impacts.

**GOAL GH LU-8** Land uses allowed within Employment Centers should be devoid of nuisance factors such as excessive noise, light, and odor; should not pose an environmental health hazard; and should not result in high public service and facility demands. Accordingly, uses such as hazardous waste treatment and storage facilities, wrecking yards, smelters, and chemical manufacturing or storage should not be allowed. Adult entertainment uses shall not be allowed.

**GH LU-8.1** Provide incentives in zoning regulations that encourage commercial, business, and industrial park concepts rather than development of individual properties on a lot by lot basis.

**GH LU-8.2** Adopt zoning requirements that encourage the retention of large parcels of land within Employment Centers. To achieve this goal, prohibit division of lands within Employment Centers into lots less than 5 acres in size, except when within an industrial or business park being proposed as a planned development district.

**GH LU-8.3** Limit any retail sales in connection with a home occupation to merchandise handcrafted on-site or items accessory to a service such as hair care products at a home-based beauty salon business.

### Urban Sensitive Resource Overlay

**GOAL GH LU-9** Implement an Urban Sensitive Resource Lands Overlay throughout the open space corridors in the UGA. Identify allowable uses, development density, and the level of project intensity that is appropriate within the designated open space areas. Utilize low impact development techniques in all Urban Sensitive Resource Overlay areas.
GH LU-9.1 Carefully control development activities in the Urban Growth Area on sites that have been identified as open space in the Comprehensive Plan Open Space Corridors Map through implementation of an Urban Sensitive Resource Overlay.

GH LU-9.1.1 Avoid fragmentation of the remaining open space corridors that create habitat for wildlife species native to the Gig Harbor Peninsula and that benefit water quality. Prioritize vegetation and tree preservation on each site that is developed in the Urban Sensitive Resource Overlay.

GH LU-9.1.2 To create corridors, locate open space on each site plan so that it provides connectivity and is contiguous to open space on adjacent properties.

GH LU-9.1.3 To preserve the function and value of the open space corridors, retain 15% to 50% of each site that is proposed for development in a natural, undisturbed condition with the exception that supplemental plantings of native, non-invasive species may be added to improve habitat quality. These areas shall be referred to as the open space tract.

GH LU-9.1.4 Locate the open space on each site plan so that the potential for wildlife movement is maintained through corridors.

GH LU-9.1.5 Designate those portions of a site which contain high priority resource categories as the open space tract as these areas are most likely to promote healthy fish and wildlife habitat areas and enhance water quality. High priority resource categories include critical salmon habitat, fish and wildlife habitat, marine waters, streams, wetlands, estuaries, tidal marshes, and wooded areas.

GH LU-9.2 Allow uses on sites that are located within the Urban Sensitive Resource Overlay that are consistent with the zoning and comprehensive plan land use designation and shall be permitted on a case by case basis through a site plan review process.

GH LU-9.2.1 The Hearing Examiner may approve a specific utility, civic, commercial, or industrial land use, pursuant to the site plan review process, based upon the unique characteristics of the property.

GH LU-9.2.2 The director may approve a specific residential or resource land use, pursuant to the administrative site plan review process, based on the unique site characteristics of the property.

GH LU-9.2.3 Encourage uses that create minimum impacts to the integrity of the open space tract, such as pervious trails.

GH LU-9.2.4 Discourage uses that require a large area of impervious coverage.

GH LU-9.2.5 Maintain compatibility between the proposed use and designated open space tracts, as well as between adjacent uses, through a variety of techniques such as increased setbacks and vegetative screens utilizing native plant species.

GH LU-9.3 When residential development is proposed in an Urban Sensitive Resource Overlay, base urban densities on the zoning and Comprehensive Plan land use designation for that parcel.
GH LU-9.3.1 In many cases, to achieve the goals of the Open Space Element, density should not exceed the minimum permissive density per acre as described in the Comprehensive Plan.

GH LU-9.3.2 On certain sites, the maximum residential density may be appropriate when the proposed development is physically separated from land designated as a priority resource category by significant topography or where clustering is utilized to reduce the impacts of intrusion into the open space corridor.

GH LU-9.4 Utilize low impact development standards on sites that are located in an Urban Sensitive Resource Overlay. Avoid or mitigate impervious surfaces, in the form of roof-tops, roads, and lawns that generate rapid run-off and prevent infiltration of water into the ground for gradual recharge of streams.

GH LU-9.4.1 The greater the intensity of the development in terms of the noise, traffic, odor, light, and other factors that could impact the open space corridor, the more open space shall be required, up to 50% of the site.

GH LU-9.4.2 Design and place individual dwelling units and accessory dwelling units to avoid impacting the open space tract.

GH LU-9.4.3 Limit and locate lawns, turf areas, driveways, and roads to result in the least impact to the open space tract.

GH LU-9.4.4 Locate buildings and other structures such as fencing to ensure protection of the open space corridor. Individual structures shall not be placed where the integrity of the open space tract and overall open space system could be compromised.

GH LU-9.4.5 Consider other low impact development tools for implementation include reducing the amount of impervious surfaces on each site, minimizing soil disturbance and erosion, disconnecting constructed drainage courses, and utilizing micro-detention facilities on each lot where feasible rather than one facility at the end of a conveyance system.

GH LU-9.5 Develop standards for implementation that describe an acceptable ratio between impervious surfaces and open space. Base this ratio on the various low impact development techniques and best management practices that are proposed on a site plan.
RURAL

GOAL GH LU-10  Preserve the natural, forested and pastoral character of rural lands outside the Urban Growth Area. Ensure that development which does occur in rural areas is planned in an environmentally conscientious manner to be compatible with this desired character through the control of lot sizes, intensity and density of land uses, and protection of open space. The preservation of agricultural and forest lands is a priority. Through careful planning, ensure urban levels of service do not occur in the rural area.

GOAL GH LU-11  The rural area shall be separate and distinct from the urban area in terms of land use, infrastructure, and visual character. Visually, it is intended to be an area characterized by an abundance of pastureland, forests, and naturally vegetated buffer areas. Provide an incentive, including property tax assessments at the current use rather than the highest and best use for prioritized open space properties and similar programs, to accomplish this goal. Limit land uses within the area to low density and intensity, and limit them primarily to agricultural, forestry, natural resource industries, and single-family residential uses. Large lot sizes should prevail and homes should be generally well separated from one another. Within the rural area, recognize historic communities such as Arletta, Rosedale, and Fox Island and make limited provisions for the continued existence of the cultural focal points of these communities. Plan and construct infrastructure improvements, such as the transportation system, to reflect and support the desired goals for the rural area.

RURAL NEIGHBORHOOD CENTERS

GOAL GH LU-12  Those historic community centers located at Arletta, Rosedale, and Fox Island are recognized as important neighborhood, civic, and commercial focal points in the rural area; also, recognize the area northwest of SR 16/24th Street NW interchange. Limited opportunities for continued commercial and civic land use shall be provided in these locations. In Rural Neighborhood Centers (RNCs), retain the architectural characteristics that have historically been associated with these centers.

GH LU-12.1  Allow continued use of those existing community centers that have been the historical focal points for neighborhood commercial and civic activities.

GH LU-12.1.1  Limit the initial Rural Neighborhood Centers designated by this community plan to existing centers at Arletta, Rosedale, and Fox Island. Include only the parcels currently utilized for commercial and civic land uses in the initial designations.

GH LU-12.1.2  Limit any future expansion of the land utilized as a RNC to those parcels immediately adjacent to the existing centers.

GH LU-12.1.3  Each RNC parcel shall have direct access onto a major or secondary County arterial road.
GH LU-12.2  Strictly limit the intensity of commercial and civic uses in the Gig Harbor Peninsula RNCs.

GH LU-12.2.1  Appropriate commercial uses include food stores and the sale of general merchandise in buildings that do not exceed 5,000 square feet and those resource uses such as agricultural sales.

GH LU-12.2.2  Encourage appropriate civic uses in RNCs. These uses are limited to daycare centers, community service centers, postal services, neighborhood parks, churches, police, and fire safety services.

GH LU-12.2.3  Prohibit new residential uses in RNCs. Additions and remodels to existing dwelling units may be permitted.

GH LU-12.2.4  Prohibit noise, dust, odorous gas, and lighting from adversely affecting the adjacent residential neighborhood.

GH LU-12.2.5  Buffer new commercial and civic uses from adjacent lower intensity rural uses outside of the RNC designation.

GH LU-12.2.6  Require site plan review for all new civic and commercial uses in rural centers.

GH LU-12.2.7  Limit site coverage including parking areas and other impervious surfaces to 70% on each site.

GH LU-12.2.8  Create new lots for commercial and civic purposes through a binding site plan associated with a site plan review process. These lots shall be subject to a minimum lot size of 5,000 square feet.

GH LU-12.3  Recognize the area northwest of the SR 16/24th Street NW interchange, commonly known as the Fisherman’s Village area, as an isolated area of commercial/business park as provided for in the Comprehensive Plan.

GH LU-12.3.1  The area will be designated as RNC to establish allowable uses only.

GH LU-12.3.2  The area northwest of the SR 16/24th Street NW interchange, commonly known as the Fisherman’s Village area, is comprised of a total of 14 acres. No further expansion of commercial/business park shall be allowed.

GH LU-12.3.3  Infill development of the vacant and undeveloped parcels of the Fisherman’s Village area commercial/business park shall be limited to the permitted uses of the RNC designation.
GOAL GH LU-13  The Tacoma Narrows Airport is an Essential Public Facility in the rural area of the County. The community does not support and Pierce County is not planning to extend the runway. The community supports continued growth and development at Tacoma Narrows Airport when consistent with the current runway length and location and with the Pierce County Comprehensive Plan, Gig Harbor Peninsula Community Plan and Federal Aviation Administration standards. Permit new development activities when off-site impacts associated with the use or uses can be mitigated in conformance with State Environmental Policy Act requirements. Develop new uses in an environmentally sound manner. Discourage the siting of incompatible uses adjacent to the airport property.

GOAL GH LU-14  Designate as an Essential Public Facility that property at the Tacoma Narrows Airport currently owned by Pierce County that was acquired for airport purposes. Discourage acquisition of additional lands for the airport, unless necessary to meet Federal Aviation Administration (FAA) safety requirements. Designate the property adjacent to the airport lands for airport buffering purposes.

GH LU-14.1  The Essential Public Facility-Rural Airport designated lands shall include property owned by Pierce County and acquired for airport purposes. Designate all properties located within 1,000 feet of the property that are located outside of the Gig Harbor UGA as Rural Sensitive Resource or Rural 10 with a Rural Airport Overlay.

GH LU-14.2  Classify the land at Tacoma Narrows Airport that was owned in 2008 by Pierce County as Essential Public Facility-Rural Airport.

GH LU-14.3  Classify those properties adjacent to the Essential Public Facility-Rural Airport classification as Rural Airport Overlay.

GH LU-14.3.1  Include within the Rural Airport Overlay all properties within 1,000 feet of the Essential Public Facility-Rural Airport classification. Discourage land use activities in this overlay that are incompatible with general aviation airport uses.

GOAL GH LU-15  Allow for growth and development of airport related uses for that portion of the Tacoma Narrows Airport located south of Stone Road. Give priority to locating such uses on the east side of the runway, adjacent to the existing taxiway and existing airport improvements. Providing jobs and maintaining the economic viability of the airport is important.

