Represented: No

Classification descriptions are intended to present a descriptive list of the range of duties performed by employees in this class and are not intended to reflect all duties performed within the job.

GENERAL FUNCTION:
The IT Manager – Applications and Project Management is responsible for the overall planning, coordination, implementation, execution, control and completion of projects consistent with company strategy, commitments and goals. This position provides primary direction and supervision to IT staff who are responsible for managing multiple IT projects that require multi-department integration and implementation, that are unusually large in scope, and are highly visible, politically sensitive, and have significant financial impact to the County. The incumbent must be able to manage multiple concurrent projects, implement 3rd party applications on premise or cloud, applying practical project management methodologies, skills, tools and techniques to ensure on-schedule, on-budget project delivery.

Additionally, the IT Manager for Applications and Project Management implements innovative and efficient project management practices for agile software development projects and enterprise commercial software implementation projects. This position is responsible for return on investment analysis, project scoping, deliverables, communication, risk management, scheduling and project outcomes. This position works with departmental, state, federal & local stakeholders to negotiate the initiation/continuance of applications/systems based on business needs and available resources, and institutes adequate controls for underlying programs per departmental, state, and federal IT policies, regulations & standards.

ESSENTIAL FUNCTIONS:
The IT Manager for the Applications and Project Management Division provides domain expertise and leadership in IT Division projects and assessments with the following responsibilities:

- Provide consultation to Client Department management on critical IT business and project issues; assess costs, risks and impacts of information technology strategies and approaches; coordinate cross-organizational efforts.
- Build trust and long-lasting relationships with key clients.
- Coordinate with software development teams, department business analysts and business management.
- Provide periodic reports of technology project and implementation activities as required to achieve and maintain performance measures.
- Serves as a technology ambassador and liaison for the Information Technology Division of Finance by establishing and providing proactive communication with clients, team members, and management. Conduct outreach to peer organizations, universities, and external clients.
- Design of agile project management process to support a wide variety of technology projects integrated with governance and budgeting initiatives.
- Manage and control day-to-day project activities, issues, risks, quality, and budget for project team.
- Provide excellent project management in the following areas:
  - Project planning, estimating and resource forecasting
  - Project management of tasks, teams, schedules, budget and deliverables
  - Project implementation planning and detailed task management
  - Project client relationship management with proactive status reporting and communications.
- Manage project risks by considering the ultimate impact of decisions and actions.
- Manage competing demands and easily adapting to changes in the work environment such as delays or unexpected events.
- Select, implement and support project management tools and systems.
- Establish measures of success, acceptance criteria, and methods to track, control and report status.
- Determine charter and scope of each project; prioritize projects according to business needs or values; set priorities.
- Develop a framework for project investment justification and return on investment.
- Facilitate discussions and consensus among various project stakeholders such as analysts, developers and clients.
- Manage vendor relationships during project execution.
- Determine financial and performance indicators and use evaluation findings to redirect the project or program. Monitor financial status of the program or project, and develop and monitor revenue and expenditure budgets.
- Manage assigned operations to achieve Division goals within budgeted funds and available personnel.
- Teach and coach peers on project management best practices and techniques.
- Develop change management processes and controls.
- Develop and supporting a technology portfolio management system and process.
- Perform project oversight for reporting on and presenting metrics.
- Assist developing business process improvements, business requirements and cost/benefit analysis.
- Perform quality reviews, developing lessons learned documentation and preparing post project review of costs and benefits.
- Provide oversight, coaching, mentoring, leadership and performance feedback to project teams.
- Conduct outreach to peer organizations, universities and external clients.
- Promote technology initiatives and benefits.
- Participate as a member of the Information Technology management team and prepare performance measures and support project governance and cost allocation tasks and initiatives.
- Plan and organize workloads and staff assignments; review progress, and direct changes in priorities, schedules, procedures to meet deadlines.
- Motivate staff by setting and achieving challenging goals; demonstrate persistence in overcoming obstacles.
- Lead change management and risk management, identifying appropriate resources and developing schedules to ensure timely project completion. Manage risks by considering the ultimate impact of decisions and actions.
- Select, supervise, coach and evaluate assigned staff. Establish work rules and performance standards, conduct and oversee performance evaluations and initiate and implement disciplinary actions as needed. Resolve grievances and other personnel matters. Provide for the training and motivation of subordinates in order to make full use of individual capabilities and to meet changing system demands.
- Partner closely with other department managers to ensure proactive planning, smooth deployment, and excellent on-going support for their applications.
- Effectively market IT services, promote technology initiatives, and advocate strongly for project benefits.
- Be a visible leader in organization change management for IT related initiatives.
- Present County project achievements at IT conferences and participate as a member of County-wide, State-wide, and other committees and groups when necessary to fulfill the general duties of the position.
