Total of credit(s) + fire flow must be at least 100%

1. In addition to meeting the code requirements of 17C.60.B and 17C.60.C, installation of an NFPA 13D fire sprinkler system is required. If the garage portion of the building exceeds 3,599 square feet fire flow in accordance with Table 17C.60-3 and 17C.60-4 are required OR it shall be compartmentalized using IBC 706 fire walls (except no openings are allowed) into fire areas of 3,599 square feet or less. The home shall not be compartmentalized to get out of the fire sprinkler system requirement.

2. A certificate of water availability and water system vicinity map are required when the property is less than an acre in size and located within a water service boundary area OR if credit is being used for Table 17C.60-6. For lots less than an acre in size where a main capable of supplying 750 gpm/45 min @ 20 psi residual is available, a hydrant is required in accordance with PCC 17C.60.160.G.1.b or 17C.60.160.G.1.c.

I understand that the fire flow credits selected above are required fire protection features that shall be incorporated into the construction of this building and shall remain in place.

Ordinance Effective July 30, 2021

7/30/2021
Substantial Alteration Calculations (Structures constructed prior to November 14, 1992)

1. Year Built:_______ Permit #:_______ Existing building area:__________
2. Area of addition:_______ + Area of replacement:_______ + Area of remodel:_______
   Total = ________________
3. Line 2 divided by line 1 x 100 = percent of alteration. ________________
4. Check alerts for cumulative total of any additions or replacements since 11/15/92.
5. Add line 3 to line 4. If the total is equal to or greater than 50%, Fire Flow and Emergency Vehicle Access are required.

Accumulated alteration is less than 50%. ☐

**Compliance with 17C.60.185.E is required even if the project meets the alteration exemption.**

Emergency Vehicle Access: NOTE: EVA is required to extend to within 150’ of all portions of the building and be in accordance with Table 1 of 17C.60.150. Reductions to the width allowed for a sprinklered buildings are not permitted for structures greater than 5,000 square feet.

Approved as shown__________ Revise drawing as noted:
Sprinkler System Required for 17B?________
Turnaround required for private road?________

Fire Flow Requirement

One & Two Family Dwellings ≥ 3,600 sq. ft. 1,000 gpm for 60 min.

Record of Existing Fire Flow

GPM ________________ Duration _____________ minutes.
Distance of hydrant from center of lot frontage _______ feet OK per plat letter __________