GH LU-15.1  Carefully design new development utilizing Level 3 landscaping adjacent to 26th Street to ensure that development is compatible with neighboring land uses and to mitigate impacts associated with new aviation development in the Essential Public Facility-Rural Airport classification.

GH LU-15.2  Development activity within the Essential Public Facility-Rural Airport Designation shall comply with applicable FAA regulations.
GH LU-15.2.1  Provide notification of all development applications to the FAA.

GH LU-15.3  Prohibit new uses that require urban levels of service, such as sanitary sewers, in the Essential Public Facility-Rural Airport classification. Urban levels of service shall be permitted only in the rural area consistent with this Title.

GH LU-15.3.1 Utilities and services necessary for airport safety and operations (i.e., on-site sewage collection and treatment facilities, water for fire flow, stormwater) are not considered an urban service and are permitted in the Essential Public Facility-Rural Airport classification.

GH LU-15.4  Capital improvements at the airport and new aviation related commercial or industrial uses shall be permitted on the east side of the runway through an administrative process without requiring Planned Unit Development (PUD) review if located within the area shown on the Tacoma Narrows Airport PUD Boundaries Map.

GH LU-15.5  Capital improvements at the airport and new aviation-related commercial or industrial uses on the west side of the runway may be appropriate provided impacts can be mitigated through the Pierce County PUD process and appropriate environmental review.

GH LU-15.6  Potential uses and improvements that may be permitted shall include the following:

GH LU-15.6.1 Capital airport improvements identified in or substantially similar to the current Tacoma Narrows Airport Master Plan (either potential or funded); capital airport improvements not identified in the current TNA Master Plan may be permitted only after an opportunity for public review and comment prior to amending the master plan, provided that capital airport improvements in the area identified for development if 26th Street is relocated may be permitted without further amendment to the master plan and without PUD approval if 26th Street is relocated. The permitted uses are described in the following subsections.

GH LU-15.6.2 Businesses that require aircraft use as a significant component of their operations, such as air freight, aerial photography, aircraft charter, or taxi services;

GH LU-15.6.3 New commercial uses that support general aviation including activities such as aircraft fueling facilities, aircraft training facilities, aircraft sales, fixed base operators, pilots' lounges, lodging, eating and drinking establishments, and automobile rental; and

GH LU-15.6.4 New light industrial uses that support general aviation including activities such as aircraft storage hangars, tie-downs, aircraft parts manufacture or aircraft assembly, and aircraft repair and maintenance services.
GOAL GH LU-16  Allow for growth and development on Tacoma Narrows Airport property located north of Stone Road for uses that do not require extension of the runway, but that provide revenues or services to support airport operations, provide services for the adjacent rural residential community, or are otherwise of a scale and intensity consistent with the adjacent rural residential community. These uses shall be sited and constructed consistent with airport safety requirements.

GH LU-16.1  Rural 10 (R10) uses, other than residential uses, shall be permitted in the Essential Public Facility-Rural Airport zone on Tacoma Narrows Airport property located north of Stone Road pursuant to the permitting process for R10 uses.

GOAL GH LU-17  All rural properties located within 1,000 feet of Tacoma Narrows Airport property shall be designated as Rural Airport Overlay. The Rural Airport Overlay shall function primarily as a safety buffer between the airport properties and the adjacent uses in the Rural Sensitive Resource, Rural 5, and Rural 10 zones. This area is also intended to provide buffering between those more intense uses related to aviation activities and the rural uses authorized in the Rural Residential classifications.

GH LU-17.1  Discourage land use activities that are incompatible with general aviation uses in this area.

GH LU-17.2  Rural land uses shall be limited to low density and low intensity uses including forestry uses, agricultural uses, walking and biking trails, golf courses, and single-family dwelling units.

GH LU-17.3  Density shall be limited to 1 dwelling unit per 10 acres for new subdivisions with a minimum lot size of 5 acres. Allow a bonus density that will provide for 2 dwelling units per 10 acres when 50% of the development is retained in open space.

GH LU-17.4  Prior to approval of a residential subdivision or building permit for a dwelling unit in this area, record notice against the title of the property that indicates the presence of the airport.

GH LU-17.5  Prohibit any buildings and structures that would penetrate the imaginary airspace surfaces for the Tacoma Narrows Airport as defined in Title 14 CFR (Code of Federal Regulations) FAR (Federal Aviation Regulations) Part 77 "Objects affecting navigable airspace." Examples of such obstructions include cell towers, radio broadcast towers, water towers, proposals to increase the height of existing buildings when the height of the structure would exceed the lower limits of navigable airspace.

GH LU-17.6  Prohibit any new use that involves the release of airborne substances that could interfere with aircraft operations.

GH LU-17.7  Prohibit any new use that emits light that interferes with a pilot's vision.

GH LU-17.8  Prohibit any new use that attracts concentrations of birds.

GH LU-17.9  Uses that emit electrical currents shall be installed in a manner not to interfere with communications systems or navigational equipment.
GOAL GH LU-18  Pierce County will collaborate in the development of a Planned Unit Development (PUD) regulation for the Essential Public Facility-Rural Airport. This PUD will be referred to as an Essential Public Facility-Rural Airport PUD. The County may apply for an Essential Public Facility-Rural Airport PUD south of Stone Road in all or any portion of the Tacoma Narrows Airport property subject to a PUD as shown on the Tacoma Narrows Airport PUD Boundaries Map, provided that the exterior boundary of the PUD matches parcel boundaries. Compatibility between the airport and the adjacent neighborhoods surrounding airport lands shall be a priority.

GH LU-18.1  The application for the Essential Public Facility-Rural Airport PUD shall include the following information regarding airport and aircraft operations for purposes of evaluating potential impacts to adjacent rural residential areas. This information shall be provided to give the public the opportunity to review and comment on the proposed PUD and associated operations. However, the Hearing Examiner and the County shall not have the authority to impose conditions related to airport or aircraft operations, safety, or noise as these areas are controlled by FAA regulations.

GH LU-18.1.1  Describe airport operations including the runway length necessary for the safe operation of aircraft at Tacoma Narrows Airport and the noise levels produced by aircraft type.

GH LU-18.1.2  Describe anticipated take-offs and landings based on aircraft type and planned use for each calendar year.

GH LU-18.2  The PUD shall include a recorded final development site plan that identifies the uses and facilities approved by the PUD. These uses may be subsequently constructed with an administrative review process.

GH LU-18.2.1  The final development site plan shall specify the location of the runway, taxiways, fueling facilities, control tower, any passive recreation facilities, and any open space.

GH LU-18.2.2  For PUDs located south of Stone Road, the final development site plan shall reflect the general location, types, and intensities of other future airport improvements and future aviation-related commercial and industrial uses identified in this section and approved through the PUD.

GOAL GH LU-19  New development and redevelopment at Tacoma Narrows Airport shall be completed in an environmentally conscientious manner pursuant to SEPA. Environmental impacts associated with the development at the airport may require off-site mitigation, provided that acquisition of additional property for airport purposes shall be discouraged, unless necessary to meet FAA safety requirements.

GH LU-19.1.1  Avoid using environmentally constrained lands for new development if unconstrained land can be redeveloped or modified to accommodate the proposed uses.
GH LU-19.1.2  Provide adequate open space and buffering to mitigate light, noise, and visual impacts sufficient to mitigate impacts on adjacent rural residential areas, provided that such mitigation does not violate any FAA requirement.

GH LU-19.1.3  Noise compatibility planning at the airport is subject to federal regulations - FAR Part 150 standards. Any limitations on aircraft operations based on noise is subject to a separate FAR Part 161 study.

GH LU-19.1.4  Promote vegetation retention and native landscaping that will be compatible with airport operations and environmental protection of sensitive areas such as Sullivan Gulch.

GH LU-19.1.5  Include public notification procedures in the Development Regulations for the Essential Public Facility-Rural Airport PUD. This public notice is intended to provide the Peninsula residents with information related to activities at Tacoma Narrows Airport. At a minimum, provide written notice of public hearings related to PUD processing to all property owners within the Rural Airport Overlay.

GH LU-19.1.6  New development within the Essential Public Facility-Rural Airport shall comply with Pierce County Critical Area Regulations to the same extent as they apply to other new development in the County.

GH LU-19.1.7  Stormwater management for development at the Essential Public Facility-Rural Airport will comply with or be functionally equivalent to provisions of the Washington State Department of Ecology Stormwater Management Manual for Western Washington.

GOAL GH LU-20  Pierce County will collaborate and coordinate planning efforts at the Tacoma Narrows Airport to better serve the citizens of all Pierce County.

GH LU-20.1  Pierce County agrees to work to reconcile differences between the Gig Harbor Peninsula Community Plan and the Tacoma Narrows Airport Master Plan including:

GH LU-20.1.1  Recognition that the revised final airport master plan does not include a runway extension;

GH LU-20.1.2  Agreement that improvements on the west side of the runway south of Stone Road are subject to approval of a PUD;

GH LU-20.1.3  Agreement that airport safety improvements shall not be designed to allow a runway extension; and

GH LU-20.1.4  Agreement to enable implementation of the revised final airport master plan including the runway safety area improvements pursuant to FAA standards to ensure public safety is achieved.

GH LU-20.2  Pierce County will amend Title 18A, Pierce County Development Regulations-Zoning to allow for an Essential Public Facility-Rural Airport PUD, consistent with the provisions of this objective.
GH LU-20.3 Pierce County will expedite the processing of any administrative permits for development within the area described as No PUD required on the Tacoma Narrows Airport PUD Boundaries Map.

GH LU-20.3.1 Require road improvements consistent with Pierce County road standards.

GH LU-20.3.2 Require stormwater management for development at the Essential Public Facility-Rural Airport consistent with or functionally equivalent to the Washington State Department of Ecology Stormwater Management Manual for Western Washington.

GH LU-20.3.3 Permit processing must be consistent with the requirements for public notice and comment required by RCW 36.70B.

GH LU-20.3.4 The County agrees to process permits consistent with and to follow the provisions of any County PUD approval.

GH LU-20.3.5 SEPA lead agency for permitting shall be Pierce County for the area south of Stone Road within the area shown as not requiring a PUD on the Tacoma Narrows Airport PUD Boundaries Map, provided that the County shall apply the categorical exemptions and cumulative impact analysis from Pierce County Code, Title 18D. The County shall be SEPA lead agency for development in the area south of Stone Road that requires a PUD approval after the County has reviewed and approved a PUD for that area.

GH LU-20.3.6 New development within the Essential Public Facility-Rural Airport shall comply with Pierce County Critical Area Regulations to the same extent as they apply to other new development in the County.

GH LU-20.4 The Tacoma Narrows Airport Advisory Commission (TNAAC) shall review and provide recommendations on any interlocal agreement with full public notice and opportunity to comment before adoption. Any changes to the interlocal agreement shall require an additional opportunity for public notice and public comment prior to adoption.

GOAL GH LU-21 A Tacoma Narrows Airport Advisory Commission (TNAAC) shall be established to provide input to Pierce County officials regarding issues related to the airport.

GH LU-21.1 The TNAAC should include voting members made up of 5 community representatives (including the City of Gig Harbor, the Peninsula Advisory Commission, and local residents) and 5 airport representatives (airport management, pilots, business owners), and shall include the County Council representative from District 7 who shall be an ex-officio/non-voting member.

GH LU-21.2 The TNAAC should serve in a capacity to receive input from airport users and neighborhood citizens regarding issues such as airport development activity, airport improvements, or concerns about off-site airport impacts such as noise. The TNAAC should forward solutions to these concerns to the appropriate County officials. The TNAAC shall review and provide recommendations on the development of the Essential Public Facility-Rural Airport PUD.
GH LU-21.3  The TNAAC shall also consider additional options for development of airport property north of Stone Road that are consistent with the overall objective not to extend the runway north of Stone Road, but that would provide additional opportunity for economic development and airport revenues compatible with the adjacent rural residential land uses or are uses that might provide services for the adjacent rural residents.

Rural 10

GOAL GH LU-22  All lands located on the Gig Harbor Peninsula outside of the Urban Growth Area that are not designated as Rural 5, Rural Neighborhood Center, Rural Airport, Sensitive Resource will be designated as Rural 10. The Rural 10 designation is intended to be an area of low intensity land development.

GH LU-22.1  A range of rural housing densities shall be allowed to occur on Rural 10 lands. This allowed density shall range from 1 dwelling unit per 10 acres to a maximum of 2.5 dwelling units per 10 acres. Maximum density shall be allowed only when the natural environment can accommodate this density and at least 75% of the gross acreage of the land proposed to be developed is dedicated in perpetuity as open space through deed restriction and other appropriate mechanisms. This open space area should be located in a tract separate from any newly created lots.

GH LU-22.2  For those agricultural activities which are subject to Pierce County review, such as construction of agricultural buildings, clearing of land for agricultural purposes, and activities within critical areas or their buffers, Pierce County shall require the preparation of a farm best management plan. The conditions of this plan shall be made conditions of any building, clearing, or other land use approval for the site.

Rural 5

GOAL GH LU-23  The land adjacent to the designated Urban Growth Area surrounding the City of Gig Harbor shall be designated as Rural 5.

GH LU-23.1  The Rural 5 designation shall generally include a limited area abutting the City of Gig Harbor’s Urban Growth Area.

GH LU-23.2  All property that is designated as Rural Sensitive Resource shall be excluded from the Rural 5 area surrounding the city’s Urban Growth Area.

GH LU-23.3  Encourage the preservation of agricultural and forestry uses.

GH LU-23.4  Civic and recreational uses shall be limited generally to those rural uses which consist of small buildings (less than 5,000 square feet) and uses which minimize impervious surfaces. Churches, schools, public safety services, and civic and community centers may exceed this building size limitation through a site plan review process provided neighborhood compatibility is achieved through extensive screening and buffer areas.
Limited provisions may be made for light commercial and industrial uses within the reserve area when directly associated with existing agricultural, forestry, or natural resource-related uses.

**Rural Sensitive Resource**

**GOAL GH LU-24** Several environmentally sensitive stream, lake, and wetland areas have been identified within the rural area. These areas include Crescent Valley, the Wollochet and Artondale Creek drainages, and the Rosedale valley area. Many of these areas were recognized when the community adopted its first comprehensive plan in 1975 and have historically been protected through performance-based zoning and other special land use controls. It is the desire of the community that the protections of these environmentally sensitive areas continue. In support of this goal, these areas will be mapped and given a designation of Rural Sensitive Resource. This designation is intended to protect surface waters, aquifers, and fish and wildlife habitat from impairment, pollution, or degradation. Lands located within this designation will be limited to low density residential uses and natural resource uses. Extensive buffering of streams and other surface waters will be required.

**GH LU-24.1** Identify and map environmentally sensitive stream, lake, and wetland areas within the community plan area.

**GH LU-24.1.1** Utilize the Gig Harbor Peninsula Environment Map, as amended, as the initial basis for determining those areas to be designated as Rural Sensitive Resource. At a minimum, those areas designated as Rural Special, Natural, or Conservancy on this map shall be considered for the Rural Sensitive Resource designation. Additional areas may be added as appropriate based upon the presence of environmentally sensitive features, such as critical fish and wildlife habitat.

**GH LU-24.1.2** At a minimum, the Rural Sensitive Resource designation should extend 500 feet in all directions from any wetland, stream, or surface water identified for protection.

**GH LU-24.1.3** Monitor and adjust, as needed over time, those lands given the Rural Sensitive Resource designation. Lands may be added or removed from this designation as information regarding the environmental carrying capacity of the land and the sensitivity of the environment changes over time.

**GH LU-24.2** Carefully control development activities in the rural area through implementation of the Rural Sensitive Resource designation on sites that have been identified as open space on the Comprehensive Plan Open Space Corridors Map that are not adequately protected through the Shoreline Master Program or the Critical Area Regulations.
Land uses within the Rural Sensitive Resource designation shall be limited to single-family residential, agriculture, and forestry. Commercial and industrial development shall not be allowed unless directly related to an agricultural product and conducted on a scale that has minimal impact to surrounding properties.

The Hearing Examiner may approve a specific land use through a site plan review process based on the unique characteristics of each site.

Detached single-family residential homes and associated accessory structures may be permitted outright.

Encourage uses that create minimum impacts to the integrity of the open space corridor such as pervious trails.

Encourage uses that do not involve significant buildings or impervious surfaces such as farming and forestry.

Development in the RSR designation shall utilize low impact development standards.

Vegetation and tree preservation shall be a priority on each site that is developed in the RSR designation.

Maintain compatibility between the proposed use and designated open space tracts, as well as between adjacent uses, through a variety of techniques such as increased setbacks and screening utilizing native plant species.

Limit lands within the Rural Sensitive Resource designation to low density residential uses and natural resource uses.

Low rural housing densities shall be allowed to occur on Rural Sensitive Resource lands. Ten-acre minimum lot sizes are encouraged. The basic density shall be 1 dwelling unit per 10 acres.

The open tract shall be located so as to provide the greatest protection for fish and wildlife habitat and water quality protection. This open space area shall be located in a tract that is separate from any newly created lots.

Extensive buffering of streams and other surface waters will be required for all clearing, site development, or construction in the Rural Sensitive Resource designation.

Buffer widths established within the Rural Sensitive Resource designation may be adjusted periodically over time as new information becomes available regarding the effectiveness of the buffers in protecting critical resources.

Buffer widths established to protect critical resources may be increased or reduced on a site by site basis when it is determined that an alternative buffer width is necessary to protect the resource in question. Any modification to a buffer width shall be based on the best available science.
GH LU-24.4.2.1 If the buffer requirement in this section would deny all reasonable use of a site, development may be allowed through a reasonable use exception approved through a public hearing process with consideration of mitigation requirements.

GH LU-24.4.3 In the event Pierce County adopts countywide buffer standards which exceed the buffers established by the community plan, the more restrictive buffering requirement shall control.

IMPLEMENTING ACTIONS

The following is a list of actions that needs to be completed in order to implement the policies contained within the Land Use Element. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short term actions should occur immediately or within one year of plan adoption. Mid-term actions should be completed within 1-5 years. Long term actions should be completed within 5-10 years of plan adoption. The party or parties responsible for leading the effort to complete the action item are listed in parenthesis following the action. Actions are assigned to the Gig Harbor Peninsula Community Planning Board (GHPCPB), the Peninsula Advisory Commission (PAC), or Pierce County Planning and Land Services (PALS). Those actions assigned to the GHPCPB are completed as part of the adoption and implementation of this plan.

SHORT TERM ACTIONS

1. Amend the Development Regulations - Zoning. (GHPCPB, PALS, County Council)
   - Develop and adopt zone classifications and implementation standards that:
     - Provide for residential densities within Gig Harbor’s UGA that are consistent with the County's population allocation for the UGA.
     - Allow a range and intensity of land uses in commercial areas that are based on community plan policies, market factors, compatibility with the neighboring area, and consistency with the City of Gig Harbor’s Comprehensive Plan.
     - Allow a variety of high quality professional, research, high tech, and light industrial land uses in Employment Centers.
     - Allow small scale commercial and civic uses in RNCs.
     - Discourage land use activities adjacent to the Tacoma Narrows Airport that are incompatible with general aviation uses.
     - Create Planned Unit Development regulations to provide a process for reviewing and approving future development at the Tacoma Narrows Airport.
     - Allow land uses in the Rural designations such as low-density housing, agricultural, forestry, and recreational uses. Provisions should also be made to allow for limited civic and public safety uses.
     - Allow uses within the Reserve-5 area that will preserve land for future urban uses and urban densities.
- Allow single-family residential, agricultural and forestry uses within the Rural Sensitive Resource designation.
- Implement low impact development standards for the RSR designation.
- Provide a formal Site Plan Review (SPR) process that is used for review and approval of major developments in the community.
- Provide for home-based businesses in residential neighborhoods.

2. Amend the Development Regulations - Design Standards and Guidelines. (GHPCPB, PAC, PALS, County Council)
   - Develop and adopt design standards that protect residential areas from the impacts of non-residential uses.
   - Develop and adopt design standards that require infill developments to be designed to be compatible with the established neighborhood.
   - Develop and adopt standards that permit a variety of urban architectural housing styles in Gig Harbor's UGA.

3. Implement the land use designations in the UGA consistent with the community plan policies. (PALS, County Council, City of Gig Harbor)
   - Designate lands in the UGA consistent with the City of Gig Harbor's adopted plan designations.

4. Implement the land use designations in the rural area consistent with the community plan policies. (PALS, County Council)
   - Designate lands adjacent to the UGA as Reserve-5.
   - Designate the historic community centers located at Arletta, Rosedale, and Fox Island as Rural Neighborhood Centers (RNCs).
   - Designate land that is identified on the Comprehensive Plan Open Space/Greenbelt Map that is not protected through the Shoreline Master Program or the Critical Area regulations as Rural Sensitive Resource.
   - Designate all lands located on the Gig Harbor Peninsula outside of the UGA that are not designated as Reserve-5, Rural Neighborhood Center, Rural Airport, or Rural Sensitive Resource, as Rural 10.

5. Coordinate, cooperate, and communicate with the City of Gig Harbor on land use issues in the UGA. (PALS, PWU, City of Gig Harbor)
   - Develop a process that provides applicants for building permits in the UGA with information that recommends contacting the City of Gig Harbor early in the permit review process for information on city-contracted requirements and utility construction standards.

**Mid-Term Actions**

1. Develop and adopt a binding Joint Planning Agreement with the City of Gig Harbor that addresses the following items: (PALS, PWU, County Council, City of Gig Harbor)
• A process for review and approval of development projects including building permits, subdivisions, and other land use approvals.
• How economic development will be encouraged and supported.
• How the rate, timing, and sequencing of Urban Growth Area boundary changes will be coordinated.
• How appropriate service level standards for determining adequacy and availability of public facilities and services will be coordinated.
• How the provision of capital improvements to an area will be coordinated.
• How public facilities and services will be provided and by which jurisdiction.
• To what extent the City of Gig Harbor may exercise extra-jurisdictional responsibility within the unincorporated UGA.

2. Develop a process that provides for UGA boundary amendments, area-wide rezones, and annexations in the community that is consistent with the direction established in the community plan. (PALS, PAC, County Council, City of Gig Harbor)

• Prior to creating new commercial and industrial centers or allowing the expansion of existing centers, it should be determined that a shortage of commercially and industrially zoned lands exist and that existing commercially or industrially zoned lands have been fully developed or redeveloped as appropriate.
• Consider the impacts on the natural environment when evaluating rezones and plan amendments.

3. Implement a long-term code enforcement program to strictly enforce the Community Plan land use regulations. (PALS)

4. Implement a monitoring program to evaluate the impacts of the community land use plan. (PALS)

LONG TERM ACTIONS

1. Evaluate the need to expand the UGA into the Reserve-5 area if the need for additional urban lands has been demonstrated. (PALS, PWU, County Council, City of Gig Harbor)

2. Develop a boardwalk along the Purdy business district shoreline to promote the marine oriented character of the neighborhood. (PALS, Parks)

Chapter 3: Community Character and Design Element

Introduction

Community design deals with the physical elements that compose the character of our community: the streets, parks, buildings, open space, and neighborhoods that determine the way our community looks and feels. It is a blending of land use planning, architecture, landscape architecture, and environmental protection. Community design looks at the way in which buildings, streets, public places, natural features, and other development relate to one another and the people who use them. Through community design, improvements such as street construction, park development, commercial, industrial, residential and civic development can be effectively coordinated with each other to promote a unified community image.

The Community Character and Design Element is a new addition to the set of documents comprising the Pierce County Comprehensive Plan. The element is an integral part of the entire growth management planning process for the Gig Harbor Peninsula and Fox Island. Design directly affects land use patterns, transportation planning, community and neighborhood livability, and overall quality of life. The design direction found in the community plan is intended to reinforce the aesthetic character that the community wants to retain and build upon. This element provides policies for site and building design which will enhance the image the overall community would like to portray to its own residents and visitors.

The Community Character and Design Element works with the Land Use Element by providing the policy direction for urban and rural design including guidelines for how urban and rural form can be achieved and critical areas can be integrated into future projects. The design direction found is also closely linked with, and provides support for, policy direction in the Economic Element, Natural Environment and Open Space Element, and the Facilities and Services Elements of the community plan.

In the years since the initial adoption of the Gig Harbor Peninsula Comprehensive (Community) Plan and Development Regulations in 1975, the residents of the plan area have been actively involved in preserving the unique character of their community through design principles, standards, and review. Over the years, the community has put a great deal of effort in maintaining the wooded, natural character of the Gig Harbor Peninsula and its connection to the waters of Puget Sound and the various creek valleys on the Peninsula. These features create a unique environment for community identity and pride. Residents have determined a high priority should be given to recognizing and preserving the environmental character of the area. The Community Character and Design Element emphasizes the community's vision by setting forth goals and objectives related to the preservation of the historic resources and natural characteristics of the area. The element also outlines policies for design standards that will help reinforce and preserve the unique environmental character of the Peninsula.
Urban Character and Design

The character of Gig Harbor has been heavily influenced by development that supports the fishing and boating industry. Many businesses located near Gig Harbor Bay rely on tourist dollars associated with the summer pleasure craft season. Businesses near the waterfront have been designed to attract tourists. It is anticipated that the Urban Growth Area will eventually be annexed into the City of Gig Harbor. For this reason, it is important that new development be designed in a manner that will be compatible with the city's design goals and objectives. These goals and objectives promote preservation of the city's small town atmosphere, encourage architecture that is consistent with the city's traditional fishing industry while discouraging the modern "big box" style and requiring protection of significant vegetation which contributes to the natural beauty of the area.

Description of Current Conditions - UGA

The character of the UGA has been heavily influenced by the development standards of the 1975 Comprehensive (Community) Plan for the Peninsula. The plan required that new urban developments retain and incorporate certain natural features, primarily existing native vegetation, as part of each development to soften the impacts on adjacent land uses. In this manner, much of the urban area has retained a wooded character that provides a unique community identity for this part of Pierce County.

Urban Design

Historically, the UGA has not developed with a consistent design theme or set of design standards. As a result, many of the buildings in the urban area have standardized franchise themes or incompatible architectural styles that lack consistent character. In the past several years (since 1995), the City of Gig Harbor has required that within the UGA, the City's adopted design objectives be met for projects requiring city services such as sanitary sewer. This has helped start a pattern of consistent architectural design for the UGA.

Urban Character

The character of the UGA is reflected in the vegetated buffers surrounding developments throughout the urban area. Since the adoption of the Gig Harbor Peninsula (Community) Comprehensive Plan in 1975, many development projects have designated native vegetative screens around the perimeter of their building sites. By providing this natural open space, developments have been allowed to increase density, increase the amount of impervious surface, reduce setback standards, and generally increase the intensity of developments without negatively impacting neighboring uses. This program of preserving trees in the urban area has created a unique style and character in much of the UGA.
DESCRIPTION OF DESIRED CONDITIONS - UGA

The following section provides information on the desired character and design for the UGA. The policies provide a quality visual design through specific site planning and architectural tools for all development in the UGA. These methods primarily rely on development incentives that allow increased density or intensity of development for projects that meet the design objectives.

URBAN DESIGN

The citizens of the Peninsula envision an urban area in which all developments are visually attractive, compatible with the historical marine identity of the community, harmonious with the small town atmosphere and residential character of the area, and are respectful of the natural environment. Diversity in site planning and architectural design is encouraged, provided developments maintain a degree of compatibility, consistent with the design objectives and goals reflected in the community plan. Urban development standards will be necessary for all new development. These standards include sidewalks, street trees, street lighting, and parks. In non-residential developments, parks can include pedestrian plazas or pocket parks. New development should provide for separate automobile, pedestrian, and bicycle access. Attractive signs that enhance the natural scenic character of the Peninsula will be permitted to advertise businesses when consistent with community plan policies. Development incentives that encourage developers to use innovative methods to provide a high quality of residential, civic, commercial, and industrial design should be implemented.

URBAN CHARACTER

In the UGA, important natural features, significant stands of trees, open space, and critical areas shall be preserved and incorporated into the site design as these elements substantially contribute to the character of development. Site characteristics that enhance community character including preservation of clusters of existing trees, retention of historic features, and conservation of similar assets should be preserved through sensitive site planning. Methods that can be used to protect these desirable features include lot-clustering, transfer of development rights, and incorporating the desirable characteristics into recreation areas or open space tracts. All development should be designed to ensure that it is compatible with neighboring uses. Building placement and vegetative screening shall be used to separate potentially conflicting uses and to separate intensive uses from less intensive uses. A visual corridor along State Route 16 which reflects the natural beauty and forested characteristics of the Peninsula shall be preserved and enhanced. Preservation of the open space and forested characteristics that have historically been part of the Gig Harbor Peninsula environment is a priority.
RURAL CHARACTER AND DESIGN

The character of the rural area of the Gig Harbor Peninsula was historically influenced by the agricultural and forestry industry. Since the 1950s, the rural area has seen a steady increase in single-family residential development. Fortunately, much of this new residential development has retained some rural character by preserving buffers of native vegetation around the perimeter of these subdivisions. There are still large, undeveloped parcels within the rural area. The agricultural, pastoral, forested character of the area, together with the Peninsula’s location west of the Tacoma Narrows, creates a perception for the citizens of the rural area that the community is isolated from the big city.

DESCRIPTION OF CURRENT CONDITIONS - RURAL AREA

The character of the rural area has been influenced by the development standards of the 1975 Comprehensive (Community) Plan for Peninsula. That plan required new developments to retain and incorporate certain natural features, primarily existing native vegetation, as part of each site development to soften the impacts on adjacent land uses. In this manner, much of the rural area has retained a forested character that contributes to the rural character for this part of Pierce County.

RURAL DESIGN

The rural area of the Gig Harbor Peninsula is primarily developed with low-density residential dwelling units. These residential uses along the shorelines of Puget Sound are typically large executive homes. The majority of new homes on the Peninsula are located in various subdivisions throughout the area and average 2,500 square feet. There are also historical farmhouses in the rural area that were built around the turn of the century. The historical neighborhood centers at Rosedale and Arletta have civic and commercial buildings that have been described by the community as rural and rustic. Newer civic and commercial buildings in the rural area do not have a specific architectural character.

RURAL CHARACTER

The character of the rural area is reflected in the vegetated buffers surrounding developments throughout the urban area. Since the adoption of the Gig Harbor Peninsula Community Comprehensive Plan in 1975, many development projects have designated native vegetative screens around the perimeter of their building sites. By providing this natural open space, developments have been allowed to increase density, increase the amount of impervious surface, reduce setback standards and generally increase the intensity of developments without negatively impacting neighboring uses. This system of preserving trees in the rural area has created a unique style and character.
DESCRIPTION OF DESIRED CONDITIONS - RURAL AREA

The policies in the design element intend to provide a quality visual design through specific site planning for development in the Rural Area. These methods primarily rely on development incentives that encourage preservation of native vegetation and open space.

RURAL DESIGN

Development should be designed in a manner which preserves water courses, drainage systems, recharge areas, the natural hydrologic cycle open space, and buffer areas in a natural condition. Preservation of a rural or rustic architectural theme should be utilized in new building construction or the external alteration of existing structures in Rural Neighborhood Centers. Retention and conservation of historic structures is encouraged.

RURAL CHARACTER

Preservation of the farms, forests, natural areas, and undisturbed lands that have historically been associated with the rural area of the Peninsula creates the rural character that the community considers essential. Native vegetation provides a variety of benefits including critical area buffering, protection of aquifer recharge areas, fish and wildlife habitat, and pleasing visual aesthetics. Preservation of native vegetation and open space should be required as a component of all new rural developments. Incentives for the dedication and preservation of open space such as clustering development, transfer of development rights, planned development districts, and other planning techniques will be provided. Important and unique land features such as marine bluffs, stream corridors, estuaries, and ridgelines should be protected by discouraging their alteration. A visual corridor along State Route 16 that reflects the forested characteristics of the Peninsula shall be retained and enhanced. Agricultural uses and forest practice activities help sustain the rural character in the community. These resource land uses should be encouraged to continue when they meet environmental standards.

DESIGN AND CHARACTER POLICIES

URBAN DESIGN

GOAL GH D-1 A variety of design techniques and styles are encouraged, reflecting the wide diversity among Peninsula residents, provided each maintains a degree of compatibility and reflects the character of the Peninsula.

GH D-1.1 Where significant distant views occur, encourage development to recognize and incorporate these views into project design. Significant distant views include views of Gig Harbor Bay, Mount Rainier, the Olympic Mountains, and Puget Sound. Developments should minimize obstruction of views from nearby properties through appropriate landscape design, building placement, height, and setbacks.
GH D-1.2 Important natural features, significant stands of trees, and critical areas shall be preserved and incorporated into the site design.

GOAL GH D-2 Urban development standards shall be provided for all new urban developments. These standards will include sidewalks, street trees, street lighting, and parks. In non-residential developments, parks can include pedestrian plazas or pocket parks. Sidewalks, street trees, and street lighting shall be provided within developments and abutting frontage roads.

GH D-2.1 Site excavation should be minimized. Native vegetative cover should be planted on slopes of all cuts and fills in conformance with safety, erosion, and visual aesthetics standards.

GH D-2.2 Landscaped areas at the north side of the Purdy spit bridge and those areas within public rights-of-way at freeway interchanges should be planted and maintained to promote visually pleasing entrances to the community.

GH D-2.3 Pierce County and the City of Gig Harbor should enhance landscaping within freeway rights-of-way in cooperative planting efforts undertaken with the Washington State Department of Transportation.

GH D-2.4 Provide opportunity for porches and decks within front yard setbacks.

GH D-2.5 Encourage rear yard alley access for garages. Permit single-family detached dwelling units to encroach into front yard setbacks the same distance the garage entrance is recessed behind the front yard setback line.

GH D-2.6 Encourage underground stormwater retention systems by providing development incentives.

GH D-2.7 Discourage residential design that accentuates carports and garages.

GH D-2.8 Encourage two-family developments that provide alley access to the vehicle enclosure.

GH D-2.9 Require sidewalks along the development’s frontage road.

GH D-2.9.1 Provide paved pedestrian walkways that connect all buildings and entries of buildings within a site.

GH D-2.9.2 Provide a paved pedestrian walkway from the public sidewalk(s) to the main entry of developments; where a development fronts two streets, access shall be provided from both streets.

GH D-2.9.3 Encourage that bicycle access and bicycle parking for customers and employees be integrated into site design on those sites that will have civic, commercial, and industrial uses amenable to nonmotorized transportation facilities.
GOAL GH D-3 Non-residential buildings shall incorporate architectural design features reflective of residential building characteristics when abutting single- and two-family neighborhoods. Projects that include design standards that achieve complete compliance with adopted design standards and that provide compatibility with adjacent residential neighborhoods may be eligible for a reduction in the width of any required vegetative screen. A poor design will result in the maximum screen width.

GH D-3.1 Street-facing building facades shall be articulated and ornamented through a variety of measures including window and entrance treatments, overhangs and projections, and innovative use of standard building materials to increase visual interest.

GH D-3.2 Street facing building facades shall be modulated through a variety of measures including varied roof forms and setbacks to visually break up the appearance of large buildings.

GH D-3.3 Provide pedestrian-friendly facades on the ground floor of all buildings that face public streets and entry facades that face parking areas.

GH D-3.4 Provide special features on large blank walls that are visible from pedestrian walkways and parking areas.

GH D-3.5 Locate and/or screen roof-mounted mechanical equipment to minimize visibility from public streets, building approaches, and adjacent properties.

GOAL GH D-4 Assure appropriate and attractive signage that enhances the natural scenic character of the Peninsula.

GH D-4.1 Signs shall be of materials and design that blend with the natural scenic atmosphere of the Peninsula.

GH D-4.2 Prohibit flashing signs, revolving signs, brightly-lit signs, or any other signs that detract from or interfere with vision and safety.

GH D-4.3 New signs other than those that provide official transportation information or directions or for safety purposes shall not be directed toward SR 16.

GH D-4.4 Promote a gradual reduction in the number and size of nonconforming signs. Any business with a nonconforming sign or signs shall be required to remove or modify the sign(s) so compliance with the sign code is achieved prior to the issuance of any building permit for the expansion, modification, remodel of the building, or change in the use of the business.

GOAL GH D-5 Provide incentives to encourage developers to use innovative methods to provide a high quality of design and landscaping.

GH D-5.1 Provide incentives for developments on contiguous pieces of property which are planned together, but not necessarily developed within the same time period.

GH D-5.1.1 Increased density or intensity of use is allowed in return for superior design, increased open space, or natural landscaping amenities.
Where possible, implement landscape plans at entrances to the community.

**Urban Character**

**GOAL GH D-6** Natural vegetation provides visual relief that softens the appearance of urban development while providing a variety of benefits, including critical area buffering, aquifer recharge, recreational use, and urban wildlife habitat. Preservation of the open space and forested characteristics that have historically been part of the Gig Harbor Peninsula environment is a priority.

**GOAL GH D-7** Retain existing vegetation consisting of mature trees and understory shrubbery on a portion of those sites that are proposed for urban development. Require sites that are devoid or deficient in natural vegetation to introduce supplemental landscaping including plantings that are native to the Pacific Northwest.

**GH D-7.1** Provide incentives for dedication of open space and use of planned development district concepts.

**GH D-7.2** Retain an appropriate amount of native vegetation in return for an appropriate increase in density, floor area, or other use intensity.

**GH D-7.3** Encourage the replanting of greenbelts on previously developed commercial and residential sites through public assistance, grants, and incentives. Establish cooperative programs with owners and residents of such developments to ensure the properties achieve suitable screening within a reasonable length of time.

**GOAL GH D-8** Maintain an acceptable ratio between natural vegetation or landscaped vegetative cover and impervious surfaces. Property improved with buildings, parking areas, and other impervious cover shall include areas of natural and/or landscaped vegetative cover to protect the aesthetic qualities of the Peninsula, to protect aquifers and aquifer recharge areas, provide urban wildlife habitat, and to prevent detrimental runoff to adjoining properties, streams, and other critical areas.

**GH D-8.1** Require natural or planted vegetative aesthetic breaks as an integral part of areas with expansive impervious cover.

**GH D-8.2** Open space requirements vary with the density or intensity of use with open space standards ranging from 15% to 50% of the site.

**GH D-8.3** Lack of permanently designated usable open space shall require a reduction in the intensity of the development by a reduction in the density of dwelling units or the amount of impervious surfaces.

**GOAL GH D-9** Establish a visual corridor along SR 16 which reflects the natural beauty and forested characteristics of the Peninsula.

**GH D-9.1** Establish vegetative screening for aesthetics, noise abatement, screening of lighting, air quality, and for safety purposes between urban development and the highway.
GH D-9.2 The depth of screening buffers shall be determined by evaluating the quality and quantity of natural vegetation that is available on the site together with intensity of the commercial or industrial use; i.e., the less the use is compatible with the natural characteristics of the Peninsula, the more natural screening required.

GH D-9.3 Completely screen uses that are incompatible with the natural characteristics of the Gig Harbor Peninsula from the highway and other public vantage points, whereas uses which blend well with the surrounding countryside and/or demonstrate desirable design, including quality site planning, pleasing architecture, extensive landscaping, etc., may be allowed limited visibility through a site plan review process.

GH D-9.4 Require noise abatement buffers of such vegetative materials, thickness, and width to effectively minimize noise impacts on properties adjacent to the highways.

GH D-9.5 Require vegetative screens of such configuration to protect highway traffic from extraneous light sources and adjacent properties from the lights of highway traffic.

GH D-9.6 Utilize SR 16 buffers and vegetated screens for trail purposes.

GH D-9.7 Implement standards which require a variety of natural vegetation screen depths based on the zoning and potential uses that abut the highway in various locations.

GH D-9.8 Apply screening criteria to all visible aspects of the use, including parking lots, signs, garages, fuel tanks, etc.

GOAL GH D-10 Require vegetative screens between new urban development and adjacent uses.

GH D-10.1 The required screening width should vary with the use, density, and intensity of the proposal and should range from 20 to 70 feet. The increase in screen width is based on the increase in impacts or the degree of incompatibility between uses.

GH D-10.2 Require vegetative buffers of at least 35 feet between residential uses and more intensive non-residential uses. The vegetative buffer must be of sufficient width and density to ensure that light and noise impacts associated with the non-residential use do not adversely affect adjacent residential development. Where a 35-foot buffer is not sufficient to accomplish this purpose, the buffer width may be required to be increased, additional vegetation may be required to be installed in the buffer, and/or additional mitigating measures such as fencing or increased setbacks may also be required.

GH D-10.3 Buffer screening is provided for mobile/manufactured home parks and subdivisions, when such parks are allowed by zoning.

GH D-10.4 Locate no structure within the Employment Center designation closer than 25 feet to a required screening buffer that is adjacent to a residential zone or residential use.

GH D-10.5 Commercial, civic, industrial, and similar uses shall not be permitted within 50 feet of any street or property line adjacent to a residential zone or residential use.
In some instances, fencing, walls, increased setbacks, or other open space dedications may partially substitute for the required screening.

Screening performance is judged as it will exist 5 years after the development is completed.

Once established, the property owner shall preserve a buffer in perpetuity. If any natural or man-made event damages or destroys the buffer so a complete visual screen is no longer occurring, the property owner shall restore the buffer. Any plantings necessary to re-establish the buffer shall be installed during the first planting season following the damage. The goal of the restoration shall be to reestablish the buffer within 5 years.

**RURAL DESIGN**

**GOAL GH D-11**

Ensure a high quality visual environment in the rural area through design guidelines, regulatory standards, and volunteer efforts. Comprehensive site planning, retention of native vegetation, and open space dedications are goals for all rural developments. The use of incentives to retain the rural character in the rural area of the Gig Harbor Peninsula is a significant component of this section.

**GH D-11.1**

Rural Neighborhood Centers (RNCs) shall retain the characteristics that have historically been associated with these centers.

**GH D-11.2**

Utilize a rural or rustic architectural theme in new building construction or the external alteration of existing structures.

**GH D-11.2.1**

Prohibit standardized corporate or franchised style in the design of new buildings.

**GH D-11.3**

Encourage site characteristics that enhance these historical commercial centers.

**GH D-11.3.1**

Provide visually unobtrusive parking lots and circulation corridors around new businesses.

**GH D-11.4**

Limit new signs in RNCs to the rural sign standards that are permitted in the adjacent rural designation.

**GH D-11.5**

Establish impervious surface limitations within the rural residential area as follows:

**GH D-11.5.1**

Within subdivisions approved under the requirements established by Gig Harbor Development Regulations (adopted June 30, 1975 to July 1, 1995), the impervious surface limitation established by the approval shall control.

**GH D-11.5.2**

Within shoreline areas regulated pursuant to the Pierce County Shoreline Master Program and Shoreline Management Use Regulations, the impervious surface limitations established by that regulation shall control.
GH D-11.5.3 Limit all other lots of record to a maximum impervious coverage of 25%. New construction shall not exceed these limitations. The amount of impervious surfaces on existing lots which currently exceed these limitations shall not be increased.

GH D-11.6 At a minimum, all new structures shall be set back at least 50 feet from all exterior property lines. Existing lots of record which are less than 150 feet in width and/or depth may reduce the required setback 1 foot for each foot the lot is less than 150 feet in width and/or depth, provided a setback of at least 25 feet shall be maintained. Require any reduction in setback below 25 feet to obtain a variance pursuant to the standards established by the Pierce County Development Regulations - Zoning.

GH D-11.7 Prioritize preservation of native vegetation (Douglas fir trees, Pacific madrone trees, etc.) on each site that is developed in the Rural Sensitive Resource (RSR) designation.

GH D-11.7.1 To create corridors, locate open space on each site plan so that it provides connectivity and is contiguous to open space on adjacent properties.

GH D-11.7.2 To preserve the function and value of the open space corridors, retain 25% to 75% in a natural, undisturbed condition with the exception that supplemental plantings of native, non-invasive species may be added to improve habitat quality. This policy shall not apply to natural resource uses such as commercial farming and forestry operations.

GH D-11.8 Development in the RSR designation shall utilize low impact development standards.

GH D-11.8.1 The greater the intensity of the development in terms of the noise, traffic, odor, light, and other factors that could impact the open space corridor, the greater the percentage of land that must be set aside to ensure the function of the corridor. In some cases, this could result in open space on up to 75% of the site.

GH D-11.8.2 Design and place individual dwelling units and accessory dwelling units to avoid impacting the open space tract.

GH D-11.8.3 Limit and locate lawn areas, driveways, and roads to result in the least disruption to the open space tract.

GH D-11.8.4 Locate buildings and other structures such as fencing to protect the open space corridor. Place individual structures where damage to the integrity of the open space tract and overall open space system is unlikely.

GH D-11.8.5 Consider implementing other low impact development tools include reducing the amount of impervious surfaces on each site, minimizing soil disturbance and erosion, disconnecting constructed drainage courses, and utilizing micro-detention facilities on each lot where feasible rather than one facility at the end of a conveyance system.
GH D-11.8.6  Develop standards for implementation that prescribe an acceptable ratio between impervious surfaces and open space, based on the various low impact development techniques and best management practices proposed on a site plan.

RURAL CHARACTER

GOAL GH D-12  The presence of farms, forests, natural areas, and undisturbed lands are valuable features in the rural area of the Gig Harbor Peninsula. Native vegetation provides a variety of benefits including critical area buffering, protection of aquifer recharge areas, fish and wildlife habitat areas, and pleasing visual aesthetics. Agricultural uses and forest practice activities help sustain the rural character in the community outside of the Urban Growth Area. Preservation of these characteristics that have historically been associated with the rural environment on the Gig Harbor Peninsula creates the rural character that the community considers essential.

GH D-12.1  Retaining areas of mature native vegetation on a site is a higher priority than providing supplemental landscaping. Provide incentives that encourage the retention of mature tracts of healthy trees on a site.

GH D-12.2  Require that setback areas be retained in natural vegetation where feasible and supplemented by planted native species where natural vegetation is sparse or non-existent.

GH D-12.3  Require an acceptable ratio between the amount of native vegetation or landscaped vegetative cover and impervious surfaces. In all new rural developments that create impervious cover, include areas of native or landscaped vegetation to protect the aesthetic qualities of the Peninsula, to protect aquifers and aquifer recharge areas, provide wildlife habitat, and to prevent detrimental runoff to adjoining properties, streams, and other critical areas.

GH D-12.3.1  Provide incentives that encourage the use of alternative methods for parking and building areas that result in a decrease in impervious surfaces. Examples of such methods include permeable pavement, grasscrete, and alternative foundation systems.

GH D-12.3.2  Allow for an adequate percentage of impervious surfaces for barns and other agricultural-related uses to encourage the continuation of that use.

GH D-12.3.3  Open space requirements vary with the density or intensity of use ranging from 25% to 75% of the site.

GOAL GH D-13  Establish vegetative screening for aesthetics, noise abatement, screening of light sources, and air quality between rural development and SR 16.

GH D-13.1  Determine the depth of screening buffers by evaluating the quality and quantity of natural vegetation that is available on the site, together with intensity of the proposed use. In no case shall the screening buffer be less than 50 feet wide.
GH D-13.2 Plant areas proposed for SR 16 buffering that are devoid or deficient in vegetation with appropriate quality and quantity of plantings to produce a complete visual corridor within 5 years of project approval.

GOAL GH D-14 Require vegetative screens between new rural development and adjacent uses.

GH D-14.1 The required screening varies with the use and density or intensity of the proposed use and shall range from 25 to 70 feet in width on the property that has been proposed for development. The increase in screen width is based on the increase in impacts or incompatibility between uses.

GH D-14.2 In some instances, fencing, walls, increased setbacks, or other open space dedications may partially substitute for the required screening in projects subject to a site plan review.

GH D-14.3 Once established, the property owner shall preserve a buffer in perpetuity. If any natural or man-made event damages or destroys the buffer such that a complete visual screen is no longer occurring, the property owner shall be responsible to restore the buffer. Install any plantings necessary to re-establish the buffer during the first planting season following the damage. The goal of the restoration shall be to reestablish the buffer within 5 years.

GH D-14.4 Prohibit off-site advertising signs and billboards in the rural area.

GH D-14.5 Permit signs throughout the rural area that increase public awareness of local farms, forests, and other habitat areas. These signs could explain the date a forest was planted, the type of crops being raised, or that a best management plan is being utilized. These signs shall not exceed 2 square feet and shall consist of a single distinct design and color.

GH D-14.6 Require property owners to provide signs on all sites that are conducting Class 4 Forest Practices or conversion option harvest plans at least 30 days prior to harvest operations, except where notice has been provided through any other public process. Encourage the Department of Natural Resources to require posting of sites that conduct Class 2 and Class 3 Forest Practice activities. These signs are intended to increase public awareness about forest practices and ensure that loggers are aware of any cutting restrictions.

IMPLEMENTING ACTIONS

The following is a list of actions that needs to be completed in order to implement the policies contained within the Community Character and Design Element. They are arranged according to the timeframe within which each should be completed: short, medium, or long term. Short term actions should occur immediately or within one year of plan adoption. Mid-term actions should be completed within 1-5 years. Long term actions should be completed within 5-10 years of plan adoption. The party or parties responsible for leading the effort to complete the action item are listed in parenthesis following the action. Actions are assigned to the Gig Harbor Peninsula Community Planning Board (GHPCPB), the Peninsula Advisory Commission.
(PAC), or Pierce County Planning and Land Services (PALS). Those actions assigned to the GHPCPB are completed as part of the adoption and implementation of this plan.

**SHORT TERM ACTIONS**

1. **Amend the County Development Regulations-Zoning.** (GHPCPB, PALS, PAC)
   - Develop and adopt an incentive program for open space preservation in the UGA that allows innovative measures such as clustering development, zero-lot-lines setbacks, and other techniques.
   - Amend the landscaping standards to require vegetative screens between new urban development and adjacent uses.
   - Develop standards that maintain forested corridor along State Route 16.
   - Develop and adopt provisions for stringent enforcement of screening and buffering standards.
   - Require urban development standards such as curbs, gutters, and sidewalks for development in the UGA.

2. **Amend the County Development Regulations-Design Standards and Guidelines.** (GHPCPB, PALS, PAC)
   - Develop urban design standards and guidelines in the UGA for:
     - Two-family, attached single-family, and multifamily residential development dealing with site planning and building placement.
     - Two-family, attached single-family, and multifamily residential development dealing with architectural design and scale of buildings.
     - Commercial, civic, and industrial uses dealing with site design including building placement, landscape and buffering, and sign placement.
     - Commercial, civic, and industrial uses to address architectural details including height, massing, materials, storefronts, and canopy and awning styles.
     - Implement an Urban Sensitive Resource Overlay on sites that have been identified as open space in the Comprehensive Plan Open Space/Greenbelt Map throughout the UGA.
   - Provide flexibility in the design review process.
   - Develop standards and guidelines that preserve the rural character of the Gig Harbor Peninsula outside of the UGA.
   - Utilize Low Impact Development (LID) techniques, limit impervious surfaces, and preserve wildlife corridors and native vegetation on each site that is developed in the RSR designation.
   - Develop and adopt incentives for developments on contiguous pieces of property which are planned together, but not necessarily developed within the same time period.
   - Develop and adopt incentives to encourage developers to use innovative methods to provide a high quality of design and landscaping.
• Adopt bonus density standards for developments that incorporate superior design, increased open space, or natural landscaping amenities.

3. Amend the Shoreline Management Use Regulations. (PAC, PALS)
• Prohibit the vacation of unopened public rights-of-way at shoreline locations except when the vacation would enable a public authority to acquire the vacated property for public purposes.

**Mid-Term Actions**

1. Amend the Pierce County Sign Code. (PALS, PAC)
   • Develop and adopt standards that reduce the number and size of nonconforming signs.
   • Develop and adopt sign standards for Rural Neighborhood Centers that are consistent with the standards of the adjacent rural designation.
   • Prohibit off-site advertising signs and billboards in the rural area.
   • Permit signs throughout the rural area that increase public awareness of local farms, forests, and other habitat areas.

2. Develop and adopt a tree conservation regulation. (PALS, DNR, PWU)
3. Seek funding to develop freeway landscape plans at entrances to the community. (PALS, WDOT)
4. Pursue public assistance programs, grants, and incentives to facilitate the replanting of greenbelts on previously developed commercial and residential sites. (PALS, Parks, PCCD)
5. Work with the Washington State Department of Transportation, Department of Corrections, and Pierce County to manage and replant any forested areas within their control along SR 16. (PALS, WSDOT, WCCW, County Council)
6. Develop and adopt a Transfer of Development Rights (TDR) program that would allow residential density credits to transfer to urban areas in exchange for permanent preservation of agricultural lands and timberland. (PALS, County Council)
7. Develop and adopt a program that would allow the direct purchase of development rights on existing agricultural and forestland. (PALS, County Council, Parks)

**Long Term Actions**

1. Implement a monitoring program to evaluate the impacts of community design standards. (PALS)
2. Seek funding for the preservation of tracts of land used for agricultural purposes and forest practices. (PALS, PCCD, DNR, DFW)
Chapter 4: Natural Environment Element

INTRODUCTION

The Natural Environment and Open Space Element addresses the protection, conservation, preservation, and restoration of the natural resources on the Gig Harbor Peninsula including shorelines, water resources, vegetation, fish and wildlife habitat, and other critical areas. Protection and preservation of these critical areas, environmentally sensitive areas, and sustainable natural resources are key components of the community's vision. A number of environmental protection strategies are identified within this element including: Establishing land use practices which protect critical areas, preserving the environment in its natural state to the greatest extent possible, maintaining or improving the water resources, encouraging forest management which promotes sustainable harvests, limiting pesticide use, and developing educational and community outreach programs which further the awareness of environmental issues.

DESCRIPTION OF CURRENT CONDITIONS

In the past 50 years, the Gig Harbor Peninsula has experienced a high level of urban and suburban growth. With that growth has come a slow degradation of the natural environment and the fish and wildlife species that are supported by the native vegetation which constitutes habitat areas. Generally, there has been a decrease in the water quality of the streams, lakes, and wetlands in the plan area. The amount of native vegetation, open space, and populations and diversity in fish and wildlife species within the plan area has also decreased as development has occurred. However, several pockets of good quality habitat areas remain, many of which have been recently targeted for acquisition and restoration efforts. Understanding the condition of each component that makes up the natural environment is important to understanding the function of the whole ecosystem, and therefore, each particular resource warrants a more detailed discussion.

SHORELINES

The Washington State Shoreline Management Act (SMA) provides for the management of water bodies identified as “shorelines of the state.” In the Gig Harbor Peninsula area, these include Crescent Lake and all of the saltwater shorelines that surround the community plan area. Areas under jurisdiction of the SMA include these water bodies, all lands within 200 feet of their ordinary high water mark, and their associated wetlands and floodplains.

The Pierce County Shoreline Master Program (SMP), adopted by Pierce County under the SMA, includes five Shoreline Environments – Natural, Conservancy, Rural, Rural-Residential, and Urban. All shorelines are given a Shoreline Environment designation that reflects current conditions and identifies the type and intensity of allowed development.
The marine waters of Puget Sound that surround the Gig Harbor Peninsula and Fox Island, including Colvos Passage, the Tacoma Narrows, Hales Passage, Carr Inlet, Henderson Bay, and the many other minor bays and inlets, are all regulated shorelines of the state. The majority of the saltwater shorelines surrounding the Gig Harbor Peninsula is either designated as a Rural Residential Shoreline Environment or a Conservancy Shoreline Environment. Low to medium bank shoreline areas are typically designated as Rural Residential. Conservancy areas are generally located along the marine bluffs adjacent to Colvos Passage, the Tacoma Narrows, and the south side of Fox Island. The east side of Burley Lagoon is designated as an Urban Shoreline Environment. The sand spits and estuaries within the plan area have been designated as Natural Shoreline Environments.

Crescent Lake, covering approximately 47 acres, is the largest lake on the Gig Harbor Peninsula. Most of the land surrounding the lake is zoned for residential use and approximately 50 percent of this land is currently developed. The lake is used for recreational purposes and features a public boat launch. Crescent Lake lies in the Rural Residential Environment, except for the outlet to Crescent Creek which is in the Conservancy Environment.

Streams within the plan area, including Crescent Creek, Artondale Creek, Wollochet Creek, Ray Nash Creek, and Purdy Creek, have not been identified as shorelines of the state as they have been determined to have a mean annual flow of less than 20 cubic feet per second. If it is demonstrated that their flows exceed this threshold, they could then be included as shorelines subject to the SMA.

### Surface Water

#### Stormwater

The Gig Harbor Peninsula is located at the south end of Water Resource Inventory Area (WRIA) #15. The Pierce County Surface Water Management (SWM) Division is commencing a basin plan for this area. The plan will analyze the existing hydrologic and habitat systems and address the impacts of current and proposed land use development on surface water runoff, capital improvement projects, and habitat degradation. Information from this basin planning effort will provide some scientific analysis which can be used to help develop preferred land use designations.

As forested and native vegetative cover is replaced with development, surface water runoff (stormwater) tends to increase both in volume of runoff and rate in which the water drains off the land. Stormwater that has not been properly addressed can result in flooding, water quality and habitat degradation, negative impacts to fisheries, and erosion. Stormwater related issues can be correlated to the amount of impervious surface within a watershed or basin. Although total impervious surface area accompanying development is not the only factor in stormwater related issues, it is a readily measurable indicator that can be tracked and correlated to stormwater problems. Another indicator that is more difficult to measure, but can be correlated with more reliability, is effective impervious area. Effective impervious surfaces occur when impervious surfaces are directly connected to one another and the water flow is not interrupted by any pervious areas.
Historically, for the smaller storm events, runoff would stay on a site trapped in numerous small depressions and saturating the top several feet of soil. Flooding would occur only during larger storm events; when the soil was completely saturated, the water would then be conveyed downstream. As development has occurred, many of the small depressions were graded smooth and the top several feet of soil was removed or compacted. This type of development removed the ability of the land to contain the smaller storm events and subsequently surface water flooding started to become a problem during these smaller storm events. Increases in the number and capacity of connected drainage systems, in the form of ditches and pipes meant to drain properties and remove water quickly, also increase stormwater problems downstream.

**Peninsula Streams and Lakes**

There are no major rivers in the plan area. However, there are a number of smaller streams located throughout Gig Harbor Peninsula. Crescent Lake is the only lake of significant size within the plan area. The water resources for the plan area, including lakes and streams and their significant tributaries, will be discussed below.

Streams on the Peninsula include Artondale Creek, Crescent Creek, Donkey (North) Creek, Garr Creek, Goodnough (Gooch) Creek, Lay (Nelyaly) Creek, Ray Nash (Mark Dickson) Creek, McCormick Creek, Purdy Creek, Rosedale Creek, Sullivan Gulch Creek, Warren Creek, and Wollochet (Bitter) Creek.

The largest stream, Crescent Creek, flows south from Crescent Lake where it eventually empties into Gig Harbor Bay. At just under 47 acres, Crescent Lake is the largest lake on the Gig Harbor Peninsula. The other major creek emptying into Gig Harbor Bay is Donkey (North) Creek. Artondale Creek is the second longest creek in the plan area, and has one major tributary referred to as the east branch of Artondale Creek. The central creek’s headwaters start from significant wetlands and then the creek flows south, then east until it meets Wollochet Bay. The east branch of Artondale Creek originates in Maloney Lake. The other major stream entering Wollochet Bay is Wollochet (Bitter) Creek. Garr Creek is the largest tributary to Wollochet Creek and is surrounded mostly by residential development with some rural uses to the west. Further south, Sullivan Gulch Creek empties into Wollochet Bay. Originating from steep headwaters, the creek’s southerly flow is fed predominantly by seeps and wetlands. Moving west to the southern edge of the Peninsula bordering Hales Passage, Warren Creek flows in a southwesterly arc from an area of wetlands due east of the intersection at Warren Drive NW and 36th Street NW. The creek empties into a lagoon/estuarine area due north of the northern tip of Fox Island. The next set of streams empties into the waters surrounding Raft Island. The first of these two streams is known as Ray Nash (Mark Dickson) Creek and empties into Henderson Bay due south of the eastern tip of Raft Island. Its headwaters begin in significant wetlands and its mouth forms an estuarine zone. To the west about a third of a mile from the mouth of Ray Nash Creek is Lake Sylvia, which also feeds the creek’s most significant tributary, Lake Sylvia Creek. Northeast of Ray Nash Creek, flowing into an estuarine zone due east of Raft Island, is Rosedale Creek. Further north is Lay (Nelyaly) Creek which flows into Lay Inlet. McCormick Creek flows northwest from a large wetland located southeast of the SR 16 interchange at Burnham Drive into Henderson Bay. Goodnough (Gooch) Creek to the north also
empties into Henderson Bay near Purdy. The only significant stream that flows into Burley Lagoon is Purdy Creek.

**FLOODING**

Flooding is not a serious hazard in the plan area, largely due to the average stream size as well as the topography of the Peninsula. Because streams on the Peninsula all tend to drain into ravines and the area draining into each stream channel is relatively small (compared to other large rivers in Pierce County such as the Puyallup or Nisqually Rivers), flooding is not considered a threat. These small streams are short in length and drain directly into the Puget Sound, so the water is quickly removed from the Peninsula. Most flooding risks would be very localized in areas that are already active wetlands.

Any flooding that does occur on the Peninsula is primarily caused by large rainstorm events. During and immediately following an extremely heavy rainstorm, streams are prone to quickly fill up and flow over their banks. This creates an erosion problem called “scouring” along the stream’s bank and may result in landslides into the streambed. However, after the stormwater flow recedes, so does the flooding. Increased impervious surfaces in the form of roads and urban development, coupled with inadequate or malfunctioning stormwater systems, can increase the frequency and size of flooding events because more water remains on the surface rather than absorbing into the ground.

**GROUNDWATER AND WATER SUPPLY**

**GROUNDWATER**

Groundwater can be defined as any subsurface water such as underground springs or streams fed by one or more geologic formations called aquifers that contain sufficient saturated permeable (porous) material to convey water that can be collected with wells, tunnels, or drainage corridors, or that flows naturally to the earth’s surface via seeps or springs.

Currently, there is very little data available to describe in detail the location and/or availability of groundwater within the plan area. Water rights in the area are primarily based upon seniority of landowners and on jurisdictional needs. Pollution of groundwater doesn’t seem to be an issue presently for the interior of the Peninsula, but a few shoreline areas are experiencing significant saltwater intrusion problems.

Saltwater intrusion is the invasion of saline water from Puget Sound into aquifers that have been depleted of fresh water as a result of over-drafting (excessive withdrawal from wells) or the reduction of aquifer recharge due to seasonal variances or the effects of development, such as increased impervious surfaces. When aquifer levels along coastal areas decline below sea level, saltwater rushes in to fill in the gap in the water table. Once intrusion occurs, it can be virtually impossible to undo or reverse.

On the Gig Harbor Peninsula, saltwater intrusion tends to reach its peak during the summer months when pumping rates are highest during the lowest periods of aquifer recharge. As
development density increases along the coastal areas of the Peninsula, the problem of saltwater intrusion is expected to rise in correlation with increased groundwater withdrawals.

Saltwater intrusion (i.e., chloride levels exceeding 100 mg/L) has been identified through sampling of private wells on Allen Point, Point Evans, Henderson Bay near Kopachuck, Fox Island, Point Fosdick, and Horsehead Bay. The most significant saltwater intrusion has occurred in wells bordering Horsehead Bay.

<th>Water Supply</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Department of Ecology issues water rights in Washington State. A water right is a legal authorization to use a certain amount of public water for specific beneficial purposes. State law requires every user of streams, lakes, springs, and other surface waters to obtain a water right. Every use of groundwater must also obtain a water right unless less than 5,000 gallons of water per day will be used. Currently within the plan area, there are 92 small Group A water systems that have 15 or more connections or serve 25 or more people per day for 60 or more days per year regardless of the number of connections. Forty-four separate water purveyors are responsible for operating these systems. The three largest purveyors on the Peninsula are Washington Water Service Company (WWSC) at 21 square miles, City of Gig Harbor Water Department at six square miles, and Rainier View Water Company at four square miles. Peninsula Light has recently been approved by the Washington State Department of Health to offer Satellite System Management Agency (SSMA) services within its current electrical customer service area with an area of coverage measuring 590 acres, including approximately 263 acres on Fox Island. As an SSMA, Peninsula Light may own and/or operate noncontiguous water systems. Fox Island Mutual Water Association (FIMWA) is the primary water purveyor on Fox Island, serving approximately five square miles. WWSC, Gig Harbor’s Water Department, and FIMWA all have water systems plans approved by the Washington State Department of Health. As required by state law, water service areas are “exclusive service areas,” which means the designated system has the first right of refusal to serve within its service area. The plan area also includes a multitude of individual wells and Group B systems, which are systems serving 2-14 connections. There is not a complete inventory of individual wells or Group B systems available at this time. The City of Gig Harbor does not provide water service within all of its city limits or Urban Growth Area.</td>

<table>
<thead>
<tr>
<th>Water Quality</th>
</tr>
</thead>
</table>
| Water quality is typically measured in one of two ways, either by the uses it can support or by the chemical and pollutant levels in the water. The streams in the Gig Harbor Community Plan area are relatively small compared to others in the state. This means that many of the streams have no official test results, leaving the question open as to whether the streams meet the state standards. The Washington Administrative Code (WAC) 173-201A classifies streams by the uses they should be capable of supporting. Classification does not mean the water body meets the
standards necessary for the uses, only the standards it should be meeting. All of the streams, lakes, and marine bodies within the Community Plan area are classified as Class AA (Extraordinary) or Lake Class. Lake Class is as stringent as Class AA in that it requires no deviation from natural conditions. Class AA classification results in stringent standards for all water bodies since they are expected to support all identified uses. Peninsula area streams are not specifically listed, but since they feed AA marine bodies, they are classified similarly. This classification means the water must meet certain standards for fecal coliform organisms; dissolved oxygen; temperature; turbidity; pH range; toxic chemical or radioactive material concentrations; and aesthetic values.

There are only a few water bodies within the Gig Harbor Community Plan area that have been classified as having significant pollution problems, Burley Lagoon and Purdy Creek being the most serious. This pollution is primarily related to elevated levels of fecal coliform bacteria. Sources of fecal coliform pollution include animal manure and failed septic systems.

A few shoreline areas on the Gig Harbor Peninsula are experiencing significant saltwater intrusion problems. The presence of saltwater in the water supply can be determined by testing groundwater sources for the presence of chloride. Seawater contains approximately 19,000 milligrams per liter [mg/L] of chloride. Fresh water contains less than 10 mg/L. Untainted Gig Harbor aquifers measure between 2.5 to 4.0 mg/L. Although chloride levels can rise between 10 and 100 mg/L due to natural causes [sea spray and some historic geologic pockets] and/or human activities [such as septic drainfields and landfills], the Department of Ecology has determined that the presence of chloride levels over 100 mg/L indicates probable seawater intrusion. The Environmental Protection Agency [EPA] recommends that the chloride concentration of drinking water supplies be less than 250 mg/L. Shoreline area aquifers on the Gig Harbor Peninsula have tested as high as 645 mg/L. A sampling of private wells located on Allen Point, Point Evans, Kopachuck, Fox Island, and Horsehead Bay indicated levels over 100 mg/L. The most significant seawater intrusion is occurring in wells bordering Horsehead Bay. Point Fosdick wells are also experiencing elevated chloride levels measuring between 20 and 100 mg/L, which suggests possible seawater intrusion.

**Wetlands**

Wetlands are legally protected under the Federal Clean Water Act, the State Growth Management Act, and Pierce County Codes. Wetlands are those areas identified by the presence of water during the growing season, hydric soils, and the presence of a plant community which is able to tolerate prolonged soil saturation. These areas provide many important environmental functions including reducing the impact or frequency of flooding, providing habitat, recharging aquifers, providing clean water for fish and other aquatic species, and preventing shoreline erosion. Wetlands also provide visual buffers in the built landscape.

It is estimated that 50% to 67% of the total wetland acreage in Washington State has been lost since European settlement, and that 90% to 98% of urban area wetlands have been lost in the Puget Sound region. There are currently no estimates for how much wetland area has disappeared within the Gig Harbor Peninsula. There is evidence that property along the
shoreline in Purdy and areas in the Rosedale Valley and Ray Nash Valley, which historically supported wetlands, have been filled or altered to the extent that in some cases the wetland hydrology has been eliminated.

Wetlands are often found in the riparian zones along streams, at the edge of lakes, and adjacent to marine waters. These riparian zones often serve as passageways for wildlife migrating between or around developed areas. Wetland and riparian vegetation also helps to maintain optimum fish spawning conditions by providing shade, bank stabilization, a breeding ground for insects, and a source of organic material for the stream.

Submerged wetland plant communities can be found offshore where marine life utilizes them for food sources and/or protection from predators. Marine plants that can indicate the presence of wetlands include species such as eelgrass, kelp, pickleweed, and sea lettuce.

**FISH AND WILDLIFE**

**FISH**

There are diverse populations of saltwater, freshwater, and anadromous fish within the Gig Harbor Peninsula plan area. This is attributable to its extensive shoreline and surface water.

Saltwater (marine) species that are found in the waters offshore of the Peninsula include cabezon, dogfish, flatfish, greenlings, lingcod, Pacific cod, pollack, rockfish, skate, surf perch, and whiting. Also found in the waters surrounding the plan area are baitfish, such as herring, sand lance, and surf smelt. Baitfish are an important food source for predatory fish, birds, and mammals. Sand lance spawning areas are located on the east and south sides of the Gig Harbor Peninsula in Wollochet Bay and Hale Passage. Surf smelt spawning areas are located in Gig Harbor just outside and north of the entrance to the harbor, in Wollochet Bay, and on the east side of Henderson Bay.

Land-locked freshwater native species, specifically cutthroat and rainbow trout, are found in streams throughout the plan area. Several non-native species of bass, bluegill, and perch can be found in lakes within the Gig Harbor Peninsula.

The primary anadromous species found in streams within the Gig Harbor Peninsula plan area are the Coho (silver) and chum (dog) salmon. Specifically, Crescent Creek supports Chinook, Coho, and chum salmon runs. Donkey Creek supports runs of Coho and chum salmon as well as cutthroat trout. Artondale Creek and its east branch support runs of Coho salmon and cutthroat trout and Artondale Creek supports a run of chum salmon. Wollochet Creek is home to Coho and chum salmon runs. Garr Creek supports a run of Coho salmon and an unconfirmed run of chum salmon. Sullivan Gulch Creek supports a run of cutthroat trout. Warren Creek supports Coho salmon and cutthroat trout. Ray Nash Creek supports runs of Coho and chum salmon. Lake Sylvia Creek supports a run of chum salmon, but driveway culverts and a dam at the outlet to Lake Sylvia are barriers to fish passage. Rosedale Creek supports Coho and chum salmon runs. Chinook salmon have been introduced in Rosedale Creek, but the success rate for adult return is not known. Volunteers have been planting Coho and chum salmon in Lay Creek for several years with a reported high rate of hatching and successful adult return. McCormick
Creek supports a minor run of Coho, chum, and steelhead salmon as well as cutthroat trout. Periodic Chinook strays have also been sighted in McCormick Creek. Purdy Creek supports Coho and chum salmon runs as well as steelhead and cutthroat trout, but Highway 16 and a blockage near the estuary at low tide impede fish passage.

**Shellfish**

Shellfish are an important commercial and public recreational resource for the Gig Harbor Peninsula for residents and visitors. The following species of shellfish can be found in the marine waters adjacent to the plan area: abalone, clams (hard-shell, razor, and soft-shell), crabs (Dungeness and red rock), geoducks, mussels, octopi, oysters, scallops, sea urchins, sea cucumber, and shrimp. Known locations of hard-shell clams include Burley Lagoon, Fox Island’s Gibson Point, and Raft Island. Public shellfish beaches include: Cutts Island State Park, Kopachuck State Park, Purdy sand spit, Sunrise Beach County Park, Tacoma Narrows, and Fox Island near the bridge.

Local shellfisheries process geoducks and oysters for the most part and, in recent years, commercial oyster operations have suffered from elevated coliform (bacteria indicating fecal contamination) counts in marine waters. Public beaches have been closed on occasion for contamination concerns related to coliform and Red Tide or to prevent overharvesting, which can also be detrimental to local shellfish populations.

**Wildlife**

There are a variety of different wildlife habitats contained within the Gig Harbor Peninsula that range from forests to prairie-type grasslands to wetland, riparian, and coastal areas. This broad range of habitats is host to a wide variety of wildlife species native to the Pacific Northwest.

The forested and shrub areas support numerous large and small mammals, birds, reptiles, and amphibians. The most common smaller mammals found in these areas include chipmunks, foxes, hares, mice, opossums, porcupines, raccoons, shrews, skunks, and squirrels. A small number of larger animals including the Colombian black-tailed deer and coyote occur where large contiguous forests remain. Common bird species found in forested and shrub areas are chickadees, crows, finches, goldfinches, hawks, jays, mountain quail, owls, pheasants, robins, thrushes, warblers, and woodpeckers. There have also been a number of recent sightings of black bears by residents of the Gig Harbor Peninsula plan area. Amphibians and reptiles commonly found in the plan area’s forest and riparian environments are frogs, garter snakes, salamanders, and toads.

Grassland environments are home to small mammals, specifically minks, moles, muskrats, rabbits, shrews, and voles (mice-like rodents), and a variety of bird species, such as blackbirds, quails, snipes, sparrows, starlings, and swallows.

Wetland, riparian, coastal, and open water areas are populated primarily by a few mammals such as bats, beavers, river otters, and sea lions as well as a wide variety of bird species such as bald eagles, ducks, Canadian geese, goldeneyes, grebes, herons, kingfishers, mergansers, ospreys, and teals. The Winchester Swamp on the Gig Harbor Peninsula is home to a great blue
heron colony and Allen Point and Cutts Island are home to pigeon guillemot colonies. Just off the southern tip and the western midpoint of Fox Island are haulout areas for California sea lions and northern sea lions.

Urban development, logging, and agricultural practices on the Gig Harbor Peninsula have substantially reduced wildlife habitat through the years. However, valuable habitat qualities still remain in the undeveloped, large native vegetation tracts and around the remaining wetlands and riparian (streamside) forests throughout plan area.

**ENDANGERED, THREATENED, SENSITIVE, AND CANDIDATE WILDLIFE SPECIES**

Congress passed the Endangered Species Act [ESA] in 1973 to protect species of plants and animals that are of "aesthetic, ecological, educational, historical, recreational, and scientific value." The ESA is also intended to protect the listed species' “critical habitat,” which is the geographic area occupied by and/or essential to the protected species.

Areas identified by the Washington Department of Fish and Wildlife as containing protected species of wildlife and plants are labeled as Priority Habitat Areas. Washington State status of fish and wildlife species is determined by the Washington Department of Fish and Wildlife. Factors considered include abundance, occurrence patterns, vulnerability, threats, existing protection, and taxonomic distinctness. The status categories are as follows:

**Endangered (E):** In danger of becoming extinct or extirpated from Washington.

**Threatened (T):** Likely to become endangered in Washington.

**Sensitive (S):** Vulnerable or declining and could become Endangered or Threatened in the state.

**Candidate (C):** Under review for listing.

**Monitored (M):** Taxa of potential concern.

Species of concern are primarily found within designated Priority Habitat Areas on the Gig Harbor Peninsula and Fox Island and include the bald eagle (T), great blue heron (M), harbor seal (M), and osprey (M). Mountain quail, which have been spotted in several areas on the Peninsula and Fox Island, are classified “rare or uncommon” with only 21 to 100 occurrences within the state, as are several native salmonid species including Chinook, chum, and Coho.

**OPEN SPACE**

The term open space can mean a variety of things to different people. Some people think of open space as wild, undisturbed areas (i.e., natural open space) that serve as habitat for fish and wildlife. Others think of artificially landscaped areas which offer a sense of visual relief from the built environment and a place to conduct passive recreation activities (i.e., greenbelts, golf courses, and parks), as open space. When considered together, all of these areas provide people a place to connect with nature.
**HISTORY OF OPEN SPACE IN PIERCE COUNTY**

Since 1972, the County has offered a Current Use Assessment (CUA) program. This program provides property owners with a tax reduction incentive to maintain properties in productive agricultural land, timberland, or open space land condition. At the present time, there are approximately 300 properties enrolled under the open space category of the CUA program. In the summer of 1999, the administrative procedures for the CUA program were revised and a public benefit rating system (PBRS) was adopted as a means of ranking applications for the CUA open space category.

The County Council approved the Conservation Futures Program in 1991. Establishment of this program authorized the County to collect a real-estate property tax (6¼ cents per $1,000.00 of assessed valuation) for the acquisition of open space properties or conservation easements. To date, the County has collected 8.4 million dollars and purchased and/or preserved 32 properties/conservation easements including open space sites like the Narrows Park and Purdy B sites.

In 1995, the County’s newly adopted Comprehensive Plan was appealed to the Central Puget Sound Growth Management Hearing Board (GMHB). One of the issues appealed was the lack of open space/greenbelt policies and map. In response to the GMHB’s decision, the County Council adopted a set of open space policies and an open space/greenbelt map in 1996. These policies included direction to form an Open Space Implementation Committee (OSIC) as a forum to comprehensively address open space issues at the Countywide scale. The County Council moved forward in implementation of these policies in 1997 and created the OSIC whose main tasks were to explore and address open space issues identified in the Comprehensive Plan.
